prevented some from attending, but the deficiencies were more than made up by the enthusiasm of those who did. Unfortunately, Governor Roosevelt missed a good portion of the drug men as he was at lunch when the sections began to go by the reviewing stand, but he returned in time to wave his hat to the "Gold Men from Gold Street" who bore a banner on which was the following: "Bryan, 1896, 'I shall cry out against the gold standard as long as I have breath to speak.' Bryan 1900, 'But when I strike New York I lose my breath.'"

Five bands accompanied the drug men, and it is safe to say the music furnished tune to march by for as many of the drug men Saturday as were in the parade of '03, when there were nearly 3,000, and in '05 the weather was fine on the day of the parade.

It was impossible to secure accurate information con-

cerning the absentees, so the entire program of the drug trade division is given as follows:

Major-Gen. Edward L. Mollneux, Marshal.

Andrew B. Rogers, Chief of Staff.

Staff.—Samuel W. Bowne, Sturgis Coffin, W. S. Mercereau, Geo. R. Hillier, Wm. Brookfield, Theo. Welcker, John Anderson, E. W. Fitch, E. L. Stauffen, John McKesson, Jr.; S. H. Carragan, David E. Green, Geo. A. Meyer, Chas. H. Patrick, Runyon Pyatt, A. Klipstein, James A. Webb, Wm. D. Paris, A. B. Garner, Geo. W. Fortmeyer, Walter Longman, Darwin R. James, Francis E. Dodge, A. F. Bradich, H. T. Fairchild, W. R. Peters, Horatio C. King.

Aides.—Isaac V. S. Hillier, William S. Douglass, Wm. De Zeller, David E. Green, Jr.

First Section, Geo. J. Seabury, commanding. Staff.—Wm. Jay Schleffelin, Arthur A. Stillwell, Edward G. Wells, Henry B. Platt, C. E. Tyler, J. Seaver Page, S. W. Burr, Frank H. Sloan, H. B. Harding, J. D. Fitzworth, Edward Kemp, Jr.; Jas. G. Shaw, James Hartford, Thos. P. Cook, Fred. B. Perry.

Aides.—Schuyler Schleffelin, Chas. A. Miller, Samuel G. Money-penny.

Delegations from the following firms: Schleffelin & Co., Parke, Davis & Co., Lanman & Kemp, H. J. Baker & Bro., J. L. & D. S. Riker, Dodge & Olcott, Merck & Co., Powers & Wegman, Fraser Tablet Triturate Co., A. A. Stillwell, Geo. Lueders & Co., Humpareys Homeopathic Co., Henry B. Platt, General Chemical Co., Seabury & Johnson, New York Quinine & Chemical Co., Breitenbach Co., J. B. Gruman, Frederick Ludham, C. N. Crittenton Co., A. Kilpstein & Co., Archibald & Lewis, Edward Hill's Son & Co., Wing & Evans, White Tar Co., National Remedy Co., Towns & James, R. Hillers Sons Company, A. T. Andrus & Co., The S. H. Wetmore Co., Fritzsche Bros., Schoelkopf, Hartford & Hanna Co., Tartar Chemical Works, Peek & Velsor, Jas. H. Taft & Co., Chas. Pfizer & Co., A. Chris, D. D. Williamson & Co., W. R. Peters & Co., Croton Chemical Co., J. A. Webb & Son, Armstrong Cork Co., Tyler & Finch Co., Wm. J. Barker, J. H. Francis, Graefenburg Co., S. S. Stafford, T. & S. C. White, Chas. Cooper & Co., Gregory & Jennings, Royal Baking Powder Co., Pacific Coast Borax Co., Drug Publications.

Second Section James B. Horner, commanding. Staff.—G. Clinton McKesson, John B. Ladd, Sidney M. Colgate, H. S. Chatfield, Chas. Downer, Albert H. Tatum, R. P. Wilson, F. Rawolle, Geo. F. Henry, Chas. O. Weisz, Fred. M. Robinson, W. W. Tamlyn, J. Edward Young, Jr.; E. H. Hammer, Russell Parker.

Aides.—P. S. Tilden, Geo. B. Martin, Hugh C. Peters. Delegations from the following firms: McKesson & Robbins, Thurston & Bradich, Ladd & Coffin, Colgate & Co., Lazell, Dalley & Co., Solon Palmer, R. W. Robinson & Son, Rogers & Pyatt, Henry Klein & Co., J. M. Marls & Co., Moxie Nerve Food Co., E. L. Kalbfleisch & Son, Fox, Fultz & Co., Carter Medicine Co., T. C. Morgan & Co., Frederick Stearns & Co., W. L. Strauss & Co., Meinecke & Co., Theo. Ricksecker Co., Ed. Plnaud, Lorenz & Co., Keasbey & Mattison Co., Schering & Glatz, Max Zeller, Brookfield Glass Co., The Alden Spears Sons Co., Whitall, Tatum & Co., J. B. Horner, D. R. James & Bro., Van Duzer Extract Co., R. W. Phair & Co., Bichels & Techow, Maltine Mfg. Co., Church & Dwight Co., Sharp & Dohme, Battelle & Renwick, Vapo-Cresolene Co., D. E. Green & Co., Parker, Stearns & Sutton, Stallman & Fulton, Johnson & Johnson, Norwich Pharmacol Co., F. R. Arnold & Co., Henry Allen, Neddinger Bros., Herman Tappan, Goetting & Co., Read, Holliday & Co., Rudisch & Co., W. R. Warner & Co., Dr. Herrick's Family Medicine Co., Mineralized Rubber Co.

Third Section, Samuel W. Fairchild, commanding. Staff.—W. H. Wickham, Thos. F. Main, H. T. Jarrett, Albert Platt, W. A. Hamann, I. Sherwood Coffin, Chas. S. Little, O. H. Jadin, P. H. Fowler, F. A. Von Stade, Albert Bruen, Otto P. Amend, Chas. W. Purdy, Wm. B. Kaufman, E. W. Dusenbury.

Aides.—Dr. H. C. Davis, Frank S. De Ronde, M. G. Foster.

Delegations from the following firms: Fairchild Bros. & Foster, Lehn & Fink, Mallinckrodt Chemical Co., Bruen, Ritchey & Co., Coffin, Redington & Co., Roessler & Hasslacher Co., Tarrant & Co., Elmer & Amend, Scott & Bowne, Magnus & Lauer, C. C. Phillips Co., C. O. Bigelow, C. T. Hurlbut, S. G. McCoiter & Co., J. August Bous, The Celluloid Co., L. Knelsel & Co., F. H. Kalbfleisch Co., A. Moses Sons & Co., T. C. Morgan & Co., New York & Boston Dye Wood Co., O. H. Jadin, W. M. Polhemus, Hall & Ruckel, H. W. Henning & Son, Chas. Roome Parmelee, Patterson & Purdy, W. J. Bush & Co., Chas. H. Rutherford, Dillon & Co., Bellevue Medical Students, College of Pharmacy, Jas. C. Butler & Co., John Carle & Sons, Max Frankel Co., Pigot, Sayre & Co., E. Fougere & Co.

Fourth Section, R. P. Rowe, commanding. Staff.—Carl Merz, H. M. Polhemus, James Langmuler, F. M. Patrick, James H. Taft, Jr.; Geo. W. Gladwin, Harry Hall, Cecil S. Mollneux, W. H. Andrews, John Doshe, M. D. Eger, Harry R. Smith, Louis C. Gillespie, E. M. Roberts, W. I. Walker.

Aides.—E. B. Horton, A. C. Saunders, J. A. McKen, Jr.

Delegations from the following firms: F. W. Devoy & C. T. Reynolds Co., H. W. Johns Mfg. Co., Heller & Merz, American Linseed Co., National Lead Co., J. Lee Smith & Co., Pratt & Lambert P. Bredt & Co., Berry Bros., W. J. Matheson & Co., F. Reichard, Frank S. De

Ronde Co., Chas. H. Gillespie & Sons, Gellon & Co., New Jersey Paint Works, Brass Paint Co., Chilton Mfg. Co., Turkey Red Oil Co., S. Winterbourne & Co., W. G. Hoople, Binney & Smith, Alsberg & Pepper, Leggett & Bros., E. O. Murdock, Prince Mfg. Co., A. B. Ansbacher & Co., W. H. Rankin, Chas. Mosher & Co.

Fifth Section, S. V. V. Huntington, commanding. Staff.—Chas. T. Pierce, Chas. A. Childs, George M. Boardman, W. B. Templeton, H. Smith, Wm. E. Lucas, M. Hermann, A. H. Schmidt, W. H. Scheel, W. F. Armstrong, H. Rosenberg, P. S. Jennings, F. Lavanberg, William Zinsser, A. V. Hart.

Aides.—Wm. M. Stiles, L. E. Mollneux, E. A. Spink. Delegations from the following firms: Ed. Smith & Co., Longman & Martinez, E. H. Kellogg & Co., Chas. A. Childs & Co., Standard Varnish Co., Aq. Rich Co., P. O. Pierce & Co., E. K. Austin, Hildreth Varnish Co., Hanlon & Goodman, J. W. Masury & Son, Brooklyn Varnish Co., Smith & Nichols, Meyer & Lowenstein, John Lucas & Co., Paterson, Boardman & Co., New York Shellac Co., Robert P. Wilson & Co., Benjamin Moore & Co., Marx & Rawolle, Wm. Zinsser & Co., Bradley & Smith, J. M. C. Martins' Sons, Bridgeport Wood Finishing Co., F. Lavanberg, J. J. Adams & Co., M. Herrman & Co., McCafferty & Holton, Rosenthal & Bro., Miles Bros. & Co., Valentine & Co., Sondheim, Alsberg & Co., Mica Roofing Co., Duche & Son, Standard Paint Co., W. H. Scheel, Taintor Mfg. Co., Emil Calman & Co., Chas. Townsend.

BUSINESS QUICKLY RE-ESTABLISHED AFTER FIRE.

Many favorable comments are being expressed by the trade upon the speedy manner in which the M. J. Breitenbach Co. resumed business operations after being almost wholly wiped out by the disastrous fire in the building of Tarrant & Co., Monday, Oct. 29. Within an hour after the catastrophe workmen, including bottle men, printers, box makers, etc., were busily engaged in reuniting the chain of business, and by working night and day, in a very short time had a shipment sufficient to put up 200 gross of its preparation on the wharf. Much is also being uttered in praise of the heroic work of two of the company's office employees, Miss Gleason and Miss Lang, both of whom had narrow escapes. They had been coached for just such occasions, and when the alarm was given closed the safe and fled, not waiting for hats or coats. When they were outside the building one of the young ladies remembered that the books of the firm were still in the office, and, going back, secured them, carrying them to a safe place. Their delay nearly had fatal results, as in their flight they were felled to the street by the force of the terrific explosion, but, bruised and stunned, clung tenaciously to the firm's property. Messrs. M. J. Breitenbach and Edward Wells, of the firm, have located a temporary office at 68 Warren street.

HUDSON COUNTY COMMITTEE FOR THE PURPOSE OF FORMING LOCAL ASSOCIATIONS.

Appointed by the New Jersey Pharmaceutical Association.

Frank O. Cole, Jersey City; E. T. Stein, Jersey City; J. N. Petterson, Bayonne.

Dear Sir: You cannot but be aware of the evils that are harassing the retail druggists throughout our county. Upon some they weigh more heavily than upon others. Hence a spirit of discontent has arisen and a means of relief is desired and sought for to alleviate the distressing conditions of trade.

A remedy may be found in a unification of effort, so that the strength of organization may accomplish the desired effect.

To secure for ourselves a better scale of prices and to foster the best interests of the drug trade in Bayonne, we desire your co-operation in our efforts to establish a live and energetic druggists' association in this town.

The history of similar organizations throughout our State is fruitful of good results. We should not be behind in securing to ourselves a like good, that will lift the druggist above the position of drudgery.

A meeting will be called at Brown's Hall, Avenue D, between Thirty-third and Thirty-fourth streets, Bayonne, N. J., Monday, November 5, 1900, at 10 P. M., at which the work of organization will be instituted. If you are in sympathy with the movement for bettering the condition of every druggist of this town, present yourself at this meeting, whereat individual views will be heard and acted upon. Should you be unable to attend, kindly acquaint any of the undersigned with your interest in this important movement.

J. N. PETTERSON,
C. D. AYERS & CO.,
A. SCHLIEBER,
C. H. ROSE,
C. H. LANDEL,
J. H. BURCHILL,
W. WHITEHEAD.

NORTH HUDSON DRUGGISTS' ASSOCIATION.

A meeting of the North Hudson Druggists' Association was held in Imperial Hall, West Hoboken, N. J., Thursday evening, October 25, and was largely attended. Chairman August Frank presided. Secretary Lang read the minutes of the previous meeting, following which a committee was named, of all who could attend, to go to the meeting of the Joint Committee of the Pharmaceutical Associations held in this city Monday, November 5. A report was received from the Committee on Shorter Hours and it was said that all the druggists in North Hudson County, numbering twenty-one, were conforming with the agreement circulated some time ago by Chairman Frank and were closing their stores at 10 o'clock in the evening. The committee named at a previous meeting to draw up a schedule of prices was ready to report with a price list, but in view of the action to be taken by the associations in Greater New York it was recommended that the report should lie over for presentation at the second meeting in November. Chairman Frank gave a comprehensive report of the recent meeting for the formation of a new organization in Hoboken, and it was agreed to co-operate with the new association as much as possible. The invitation extended by former President J. C. Gallagher, of the Jersey City Druggists' Association, was received and accepted.

FIRST COMMERCIAL LECTURE IN BROOKLYN COLLEGE OF PHARMACY.

Hon. W. L. Perkins, of the law firm of Perkins & Butler, of this city, delivered the first of what is to be a series of lectures on practical business as applied to the retail drug trade before an audience of about seventy-five students in the Brooklyn College of Pharmacy, Wednesday evening, October 31. Mr. Perkins made the theme of his first talk the simple business conditions that confront the graduate of pharmacy about to assume proprietorship of a retail store and outlined in a very plain manner the laws regulating commercial exchange. He endeavored to impress upon the minds of his auditors a policy of cautiousness, shrewdness and business diplomacy that would best fit them for the buying and selling in the retail store. He characterized the druggist and pharmacist as professional men who have entered the world of commerce and must be prepared to cope successfully with the difficulties which attend the "merchandising" parts of their calling. He touched briefly on commercial paper with reference to the drawing and paying of bills, in cash, check or note, and then answered questions on these subjects. In the coming lectures, one of which is to be given each month during the college course, Mr. Perkins will take up the matters of leases, bills of sale, chattel mortgages, etc., together with the laws on the subject, and will devote one special lecture to the pharmacy law.

CHECK SWINDLER CAUGHT.

John S. Silver was arrested in a flat at No. 1232 Fulton street, Bronx Borough, Wednesday evening, October 31, on complaint of Henry Buch, druggist at No. 661 Columbus avenue, who charges him with passing a worthless check. Druggist Buch is not the only one Silver has defrauded with bad checks, as he had been working merchants on Columbus avenue since before August 1, at which time he was arrested on the same charge. At the time of his arrest, Silver was paroled in the custody of his counsel, who said he was C. A. Reed. Whenever the case was called after that, it was adjourned. The result was that many of the complainants grew tired of going to court. Finally the District Attorney's office took the matter in hand, and Assistant District Attorney Keith advised that a complaint be taken against Silver. Magistrate Zeller issued a warrant for Silver on complaint of Mr. Buch and a policeman arrested him, although Silver threatened the officer with all kinds of trouble. Silver was held in \$1,000 bail, which he furnished, for trial.

German Apothecaries' Society.

The last meeting of the German Apothecaries' Society was held at the rooms, No. 192 Third avenue, Thursday evening, November 1. A representative of this paper was present to report the proceedings, but was requested to withdraw, hence the Era has no record of the business transacted.

Dantes Gets One Year.

"Edmond Dantes," otherwise Gerald Levine, whose history in pharmacy was given at length in the Era of last week, was sentenced by Judge Cowing in the Court of General Sessions, Wednesday October 31, to serve one year in State's prison on a charge of forging his name to a diploma issued by the New York College of Pharmacy, May 3, 1892, to Charles H. Hall, a druggist in Plainfield, N. J.

NOTES.

—Andrew Jackson Schick, more familiarly known to the trade as "Arthur" Schick, and for many years employed as traveling salesman for Wm. R. Warner & Co., died at St. Vincent's Hospital Wednesday, October 24, after a short illness with consumption, aged sixty-four years. Had it not been for a chance discovery by one of the nurses of the hospital of a card in a pocket of Mr. Schick's clothing it is possible the body would have been buried with the unidentified dead, as he refused to disclose his name to the hospital authorities and destroyed all evidences on his person that would lead to his identity. The card bore the name and address of H. H. Risley, son of Chas. F. Risley, of C. F. Risley & Co., 46 Cortlandt street, by whom Mr. Schick was employed as salesman and book-keeper during the last two years of his life. Mr. Schick learned the drug business with Bullock & Crenshaw, Philadelphia, by whom he was employed for a number of years. He was graduated from the Philadelphia College of Pharmacy in the same class with William R. Warner, of William R. Warner & Co., and was in Mr. Warner's employ for ten years as traveling salesman and two years as manager of the New York office of the concern. Mr. Schick served as captain of the Eighth Pennsylvania Cavalry during the Civil War. The body was shipped to Philadelphia where it was buried in the family plot in Mt. Moriah Cemetery by his widow, Mrs. Elizabeth B. Schick. One daughter also survives him. Mr. Schick enjoyed a large acquaintance in the trade throughout the United States.

—It developed during the last week that the explosions which destroyed the building of Tarrant & Co. and many other business firms, Monday, October 29, were due to chemical or heat action on chlorate of potash, large quantities of which were stored in the building. It has been stated that the following firms stored the chemicals there: Rogers & Pyatt, McKesson & Robbins, Schoelkopf, Hartford and Hanna and R. W. Phair & Co. It has also been stated that Harshaw, Fuller & Goodwin had 100 barrels of sulphur in the place. The investigation by the Fire Marshal has not yet been concluded, but it is hinted that Tarrant & Co.'s insurance policies may be vitiated if it is proven that the chlorate of potash was stored in the building in violation of the law, and it has been said that criminal action may result.

—Jacob Fredericks, who said he was a medical student and resided at No. 1,420 Amsterdam avenue, was arrested Friday evening on a charge of swindling, preferred by Hamilton Aley, Jr., a druggist of No. 1,961 Amsterdam avenue. Fredericks went to Mr. Aley's store Friday evening with a prescription and asked that it be filled and sent to his address together with change for \$5. Mr. Aley became suspicious and questioned the fellow, who immediately ran from the store, but was caught by Dr. E. A. Norton, of Broadway and 159th street, who was passing at the time. He was arraigned in Harlem Police Court Saturday morning and held for trial. For some time past druggists in Harlem have been victimized by a plan the same as the one tried by Fredericks on Mr. Aley and it is believed the medical student is the person who is guilty of the work.

—Joseph De Giorgi and Mariana H. Mason, students at the New York College of Pharmacy, living at 1987 Broadway, were arrested Wednesday evening, October 31, on warrants issued by Magistrate Zeller charging illegal registration. The complaint is said to have been made by a boarding house proprietor whose house the young men had recently left. The contention of the police was that the young men had not resided in the country the requisite four months. In court Thursday morning the young men told Magistrate Zeller they had lived in the county for the last year but during the sum-

mer months De Giorgi had been employed in Asbury Park and Mason had been spending a vacation with his parents. They were promptly discharged.

—The November bulletin of the Scientific Alliance of New York has been issued, and contains the following schedule of meetings for the month: Friday, Nov. 9, Chemical Society; Monday, Nov. 12, Academy of Sciences; Tuesday, Nov. 13, Torrey Botanical Club; Friday, Nov. 16, Microscopical Society (Annual Exhibition); Monday, Nov. 19, Mineralogical Club; Monday, Nov. 19, Academy of Sciences; Tuesday, Nov. 20, Entomological Society; Monday, Nov. 26, Academy of Sciences; Tuesday, Nov. 27, Linnean Society; Wednesday, Nov. 28, Torrey Botanical Club. The Society requests that members inform their friends that visitors interested in the subjects announced are welcome at all the meetings of the societies.

—In consequence of the recent fire and explosions which destroyed the Tarrant and other buildings, Monday, October 29, a number of the large jobbing houses have removed their stocks of chlorate of potash, etc., to safer places. A number of men have visited the drug houses during the last few days on tours of inspection. It is hinted that the men were in employ of the fire department and were looking up particulars concerning the Tarrant fire. It was said that one firm which handles heavy chemicals removed as much as seven tons from its building during the week and that the same concern had nearly five times this amount destroyed in the Tarrant fire.

—It is understood that the well-known store of W. B. Parkin & Co., for many years located on the corner of Sixty-sixth street and Columbus avenue, has been rented to other parties for the year beginning May 1, 1901. Parkin & Co. will remain in the locality provided a suitable site for another store be obtained. It is stated that the neighborhood offered better advantages to a liquor store than a drug store and this was the reason for the refusal to renew Parkin & Co.'s lease.

—The Walpole Chemical Co. has incorporated under the laws of New Jersey with a capital of \$100,000 and will manufacture paints and chemicals at East Orange, N. J. The incorporators are W. J. Matheson and R. A. Shaw. Another concern to incorporate under the laws of New Jersey is the Billings-Clapp Co., and it will deal in the same line. Its capital stock is also \$100,000, and its incorporators are R. A. Shaw, C. H. Otis, C. W. Millard and C. W. Joy, all of New York.

—Mr. Walker, of the New York Telephone Company, was to have met the following committee of the Manhattan Pharmaceutical Association at the store of W. H. Poir, Saturday evening, Nov. 3: President R. R. Smith, William Schauf, W. H. Poir and A. E. Gebhardt, for the purpose of offering something of benefit in the matter of telephone rates. Word was received Saturday morning that Mr. Walker could not be present, so the meeting was postponed indefinitely.

—The committee of the German Apothecaries' Society having in charge the entertainment proposed at a recent meeting, have arranged to have the outing at Piel Bros.' Brewery, corner Liberty and Sheffield avenues, Brooklyn, Thursday, November 15. The programme will include bowling from 3 o'clock to 7 P. M., a medal to be given to the one securing the best score; a supper will be served and a stag entertainment in the evening.

—A slight fire occurred in the fifth floor of the building at 20 Cedar street, occupied by the Croton Chemical Co. and Dillon & Co., Wednesday morning, October 31. The Croton Chemical Co. deals in saltpetre and borax and Dillon & Co. handle drugs and chemicals. Fortunately the blaze did not get a chance to spread, else a serious fire might have resulted.

—The schedules of Annie J. Lawrie, doing business as Lawrie & Co., and who recently filed a petition in bankruptcy, have been filed as follows: Liabilities, \$7,803.41, and assets, \$1,169.71. Of the assets there is \$1,800 represented in stock in trade, consisting of dyestuffs, chemicals and acids, also fixtures. The debts due on open accounts are \$1,685.80.

—Among the druggists who have visited the trade during the last week were the following: James M. Love, Kansas City; H. C. Ogden, of Ogden & Shimer, Middletown, N. Y.; W. H. Hyler, Port Chester, N. Y.; Dr. C. B. Strong, Bayside, L. I.; J. C. McClure, Coxsackie, N. Y.; C. Dick-

inson, New Britain, Conn., and N. M. Strong, North Woodbury, Conn.

—Henry Siebenborn, druggist at 255 Ninth avenue, was arraigned before Magistrate Mott in Jefferson Market Court Wednesday, October 31, on a charge of allowing an unregistered clerk in his employ to compound prescriptions, the New York Board of Pharmacy being complainant. Mr. Siebenborn was held for trial and was admitted to bail.

—Henry H. Risley, who for many years has been with his father, Charles F. Risley, of C. F. Risley & Co., proprietary medicines, at 46 Cortlandt street, is slowly recovering from a severe attack of typhoid fever. He has been confined to his house for the last seven weeks, but is expected to be out in a short time.

—The games of the Wholesale Drug Trade Bowling Association were not played last Saturday because of the Sound Money Parade. This Saturday the following teams will contest: Seabury & Johnson, Johnson & Johnson, Dodge & Olcott, National Lead Co., General Chemical Co. and Church, Dwight & Co.

—The American Institute of Electro Therapeutics has incorporated to supply drugs, electricity and remedies for diseases. The offices of the concern are located in this city and the capital stock is \$5,000. The incorporators are S. G. Tracy, W. H. McIntosh and E. E. Black, all of this city.

—Prof. George C. Diekman, as stated last week, has accepted an invitation to deliver a lecture on the new Pharmacy law before the Manhattan Pharmaceutical Association at its next meeting, November 19. All druggists in the city are invited to be present.

—The next meeting of the members of the new All-State Board of Pharmacy is to be held in the New York College of Pharmacy, November 15. The session will begin in the morning, and will probably continue throughout the day.

—The drug firm of Adams & Co. at Saugerties, N. Y., has gone out of business. Harry W. Adams writes that Adams & Co., 3 North Perry street, Johnstown, N. Y., is a new firm and has no connection with the old one.

—J. J. Ogle, formerly manager for H. A. Cassebeer, at Seventy-fifth street and Madison avenue, is now manager in the Sherman Square Pharmacy at Seventieth street and Broadway, recently owned by A. P. Kerley & Co.

—There is to be circulated shortly throughout the State 10,000 pamphlet copies of the new pharmacy law. The work has been conveniently indexed, is printed with wide margin and bound strongly for preservation.

—The importations of drugs, chemicals, etc., to this port for the week ending Nov. 2 amounted to \$813,578. The largest shipments were of brimstone, of which there was \$100,755 worth.

The next sitting of the New York City Board of Pharmacy will be held in the Brooklyn College of Pharmacy, Monday, November 19, when a number of applicants will be examined.

—The Empire Baking Powder Co. of this city has incorporated with a capital of \$1,000. The incorporators are B. S. Heller, F. Jellenik and N. D. Stern, all of New York City.

—William O. Luttman, of 440 Columbus avenue, is to remove his store to another address in the neighborhood, the place having been rented to other parties.

—Ambrose M. McGregor, president of the Chesebrough Manufacturing Co. and director of the Standard Oil Company, died at his house in this city last week.

—T. P. Cook, manager of the New York Quinine and Chemical Works, returned Friday, November 2, from a visit of several weeks in the South.

—Chauncey N. Hemlon will open a drug store in Suffern, N. Y., November 17. Mr. Hemlon is a young man and has bright prospects before him.

—The Retail Druggists' Association will meet to-morrow evening. At the meeting held October 26 ten persons were elected to membership.

—The Apothecaries' Bicycle Club wheeled to Madison, N. J., last Thursday and to-day the members are at Oakwood, Staten Island.

—Julius Lifschitz has purchased the store of William Vincent, corner of Atlantic and Albany avenues, Brooklyn.

—A. Braunstein will open a new store at Bushwick avenue and Boerum street, Brooklyn, about November 10.

—Frank E. Brownell has resigned his position with A. W. Day at Asbury Park and is now living in this city.

—E. C. Woodstock is no longer connected with the pharmacy of Theodore Merritt's Sons at Newburgh, N. Y.

—O. F. Fuller, president of the Fuller & Fuller Co., of Chicago, called on friends in the trade last week.

—William J. Cremin has discontinued his connection with the pharmacy of C. Landell at Bayonne, N. J.

—John J. Evans, of Liverpool, England, was a visitor at the Drug Trade Club during last week.

—A. M. Pergans has lately become clerk in George W. Burns' pharmacy at Bernardsville, N. J.

—L. Woelfert has recently purchased the store of Oscar Linke at 6 Sumner avenue, Brooklyn.

—P. H. Hall, auditor for Parke, Davis & Co., at Detroit, Mich., is in the city for a few days.

—J. W. Ballou, of New Haven, Conn., was in town calling on old friends last week.

—A. E. Pickhard, a well-known druggist of Roslyn, L. I., was married recently.

—Alexander Goldman has sold his store, corner Market and Monroe streets.

—John Corr has accepted a position with A. Richter, 1010 Third avenue.

IN AND ABOUT BOSTON.

New York Explosion Recalls a Similar Fatality in Boston.

Boston, Nov. 3.—The fearful explosion at the Tarrant plant in New York recalls a somewhat similar fatality which occurred here on the evening of May 26, 1875. The scene was the old brick building at the corner of Washington and Lagrange streets, on the ground floor of which there was a drug store. About half past six an explosion occurred which left it and part of the adjoining structure in ruins. Fire followed the explosion. At the time there were in the drug store several customers, all of whom miraculously escaped. Three fatalities resulted. At the time of the explosion no cause was known, and up to the present time it always has remained a mystery. Some thought that explosives were stored in the cellar of the drug store, but the proprietor, E. G. Dow, stated that there was nothing which would cause such an explosion, with the exception of soda water generators.

Box Manufacturer's Will to be Contested.

Boston, Nov. 3.—Druggists throughout New England and elsewhere knew Charles Place, the old-time box manufacturer, who recently died in Cambridge. He manufactured at his large plant many of the kinds of paper boxes which druggists use so constantly. It is interesting, therefore, considering that the man is alleged to have led a dual life, to know that his will has been filed at the Middlesex Probate Court, East Cambridge, by Andrew J. Rady, attorney for Elfereta M. Worden, with whom the testator lived at the time of his decease, at 314 Broadway, Cambridge. The will gives to each of the two daughters (married) by his first wife, \$5. All the real estate, personal and mixed, he gives and bequeaths (subject to the lawful claims of his wife, Martha E. Place) to three children (by Elfereta M. Worden, the second wife—known as Place) in three equal parts, to have and to hold, the same to them, their heirs and assigns forever. He nominates Dr. Joseph A. Wolcott, of Cambridge, as sole executor of the will. The will was made October 15, 1900, and the signature looks as if he were feeble then. The first wife, Martha E., lives in Somerville. She claims there never was a divorce. Dr.

Wolcott, the executor named in the will, has filed his bond to the amount of \$12,800 and has reported that the amount of real estate he has found is \$16,000, while the personal estate amounts to \$6,400. He asks for the allowance of the will and that letters testamentary shall issue him. The appraisers suggested were Henry Russell, George Close and Edward C. Wheeler, all of Cambridge. The will, it is said, will be contested by the first wife of Place and his legitimate children.

NOTES.

—At the annual meeting of the Paint and Oil Club of New England, held this week, thirty members were present to dine at Parker's. President F. H. Newton presided. George B. Dexter was chosen a member of the Pricing Committee for November and Robert Archer was elected a delegate to the State Board of Trade for three years. The following named officers were elected: President, Norris S. Wilson; vice-president, J. William Rice; secretary, C. W. Willis; treasurer, W. S. Cutler; directors, F. H. Newton, S. G. King, R. D. Archer, George B. Dexter, Leander Fobes, M. W. Brownell and J. Russell Marble.

—Mrs. Albert Eayrs, formerly of Jamaica Plain, and widow of Albert Eayrs, the druggist, who died last spring, attempted to take her own life by jumping into the Merrimac River from a bridge at Concord, N. H. She was rescued by a man who was boating at the time. Mrs. Eayrs has been seriously ill since Mr. Eayrs' death. His drug store, on Green street, Jamaica Plain, never has been opened since his death. It still stands stocked with fixtures and goods, practically as he left it.

—A new device for administering drugs and medicines has been invented by a Worcester dentist, Dr. W. O. Bloom. It is in the form of a glass tube, with a bulb at the end with an opening near the top for pouring in the medicine. The bulb is graduated so that exact quantities of medicine can be measured. The tube is curved in such a way that by slowly twisting the bulb in one hand the medicine is poured into the throat of the patient.

—A seventeen-year-old boy went a-thieving one day this week and finally brought up in a police station. He paid a visit to the drug store of the Walker-Rintels Company, 244 Boylston street, and took possession of two hair brushes. Clerks caught him in the act and held him until the police arrived.

—An evening fire this week in the rear of the Walker-Rintels Drug Company's Back Bay store, corner of Boylston and Church streets, fortunately did not amount to much, although dangerously near to doing so. It was confined to a lot of empty boxes in the alleyway back of the store.

—Among the petitions in bankruptcy filed this week is that of Arthur A. Stinson, a druggist of this city with a store at 268 Washington street, in the Roxbury district. His liabilities are \$4,818 and he is without assets.

—John W. Tirrell, of Canton, is the president and William B. Tirrell of the same town is treasurer of Tirrell's Pharmacy Company just organized at Kittery, Me., with a capital stock of \$5,000, of which nothing is paid in.

—John Ferrin, for some time druggist at the corner of Tremont street and Concord Square, is now the owner of the well-known Dudley Pharmacy, Boylston street and Park Square, which he purchased last month.

—Josiah Bryant, one of the senior salesmen of the Eastern Drug Company, and who has been ill during several weeks past, is now recovering and it is expected that before long he will be able to be back at his desk.

—Edgar J. Howland, a Somerville druggist, who also is a physician, is a voluntary petitioner in bankruptcy. His liabilities are \$2,666 and his assets are about \$200 more than that—\$2,888.

—The week's exports from the Port of Boston include drugs and chemicals, \$13,785; india rubber manufactures, \$15,116; tobacco, \$17,319; was, \$370, and spirits, \$48,642.

The Barnes Botanic Drug Co., Tullahoma, Tenn., have gone into receiver's hands. They were dealers in crude drugs. It is reported that their liabilities are about \$8,000.

PHILADELPHIA.

THE PHARMACY BOARD PROSECUTIONS.

Philadelphia, Pa., Nov. 1.—The hearing of the cases of Philadelphia druggists summoned before Magistrate Cunningham for violation of that part of the State Pharmacy law relating to the public display of certificates of registration and renewal thereof, came to an abrupt ending last Tuesday in an unexpected manner. Four druggists, unrepresented by counsel, had appeared, pleaded guilty and had paid their fine and costs, \$12.50; two had paid and given notice of appeal and the fifth case was being tried when lawyer John H. Fow interrupted the hearing with a challenge of the power of the State Board's attorney to ask questions of his client tending to make him give evidence against himself. In the legal wrangle that followed, the credentials of the board's attorney were also challenged and demanded, as were the credentials of the two agents of the board who had gathered the evidence in these cases. The magistrate sustained all these points. Then it was found that while the board's attorney has his credentials, those of the agents had been left by them at their hotel, and a further legal tussle ensued.

The result of these challenges and arguments was a continuation and postponement of all cases until Monday, November 12, at 10 A. M., this agreement being reached after a conference between the attorneys for the druggists, the board's attorney and its members present.

This is looked upon by the druggists as being greatly in their favor, as giving them time to reach some understanding with the State Board in regard to cases of a minor nature. The State Board was represented by A. T. Stewart, of Towanda; J. H. Fow represented several druggists individually and W. W. Wallace appeared for the Philadelphia Association of Retail Druggists. Quite a number of prominent local retailers were at the hearing, which had excited a general interest among the trade, as were also reporters from most of the daily papers, who looked upon the affair as quite an item from a humorous view.

In the hands of these news gatherers the "erusalem," as they term it, of the State Board has been distorted into an entirely different aspect from what it really is. Although there was quite a bit of hard feeling against the board at first, since matters have appeared in their true light nothing but the unfair reports in the daily papers have given anyone cause to disparage the efforts of the board to enforce the State law. It is now pretty generally recognized that while the State Pharmacy law is what it is, the board had nothing else to choose except to see that it is complied with; if any one is caught napping it is his own fault for not obeying the law's provisions. The only point on which the druggists take issue with the board is in those cases where men have been summoned for violating the law in not displaying the certificate of renewal as well as that of registration. There is much in favor of their contention, for the majority of business men would naturally look upon the renewal certificate as merely a receipt for the money they had paid in and would never think of doing anything else except filing it away with other business receipts. Also many hold that it was the part of the board to notify druggists when they sent this renewal certificate that it, too, had to be displayed along with the certificate of registration.

It is on this contention that the Philadelphia Association of Retail Druggists have employed counsel to defend such cases and have called a mass meeting of druggists to take action looking to a final settlement of the disputed question. There is not, nor has there been, the slightest intention of the part of the P. A. R. D. to defy the State Board; on the contrary, one of the articles of this association's constitution requires that none but "registered pharmacists" can become members, and the P. A. R. D., through its members and officers has afforded and is now affording every possible help to the State Board to bring to justice that class of offenders which brings so much discredit on the good name of pharmacy. This is noted, as there seems to be a misconception in some quarters of the position taken by the P. A. R. D. (in its efforts to assist unintentional offenders

and those who offended because of a mistaken idea of the law) to come to an understanding with the State Board without the necessity of a public trial.

With this purpose in view a delegation from the P. A. R. D. went to Harrisburg yesterday to confer with President Emanuel and others of the State Board. President McIntyre, Executive Committee Chairman Perry, Vice-president Hoch, Secretary Rumsey and W. L. Cliffe were the representatives of their association and the interview was, it is reported, very pleasant and entirely without friction. The delegates, Mr. Cliffe presenting their arguments chiefly, endeavored to bring the board to see the matter as they did; that is, where no wilful or flagrant violation of the law was found, to withdraw the case, and of course while nothing definite can yet be said there is a strong belief that the board will take this action.

It is understood that the board in withdrawing these cases will do so because of the evident intention of this class of offenders to comply with the law by displaying their certificate of registration, and that they did not also display the certificate of renewal is considered to be from either an oversight or from ignorance of this requirement. And so what threatened to be a most disagreeable clash between the State Pharmacy Board and the druggists of Philadelphia seems likely to pass off with the best of feeling on both sides. As said last week, the board is composed of able and fair-minded men and the hot-headed ones are now beginning to see that the board could not do otherwise than it did when it started in to enforce generally the State law. The evident willingness of the board to "do the square thing" fully justifies the claim that they had no intention of a "persecution" or a "round up" of fines, as many at first accused them. Most of the criticism can really be traced to the over-zeal of the agents, who had in many cases exceeded their instructions.

MASS MEETING OF PHILADELPHIA DRUGGISTS.

Philadelphia, Nov. 3.—A mass meeting of the retail druggists of this city was held yesterday under the auspices of the Philadelphia Association of Retail Druggists at the Philadelphia College of Pharmacy. The purpose of this meeting was to discuss the recent action of the State Pharmacy Board in preferring charges of violations of the State Pharmacy law against a large number of druggists here and to learn how it might be possible to settle many of the merely technical offences outside of court.

In the discussion, which followed the regular meeting of the P. A. R. D., it was shown that many druggists were quite ignorant of the provision of the law relating to the display of renewal certificates and also of the power and obligation of the board to enforce this and other sections. Mr. W. L. Cliffe presented clearly the results of the conference between the association's committee and President Emanuel of the State Board, saying that while the board desired to act fairly towards technical violations there was nothing to be done by those whose neglect to display certificates of registration put them at fault but to pay their fine. Mr. Perry and others also spoke along this line, counselling respect for the State Board and expressing confidence in its desire to act fairly. There was none of the anticipated violent opposition to the State Board, sober second thought having brought even those most indignant last week to see that they were only "bucking up against" the law as it now stands. There was a general expression of opinion that the present State Pharmacy law is woefully inadequate and unsuitable, the section calling for an annual fee of \$1, payable every three years, for renewal of registration being particularly unjust to druggists. A strong sentiment has been aroused for a repeal of the present law and the enactment of proper regulations to govern the profession of pharmacy in this State.

The result of the meeting was a decision to wait further action until the reply of the board had been received by the association's committee. If necessary legal counsel was to be engaged to defend all cases where the violation was unintentional or ignorant. The wisdom of this course and of the moderate counsel advised by those best informed was fully vindicated by the following com-

munication, received later, from the attorney of the State Board:

To the Philadelphia Retail Druggists' Association: Gentlemen: The State Pharmaceutical Examining Board of Pennsylvania, by its attorney, respectfully submits the following proposition:

First. The board will insist upon the display of certificates of registration and will not discontinue prosecutions for a non-compliance with this provision.

Second. The board will not discontinue cases brought for a violation of the Poison and Adulteration section.

Third. In relation to the suits now pending before Magistrate Cunningham, the board will ask that all cases be dismissed at the cost of the board in the following instances, namely: Where a druggist will state that he was not aware that it was necessary to display his renewal certificate; that he has honestly attempted to comply with the law, or that he has received no notice that it was necessary to so display his renewal certificate, and the board will accept the druggist's own statement as to those facts and order suits discontinued without further evidence.

Fourth. Where, however, the evidence shows that the violation was wilful and malicious, with full knowledge and notice, the board will insist upon the fine being imposed, but innocent violators will be discharged.

Fifth. That hereafter the present prosecutions and notoriety shall be deemed sufficient notice to druggists in this city to comply with the law and subsequent violations will not be excused.

The attorney for the board hereby agrees to meet a committee of your association and discuss any modifications of the foregoing proposition and endeavor to amicably adjust any differences.

All of which is respectfully submitted.

A. T. STEWART.

Attorney for the State Pharmaceutical Examining Board. Philadelphia, November 2, 1900.

Action on this communication will probably be taken at once by the Executive Committee of the P. A. R. D. and the committee appointed to confer with the State Board, the results of which will be made known early in the week.

The concessions granted by the State Board are precisely those asked for by the P. A. R. D. committee, and no doubt will be received by druggists generally with great satisfaction. This is but another addition to the long list of achievements of the Philadelphia Association of Retail Druggists for the benefit of Philadelphia druggists. It is indeed a pleasure to note the zeal and energy displayed by this association in every question affecting the interests of the retail druggists, and it certainly affords a shining example of the good that a real, live druggists' association can do for its members. Philadelphia to-day can boast of having the most active, energetic and successful organization of retail druggists of any of the larger cities.

NOTES.

—Alexander, hospital steward of the battleship Indiana, a P. C. P. graduate, has left the naval service by reason of the expiration of his term of enlistment and expects to take up the study of medicine as his future profession. It has often been commented through the Navy that P. C. P. men stand at the top of the ladder as regards efficiency and good character and that most of them generally wind up either in the profession of medicine or as owners of the finest pharmacy in whatever place they may locate. Two P. C. P. boys, Messrs. Evans & Goss, are now owners of the largest and finest drug store in Nagasaki, Japan, which they bought from an Englishman and proceeded to make a big success of along American lines.

—The Code of Ethics of the Philadelphia College of Pharmacy College of Pharmacy has practically not been altered since 1840. That such should be the case is indeed a testimonial to the far-sighted men who then composed and adopted a Code of Ethics that has stood as a model ever since. The proposed change in the by-laws provides for the appointment of a Committee on Nominations to propose candidates for election to the different offices and regulations for the manner of so doing. It is also proposed to have the certificate of membership issued by the college copyrighted to prevent infringement and possible fraudulent imitation.

—There is a strong probability that a Bowling League will be formed among the employes of the wholesale drug houses here after the example of New York, Baltimore, etc. It is proposed to have each firm represented by a team and to have regular contests, and as soon as the clubs are in working order to pick out a team to challenge New York and Baltimore. The promoters and

those who have signified their intention of joining bowling clubs are very enthusiastic over the outlook.

—A very fine display of otto de rose and neroli, with five and ten gallon containers of rose and orange flower water, in their original packages, was a feature of J. P. Frey's window display at his Sixteenth and Tasker streets store last week. Many passers-by stopped to look at the queer packages which held in so small a bulk so many dollars' worth of the rare and valuable perfumes.

—Two changes in ownership are noted. W. Webb has bought out Mr. Hummels, of Thirtieth and Richmond streets, and J. W. Laughren succeeds Mr. Kyle at 2909 Kensington avenue.

—Mr. Hagenbuch, who was formerly in business at Fifty-first and Baltimore avenue, has given up his store and is now with Stoevver's Broad Street Station Pharmacy.

—C. Whittaker, manager of the Glenside Pharmacy, has purchased an interest in the business and will make several much-needed additions to meet the increase of trade.

—Mr. and Mrs. Joseph Crawford were made happy a few days ago by the arrival of a new girl, a baby one, who secured a situation on the 15th with Mrs. Crawford.

—F. W. Jordan has disposed of his pharmacy at Tacony and has taken charge of the stores at Second street and Lehigh avenue and Thirteenth and Vine streets.

—Walter E. Lee, formerly with Dr. Cantrell, of South Second street, has accepted a position with N. Richardson at Sixth and Diamond streets.

—W. H. Ricker, of Nineteenth and Dickinson streets, has joined the noble army of benedicts and is being kept busy dodging congratulations.

BALTIMORE.

The Troubles of the Houchens'.

Baltimore, Nov. 1.—Mrs. Mary E. Houchens, of 623 Hopkins avenue, was before Justice Lewis, at the North-eastern Police Station, last Sunday to answer the charge of libel preferred by her husband, Dr. J. T. Houchens. The couple do not live together and their disagreements have formed food for the neighborhood gossip for some time past. When they separated, several years ago, the wife continued to manufacture and sell on her own account a medicine of which Dr. Houchens claims to be the patentee and which, he said, he alone had the right to manufacture. The wife, on her part, asserted that she had assisted the husband in his business and was as much entitled to the use of the formula in question as he. Each has since been pursuing his own course. Lately, however, according to the statements of the husband, the wife has caused to be printed and circulated handbills bearing the wife's name and setting forth among other things that "I, Mary E. Houchens, his wife, possess, the original recipe, given to me by him fourteen years ago, and have been manufacturing the medicine for the trade in his absence." It was also alleged in the circular that the husband had been guilty of improper conduct with a former servant. This latter clause prompted Dr. Houchens to have the wife of his bosom arrested on a warrant. The accused waived a hearing and was released on bail for the action of the criminal court, where the next scene in this domestic drama will be enacted.

Among the Bowlers.

Baltimore, Nov. 2.—Surprises are still the order of the day, or rather, of the evening, in the Baltimore Drug Trade Bowling Club contests. Last season James Bailly & Son were accounted a fairly strong team and they are still to be regarded as a formidable opponent. But McCormick & Co., this season's newcomers, took them in hand on Tuesday night and made them look like thirty cents, to employ classic language. The infants took all three games by scores which cannot be considered high, but which did the business effectively. The totals were: McCormick & Co., 707, 721 and 770 points; James Bailly & Son, 696, 686 and 725. No remarkable individual records were made during the evening, neither were there any astonishingly low ones. The work of all

the bowlers was exceptionally even. To-night Sharp & Dohme gave battle to Parke, Davis & Co., taking all three games handily. The losers developed several weak spots and the work of the stronger men proved ineffective in pulling up averages. The present standing of the teams is as follows:

Teams.	Games Won.	Games Lost.	Per cent.
Root and Herbs.....	5	1	.833
McCormick & Co.....	7	1	.778
Sharp & Dohme.....	5	4	.556
James Bally & Son.....	5	4	.556
Muth Bros. & Co.....	4	5	.444
Winkelmann & Brown Drug Co.	3	6	.333
Parke, Davis & Co.....	1	8	.125

The Tarrant Disaster.

Baltimore, Nov. 1.—The destruction of Tarrant & Company's establishment in New York was extensively discussed by manufacturing pharmacists here this week, who scanned eagerly every detail of the published accounts and expressed themselves as being of the belief that the disaster was caused primarily by fire which came in contact with certain gases and caused a series of explosions. "You will note," said one experienced chemist to the Era correspondent, "that shortly after the fire had broken out there was a slight explosion, followed about four minutes later by a tremendous detonation, which blew out the walls. It is evident that gases of chlorate of potash or some other substance coming in contact with the flames were exploded."

DETROIT.

THEY'VE GOT TOGETHER NOW.

Detroit, Nov. 1.—To-day, November 1, the new schedule of prices for drugs goes into effect in this city. The committee of five of the local druggists' association, appointed less than two weeks ago, worked like Trojans and submitted a report on Tuesday of this week which was adopted without a dissenting voice. Everybody is in on it—all the druggists, all the cutters (even the most aggressive), all the department stores. The new schedule comprises about 150 articles, all of which have been raised from 10 to 20 per cent. on the prices which have prevailed to a greater or less extent among the cutters ever since the evil broke out in Detroit, and which continued up to this morning. Articles which have been sold for 67 cents are now marked 75, 80 and even 85 cents; 17 cent articles are up to 20, and so all along the list. These prices are the minimum agreed upon and no one can in honor go below them. If violations are made they will be accidental and will be remedied as soon as possible.

The Tuesday meeting was largely attended and proved very satisfactory. The "conciliatory basis" idea had been faithfully adhered to and seemed the best possible plan to work upon—more profitable to the trade and better for all. Druggists of the city feel that a big step forward has been taken, in that everybody in the city to-day is selling upon an agreed basis. It is something to start from, even if it does not at this time mean selling goods at full prices. It is hoped and believed that another raise can be made in a few months. The fact of the new schedule is not being advertised, for it is thought best not to call the attention of the public at large to it. If the change can be made without attracting much notice and exercising the public unduly, the druggists will feel that they are on safer ground than for several years.

NOTES.

—H. C. Clark, of Farrand, Williams & Clark, has returned from a trip down East. While in New York City Mr. Clark was a guest at the Booksellers' Club banquet where he heard one of the Pekin University professors give a talk on "Influence of Literature upon the Chinese." The speaker gave the English words of some of the Chinese songs, which were unusually pleasing and beautiful, Mr. Clark says. On the whole the literature was said to be decidedly elevating in its influence.

—The Michigan Drug Co. are trying to perfect plans by which they can add to their building or build it higher. This is necessary because of the great increase in their manufacturing department. October business in this department is reported to be about double that of October, 1899.

—A. P. Breitenbach, for several years in the drug business at the corner of Champlain and Sheridan avenues, Detroit, has sold to J. D. Hogg. The new firm will be Hogg & Walters. Mr. Hogg has a store on Jefferson avenue which he will continue to run.

—State Food Commissioner Grosvenor, of Michigan, has ordered a chemical analysis of the chewing gum sold in the penny-in-the-slot machines about the city. It is being claimed that cocaine and other harmful drugs enter into the gum.

CHICAGO.

A Druggists' Association Plays Politics.

Chicago, Oct. 31.—The Executive Committee of the Druggists' Protective Association of Chicago, consisting of Messrs. Emil Thiele, president; Hermann Fry, first vice-president; Rudolf Stangohr, second vice-president; Rudolf P. Braun, third vice-president; Jno. J. Boehm, T. L. James, R. C. Frerkson, S. C. Yeoman, treasurer, and Alfred P. Knight, secretary, have issued the following circular, which, in the expressive phrase of the well-known local maker of epigrams, "finally hitches the association to the tail of the free silver kite":

Bro. Druggist: Do you wish a continuance for the next four years of the present spying, entrapping and informing of Chaffee and the prosecution of Kitt Gould? Do you want another four years of fear and dread lest you should be held up on the charge of violating some little technical law and taken miles from home before one or another of the far-famed justices of the peace only to put political spoil in the pocket of our persecutor, not for the public good, as he would have you and the public believe?

It not, vote for Julius Goldzier for States Attorney and appeal to every Republican friend of yours who has a keener sense of decency and justice than political partisanship to do the same.

Remember that the present States Attorney appointed Kitt Gould to the position and retains him there, therefore agreeing with his conduct apparently for purely political reasons, is therefore responsible and should suffer in consequence. Vote yourself and don't fail to influence others to vote for Julius Goldzier for States Attorney, and just as sure as he is elected we shall get a fair show, which is all we want.

We want no favors, only justice.

THE COMMITTEE.

It is broadly hinted that at least one member prominent in the counsels of the Protective Association has not ceased to harbor political aspirations, having already figured somewhat in that arena. He is a strong man and impresses his views upon his associates usually with considerable success.

NOTES.

—In the Business Men's League Saturday night, October 27, the Drug Trade rollers were twice defeated by the Publishers. Scores: Publishers, 832, 761, 774; Drug Trade, 797, 929, 732. In the second game the druggists made an unusual score and won.

—Dr. James, of James & Dewey, Sixty-third street and Woodlawn avenue, has been absent several weeks attending his sister who is seriously ill at Gilbert Station, Illinois.

—Mr. and Mrs. Ed. Hitchcock, Fifty-fifth and Halsted streets, returned last week from their wedding trip. They have begun housekeeping in a neat flat on Garfield Boulevard.

—A. G. Castor has bought the goods and fixtures of the F. E. McKenzie pharmacy at Lake street and Homan avenue, recently foreclosed by Peter Van Schaack & Sons.

—The store formerly owned by Edward A. Schmidt, deceased, at 3622 Archer avenue, has been sold to the firm of Rush & Schmidt for a consideration of \$2,350.

—J. H. Prouty, organizer for the N. A. R. D., has been retained by the Chicago Retail Druggists' Association to push organization work in Chicago.

—A. J. Kettering, 2601 South Halsted street, was the nominee of the Republicans for member of the General Assembly from the First District.

—George Ritter, formerly at Fifty-first street and Ashland avenue, has moved his store to Sixty-ninth street and Stewart avenue.

—B. Winholt, 248 Grand avenue, has sold out to Dr. J. F. Stanton, who has christened the store the "Diamond Pharmacy."

—Campbell Brothers, Chicago Heights, Ill., have sold out to Oliver & Company, who also own a store in Harvey, Ill.

—It is reported that the Hampden Pharmacy at Thirty-ninth street and Langley avenue is negotiating to sell out.

—C. L. Feldkamp, 400 North Ashland avenue, has sold out.

THE NORTHWEST.

JAPANESE CHEMIST'S OBSERVATIONS.

St. Paul, Nov. 2.—A Japanese chemist of high station was in this city the other day and advanced a number of instructive ideas in an interview. It was Dr. Matsujino Kamoshita, of Tokio, agricultural chemist of the Japanese Department of Agriculture and Commerce.

Dr. Kamoshita is on his way back to Japan from the Paris Exposition. He was Japan's agricultural commissioner to the great fair, and he acquired much valuable information which he intends to put into practice upon his return. The Doctor is greatly interested in the situation in China, but did not care to discuss the situation at length, owing to his governmental position. He says that China has been misrepresented to a considerable extent and that the people have not been altogether to blame for the present mix-up. With all the great powers undertaking to transact the country's business for it, he says, it is small wonder that the people did finally show resentment. He does not approve of the Boxer methods of retaliation, however, and thinks that the chief conspirators should be severely dealt with. He believes the powers will finally recognize the wisdom of letting China alone, at least so far as the proposed partition of the empire is concerned. It is not written, he declares, that China, "the most venerable of the nations, in which the arts of civilization were first taught," is to be dismembered because she has for various reasons become a laggard in the race. He maintains that the country still has a future.

Dr. Kamoshita declares that it would be the height of folly for the United States to relinquish its hold on the Philippines. Said he:

"People who have not visited the Philippines can have no idea of the vast amount of material wealth which there awaits development. Those islands will contribute immensely to the prosperity of the United States. The outcome of the elections in the United States is being awaited with the utmost interest in Japan. America has had such an influence on my country for the good that we are naturally concerned about everything which might change conditions here. We hope to see Mr. McKinley elected; the triumph of the Republican party will mean much to us as a stimulant to the trade relations between the two countries, which are being emphasized more and more by the growing commerce with the Philippines. The moment the United States lets go of the islands Japan stands ready to shoulder the burden, and all the other powers would be willing. We were glad to see Admiral Dewey in the Orient. When Commodore Perry opened up our ports to the world he conferred a hidden blessing on us. That was the signal for the gigantic strides forward in civilization and progress which Japan has taken in the last fifty years. Japan will be with the United States when it becomes necessary to form international alliances for mutual protection."

NOTES.

—Successions: E. D. Putnam & Co., Harris, Ia., by Ira J. Burlison, Jr.; Lion Drug Co., Clinton, Minn., by John Onstad; Scallin Bros., Scotland, S. D., by Woodward & Filbert; Kinyon & Hess, Des Moines, Ia., by J. W. Hess; H. H. Lexvold & Co., Roland, Ia., by T. P. Hermanson; F. H. Ellis, Nebraska City, Neb., by J. C. Thygeson; Smart & Bottelsohn, Blue Earth City, Minn., by Bottelsohn & Co.; Tabler, Marquis & Co., Colfax, Ia., by F. A. Marquis & Co.; Lawrence & Cummins, La Porte, Ia., by Cummins & O'Reiley.

—The plant of the Minnesota Pharmaceutical Manufacturing Company in this city was slightly damaged by fire this week. An employe left a pot of grease on the fire when the plant was closed for the night, which

boiled over and would have destroyed the building had it not been discovered by a policeman just in time.

—According to the published reports A. Rasmussen, formerly of this city, and Dassell, passed the examination before the Montana board at its last meeting with an average of 91.2-3, thus upholding the honor and dignity of the State of Minnesota.

—G. M. Larson has left Mr. Davenport's drug store, St. Paul, and is taking a vacation.

—F. G. Haas, of F. S. Thompson & Co., Salem, Ore., has sold his interest to his wife.

—The stock of J. A. Johnson, Des Moines, Ia., has been sold under mortgage.

—O. G. Berg is now employed in Boyden's drug store, Hudson, Wis.

—M. E. (Mrs. C. H.) Westbrook, Manila, Ia., has given a bill of sale.

—A. J. Schilling is preparing to start at Raymond, Minn.

ST. LOUIS.

THE DRUG CLERKS AND THEIR AIMS.

St. Louis, Nov. 2.—While all over the land we see the drug clerks, especially of the large cities, making strenuous efforts, but usually without success, to secure shorter hours, the drug clerks of St. Louis are gradually gaining this point and apparently without any effort. Many drug clerks in this city will be surprised to hear this statement, but if they will make a comparison of their condition to-day with that of five years ago they will see the truth of the statement. Of course when the proprietor tells how much easier time the drug clerk of to-day has than when he was a drug clerk, they think he has personal reasons for doing so. This city has probably the oldest drug clerks' organization in the country. The records of this society and the memory of its old-time members show that there has never been any decided action towards securing shorter hours for the drug clerks. They have gone about to accomplish this object in a surer way. The membership of the organization has always been made up of the most competent, energetic and ambitious drug clerks of the city, and the records show that the majority of them become proprietors within a very few years. At the meetings of the society there is always more or less discussion of topics of the day and the shorter hour question always receives its due attention, but always terminates with the old pledge that when the members become proprietors they will see that their clerks are treated fair in this respect. That they keep their word is a long-established fact. They take pride in pointing out the interest they take in their clerks and the admirable hours they give him. The old rule in this city was for a clerk to work from 6.30 or 7 in the morning until 10.30 or 11.30 at night, with one afternoon or evening off each week, which, however, was frequently missed. Occasionally he would get a Sunday afternoon or evening off. In many cases when he got his afternoon and evening off he could not leave the store until 1.30 and would be obliged to return from 6 to 7.30 and allow the proprietor to leisurely eat supper. There is scarcely a store in the city now where the clerk can complain of such treatment.

In nearly all the large stores in the city where they have more than one registered clerk, each one gets off every other afternoon and evening and has every other Sunday to himself, and they can always depend upon this. These proprietors say they find this rule very satisfactory. They get excellent service from their clerks and the clerks are highly pleased with the arrangements. This rule was first established by M. W. Alexander, who for many years was the star druggist of the city. And for many years it was the ambition of a host of the local clerks to secure a position in that store. As his clerks would leave him to open stores of their own or become managers of some other stores, their first move would be to arrange desirable hours for those in their employ. Stores where such hours are observed are so numerous in the city now that a proprietor who endeavors to work his clerk according to the old system finds it very difficult to keep a competent assistant. The Drug Clerks' Society has a bureau of information, and all drug clerks are assisted in securing desirable positions and proprietors

are furnished reliable clerks. A list of the proprietors who are disagreeable to work for is kept, as well as of the incompetent clerks but it is hardly necessary to go further into details on this point.

NOTES.

—The annual meeting of the St. Louis Paint, Oil and Drug Club was held at the Mercantile Club on October 18. Meetings will be held throughout the winter on the third Thursday of each month. The following officers were elected: President, W. H. Gregg, Jr.; vice-president, George A. Merrell; secretary, J. A. Venable; treasurer, F. Westerbeck; directors, W. H. Baker, C. W. Blow, D. P. Daugherty, A. A. Ebersson and M. H. Stearns. After considerable discussion of business topics, an elegant supper was served.

—The Omega Phi Society, an organization among the senior students of the St. Louis College of Pharmacy, has been organized for the season and the following officers elected: President, W. P. Forbes, Missouri; vice-president, J. J. Miller, Missouri; secretary, I. Sewell, Texas; treasurer, Mr. Polly, Nebraska; sergeant-at-arms, Mr. Dye, of Texas. They hold meetings every week, when the principal business is the conducting of a quiz on the various branches taught in the college.

—E. W. Groves, who for the past three years has been making his home at Asheville, N. C., has removed his family to this city and will once more assume complete charge of the Paris Medicine Co. They have moved their entire plant into a new and more commodious building just adjoining the old plant. Mr. Seeley, his son-in-law, accompanies him and will take charge of their tablet department.

—Hector Labadie, one of the leading wholesale druggists of the City of Mexico, is spending a few days in this city on his way to Europe. He says that proprietary medicines as well as a great many other lines manufactured in the United States are rapidly gaining in popularity with the Mexicans. He will spend several days in New York City before sailing for Europe.

—Marbury & Kidd, C. P. Cooper and M. G. Terrill, all of Ruston, La., have purchased new drug store outfits in this market during the past few days. They had a big fire down there a short time ago which destroyed almost the entire business portion of the town.

—Dr. F. J. Minich, city desk man for the J. S. Merrell Drug Co., has arrived home from Chicago, where he spent the first vacation he has taken in five years.

—J. B. Hicks has purchased the drug store at Boyl avenue and Old Manchester road, where he has worked as chief clerk for the past year.

—J. F. Hassebrock, High and Washington streets, is hunting for anything which wears hair, horns or feathers down near Bon Terre, Mo.

—B. A. Plumpe, 8200 North Broadway, with a number of his friends has been holding protracted coon hunts up above the Chain of Rocks.

—F. C. Euler has become proprietor of the drug store at Broadway and O'Fallon street recently owned by Dr. B. J. Ludwig.

—W. C. Lieser has purchased the drug store at Eads and Nebraska avenues formerly owned by the late Barth Kissel.

—Mrs. Cook is opening a branch store at Pocatello, Idaho. She has been in the drug business there for some time.

—The date of the St. Louis Drug Clerks' Society annual ball is set for November 15 at Pickwick Hall.

—Otto P. Trauble, Jefferson and Choteau avenues, is away on a big quail hunt near Windfield, Mo.

—Will Farris has purchased the T. J. Fletscher drug store at Sedalia, Mo.

—Davis & Scholl are opening a new drug store at Harrisonville, Mo.

—Dr. A. L. Lemon is opening a new drug store at Lincoln, Mo.

DR. HIRAM GREENTREE, for a number of years in the drug business on Pennsylvania avenue, near Cumberland street, Baltimore, died on October 25 at the home of his sister, Mrs. A. R. Watkins, 724 Cumberland street, of bilious dysentery. He was a man of middle age and had a host of friends.

MONTREAL.

Montreal, Oct. 29.

—The semi-annual examinations of the Pharmaceutical Association of the Province of Quebec were held in Laval University, Quebec City, in October. Twenty-two students in all presented themselves, ten being for the minor and twelve for the major; of these only three were successful in the former and four in the latter. The successful students are as follows in order of merit: Miss A. Provost, of Sorel; V. F. Forquiss, of St. Constant; Maurice O. Dion, of Levis, and L. Edgar Martel, of St. Romald, as licentiates of pharmacy, and Edmond Vadboncoeur, T. A. Swift and Wilfred Barolet, of Montreal, as certified clerks. The examiners and their subjects were as follows: Alex. B. J. Moore, materia medica and toxicology; R. W. Williams, botany; Henri Lanctot, chemistry; W. H. Chapman, practical chemistry; A. J. Laurance, pharmacy, and Edmond Giroux, dispensing and weights and measures. The examinations will be notable in the annals of the association because of the fact that Miss Provost came out on top with more than sufficient marks to obtain the gold medal which will be presented to her next month. When it is taken into consideration that the medal has not been won since '96 the honor is all the greater to the present winner. The number of marks required to obtain the medal is 80 per cent., while Miss Provost procured 81.1. She is not only the gold medalist of the year, but is also the first lady graduate of the association and has taken the full course of lectures at the Montreal College of Pharmacy. Miss Provost is at present the recipient of congratulations on all sides, while her pharmacy at Sorel will no doubt be on a par with the talented new-fledged apothecary. Edmond Vadboncoeur was also fortunate in the minor in winning the silver medal.

—The Windsor Hotel was, a few evenings ago, the scene of a very enjoyable dinner given by J. J. Evans, of Evans & Co., Liverpool, to the heads of departments and travelers of Evans & Sons, Ltd. A. B. Evans, the resident director, occupied the vice-chair. After the good things were disposed of, speeches, songs and stories were in order. Among those who largely contributed to the evening's enjoyment were Alex. B. J. Moore, laboratory superintendent; J. A. Tellier, East End representative, and J. A. Dyke, assistant manager. At the close of the festivities all present wished Mr. Evans and his son Kenneth bon voyage, as they intend sailing for home by the Oceanic on the 31st inst. and are accompanied by Mr. Castle.

—The prevailing strike at the Valleyfield Cotton Mills has called quite a number of our drug clerks into active service. Several belong to the Army Medical Corps, also to the regiments which have been called out to quell the riots. Unfortunately their services were badly needed, several of the troops being seriously hurt and it was good to know that employers did not stand in the way when their clerks were ordered out on military duty.

—George Brockelhurst, son of G. G. Brockelhurst, apothecary, St. Johns, Newfoundland, is in the city and intends following the courses of lectures at the Montreal College of pharmacy and if possible gain the diploma of the Pharmaceutical Association. There happens to be no pharmacy law in Newfoundland and the young man is anxious to bring back a Canadian diploma to the city of his birth and enter into business with his father.

—The officers of the Retail Druggists' Association had a lengthy interview with Messrs. Evans & Sons, Limited, with regard to the signing of the card issued by the Association. The feeling of the firm in question is that they will gladly sign any requisition of the association providing it is for the welfare of the retailer and at the same time not inconsistent with the integrity of the firm in question.

—At the preliminary examinations for admittance to the study of pharmacy held this month, twenty-one students presented themselves, eight of whom were successful, as follows: A. H. Hugill, S. Fife, E. Lepailleur, F. St. Louis, A. Cadieux, P. A. Bolvin, E. Morel and J. A. Richard. The examiners were Professors Isaac Gammell and J. O. Cassegrain.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

GEORGIA.—Douglasville.—T. A. Duke, deceased.
ILLINOIS.—Chicago.—Hensel Bros., No. 1273 West Lake street, succeeded by Arthur Hensel.
Decatur.—W. F. Neisler Drug & Supply Company, succeeded by Neisler-Burwell Drug Company.
Dwight.—G. A. Seymour, deceased.
IOWA.—Cresco.—John H. Luers Drug Company, sold to Shuttleworth Drug Company.
Des Moines.—Kinyon-Hess Drug Company, Seventh and Walnut streets, succeeded by J. W. Hess.
Glenwood.—William Skillcom & Co., sold to H. S. Tubbs & Co.
La Porte City.—Lawrence & Cummins, succeeded by Cummins & O'Reilly.
KENTUCKY.—Bandana.—Henly & Hahs, succeeded by W. A. Hahs.
MAINE.—Caribou.—E. H. Pushor, sold to Herbert Hackett.
MARYLAND.—Baltimore.—Dr. Hiram Greentree, No. 2000 Penn avenue, deceased.
MASSACHUSETTS.—Fitchburg.—The Cleghorn Pharmacy, Fairmount, corner of Clarendon streets, sold to J. C. Roy.
MICHIGAN.—St. Clair.—A. F. Milliken, damaged by fire; insured.
NEBRASKA.—Blue Hill.—D. Stevens, removed to Eustis.
Eustis.—S. L. Rowe, sold to D. Stevens.
Nebraska City.—F. H. Ellis, sold to J. C. Thygeson.
NEW JERSEY.—Trenton.—H. Tidd, sold to Louis W. Long.
NEW YORK.—Johnstown.—Adams & Co., No. 3 North Perry street, new store.
New York City.—Caswell, Massey & Co., No. 202 Fifth avenue, should be added to D. D. List.—Flannery's Pharmacy, No. 103 West Forty-second street, sold to B. Tauber.—Jones & Co., 115th street and St. Nicholas avenue, sold to M. Hollander.
NORTH CAROLINA.—Lenoir.—Todd & Shell, succeeded by J. E. Shell & Co.
Randleman.—W. A. Underwood, should be added to D. D. List.
Tryon.—Missildine & Grady, succeeded by E. E. Missildine.
OHIO.—Lima.—Estate of William Timberlake, sold to Lee Beeler.
OREGON.—Monroe.—William C. Band, deceased.
PENNSYLVANIA.—Corry.—C. O. Babbitt, of the firm of C. O. Babbitt & Son, deceased.
Scranton.—Loftus & Melvin, No. 237 Wyoming avenue, succeeded by John J. Loftus.
SOUTH DAKOTA.—Scotland.—Scallin Brothers, sold to Woodward & Filbert.
TEXAS.—Bridgeport.—R. D. Ward, succeeded by R. D. Ward & Co.
De Leon.—Rush & Ayers, succeeded by R. H. Rush.
Van Alstyne.—C. E. Brown & L. A. Cartwright have consolidated under the firm style of Brown & Cartwright.
VERMONT.—Poultney.—C. W. Humphrey, sold to P. D. Kinney.
VIRGINIA.—Salem.—Dillard & Persinger, succeeded by W. B. Dillard.
WASHINGTON.—Friday Harbor, San Juan County.—Friday Harbor Drug Company, Alice L. Summers, manager, should be added to D. D. List.
WISCONSIN.—Potosi.—Ennor & Spaulding, succeeded by Ennor & Seaton.

Drug buyers in need of anything made of cork can have their wants supplied by Justus Brauer & Son, No. 248 North Front street, Philadelphia, Pa. This business was established by Mr. Brauer in 1865, and has steadily prospered. They manufacture machine-cut corks of all descriptions, but their specialties are fine prescription and homeopathic corks. They also deal in bungs and taps, and are sole agents for patent beer wrappers. They are the original patentees of cork lining, which has proven to be one of the best non-conductors for refrigerating purposes.

Druggists' Advertising.

There is a growing interest on the part of the retail druggist in local advertising. We mean advertising in his local paper, and in this manner to lead customers into his store. If newspaper advertising of this character is properly conducted, in conjunction with appropriate window displays, it will not only pay for itself, but will

make a big difference in the druggist's balance sheet at the end of the year. We have prepared a lot of electrotypes intended for the use of druggists who use their local newspapers for this purpose. They can also be used for circulars, folders or booklets intended for distribution among their customers. The illustration here is simply one of some 300 cuts which we have on hand. Most of these are illustrated in a 16-page pamphlet which we will send free of charge to any druggist who will take

the trouble to write for it. From this pamphlet he can select such cuts as he thinks he can use, which we will send at the following rates: 50c. each, three for \$1.00; special prices in lots of 50 or more, assorted. We pay the charges on them, but they should be ordered by number.

In addition to these cuts, we also publish a little book called "Sample Advertisements for Druggists." It contains 180 illustrations, many of them shown in the pamphlet above referred to, and, we think, are sample advertisements which a druggist can either adapt to his own business or use just as they are. They are adapted to many needs, and will be found a great aid to the druggist in preparing his advertising. Correspondence should be addressed to The Pharmaceutical Era, 396 Broadway, New York.

Clarke's Pure Rye Whiskey.

Physicians who have given careful study to the subject, are practically agreed that in certain conditions alcohol exerts a beneficial influence which can be obtained by no other medium, and for medicinal purposes alcohol is usually administered in the form of whiskey, or Spiritus Frumenti. But to get the full stimulating effect without any deleterious after effects, the whiskey must be pure and properly aged. Although some prefer corn whiskey, or Bourbon, many are of the opinion that the best stimulant, or rather the whiskeys from which the best effect can be obtained, are rye whiskeys, and of the many rye whiskeys offered to the trade probably none is better known than Clarke's Pure Rye. It has been distilled for many years by Clarke Bros. & Co., Peoria, Ill., and is now bottled in bond under Government supervision, none of it being sold under six years old. They have also put on the market Clarke's Pure Old Juniper Gin, which they claim to be a most excellent brand for medicinal purposes, and which is sold under their guarantee.

The Charleroi Oval.

In selecting a prescription bottle, the average druggist is careful about two or three points. He wants a bottle which will tie up well, that is, make a neat package, one made of good, clear glass and not full of bubbles; he wants a bottle accurate in capacity, not a 4 ounce bottle holding 3½ ounces, nor one holding 4½ ounces, and he wants one that can be entirely emptied of its contents. All of these qualities may be found in the Charleroi Oval, made by W. H. Hamilton Co., Pittsburg, Pa. This bottle has been especially designed to permit the last drop to be poured from the bottle, leaving it sweet and clean for future use. These bottles can be easily cleaned, and no nasty, ill-smelling sediment need ever be found in them. This quality will be particularly appreciated by those druggists who have had to clean certain other prescription bottles when returned by customers to be refilled. The Charleroi Oval is one of the handsomest prescription bottles on the market, and meets with favor wherever it is introduced.

A Patent Herb Case.

We illustrate on another page of this issue a patent, metal-lined herb case, a piece of furniture which is designated to keep herbs in a proper condition. It is mouse-proof, worm-proof and almost dust proof. It is made of oak and sheet metal, contains fifty drawers, each holding two packages of pressed herbs. It also has a label handle and a sunken panel on the side of each drawer for price label. Take it altogether it is one of the most desirable pieces of furniture which has lately been offered to the trade. It is sold at the low price of \$15. If 10 per cent. is added to this price, the manufacturer will pay freight to your door. Those druggists who are interested and want to know more about this case should send to the manufacturer, Charles P. Whittle, 125 Portland street, Boston, for further information.

Duffy's Malt Whiskey.

Speaking of whiskey, The Duffy Malt Whiskey Co., Rochester, N. Y., want us to remind the drug trade that theirs is the only whiskey taxed by the Government as a medicine. This we believe to be a fact; at any rate, we do not recall any other brand which requires to be stamped. They pay the tax themselves, consequently it is neither an annoyance nor a burden to the jobber or to the consumer. Duffy's Whiskey has been on the market for many years; it is advertised liberally, and requires no particular effort on the part of the dealer to dispose of it. In other words, it has become a staple article in every drug store.

The Hartt Soda Water Apparatus, which we illustrate very attractively on another page of this issue, is too well known to the public to require more than a mention of the name. The season is now at hand when those about to make a choice of apparatus should carefully consider every point of excellence that will contribute in greatest measure to the profit of soda water dispensing and at the same time attract general trade. No one questions the profit to be derived from a good apparatus, but by having the very best in the market the ratio increases in a degree that does not appear at first glance.

In having the best of everything the manufacturers of the Hartt Apparatus certainly hold as strong a hand as their advertisement would indicate. In the "real thing" a straight flush comes pretty near blocking the game and by the same token a Hartt Apparatus covering as it does the requisite points of excellence and the very best of everything certainly blocks all competition. The highest quality, the greatest utility, the most superb beauty and the best of everything in material and workmanship cannot fail to make this popular fountain "a straight royal flush of Hartts."

Scott & Bowne's advertisement in last week's issue is well worth studying. They say truly that you cannot think customers into your store; you must get them in in some other way. Customers will not come to you without some effort, either on your part or on the part of somebody else in your behalf, and in the case of Scott's Emulsion, Scott & Bowne do the work for you. They advertise it, they create a demand for it, they send people to you for it. When a customer comes for it you need do nothing but wrap it up for him. It requires none of your time to exploit its merits or tell what it will do. The customer already knows that, for he has read their advertisement, and they stand behind their statement that it is the most pleasant, the most effective, and the most salable of any preparation of cod liver oil. They create the demand, they make people ask you for Scott's Emulsion; all they ask of the druggist is that he gives Scott's Emulsion when it is called for.

One of the great advantages claimed by the Blackmore Gall Cure Co. for their preparation is the fact that you can work your horse while you are using it, the more you work him the better. They offer it as the most reliable and the best selling cure for hurts and sores and animals. They have a special sample and trial offer which they would like to present to every druggist who is interested and it might be well for up-to-date buyers who are always looking for the best of everything to write to them. Their address is Box 900, Old Town, Me.

STATE OF TRADE.**Politics Curtail Business.**

New York, Nov. 6.—Business in a wholesale way during the period under review was considerably curtailed on account of increased interest in the political situation. Saturday was practically given over to affairs incidental to the sound money parade, and to-day the Presidential election is absorbing the bulk of attention. Consequently, developments have been limited, and there are very few new features of more than ordinary interest, the movement of merchandise having been almost wholly in accordance with actual current necessities of consumers in the various departments. Opium has continued to harden under the influences noted last week, and first hand quotations show a further advance of 5c. per pound, with powdered correspondingly higher. According to cable advices from Smyrna, rain is very much needed in the growing districts, and the continued drought is causing considerable damage to the Autumn sowings. Speculators were reported as buying freely and paying full prices, especially for high grades. The local demand also has shown improvement and the volume of business was larger than for some time past.

Developments in the quinine situation have been somewhat depressing. At the Batavia auction sale on Wednesday, prices declined about 5 per cent., the average price being 24½ florins per kilo, against 25½ florins at the September sale. At the regular monthly bark sale in Amsterdam on Thursday, values were 11 per cent. lower, the average being 10.90 Dutch cents, against 12¼c. at the previous sale. Shipments of bark from Java for the last half of October were 740,000 lbs., making a total of 1,100,000 lbs. for the month. As a result of these influences, the German manufacturers of quinine and one domestic maker on Thursday reduced their quotations 2c. per ounce to the basis of 35c. for bulk, and to-day the other domestic makers reduced to the same basis. A fair business is in progress at the decline, but little has been done in a speculative way, outside holders, as a rule, showing no anxiety to sell; an opinion prevailing that conditions will improve in the near future.

In the department of essential oils, citronella is firmer, and lemongrass easier, the latter showing a decline of 10c. per pound. Turkish geranium is hardening in price, especially the better grades, as the outlook for the coming crop is considered unfavorable, but it is too early yet to give any reliable estimate of the probable yield. The finer grades of natural wintergreen is very scarce both here and in producing markets, and in some instances holders are asking materially higher prices.

Lycopodium was active in a small way, mainly for campaign purposes, and the stock of ordinary grades is practically exhausted, while quotations for Politz have moved steadily upward. Naphthalene balls are in good demand and firmer only with limited quantities obtainable. Canella alba is in reduced supply, the bulk of the available stock having been taken for export and for the small parcels remaining higher prices are demanded. Lump arsenic is scarce and higher for prompt delivery, but fresh supplies are on the way and are offered to arrive at a concession from spot quotations. Manufacturers of nitrate of silver have advanced their quotations 1 cent per ounce owing to increased cost of bullion.

Senega root has continued to move upward, quotations showing a further advance of 2 cents per pound. Ergot is stronger in sympathy with improved conditions abroad, but the demand has not been urgent and no important sales have transpired. Fractional advances have occurred in quotations for coriander, millet and mustard seeds, but there is no change in values of jobbing quantities. Golden seal root is quiet and a shade easier, Ipecac is in good steady request for consumption at unchanged prices. Carnauba wax is in better demand and a better feeling appears to be developing among holders.

Boston Trade Satisfied.

Boston, Nov. 3.—All things considered, this appears to have been a satisfactory week among the druggists. There has been nothing special to give marked impetus to business, although there is considerable sickness of one kind and another in this city and hereabout. This of course plays its part in making things somewhat more active with the druggists. The general market on the whole has been fairly active, and yet not enough to bring about marked changes in regard to prices. Alcohols, especially grain, continue to show activity, and cologne spirits are in fair demand. Dyestuffs and the tanning lines are looking better, and the outlook is encouraging. Waxes are sold only in limited amounts.

A Good Week In Philadelphia.

Philadelphia, Nov. 3.—Inquiry among the many druggists at the mass meeting to-day gave the pleasant news of a good week in business. All over the city the report is of a general picking up of trade and an increase over last week's sales. The improvement is not confined to any one line, prescription business and general sales being equally as good. In a way, much of this

can be attributed to the settlement of the coal strike, as the bugbear of \$8 coal which tightened up family purse strings has been removed, and money is being spent more freely on all sides.

The wholesale houses are being pushed to fill orders from dealers in the coal regions, which are now coming in with a rush. Local orders are fully up to the mark and are on the increase. Nobody in drug circles here seems to be very much worried over the election, that being taken as a matter of course, and affairs for the future are planned with confidence. One of the large manufacturing houses here is now engaged in filling a large Government order for the troops in the Philippines and Cuba.

Chicago Trade Fair.

Chicago, Nov. 3.—Most of the drug men say that business is fair, but not especially active, owing to the political strain of the last week in the campaign. But little of note has occurred and everyone is doing fairly in a business way so far as can be learned from those in a position to know. Sundries and fancy goods are slow and staple goods are moving quite freely.

A Handsome Side Line.

It is with pleasure that we again refer to the attractive line of fancy china, bric-a-brac, lamps, etc., which Falker & Stern Co., 144 Lake street, Chicago, advertise on another page. They announce a magnificent line for the 1900 holiday trade, a line that will not only pay druggists to see if they are near enough to Chicago to visit it, but if they are not, which they should know about through their illustrated catalogue. This catalogue will be sent to any retailer for the asking. The line of goods it illustrates is attractive enough to sell itself. If you have not already laid in your holiday stock you cannot find anything more profitable than these goods, especially if you advertise them in your local papers. You can advertise a few of the specialties, make a window display of the general line, and by pushing them actively in this way you can increase your holiday sales 100 per cent. and on a line of goods that you can make more money on than anything you usually sell.

Arnold's Sterilizers.

Nowadays when one thinks of a sterilizer, he thinks of Arnold's. This is particularly true of physicians, who recommend it in almost every case. These two statements ought to be enough for the careful drug buyer, for he will carry in stock an article not only recommended by physicians and known by the consumer, but one which pays him as well as does the Arnold. If you do not carry them in stock, you can get full information about them, with suggestions as to the proper way to advertise them to your customers, and literature regarding them and their use by applying to Wilmot Castle & Co., No. 26 Elm street, Rochester, N. Y.

Rubinat-Serre.

The proof of the pudding is in the eating, and the reproduction of the communication of Dr. Chas. Henry Brown to the proprietors of Rubinat-Serre Mineral Water tells its own story. There is no question about the quality of the water, which is put up in green bottles with a buff label, and they offer special inducements to druggists which will make it worth while to correspond with them. Communications should be addressed to the Rubinat Serre Company, No. 4 Stone street, New York.

A Clever Advertisement.

We have seen during the past year some very bright ideas of the American Soda Fountain Co.'s advertising man, but the cleverest of them all is a card which they are now sending out to the trade, entitled "The Proof of the Pudding is in the Eating." It is designed to advertise Tufts' Hot Soda Fountains, and if the Fountains are as good as the advertisement there ought to be no trouble in getting them into every drug store in the country.

NEW ADVERTISEMENTS IN THIS WEEK'S ERA.

MARKET REPORT.

NEW YORK MARKET.

New York, Nov. 6.—Political affairs have received increased attention and the volume of business during the past week was of reduced volume. Prevailing conditions, however, are in line with expectations and a continued steady feeling is manifested on the part of dealers. Changes in prices were exceedingly limited and very few new features of importance were developed.

OPIUM.—Notwithstanding the fact that primary markets are again firmer with a further advance in values reported, the spot market for jobbing quantities remains unchanged and consumers can yet supply their wants at prices within the old range of \$3.40@3.50 for 9 per cent. and \$3.50@3.60 for 11 per cent., according to quantity.

POWDERED OPIUM.—Small lots have continued to move freely on consuming orders with jobbing quotations ruling steady at \$4.50@4.65 for 13 per cent. and \$5.10@5.25 for 16 per cent., as to size of order, the outside figures for single pounds.

MORPHINE.—There is no abatement of the active demand noted for several weeks past and values continue steady on the basis of \$2.40@2.60 for eighths, according to brand and quantity.

QUININE.—German manufacturers and one domestic maker have reduced their quotations 2 cents per ounce owing to a decline in bark at the monthly sale in Amsterdam, and the revised jobbing prices are on the basis of 42@43c. in ounces, according to brand.

CANELLA ALBA.—Purchases for export have materially reduced the available spot stock and in consequence holders are firmer in their views with an advance in jobbing quotations to 30@35c. for whole and 35@40c. for powdered.

LYCOPodium.—A firmer feeling has developed under a good demand and diminishing supplies and holders of the limited spot stock have advanced quotations for jobbing quantities to 70@75c. as to size of order.

SENEGA ROOT.—Under the influences noted last week the market is again stronger and jobbers have further advanced prices to 55@65c. for whole and 60@70c. for powdered.

ERGOT.—Foreign markets have continued to improve and the situation here is correspondingly firmer with jobbing quotations firmly maintained at the recent advance to 70@80c. for whole and 80@90c. for powdered.

NITRATE OF SILVER.—Owing to the increased cost of bullion manufacturers have advanced prices 1 cent per ounce and jobbers are now quoting 50@55c. for crystals and 52@57c. for cones.

OIL LEMON GRASS.—Business is slow and with supplies ample the tone of the market is easier and quotations for jobbing quantities have been reduced to \$1.65@1.80, as to quality.

BISMUTH SALICYLATE.—A revision of quotations to correspond with the changes made some time ago in other preparations shows a higher range, the new figures being \$2.20@2.40 for 40 per cent.

HOPS.—New crop is now available and the market is slightly easier with sellers in a jobbing way at 30@35c. Old, of the 1890 crop, are obtainable at 22@27c.

LEAD.—Quotations for both white and red, either dry or in oil, are slightly firmer, the revised range being 6¼@7c., as to quantity.

Decorative Plants for the Holiday Trade.

If you are going to put in a line of holiday goods or intend to make any special effort for holiday trade, you should at least decorate your store, and for this purpose there is nothing better or cheaper than the artificial plants advertised by Frank Netschert, New York, on another page of this issue. These plants not only simulate the natural plants so closely as to be almost impossible of detection, they will not only serve the purpose of making your store more attractive and thus drawing customers, but you can take orders for them, as they are just as useful for decorating the home as the store. It will

not be necessary to carry a large line in stock for this purpose, you can simply order from Netschert's catalogue. The profit on these plants runs up to 300 per cent., and when you consider that all you have to do is to send in the orders without handling the goods, for he ships directly to your customers, the advantages of these plants as a side line will be apparent to you.

NEW YORK IN LINE.

One of the greatest and most satisfactory accomplishments in the work of the N. A. R. D. was the action taken last week by the jobbing drug trade of New York City.

As we related in our news columns, the whole salers of this city, without an exception, in formal meeting agreed individually and collectively to uphold the N. A. R. D. plan and its work in spirit and in letter. An agreement embodying this action was drawn up in due form and has received the signature of every wholesale house in this locality.

The effect of this action cannot be underestimated. It is virtually a surety of the ultimate and early success of the N. A. R. D. plan for the regulation of the traffic in proprietary medicines. This action on the part of the jobbers was undoubtedly the result of an attempt by a Western cutter to purchase in this market supplies which had been denied him in his own locality. This cutter is in an Indiana city where the N. A. R. D. plan is in operation. He could not buy goods there, nor in Chicago, and came East. While the New York retail drug trade has not been sufficiently organized thus far to be able to demand the co-operation of the New York jobbing trade, yet the latter, unequivocally and without hesitation, have shown in the most practical way that they are the friends of the retail druggists and intend to stand by them. The Indiana cutter found it hard sledding here.

The meeting of jobbers was attended by representatives from every firm in the city, by the chairman of the Proprietary Goods Committee of the N. W. D. A. and by the chairman of the Executive Committee of the N. A. R. D. The meeting was behind closed doors and lasted for several hours. While it is not advisable to give the exact text of the resolutions adopted and of the agreement signed by the jobbing houses, their general nature is no secret. The agreement pledges the wholesaler to carry out loyally and faithfully the spirit as well as the letter of the tripartite rebate plan and to give fullest co-operation to the proprietors and to other jobbers in order to make the N. A. R. D. plan a success. Whenever the secretary of the N. A. R. D. reports any one violating the terms of the tripartite plan, the jobbers will refuse to sell such person any goods. Neither will they sell goods coming under this agreement to brokers, or through brokers, except to and only to, recognized wholesale distributors of proprietary medicines. Violations of this agreement will be reported to the chairman of the Proprietary Goods Committee of the N. W. D. A. There is no combination, but each jobbing house makes its individual

MATRICULATE NOW.

See New Announcement Facing Third Cover.

agreement to do these things and will notify the retail trade of its action.

This evidence of loyalty on the part of the New York jobbers will be highly appreciated by the retail trade throughout the country. This city is really the key to the whole problem. It has always been understood that if New York comes into the N. A. R. D. plan it is a go. It is now up to the retailers of this section to show that they mean business and honest dealing.

While there has been some little local disturbance in a couple of the retail organizations in this section, and some have vowed and threatened hostility to the N. A. R. D. plan, it is believed that the majority sentiment of the retailers is thoroughly in favor of it. A conference of special committees from the several local organizations recently held, and other meetings of the same character soon to come, are expected to result in a strong movement on the part of the majority of the retail trade in Greater New York looking to the enforcement of the N. A. R. D. plan. The jobbers have done their part, even before being officially requested to do so, and cannot be too highly commended therefor. The N. A. R. D. has reason to feel greatly cheered by this important development.

THE ERA COURSE IN PHARMACY.

Enrolment in the November class of the Era Course in Pharmacy is now progressing most favorably and indications point to a large and enthusiastic class. There is success in large numbers and we want to urge students to join this class by sending in their matriculations right away. By so doing they will be able to get started upon the work at once, thus having the long winter evenings in which to study. The students who started last month are devoting their time to the lectures on pharmaceutical processes, while students who begin this month take up the subject of general and analytical chemistry.

Matriculate now and start out with an enthusiastic class.

WHERE WAS THE EDITOR?

Our esteemed cotemporary, the Journal of Pharmacology, published by the Alumni Association of the College of Pharmacy of the City of New York, prints in its last issue the following advice to those interested: "Are you a registered pharmacist? If not, and you hold a N. Y. C. P. diploma, do so at once."

THESE REQUEST COPIES OF THE STAMP TAX PETITION.

Randolph Wehler, New Oxford, Pa.
J. H. Beam, Moundsville, W. Va.
J. E. Anderson, Mt. Pleasant, Tenn.
M. Giesy, Aurora, Ore.
W. M. Durham, Corry, Pa.
J. L. Billman, Eldorado, Ohio.
R. S. Freeman & Son, River Falls, Wis.

REPEAL THE STAMP TAX.

Interest is growing among the drug trade in the movement inaugurated by this journal to secure a repeal of the stamp tax on medicines. The blank petitions to Congress which have been so widely distributed are coming back to us bearing the signatures of thousands of firms and individuals. The number of these signatures has become so great that we can print only a very few of them, but we make a selection which will show how widespread is the agitation and interest. From Maine to California, Minnesota to Texas, the drug trade is a unit in the position that the tax is unjust, unnecessary and unequally distributed. There is no good reason for its continuance, every reason for its abolition.

It is with a good deal of hope that the drug trade takes up this movement. The wholesalers, manufacturers and retailers, in their national organizations, have special committees which are actively at work to influence Congress, and hundreds of local bodies are doing likewise. But every individual can add his mite to the weight of the movement. We should be pleased to send copies of the petition to every druggist who desires to go on record as in favor of the repeal of this most onerous legislation. Within the past few days an important conference has been held in the national capital respecting this matter, and as a result there has been given out to the press the statement that in all probability the stamp tax will be repealed at the coming session of Congress, or at the least so materially modified as to bear less hardly and more equitably upon the interests affected. Every druggist can exert his individual influence with his Congressman from his district, and there is every prospect that the wish of the drug trade will receive not only respectful attention, but result in the relief sought.

Send for a copy of the petition; sign it yourself, get your brother druggists to do likewise, and return it to us promptly. This monster petition from the drug trade will be duly presented to Congress and cannot fail to have great weight.

MORE SIGNATURES.

Our attention has been called to the editorial notice in your last issue of the effort being made to secure the repeal of the stamp tax upon proprietary medicines. We are most heartily in sympathy with that movement, regarding that law as "class legislation" of the most unjust and outrageous character. While we are perfectly willing to bear our share of the burden of taxation, we do not feel disposed to be taxed out of existence if it can be avoided. Just why the proprietary medicine fellow is compelled to shell out 6 per cent. upon his gross receipts and the product of Rockefeller's Standard Oil Company swim clear would be a puzzle to any one but a Congressman. We can use one-half dozen blank petitions to advantage, which kindly forward.

Elyria, O.

ROSE VECTARINE CO.

I have just noticed your petition to Congress for the removal of the stamp tax. Will say that I believe the only way to remove this stamp tax is to remove the Republican party from power. If druggists and manufacturers expect any relief, they would better vote the Democratic ticket. The Republican party expects to continue the war indefinitely, and if re-elected, Mr.

Payne will say "no," as he said last year. Petitions were sent up from all over the entire United States last year, with no avail, and it will very likely be a futile effort if McKinley is continued in power. I am very much of the opinion that the quickest relief will come from the success of W. J. Bryan.

Muskogee, Ind. Ter.

L. L. MOORE.

Enclosed we return the petition signed by those who will be more than pleased to see the stamp bill repealed. We have stood the tax ourselves rather than saddle this unjust tax on the retail druggists, as so many others have done, and we have felt the burden severely. If the bill had been properly enforced and all trade-marked articles stamped, the manufacturers would not kick, but to single out some branches and leave others free is not honest, and we trust the Republican managers will celebrate their re-election by seeing that the bill is repealed.

H. PLANTEN & SON.

New York.

H. Roeff Platen, Attorney.

We enclose petition signed by all the druggists of our city. The repeal of this Stamp Tax will be a considerable saving to us in the stamps we put on our own preparations, even if the patent medicine men do not resume their former scale of prices. Should the patent medicine men fail to resume their former prices every druggist in the country ought to increase his own line of preparations as much as possible and push them with a renewed zeal.

Staunton, Va.

WILLSON BROS.

We enclose you the petition signed by us and a large number of druggists of this city. Could have had more signatures, but it was difficult to find the proprietors of the drug stores in, and wish you success in your undertaking to have the war tax repealed on proprietary medicines.

If you will send me one or two more copies of the petition, on my trips out to the different towns, I could get a good many signatures among the druggists.

Cambridge, Mass.

E. HARRISON ALLISON.

We herewith return petition signed by all our druggists and others directly interested in the repeal of this burdensome tax on industry. The Hon. Edgar Weeks (Rep.), Congressman of this Seventh District of Michigan, says send the petitions to him and he will introduce them the first day of the coming session. Success to your efforts.

THE MOXON LINIMENT CO.

By T. J. Shoemaker, Secretary and Treasurer.
Mt. Clemens, Mich.

We received your blank petition, and have done what we could in a couple of days. We did not go to the outskirts of the city. As far as we went, every one was glad to sign it. One man thought if this had been started some two months ago, and every druggist had signed a petition that they would not vote the Republican ticket unless it was taken off, it would have been done by this time, without Congress. That is his belief. We wish you success.

Dayton, O.

IRA A. POTTER & CO.

We beg to enclose you signed petition. We have secured the signatures of all the retailers of Duluth, Minn., and West Superior, Wis., as well as having attached our own signature. Hoping that this will assist in repealing the war tax, and with best regards, we remain,

L. W. LEITHHEAD DRUG CO.,

L. W. Leithhead, President and Manager.
Duluth, Minn.

We herewith hand you petition to Congress for the repeal of the stamp act. We hope that Congress will take this matter up during the next session and relieve us of this heavy burden. We are glad to note your interest in the matter.

CLINTON E. WORDEN & CO.,

San Francisco, Cal. W. W. Worden, Treasurer.

We enclose herewith copy of the petition to Congress for the repeal of the stamp tax act, which is signed by all the leading wholesale druggists in Philadelphia. As soon as we receive other copies of the petition, which have been distributed among our salesmen, we will forward them to you.

HANCE BROTHERS & WHITE.

Philadelphia, Pa.

C. B.

Enclosed please find the signatures you request. I found that my pharmacist friends whom I have met had already signed a similar circular. I hope that the undertaking may be successful, and thank you for giving me the opportunity to sign in favor of abolishing the stamp tax. If I can be of any service to the cause it will afford me pleasure.

Baltimore, Md.

J. F. HANCOCK.

I enclose herewith the petition to Congress signed by leading druggists of this city, all of whom would be glad to see this tax either repealed or modified. For myself it amounts to about 4½ per cent. on my sales.

Portland, Ore.

S. MEITSHU.

Enclosed please find petition with our signature. All that we have seen have already signed. The Member of Congress from our district, Mr. McCall, has declared in public to be in favor of the repeal.

Boston, Mass.

E. HARTSHORN & SONS.

We beg to hand you the petition sent us filled with the signatures of the largest retailers of this city. The sentiment is unanimous in favor of the repeal of the law.

New Orleans, La.

I. L. LYONS & CO.

Now that the great political question is settled and we are working back to quietude, guess it's about time to stir up Stamp Tax. With this forward petition.

Petition to the Congress of the United States.

We, members of the drug trade of the United States in its several branches, retail druggists, wholesalers and jobbers, and manufacturers of proprietary preparations, herewith respectfully petition the Honorable Congress of the United States to repeal the special tax imposed under Schedule B, Section 25, and its dependent sections of the War Revenue Act of 1898, now in force, so far as such tax is laid upon medicinal preparations.

We seek this repeal for the following reasons:—

- 1.—This tax on medicines is class legislation, unjust and unduly burdensome.
- 2.—The tax is unequally distributed, being placed upon medicinal preparations which are necessities, and at the same time allowing to escape taxation a large number of articles which are as truly proprietary and which enjoy special protection under the copyright and trade mark laws.
- 3.—The revenue created by the enforcement of the law is no longer necessary, and the amount collected under this Schedule B is but a small proportion of the total revenue derived.
- 4.—The drug trade is already heavily taxed. Alcohol, which enters so largely into the manufacture of the preparations sold by us, is already taxed about 1,000 per cent., and the imposition of further taxation, as provided by this act, makes its operation oppressive.
- 5.—The intent of the law was to tax proprietary medicines only, but owing to its peculiar phraseology and the construction placed upon it by the officials, it does not reach nor apply to a large class of medicinal chemicals protected by trade mark, while on the other hand, it applies to nearly all drugs and medicines which are a necessity to the sick.

We ask relief, believing that the honorable members of Congress will realize the justice of our claims by repealing these unjust and burdensome provisions of the War Revenue Act.

NAME.

ADDRESS.

OINTMENTS.*

With a Formulary of the Ointments in Use at the German Hospital, Philadelphia.

By M. L. WILBERT.

Ointments are among the oldest of our pharmaceutical preparations. Their discovery, or introduction, would seem to date back long before the dawn of any known historic era. The ancient Egyptians used ointments very extensively for medicinal as well as for toilet purposes. According to Dioscorides, the use of ointments was so extensive in ancient Egypt that their manufacture had developed into a distinct specialty or art, and the ointment makers of that time were not only numerous, but also highly respected. The same writer, in his Treatise on *Materia Medica*, has preserved the formulas of several of the more popular and well known Egyptian ointments of his time.

From Egypt, the art of making these preparations gradually spread to other Oriental countries, where they were and still are quite extensively used, especially for toilet purposes. As a toilet article they were used to counteract the strong, and, in many cases, somewhat disagreeable exhalations from the human body; with many of these Eastern people ointments were a substitute for soap and water.

The Jews classed ointments among the necessities of life, and used them freely, especially as an adjunct to the toilet on festive occasions. With these people the non-use of ointments was considered to be a sign of sorrow and mourning.

An indication of the age of this class of preparations is found in the fact that from the earliest historic times they have been included in the religious practices and ceremonials of various races. Among the Jews, temples and places of worship were consecrated, and priests, prophets and kings were introduced into their offices by anointing them with sacred ointments.

The old Egyptians anointed their gods and temples on festive occasions, and from here the practice probably spread to Greece and other countries with whom the Egyptians came in contact.

The use of ointment as a part of religious ceremonial, has been preserved, and in both the Greek and Roman churches of to-day the sacred ointments form an essential part of many of their ceremonies.

The ancient Greeks made use of ointments to anoint their athletes, so as to make their joints more supple and to give them additional strength for the various contests.

From a pharmaceutical point of view ointments are of especial interest for several reasons, one of them the periodic discussions as to the proper or most satisfactory base to be used in their preparation. The number of compounds or mixtures that have been recommended from time to time as a suitable or satisfactory base for ointments are too numerous to even enumerate, to say nothing of entering into a general discussion as to their relative merits. We will confine our remarks, therefore, to a discussion, or, perhaps, what would seem more appropriate, to an expression of opinion as to the relative value and adaptability of lard and petrolatum as a base for the official ointments.

The present United States Pharmacopœia recognizes twenty-three official ointments. In twenty of them lard is the chief ingredient of the base.

The same Pharmacopœia also defines what is meant by the term lard, and gives a number of tests for its identification and the detection of foreign substances or adulterations.

Such pharmacists as have ever applied these tests will admit that it is rather difficult, if not well-nigh impossible, to obtain lard in the open market that will come up to all the requirements of the Pharmacopœia, and that practically the only way of obtaining a thoroughly pure and satisfactory article is to make it, by trying out the so-called "leaf lard," although at times this is rather difficult to obtain, as the large packing houses, who practically control the supply of meats in the large cities, have entered into the manufacture of

lard, lard oil and lard substitutes on an extensive scale, and for this reason do not market the raw product.

When we come to consider the therapeutic use of ointments we find that they may generally be grouped in one of two classes, and are used for either their local or general effect. Those classed in the first group are used for the protective, emollient or stimulating effect of the base, or of the combined base and medicinal ingredient, on the skin and superficial tissues. Among these we may mention cold cream, petrolatum and the ointment of oxide of zinc.

In the second class we make use of the base as a vehicle to carry, or, in some cases, to facilitate the absorption of, more or less active medicinal ingredients for their resolvent or alterative effect. In this class we may place such ointments as the ointments of potassium iodide, salicylic acid and mercury.

As a vehicle to facilitate the absorption of active medicinal ingredients associated with it in an ointment, lard probably has some advantage over petrolatum, at least that is what the results of physiological experiments would indicate. From a practical point of view, even this may be questioned, as it has been repeatedly demonstrated that such active drugs as potassium iodide, salicylic acid and acetanilid are very readily absorbed into the system from an ointment made up with petrolatum and even a mercurial ointment made with petrolatum seems to be quite as active as one made with lard and suet, according to the directions of the Pharmacopœia.

It is when we are after the protecting and emollient effect of an ointment that petrolatum offers many points of advantage over animal fats, and as a majority of our ointments are used for their local effect on the skin and superficial tissues, it would seem strange that the Committee on Revision of the Pharmacopœia has not previously recognized the marked advantages offered by this stable, bland, unctuous material. Both the German and British Pharmacopœias have recognized the desirability of supplying a substitute for animal fats in this class of preparations, and for this purpose have introduced as paraffine ointment a mixture of hard paraffine and paraffine oil. This preparation is far from satisfactory, and although theoretically the same as petrolatum, still practically it seems to have distinct physical properties and will not stand the same variety of temperature. In warm weather the paraffine usually separates, crystallizing out in granular or in large crystalline masses. The naturally existing mixture of paraffine and oil seems to be more stable than the product of any attempt at imitation.

A few words as to our reasons for preferring petrolatum as a base for ointments:

(1) Economy. Other things being equal, the price of an article always plays a very important part in its selection. In this case the use of petrolatum would effect a saving of from 20 to 30 per cent. in the cost of the majority of ointments.

(2) Non-absorption of the base. This is of decided advantage in cases where a protective covering is the chief object sought for or required. Such ointments as boric acid, carholie acid and oxide of zinc would meet these requirements better and be more efficacious, while ointments that are used as parasiticides, such as sulphur, tar and red oxide of mercury, would be more practical, less irritating and more stable if made up with petrolatum.

(3) Permanence. There are many readily decomposed chemicals like the mercurial salts that undergo decomposition when in contact with unstable and readily decomposed fats. With this class of chemicals the advantage of using an inert and stable base is self-apparent.

Some seventeen or eighteen years ago, when the question of using a petroleum compound was suggested to the revisers of the United States Pharmacopœia, it was thought that the supply of petrolatum was too uncertain and too varied, and for this reason the committee did not see its way clear to adopt any of the very excellent formulas presented to it by Prof. Remington. The same objections did not exist at the present time, and have not existed for ten or twelve years, as upward of half a dozen manufacturers are marketing a product that

*Reprinted from Amer. Jour. Pharmacy.

Is practically identical in appearance and in physical properties.

Ointments made up according to the appended formulary have been in use at the German Hospital for the past ten years with uniformly good results and in constantly increasing quantities. During the year of 1899 there were in the laboratory of the German Hospital 312 kilos of these various ointments.

I would like to add a few words of comment or explanation of some of the formulas.

The ointment of boric acid is practically identical with that of the German Pharmacopœia. It has a wide field of usefulness as a mild antiseptic protective dressing and deserves a place in our Pharmacopœia.

The other formulas are all more or less familiar. As a rule they are modifications of official formulas, substituting petrolatum for the usual base. The ointments of belladonna, nutgall and stramonium are more permanent and more sightly than when made up according to the official formulas.

It will be noted that the strength of the ointment of yellow mercuric oxide is but 2 per cent. This is what is popularly known as Pagenstecher's eye salve, and is what the majority of oculists expect to have dispensed when they write for "Ung. Hydrarg. Ox. Flav." The 10 per cent. official ointment is considered too strong to be used in the eye, as an excess of mercuric oxide is apt to be irritating instead of soothing. Many pharmacists when making this ointment do not devote sufficient care to reducing the masses of mercuric oxide to a fine powder, and as a result dispense a more or less gritty ointment. These gritty particles sometimes act as foreign bodies in the eye and are apt to be quite irritating.

We have found a few drops of oil or water to be of decided advantage in reducing the gritty masses of mercuric oxide. In making up quantities of any ointment, it sometimes requires considerable ingenuity to devise ways and means of getting a satisfactory product without the use of expensive machines or the undue expenditure of time. Several of these problems we have solved, at least to our own satisfaction. For instance, in making ointments of boric acid or sulphur, we have found it to be of advantage to melt the petrolatum, remove it from the source of heat and just as it is about to congeal, sift in the required powder through a fine sieve, constantly stirring the mass. By this means a homogeneous mixture may be readily and easily obtained.

In making the ointment of zinc oxide, we first thoroughly dry the powder, then incorporate it with a portion of the melted petrolatum, keeping the mixture quite hot; this mixture is subsequently run through a No. 40 sieve and the sieve rinsed out with additional portions of the melted petrolatum until the required quantity has been added; then stir until cold. This process assures a smooth ointment in which the oxide of zinc is finely divided and thoroughly incorporated with the ointment base.

The ointment of turpentine is practically the compound resin cerate of 1870, with the substitution of petrolatum for the animal fats. This ointment is rather more stimulating than the official cerate and for that reason more desirable. The ointment of rose water differs from the official in that oil of cotton seed takes the place of the expressed oil of almonds and the use of distilled water and oil of rose instead of stronger rose water. This formula gives a very smooth ointment that stands well, and while it is not as white as the official ointment it is correspondingly cheaper.

Ointment of Boric Acid.

	Grams.
Boric acid	100
Petrolatum	900

Ointment of Carbolic Acid.

Carbolic acid	50
Petrolatum	950

Ointment of Rose Water.

Spermaceti	125
White wax	120
Oil of cotton seed	600
Sodium borate	5
Distilled water	120
Oil of roses	drops. 2

Belladonna Ointment.

Alcoholic extract of belladonna leaves	100
Diluted alcohol	50
Petrolatum	850

Ointment of Belladonna and Mercury.

Belladonna ointment	500
Mercurial ointment, U. S. P.	500

Nutgall Ointment.

Nutgalls in fine powder	200
Petrolatum	800

Ointment of Galls and Opium.

Powdered opium	5
Nutgall ointment	95

Ointment of Ammoniated Mercury.

Ammoniated mercury	100
Petrolatum	900

Ointment of Yellow Mercuric Oxide.

Yellow mercuric oxide	20
Petrolatum	980

Ointment of Red Mercuric Oxide.

Red mercuric oxide	100
Petrolatum	900

Iodine Ointment.

Iodine	40

Diluted alcohol	50
Petrolatum	850

Sulphur Ointment.

Sublimed sulphur	300
Petrolatum	700

Ointment of Turpentine (Compound Resin Cerate).

Resin	240
Yellow wax	240
Petrolatum	300
Oil of turpentine	120
Linseed oil	100

Ointment of Zinc Oxide.

Zinc oxide	200
Petrolatum	800

Ointment of Zinc and Ichthyol.

Ichthyol	50
Ointment of zinc oxide	950

ESTIMATION OF CHLOROFORM.—Last year Mr. Vernon Harecourt, at a meeting of the Chemical Society, gave the details of a trustworthy method of estimating chloroform in air. The method was to put a few Cc.'s of warm water with the chloroform and air in a flask and decompose the chloroform by an incandescent platinum wire, hydrochloric acid and carbon dioxide being formed. Dr. James Edmunds communicates to the *Lancet* a method of estimating chloroform in the blood, secretions or organs of animals anesthetized with chloroform, which is rapid and precise. Dr. Edmunds prefers to determine the chlorine resulting from the decomposition of the chloroform, the weight of which being accurately determined, multiplication by the factor 1.2314 gives the weight of the chloroform. The disruption is managed by adding less than half the permanganate equivalent of chloroform to a solution made by dissolving 3.137 grammes of potassium permanganate and 55.71 grammes of potassium hydrate in sufficient water to make 1 liter. On heating chloroform to 100° C. in such solution disruption takes place almost at once, but a lower temperature and longer period are preferable. Care must be taken to prevent loss of chloroform by volatilization. When the reaction is complete the purple color of the permanganate changes to the bluish-green color of the manganate. When quite cold the solution is decolorized by the addition of decinormal solution of sodium sulphite, filtered and made up to a definite volume. The potassium chloride is estimated in the filtrate. (Chem. and Drug.)

WHAT IS THE BEST COURSE TO PURSUE TO REPRESS THE SALE OF PROPRIETARY ARTICLES THAT YIELD NO PROFIT?*

By JOHN F. PATTON.

The answer to this query is simplicity itself: Don't sell them.

Your profits must bear some relation to your expenses or you will soon reach the limit of your capital and then the sheriff will kindly assist you to close your business.

There is probably no small business so expensive to conduct as that of a pharmacy. The expenses will average at least 25 per cent. of the gross sales. Your help must be of the kind that will not only satisfy the pharmacy board that he possesses the requisite qualifications, but he must inspire your customers, as well as yourself, with confidence.

The exacting duties, close confinement and long hours all demand commensurate compensation. But clerk hire is only one of the many things that go to make up the expense account.

The next best thing to not selling goods that pay no profit is to enter into competition articles of like character of your own manufacture. If you can furnish a better article at a lower cost for which there is a demand you will be rendering a service to the public that will not fail of recognition and reward.

In the matter of serving the public, what a valuable member of society is the Knight of the Mortar and Pestle. How willing, and even anxious, is he to render service. He manifests a deeper concern and goes to greater lengths to accommodate and serve the people than those engaged in any other profession, occupation or calling.

The spirit and mind of service is so general among our craft and so universally recognized by the public that it would not be inappropriate to have a sign emblazoned with the old German motto, "Ich dien," in every drug store.

For information, both medical and otherwise, the use of the directory and telephone, small change for large bills, postage stamps, a comfortable place to wait for a street car—the drug store is sought with the assurance of service born of confidence that never suffered disappointment.

Is all this gratuitous service to the public a part of pharmacy inherent, or has it grown up as the result of that innate goodness, generosity and spirit of human kindness of the devotees to pharmaceutical science?

This sort of uncompensated service has continued so long and has become so firmly fixed in the public mind that a polite refusal would be regarded as an outrage.

People, however, usually appreciate that which costs them something, either in time, effort or money. Is it not possible that that which begins as favor to the public may end by being regarded as a right? We often have instances of that. It is not good policy to so cheapen either your service or what you have to sell as to lessen their value. Nor is it wise to encourage the mean and sordid spirit influencing so many people in their desire to get something for nothing.

To serve the public is one thing, to be a public servant quite another thing. It is a mistake to seek the smallest trade and descend to the bargain counter scheme to attract business.

The public estimate of an individual is pretty generally correct. If you are regarded as one who lives by suffering and not by an inherent right, is not this due to the spirit of too much subservency on your part?

When you advertise your willingness to do so many things for the public free of cost, are you not seeking the patronage of those whose trade is not worth having? The ability and willingness to pay for what they get is the sort of trade that you want to cultivate. Drug stores cannot be successfully conducted on the basis of philanthropic institutions. It is urgent need that sends people

to the drug store. The office of the pharmacist is to supply this want for the sick and afflicted, and just in proportion as the articles to meet this demand come out of your own laboratory as evidence of your skill and ability to produce, just to that extent will your reputation be enhanced and your business become more firmly established.

The foregoing may seem irrelevant as an answer to this query. There is but one way in which you can repress the sale of goods that yield no profit and that is by competing with articles of like character of your own manufacture.

Then the next thing is to acquaint the public with the merit of the articles. In other words advertise them.

Druggists' advertising is a subject that has received a good deal of attention in recent years. The pharmaceutical press has taken it up and set aside a portion of their papers as a special department presided over by a special editor whose duties involve criticising copy of druggists' advertising and making suggestions along that line of a helpful nature. Some of this counsel and advice might be of service to a neophyte; but much that is commended seems trivial, sensational and undignified.

Our calling or occupation does not admit of anything that savors of the surprising. The practice of pharmacy is in no wise sensational, but eminently sober, practical and even prosaic. All advertising announcements in the public press or otherwise should be along the line of that which is plain, simple and dignified.

The medical profession in their code of ethics prohibit advertising beyond a mere professional card, which emphasizes their estimate of the high humanitarian spirit of their calling. The pharmacist should regard no less highly the importance, the value and dignity of his occupation.

It is inadvisable that his name should appear in connection with the advertising of any nostrum. You will gain in public esteem by the omission of this sort of publicity. What do you think of the physician who writes patent medicine testimonials?

Advertise in the newspapers; advertise by any legitimate means, but let it always be in the interest of something you make. Samples of the article, judiciously placed, usually make a good return on the outlay.

It is not good policy to spend money to advertise that which sells for small amounts. The impression already exists that the drug store is the place where you can get the smallest possible quantity of anything.

Much has been said about window dressing and displays as a means of advertising. Chemical apparatus as well as pharmaceutical manipulations always attract attention. Crude drugs in liberal quantities, or arranged in small cases with glass front, labeled with name, habitat and medicinal properties, afford interest and instruction and will be looked at and commented on.

A wooden-hooped cask or half barrel, had of any wine dealer, placed in the window and labeled Bay Rum, Witch Hazel, etc., creates a good impression.

A clock with a twelve-inch diameter dial placed at an angle in the window with a nicely painted bright-colored card sign 8 x 20 inches, advertising some one of your preparations, placed immediately above or below the clock and changed every few days will prove an excellent and attractive advertising medium. Everybody looks at a clock, and, under these conditions, they cannot help but see your sign.

To sum up the whole matter, sell as few of the nostrums that pay no profit as possible. Compete along the same line with remedies of your own manufacture and promote their sale by all legitimate means. Supply what is called for without comment, but at the same time give a sample of your own remedy intended for the same disorder. Don't advertise that you don't substitute, and don't be too anxious to serve the dear public without compensation.

Cascarine Leprince.—Name for a crystalline principle obtained from *Cascara sagrada*, with the formula $C_{12}H_{16}O_6$. It possesses the aperient and cholagogue properties of cascara, with apparently no evil sequelae. It comes into trade in the shape of an elixir and also in pills.

A PRAYER.

**Reply to a Wholesale Druggist, Who Pleads
That the Pharmacy Law Should Not
Be Enforced Because It Will
Result in Its Repeal.**

Holy St. Andrew, patron saint of Nolham Enilk, I humbly beg your kind intercession. I pray and beg for your guidance and protection for the entire Board of Pharmacy, so that its members may ever be mindful of the oath they have taken, namely, that they will enforce the law governing the practice of pharmacy of this commonwealth impartially, without fear and without favor to anyone, and that they will not discriminate in favor of friend, nor be especially vindictive against foe.

I pray for your guidance of the unregistered druggist, so that he may see the villainy of selling adulterated drugs, and of the carelessness in compounding prescriptions, and that they will clearly see the law is constitutional and that the board means to enforce it.

I pray your guidance, and kindly ask you to secure to your assistance all those great mortals who during their lifetime on this earth were unselfish laborers in the field of honest pharmacy; for all honest retail pharmacists, so that they may be able to protect themselves against the mammon worshiping jobbers, so that they may not sell powdered tragacanth containing 25 per cent. of starch; oil sandalwood containing oil cedar, powdered podophyllum in place of podophyllin, powdered aloes for aloin.

I also pray for the guidance and enlightenment of all jobbers, so that they will not justify themselves when they sell adulterated sandalwood oil on the plea that "it is of little medicinal value, anyhow," or that it is mostly used in perfumery, for which it need not be pure; also that they will not sell impure drugs, or justify themselves when they sell them that they are of little medicinal value, anyhow.

In closing this prayer, do not be offended if I ask for the assistance of all the saints on the calendar for their intervention that all the members of the Pharmacy Board will have backbone enough to enforce the law, and will not be frightened by the threat of Nolham Enilk that he will see that they will be replaced by men who will do his bidding, even as the members of the State Association bow to his every wish.

I am yours, though not in brotherhood, but in prayer for honest pharmacy.

Pittsburg, Pa.

LOUIS EMANUEL.

ALMOND OIL AND ITS SUBSTITUTES.*

By W. C. ALLEN and E. T. BREWIS.

In speaking of almond oil we have to remember at the outset that almonds are produced in many countries, and, although most of those that reach our market are shipped from a zone falling between the 30th and 45th parallels of north latitude that might be broadly described as "Southern Europe and countries adjacent," we have within that limit to deal with fruit produced under varying conditions both of climate and soil. This is evident when we glance at the different countries from which we get our principal supplies, viz., Morocco, Canary Islands, Portugal, Spain, France, Italy, Sicily, Syria and Persia.

Moller, in his "Lehrbuch der Pharmacognosie," states that approximately "almonds contain 50 per cent. of fatty oil, 23 per cent. albuminous bodies, 6 per cent. sugar and 3 per cent. gum. Starch is absent. Bitter almonds contain in addition, 3 per cent. of a crystalline glucoside amygdalin, which, in the presence of water, is acted upon by the emulsin and is decomposed into hydrocyanic acid, sugar and volatile oil of bitter almonds."

The above percentage of fatty oil appears to be considerably exaggerated—the estimate of Schaedler (45 per cent. from sweet and 38 per cent. from bitter) being much more in accordance with practical experience.

In a company of pharmacists it is hardly necessary to recall the fact that the "almond oil" of commerce is almost entirely obtained by the expression of bitter almonds in powerful hydraulic presses. The expressed oils from "sweets" and "bitters" do not differ from each other in any material degree (compare Valencia sweets and Sicily bitters), while the additional product, essential oil of almonds, obtained by distillation of the "press cake" from the latter, enables the manufacturer to supply oil at a price that would not be possible were really "sweet almonds" alone used.

Morocco, or as they are more commonly known, "Barbary" bitters, at any rate those from the port of Mogador, are always more or less mixed with sweets. The exports from the more northerly ports, viz., Saffi, Mazagan, and occasionally Rhabat, appear less open to this objection, though a slight admixture is usually met with. The supplies from Sicily are not only of larger growth, but are prepared for the market in a superior manner, being cleaner and more thoroughly sorted into their respective classes "sweet" and "bitter." Thus, here again we must note a difference even in bitter almonds, and whilst our suggested masticator would find even the ordinary Mogador "sweet" almond bitter, if, on the other hand, he had got hold of true Sicilian bitters, his language might not bear a "qualitative analysis." The important production of the Canary Islands holds a somewhat intermediate place between that of Morocco and Sicily, while French, Syrian and Persian may be said practically to resemble the Sicilian almonds as regards the quality of the oil they produce. In view, therefore, of these differing sources of supply, we cannot expect absolute uniformity in results upon the examination of the various oils, more especially by color reactions. Fortunately these differences are but slight, and in no case do they reach a limit that would cause difficulty in distinguishing a genuine almond oil from one containing any of the ordinary adulterants.

The British Pharmacopœia, 1898, states that almond oil does not congeal until nearly 20° C. The German merely says that "it remains clear at 10° C., while the U. S. P., with its usual thoroughness, combines the two statements. The lower limit appears to be reasonable and conforms to our experience. All three authorities unite in giving the nitric acid test, while the German and the United States stipulate in addition a test dependent upon the melting point and solubility of the free fatty acids.

The nitric acid test has replaced that given by Bieber, who was the first, we believe, to draw attention to the means of discriminating between almond and the so-called "peach kernel oil." We owe much to his investigations, which brought to the knowledge of the trade how extensively the cheaper oil was being sold as "almond oil," or used to make the true "*Oleum amygdale dulc.*" become like the product of "the widow's curse." Although this reagent is now apt to be considered obsolete, in favor of the nitric acid test, and rightly so, we think it is interesting to note that when comparative tests are made by the two methods on a series of oils, some of the differing characteristics of individual samples are brought out more clearly by the Bieber test; all this is more especially noticeable after the lapse of some hours. We may, however, add that we find that the proportions one to four rather than one to five present advantages in actual working.

Maben's results using nitric acid, s. g., 1.42, differ from those of other observers and have repeatedly been quoted by authors who seem to have overlooked his explanation that the oils upon which he experimented were not those usually met with in English commerce.

Later, Micko (Analyst, 1893, p. 149) pointed out that the peach blossoms color ascribed by Bieber to peach kernel oil was really due to the oil from apricot kernels.

No reference to the chemical reactions of almond and kernel oils would be complete without mention of the helpful researches of Mr. J. C. Umney, who has done so much in aid of scientific production in British manufacturing pharmacy.

Since light has been thrown upon this question, we believe that adulteration of almond oil is comparatively rare. It is substitution rather than adulteration that is

*A paper read before the British Pharmaceutical Conference, at its last annual meeting.

the practical question of the day. At the present time this question has become acute; the damage done to growing crops of almonds by the unseasonable frosts in the spring of last year and this has brought about a phenomenal advance in the cost of the fruit, which has in turn affected the price of the oil. The temptation to substitution is, therefore, considerable.

Of such substitutes, peach or apricot kernel oils, above alluded to, stand foremost; they are, indeed, the only ones that need serious discussion, and we may here state that though it is interesting from a scientific point of view to trace the difference between oil from peach kernels and that from kernels of apricots, for all practical purposes we may take the two as interchangeable. Shipments, although now consisting chiefly of apricot kernels containing occasional packages of peach, in the past have been known to the trade as "peach kernels" and it was this that originally guided us to use what then appeared to be the correct title for the products, *Oleum Amygdalae Persicae*, from *Amygdalus Persica*, the peach, and not, as some of our friends have freely translated it, "Persian almond oil." This oil, now so largely produced at home under its distinctive name, yet constantly described from abroad as "almond oil," has a good deal of resemblance to its namesake. It is slightly more limpid and possesses a more nutty flavor than the true almond oil, the rich, bland, soft taste of which can be recognized by an expert.

These kernel oils have not the same keeping quality as the oil for which they are substituted, and this, together with their greater limpidity, has been the cause of various troubles, where they had been unwittingly used in place of almond oil. The red color reaction of apricot as compared with the yellowish white of almond is characteristic and sharply marks a distinction between the two.

In recent years we have met with many cases of undoubted adulteration, and within the last twelve months have noticed this to a very marked extent. Out of at least seven representative samples of foreign obtained from different parts of the country, one only could be recognized as an unsophisticated kernel oil. The principal adulterants to be looked for are oils of cotton seed, sesame, poppy, olive and ararobis. But this is a branch of the subject with which we have no practical experience and have found some difficulty in obtaining reliable information. We have, however, seen certain specimens which had nothing in common with "almond oil," whose name they bore, or of the kernel oil so often used as a substitute.

In conclusion, while we believe that almond oil will always be facile princeps among fixed oils, we see no reason why the true peach or apricot kernel oils should not continue to find a useful place where they are suited to any particular manufacture, and we should certainly protest against any substitution of the one for the other without the knowledge of the purchaser.

ETHER, CHLOROFORM, ETC., TITTLING.

The Daily Mail (London) publishes an article on this subject from which we take the following extracts: (Chem. and Dr.)

Unfortunately, there are more ways than one of getting drunk.

Eau de Cologne has been more or less used for many years. But of late years the quantities sold by chemists are enormous. Chemists will tell you that fashionable ladies buy an enormous amount of eau de cologne that they could not possibly use for toilet purposes.

The novice, who, by the way, would be shocked at the idea of drinking brandy neat, usually begins with five or six drops of eau de cologne taken on a piece of sugar. It gives a glow to the cheeks and a sparkle to the eye. And when a woman is weary after a dance it is delightfully stimulating. From six drops the dose increases to twelve. By and by thirty or forty drops are taken in water. And when well into the habit women drink it by the spoonful.

Of course, it ruins the health, for the lining of the stomach is quickly ruined, sleeplessness follows, and after a while melancholia sets in. England and the United States are the leading countries in eau de cologne tittling.

Essence of lavender is also becoming a much-used intoxicant. It is quite common for a man to walk into a chemist's and drink a couple of drachms, or even an ounce, of this still more destructive liquor. As an ounce of essence of lavender is equal to about ninepence worth of public house whiskey, it can be realized how dangerous the practice is.

Pretty similar to these two intoxicants is essence of ginger. But the ginger is even more harmful. Essence of ginger is 84 degrees over proof, or about twice as strong as good whiskey.

It is quite surprising what a lot of people drink ginger on the sly. An able London barrister never goes to court without a bottle of it. Clergymen take it. Literary men take it. Business men take it. But the great consumers are women.

Usually these people begin by taking drops for painful sensations in the stomach. Then they often get up to a pint a day and numerous chemists' customers buy essence of ginger by the gallon.

Capsicum drinking is one of the newest forms of indulgence. Tincture of capsicum is a very valuable medicine when properly used. But if consumed to excess it destroys the body. And the liking some people get for it is extraordinary. An army officer who began taking capsicum as a relief for chilly sensation became so addicted to its use that he could take no fluid without it. He put it in tea, coffee, beer and even soup. The consequence was that from being a happy, cheery man, he became gloomy and melancholy and in a twelvemonth looked twenty years older.

Quite different from the foregoing are ether and chloroform. These terrible drugs are used by an immense number of persons. Men whom you meet in business and whom you would never suspect of giving way to the worst of all forms of intoxication, go to sleep every night under the influence of ether or chloroform. Chloroform is really not very dissimilar to alcohol. It is, in fact, made from alcohol, and it first excites and then stupefies, precisely like alcohol. In one way it is not so injurious, for it does not injure the substance of the liver and other organs nearly so much. But it kills all the same.

Some people drink chloroform, others inhale it.

The habit is startlingly common in England, medical men being the most numerous victims. Dr. Kerr says that he found it consumed mostly by males, mostly by doctors and mostly by men between the ages of forty and fifty. After the horrible experience of inhaling the dose there follows a perfectly delicious unconsciousness of all discomfort and all things external to one's self. Beautiful visions are seen. One experiences all the happiness we conceive to exist in Heaven. But this state is very transient. Soon there is a most unpleasant awakening and until the next dose is taken existence is perfect misery. Then ruin progresses very swiftly. Nausea becomes constant, dyspepsia of a severe form comes on, with hatred of food. There is an ever-present burning thirst, a horrible pain in the heart. The victim becomes nervous, laguld, drowsy, thin, cold, haggard, worn and utterly hopeless. He has an hour or two of perfect bliss every day and almost twenty-two hours of almost intolerable misery.

The quantity of chloroform used by those accustomed to it is astonishing. One woman was known to have bought a pint of it every day, poured it on her blanket and inhaled it. Yet a single teaspoonful sometimes kills.

Ether is quite like chloroform in its effects. But if you inhale it the action is much slower, while if you drink it the action is quicker than that of chloroform. At first it is most exhilarating. Mixed with whiskey it excites men to madness. It is not so dangerous to life as chloroform. Hence it is more commonly used. It takes a terrible hold of the consumer and many people get drunk on it several times a day. After a time it produces gastritis.

In Ireland some years ago the population of an immense district were, almost every man, woman and child, ether drunkards. From Ireland the practice traveled to Glasgow, down to Lincolnshire and London and even across the Atlantic. It is not quite so extensively used now, but as it is a cheap way of getting drunk, there is a progressive increase of the habit.

PHARMACY.

COMPOUNDS OF OSMIUM.—In a communication recently made to the Académie des Sciences, M. L. Wintrebert describes a series of experiments in which he has produced several new compounds of the metal osmium. The metal here plays the part of an acid, in combination with oxalic acid forming a series of salts, which the experimenter calls osmyloxalates; he has succeeded in producing several of these salts. The first experiment in this direction was made last year by M. Vêzes, who found that by adding an excess of oxalic acid to potassium solution of peroxide of osmium, OsO_4 , fine needle-like crystals were obtained, of a brown color, acting strongly upon polarized light. M. Wintrebert, in taking up the experiment, formed the same salt in a different manner, using the osmate of potassium, K_2OsO_4 , as a starting point. Oxalic acid is added to an alkaline and concentrated solution of the osmate until an acid reaction is obtained, and the liquid is slowly heated; it passes from a dark red to a light yellow-brown, and after cooling deposits the brown needle-like crystals previously mentioned. The conditions of the experiment indicated that the osmium is at the same degree of oxidation as in the osmate, which is derived from the trioxide, OsO_3 ; this was confirmed by direct analysis of the compound, which gave the formula $\text{OsO}_2(\text{C}_2\text{O}_4)_2\text{K}_2$, $2\text{H}_2\text{O}$, it being thus an osmyloxalate of potassium hydrate.

It is evident that the potassium may be replaced by other metals, and a series of salts obtained; two of these salts have been prepared, those of sodium and of mercury. The osmyloxalate of sodium is prepared by heating to the boiling point a solution of peroxide of osmium in caustic soda and adding an excess of crystallized oxalic acid, so that after this is dissolved the solution is quite acid. The boiling solution changes after a time from a dark red-brown to a light yellow-brown; it is then concentrated by evaporation. It deposits first the binoxalate of sodium, then the osmyloxalate appears in the form of brown crystals, which are much more soluble cold than those of the potassium salt. These two alkaline salts are but little stable in the presence of water; their solution soon becomes turbid, and a black precipitate of osmic acid is formed; this decomposition may be prevented by adding a small quantity of oxalic acid or alkaline oxalate to the solution. To prepare the silver salt, one of these solutions is poured into a solution of nitrate of silver; the brown liquid changes color, passing to a greenish brown, and deposits small greenish-brown crystals, which appear yellow by transparency, and act upon polarized light. The silver salt is rather unstable; the liquid in which it is formed often becomes turbid, and deposits osmic acid and oxalate of silver. In the crystalline state the salt undergoes a slow decomposition.—Sci. Am.

ALKALOIDAL ANTAGONISM.—The old-fashioned belief that in certain drugs Nature has placed principles which are physiologically antagonistic to each other has received another rude shock from Professor C. R. Marshall and Dr. H. A. D. Jowett in their papers communicated to the British Medical Association (Ch. and Dr.) on the alkaloids of jaborandi and their physiological action. It will be remembered that therapeutics have taught for many years that the jaborine of jaborandi is physiologically antagonistic to pilocarpine and we have been given to believe that the predominance of the former alkaloid in jaborandi accounts for the feeble activity of some samples of the drug. Similarly we have been taught that the calabarine of calabar beans is the physiological opposite of physostigmine. These statements will occur in many text books. In the case of the calabar bean it was proved more than a dozen years ago that there is no alkaloid in it corresponding in properties with those attributed to calabarine—in fact, calabarine does not exist. It is now more than a year since Dr. Jowett, in a revision research of jaborandi, discovered that the so-called alkaloid jaborine is non-existent, and that the article placed upon the market under that name is a mix-

ture of resin, pilocarpine and its isomer isopilocarpine. Some physiological research was needed to complete the work, and this is now provided in the British Medical Association papers. These cover the physiological action of jaborandi itself, and of pilocarpine, isopilocarpine and pilocarpidine—the last an existing principle, but now practically unobtainable, because it only occurs in the leaves of true jaborandi which is rarely found commercially. Professor Marshall has ascertained that this principle is so slightly active that it may be put down as a physiologically inactive substance. Isopilocarpine has the same action as pilocarpine, but it is only an eighth to a tenth as strong. The jaborandi experiments were made with four samples of liquid extract. By direct alkaloidal assay these seemed to be fair products, the "total alkaloid" being (1) 0.21, (2) 0.34, (3) 0.5, and (4) 0.25 per cent. but the crystalline nitrate obtainable from them was nil in the first two samples and 0.082 per cent. from each of the second two—in short, the "total alkaloid" consisted chiefly of resin. The physiological experiments corroborated the feeble activity of these preparations. They were supplemented by personal trials on Professor Marshall himself. He took doses of the extract and found them to be almost valueless. The following are his own words in respect to the trials:

Of one preparation more than an ounce was required to produce slight salivation in twenty minutes, and of the most powerful 85 minims; $\frac{3}{4}$ ounce of another was inactive. These results, coupled with the experiments on animals, prove the extreme variability of this preparation, and cast considerable doubt on its utility as a medicine. Moreover, its inclusion in the Pharmacopœia is unnecessary. The whole therapeutic activity of jaborandi leaves is due to the pilocarpine or isopilocarpine they contain, and preparations which cannot be standardized with accuracy only contain a variable proportion of these with alcohol and inert resinous and coloring matters. The inactivity of the preparations seems to be due to the absence of pilocarpine, and not to the presence of an antagonistic alkaloid.

This discredit of galenical preparations of jaborandi will doubtless receive due official notice and requires no emphasis; but the last sentence of the paragraph does. The doctrine of natural antagonism has been accepted by therapeutists far too complacently. Intuition without experiment should have discredited it, but unfortunately it was confirmed by alkaloidal work done in the sixth and seventh decades of this century and much of that work has been found to be extremely unreliable. This should act as a stimulus to revision, especially in those cases where earlier workers have isolated from the same drug two "alkaloids" which are physiologically antagonistic to each other. From such statements it may be confidently surmised that the conditions are similar to those discovered by Dr. Jowett in jaborandi.

FROZEN SPOOKS.—In the London Day by Day column of the Daily Telegraph an interview with Professor Dewar concerning the solidification of spooks who happen to be in the atmosphere when he is freezing it, is thus humorously treated:

With respect to the protest by a spiritualist against the maltreatment of spooks, whose existence in our atmosphere is rendered unbearable by the experiments of scientific men to solidify air, Prof. Dewar, of the Royal Institution, has been interviewed on the subject. He said: "If what spiritualists say be true, spooks would be included in the air which he and others liquefied. Their possible presence, however, he added with a grim smile, has never troubled him. The temperature at which air solidifies is very much below freezing point, and when it falls down like a lump of ice, whatever spirits there are in it would have very little chance indeed of escaping." Such are the views of Prof. Dewar, and it must be confessed that they offer very little prospective consolation for the spooks. Another spiritualist has written us emphasizing the statement concerning the dangers which the "shades" run in traversing the atmosphere to attend "circles," and reiterates the allegation that the latter are often deprived of their most intelligent spirits in consequence.

It will probably be necessary, if the learned professor brings his scientific researches up to a commercial realization, to provide a close time for spooks, say during the Long Vacation. (Chem. and Drug.)

Pictolin.—Trade name for a liquid gas, put up in convenient packages. It is recommended as a destroyer of mice, rats, bugs, roaches, etc., on a grand scale. The localities to be freed from vermin are made as nearly air-tight as possible, and the pictolin is then set free in them.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Disguising the Taste of Aloes.—(G. F. M.) asks if there is any method of disguising the taste of one grain of aloes in a five or six grain tablet.

Combination with extract of licorice and aromatic will partially disguise the taste of aloes. In the preparation of tablets containing aloes the most satisfactory method is to coat them with chocolate, a process for which may be found in this journal July 6, 1899, page 18.

Liquid Meat Smoke.—(M. S.) We know of no formula for a preparation under this title. Crude pyrologeneous acid is often used for "smoking" meat, being painted on with a brush or otherwise applied. According to King's American Dispensary, "fish and meats, fresh or salted, immersed for a few seconds in crude pyrologeneous acid, acquire a smoky taste and are as well cured as by the usual method of smoking, besides being preserved from 'skippers.' Silliman found that if a quart of this acid be added to the pickling liquid when hams are packed in it they would have as perfect a smoky flavor as if they had gone through the usual process of preparation by smoking." We understand that one manufacturer of a liquid preparation for giving to meat a smoky flavor claims trade mark rights in the words "liquid extract of smoke."

Household Ammonia.—(G. W. P.).

- | | |
|------------------------------|-----------|
| (1) Yellow soap | 10 grains |
| Borax | 1 dram |
| Lavender water | 20 minims |
| Stronger ammonia water | 6 ounces |
| Water, enough to make | 20 ounces |

Dissolve the soap and borax in 5 ounces of boiling water; when cold add the lavender water and ammonia, and make up to a pint with water.

- | | |
|------------------------------|------------|
| (2) Methylated spirit | 1 gallon |
| Soft water | 1 gallon |
| Stronger ammonia water | 1 gallon |
| (3) Ammonia water | 5 pints |
| Distilled water | 5 pints |
| Soap | 100 grains |
| Olive oil | 5 drams |

Put the soap in shavings, boil with the oil and water, cool, add the ammonia water, and bottle. For use in laundries, baths and general household purposes, add one tablespoonful to one gallon of water.

Removal of Moles from the Face. (A. M.) Usually small moles or nevi, commonly called "mother's marks," may be removed without scarring by means of the electric needle, but no treatment of this character should be undertaken without the advice of a competent physician. Most of the remedies used for the purpose are caustics and they cannot be used indiscriminately. On the authority of a foreign medical journal we give the following, but we cannot vouch for its safety: Apply over the mark a paste made of one part of tartar emetic with four parts of soap plaster. The paste is applied to the depth of about 1-12 inch and covered with a slip of gum paper or court plaster. On the fourth or fifth day, supuration sets in and in a few days later scarcely a sign of a mark can be seen. Hager gives this one: Mix together, with frequent agitation, 1 part pure carbonate of potassium, 4 parts rose water, 2 parts Hoffmann's Balsam of Life, and 2 parts distilled water. Apply to the mark twice a day, shaking the bottle well before using.

Chill and Fever Cure.—(A. F. C.) The following formulas are for preparations used in the treatment of chills and fever:

- | | |
|----------------------------------|----------|
| (1) Tincture of eucalyptus | 2 ounces |
| Tincture of serpentaria | 4 ounces |

Tincture of capsicum	5 drams
Tincture of myrrh	5 drams
Tincture of nux vomica	2 drams
Quinine sulphate	1 dram
Ellixir glycyrrhiza, enough to make	16 ounces

Dose, $\frac{1}{2}$ tablespoonful.

- | | |
|--|---------------|
| (2) Cinchonidine sulphate | 2 ounces |
| Aromatic sulphuric acid | 1 fl. ounce |
| Tincture ferric chloride | 3 fl. ounces |
| Tincture of nux vomica | 2 fl. ounces |
| Syrup of ginger, enough to make | 64 fl. ounces |
| (3) Quinine sulphate | 61 grains |
| Cinchonine sulphate | 61 grains |
| Sodium bicarbonate | 120 grains |
| Saccharin | 15 grains |
| Oil of wintergreen | 30 grains |
| Fowler's solution | 256 minims |
| Alcohol | 2 ounces |
| Water | 3 ounces |
| Aromatic ellixir cascara, enough to make | 16 fl. ounces |

Dissolve the cinchona salts and oil of wintergreen in the alcohol, using a gentle heat of the water bath. Dissolve the saccharin and the sodium bicarbonate in the water and add to the solution of the cinchona salts, previously mixed with the aromatic ellixir of cascara, lastly add the Fowler's solution. Formulas for "tasteless" chill tonics and other preparations may be found in previous volumes of the Era. Consult the Index.

Granular Effervescent Magnesium Citrate.

(G. F. M.) We know of no better formula for this preparation than that given in the Pharmacopœia, but it cannot be well made within the price you name—18 cents per pound. To cheapen the price some manufacturers, both in this country and in England, are reported to use magnesium sulphate almost, if not entirely, in the manufacture of this so-called effervescent "magnesium citrate" salt. Some time ago A. Bradley read a paper on granular effervescent preparations before the North Carolina Pharmaceutical Association, in which he gave the following formula, which he said was practically identical with the granular effervescent magnesium citrate on the market:

Dried magnesium sulphate	400 grains
Tartaric acid	300 grains
Citric acid	240 grains
Powdered sugar	160 grains
Sodium bicarbonate	600 grains

Alcohol as directed in the National Formulary for the preparation of effervescent salts is said to be the best liquid for general use as a moistening agent. The temperature of the drying apparatus should not go above 158° F., for fear of converting the sodium bicarbonate into carbonate through loss of carbon dioxide. Of course, you will understand that preparations made with magnesium sulphate are not preparations of effervescent magnesium citrate as defined in the Pharmacopœia, and their sale as such would undoubtedly make the seller liable to prosecution under the pure food and drug laws obtaining in the various States.

Use of Glycerine in Vanilla Extract.—J. G. P.

writes: "Will you give your views as to the use of glycerine in the manufacture of vanilla extract from the bean? Chas. E. Hires, in 'Recipes' says: 'Using glycerine as a solvent, and by heat, and in vacuo have all failed to give the unvarying and satisfactory results as we have always found in percolation.' In Harrop's 'Monograph on Flavoring Extracts,' Dr. C. E. Nicholson says: 'I have not found the addition of glycerine an improvement.' An unknown writer says, in giving a formula in which he calls for glycerine: 'Vanilla beans contain a large amount of vegetable acid, together with certain albuminous substances allied to the alcohol series, with the acid combine to produce the flavor of vanilla extract. The glycerine acts as a solvent of these acids and albuminous substances, admitting of their combination, which occurs imperfectly when the alcoholic menstruum is used. In the hands of many manufacturers this process has proved economical and profitable. Some have advised its use in lemon and other extracts from oils, stating that it will bring out the flavor.'"

The practical value of glycerine as a solvent in the manufacture of vanilla extract is extremely doubtful. This belief is backed up by an examination of several dozen formulas, in but very few of which glycerine is advised, and then only as a sweetening agent and

give the resulting product more "body." There is no solvent or menstruum which will take the place of deodorized alcohol in making this extract. Of course, the vanilla must be properly prepared and macerated to soften it so that it may be further disintegrated by beating with sugar, as is done in the official process. In this way it is possible to remove all of the odoriferous portions of the vanilla by percolation. "Aging" the extract serves to develop the odor by the formation of the ethers peculiar to a well made extract or tincture. Flavoring extracts made with oil of lemon tend to become resinous and bitter with age. In our experience glycerin does not "bring out the flavor" of extracts made from essential oils, neither is it a solvent of oily bodies.

Treatment of Garget.—(C. V. T.) The following information and method of treatment is taken from "Veterinary Counter Practice":

Inflammation of the udder or "garget" is of frequent occurrence in the cow; it may result from external injury, exposure to cold, or irregular and bad milking. It occurs, too, sometimes as an aggravation of milk fever and the foot and mouth disease. The symptoms are at first purely local, but shortly accompanied by fever in greater or less degree, depending upon the severity of pain, etc. The secretion of milk is diminished and perverted, being watery and containing curds; it then becomes yellowish from admixture of pus and may be entirely arrested. The gland swells, feels hard and hot, is very painful, the veins running from it being much distended. These symptoms may terminate in resolution, but in some few bad cases end in abscess or even mortification of a quarter of the udder.

The general treatment consists in lessening the food and giving mild aperients and antacids. Potassium bicarbonate in two dram doses twice a day till the acute symptoms have passed, is generally satisfactory. Local treatment consists in the constant use of warm fomentation and the support of the gland by a carefully arranged bandage, through which the teats must be allowed to protrude. The milk must be frequently but gently drawn off. When the acute pain has passed off, resolution may be accelerated by gentle friction, and, still later, by a stimulating liniment or a mild iodine ointment. Should an abscess form, early incision must be resorted to; once being sure of the presence of matter, do not wait for it to "point." Many successful practitioners of the old school put their faith in bleeding and purging, and, if one may judge by results, they are not far wrong. As much as two and even three ounces of aloes with magnesium sulphate are given in the following form:

Socotrine aloes	1½ ounces.
Powdered ginger	1 ounce.
Juniper berries	4 drams.
Magnesium sulphate	1 pound.

To be given in 3 pints of small beer.

For local application try one of the following:

Garget Liniment.

(1) Olive oil	3 ounces.
Oil of turpentine	1 ounce.
Camphor	2 drams.
(2) Neatsfoot oil	4 ounces.
Camphorated oil	1 ounce.
Oil of turpentine	1 ounce.
Tincture opium	1 ounce.
Oil origanum	1 dram.

Garget Ointment.

(1) Spirit camphor	1 ounce.
Mercurial ointment	1 ounce.
Elder ointment	8 ounces.
(2) Soft soap	1 pound.
Mercurial ointment	2 ounces.
Powdered camphor	1 ounce.

Accompanying the application of this ointment the animal should be first given a laxative, then a fever or diuretic drink.

Starch Converting Power of Diastase.—(A. C.) asks the following question: How can a comparative test of the starch converting power of different samples of vegetable diastase be conveniently made?

A number of methods have been proposed, but most of them are exceedingly tedious in detail. Probably as good a method as any is that proposed by Prof. J. M. Francis (A. Ph. A. Proceedings, 1898) for the estimation

of malt extracts and other diastasic products. It is as follows:

Solution of Digestants.—Accurately weigh out five grams (or any desired amount) of the malt extract and make into solution, measuring 100 cubic centimeters with distilled water at 40° C. In case of more powerful digestants weigh out a proportionately smaller quantity. If it be a powder, or if a portion is not readily soluble, allow maceration in a warm place for one-half hour.

Iodine Solution.—Prepare a solution by dissolving two grams iodine in 200 cubic centimeters distilled water containing five grams of potassium iodide; adjust to 250 cubic centimeters with distilled water. Add 1½ cubic centimeters of this iodine solution to a sufficient quantity of distilled water to produce 1,000 cubic centimeters. Mix well and fill a dozen clear two-ounce vials. Arrange these side by side on a white porcelain plate or white sheet of paper.

Water Bath.—In order to have an even temperature it is best to arrange a metal water bath containing a perforated rack. Put in the proper measure of water and keep up a temperature of 40° C. by means of lamp or gas burner. Large, flat-bottomed tubes are best suited for containing the starch solution, but four or five wide-mouthed vials answer well.

Starch Solution.—Into a counterpoised beaker or other container of sufficient size, pour distilled water, about 400 Gm.; bring this water to violent ebullition before adding the starch. In the meantime weigh out ten grams potato starch, transfer to a small beaker, add fifty cubic centimeters cold water, and stir until all lumps are broken and the starch is suspended in the water. Pour this starch and the water into the boiling water, stirring the latter constantly with a rubber-tipped rod. Rinse out remaining traces of starch, add to the paste in beaker, and continue to stir the latter until a smooth, homogeneous jelly is formed; allow to boil vigorously for fifteen minutes; transfer beaker and contents to the balances; remove stirring rod and add sufficient distilled water to make 500 grams (exclusive of weight of beaker); stir to thorough mixture. Counterpoise each tube or vial and pour into each 100 Gm. of the starch paste; transfer the tubes of paste to the water bath and allow them to remain until the paste attains a temperature of 40° C.

Performing the Test.—To each tube containing 100 grams of paste, at a temperature of 40° C., add the calculated measure of digestant solution, shake vigorously and replace in water bath. At intervals of one minute, by means of a minim-dropper, drop two minims of the starch solution into a vial of iodine solution; note the color produced, and continue until no change of tint is produced in a vial standing on a white base and between two other vials to which no starch solution is added. Note time required.

If the digestion is completed in less than thirty minutes (or any specified time), repeat the test, employing a proportionately smaller measure of the digestant, until the proportion required to digest 100 grams of starch paste in thirty minutes is determined. It is hardly necessary to prescribe the amount of digestive solution to be employed in each case, as this is simply a matter of arithmetic. For instance, each tube contains 100 grams paste, equal to 2 grams dry starch (two per cent. solution). If we dissolve 5 grams malt extract in sufficient water to make 100 cubic centimeters, each cubic centimeter will contain 0.05 gram malt extract. If we suppose the malt extract will digest ten times its weight, we should employ 100 grams starch paste (2 grams starch), and one-tenth of 2 grams malt extract, equal to 0.2 gram or four cubic centimeters of the malt extract dilution. The higher the power tested for, the more dilute should be the solution of digestant.

The temperature of 40° C. is suggested to conform to the U. S. P. pepsin test; 38° C. (body temperature) would be theoretically better.

Two good books on physiological chemistry are Hammarsten's Text Book of Physiological Chemistry, \$4, and Novy's Laboratory Work in Physiological Chemistry, \$2. If you want to go into the subject exhaustively you should consult the works of Hoppe-Seyler, Neubauer-Huppert, Salkowski and others.

NEWS AND TRADE DEPARTMENT.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN. China.

Li Hung Chang declares that it is useless to expect the Chinese Court to consent to the execution of Yu Hsie or Tung Fu Hsiang, and he dispairs of a settlement. He believes that it is equally vain to attempt to induce the Powers to moderate their demands, and he says that the Chinese Court, therefore, is preparing for a further flight to the Province of Sze Chuen, with an Imperial army of 14,000 troops.

Four high Chinese officials have already been put to death in accordance with the demands of the representatives of the Powers.

Count Von Waldersee's plan of campaign in China principally contemplates forcing the return of the Emperor Kwang Su and the Empress Dowager to Peking by pushing expeditions nearer to them, cutting off their supplies and cutting off reinforcements.

More details from German soldiers have been received in Berlin telling of terrible atrocities by German troops in China.

The rebellion that is being organized in South China, it is said, is ruining commerce in that section of the empire.

The Chinese Government hopes, by increasing the marine customs, to shift her indemnity debt upon the Western Hemisphere, but it is believed that this shrewd financial scheme of Li Hung Chang will not succeed.

South Africa.

There was heavy fighting near Bothaville, Orange River Colony, last week, resulting in the defeat of the Boers with 23 killed, 30 wounded and 100 taken prisoners. Seven of their guns were taken. The British lost three officers and four men killed.

Ex-President Kruger, it is expected, will reach Marseilles on November 17 and Paris on the 19th.

Other Foreign News.

The Italian Government has decided to adopt serious measures for the protection of King Victor Emmanuel. A special section of police is being organized.

The iron deposits discovered a year ago at Kursk, in the south of European Russia, for whose development eighteen companies were started, have proved worthless.

The Russian Government intends sending an agent to this country to study homestead legislation with a view to its partial application in Russia.

The Canadian elections last week resulted in a victory for Sir Wilfred Laurier, the premier, and the Liberal party. The Liberals will have a majority of 53 in the Canadian Parliament.

All the South American republics except Brazil are represented at the Spanish-American Congress which is in session in Madrid. The object of the Congress is to promote trade and friendship between Spain and the Latin republics.

Glasgow is at last free from the plague.

The election in Newfoundland last week resulted in a victory for the present government over the forces of Reid, the Scotch capitalist. Reid has been lending money to the Newfoundland Government and buying up the railroads, docks, steamship lines and land, until he controls practically everything except the government itself. In last week's election he made a desperate effort to gain control of the island politically, as well as financially, but was defeated.

DOMESTIC.

The Election.

The overwhelming defeat of Mr. Bryan brings the Democratic party face to face with the question whether they can ever expect to win with Bryan for a leader and with the planks of the famous "Chicago platform" for principles. Many of the party leaders and newspapers urge the total abandonment of Bryan and "Bryanism," and a return to the principles that brought political success in 1884 and 1892.

It is reported that a meeting of the Democratic party leaders will be held in New York City in a few days to consider the lines on which the party shall be reorganized.

The large radical element that has been in the saddle in the last two campaigns of the Democratic party is not likely to submit quietly to a return to the old conservative principles that swayed the party in former years, and if a reorganization is attempted it would not be at all surprising to see this radical element cut loose and form a new radical party. Most of them came into the Democratic party from the Populist party, an independent movement that captured several

State elections during Cleveland's second term, and another independent movement would simply be a repetition of former methods.

Although McKinley won by a margin of 137 electoral votes, his majorities in some States were so close that a change of 75,000 votes, properly distributed, would have elected Bryan.

McKinley's total plurality is about \$15,000, or 213,000 more than his plurality in 1896. In New York New Jersey and New England his pluralities were about half what they were in 1896.

Outside of 142 electoral votes from Southern States, which would have been cast probably for any Democratic candidate, Bryan carried only Colorado, Idaho, Montana and Nevada, having a total of 13 electoral votes. One precinct in Batavia, Ill., gave its entire vote of 575 to McKinley.

The Republicans in Porto Rico elected their entire House of Delegates and the Commissioner to Congress. The election passed off without disorder.

There was little, if any, opposition in Michigan to the constitutional amendment authorizing the taxation of railroad and other corporations on the cash value of their property, instead of their earnings, as at present, and it was adopted by probably the largest vote ever cast for such a measure.

Montana elected a Legislature favorable to Mr. Clark and he will probably be elected to the United States Senate.

The result of the election caused a tremendous boom in stocks in Wall Street last week.

Other Domestic News.

It is announced from Washington that the campaign in the Philippines will be pushed with increased energy.

A conspiracy by which many divorces have been obtained on false evidence was unearthed in New York City last week.

Leading cotton goods manufacturers of the South have petitioned the Administration to preserve the "open door" in China.

To guard against the effects of prolonged service in the Philippines the Navy Department is sending out another detachment of 600 men to relieve sailors on the ships now at Manila. Service on the monitors in hot weather is said to be severely trying.

The purchase from Spain of the islands of Cayayan and Cibuta, in the Philippine Archipelago, for \$100,000 has been concluded.

The Venezuelan Government has restored to ex-President Andrade all his real estate and other property confiscated at the time of the recent revolution. The ex-President is living in New York City with his brother, ex-Minister Andrade.

Fire in Biloxi, Miss., last week, destroyed over 100 buildings and caused losses aggregating \$300,000.

A statement from Cape Nome bankers gives the gold output of that district as \$5,000,000 for the past season, as compared with \$2,000,000 for 1899.

Senator Platt has announced his purpose to have the New York State Legislature at its coming session pass a law placing all the police in the State under State control. If successful this will transfer a large amount of patronage and political power from Tammany to the Republican machine.

The transport Logan has sailed from Manila with 278 sick soldiers, thirty-nine general prisoners and eight insane patients.

Governor-elect Sanford of Alabama died last week.

The Cuban Constitutional Convention passed a resolution last week expressing gratitude to the United States for its efforts in Cuba's behalf. The convention showed immense enthusiasm for the United States, and seems to be a capable and harmonious body.

Figures given out by the chief of the Treasury Bureau of Statistics show that the United States will probably lead the world in amount of export trade at the end of this year.

Wholesale Druggist Bowlers' Blue.

The members of the teams of the Wholesale Druggists' Bowling Association who gathered at Reid's alleys, Saturday, November 10, to contest, were treated to a pleasant surprise by the president of the organization, George J. Seabury, who announced the day was an anniversary of his birthday and in celebration he had prepared a dinner. The following teams present enjoyed the repast: Seabury & Johnson, Johnson & Johnson, Dodge & Olcott, National Lead Co., General Chemical Co. and Church, Dwight & Co. During the meal S. H. Carragan, vice-president of the association, delivered an interesting address. The games rolled during the afternoon resulted as follows: Seabury & Johnson, 739; Johnson & Johnson, 687; Johnson & Johnson, 715; Dodge & Olcott, 887; Seabury & Johnson, 736; Dodge & Olcott, 788; National Lead Co., 709; General Chemical Co., 661; General Chemical Co., 705; Church, Dwight & Co., 677; National Lead Co., 703; Church, Dwight & Co., 714.

THE DRUG NEWS.

N. A. R. D. NOTES.

"Mr. Thos. V. Wooten, Secy., Chicago:

"Dear Sir: In the September 25 issue of — I find the report of the convention at Detroit of the N. A. R. D. I am not a retailer, simply a clerk. I am very much interested in the effort to organize the drug trade thoroughly; please let me hear from you, giving all information possible. Truly yours,

"FRED. W. THOMAS.

"Beardstown, Ill."

The national secretary is receiving many such letters from clerks who, realizing that their own welfare both now and in the future depends upon the success of the National Association's work, are anxious to give it their assistance.

The Committee on National Legislation is receiving many encouraging letters from druggists and others interested in the stamp tax on medicinal preparations. From present indications this measure will receive attention early in the approaching session of Congress. The members of the National Association are urged to call on their Senators and Congressmen previous to the assembling in Washington and insist upon the immediate repeal of this burdensome and discriminating tax.

The Chicago Retail Druggists' Association now has a competent organizer in the field and the association is growing rapidly. The city is being divided into districts, each of which is a component part of the city organization. The work is progressing in a very satisfactory manner. In this association there are determined men, and they are not a few, who have decided that the conditions of the drug trade in Chicago can be and shall be improved.

President J. A. Lockie, of the Erie County, N. Y., Pharmaceutical Association telegraphed Secretary Wooten October 31 that his society is to be reorganized on the plan of the Northern Ohio Association. There is no doubt of the association's increased usefulness under the new arrangement and the N. A. R. D., as well as the Erie County Association is to be congratulated on the change.

At a meeting of the Illinois Druggists' Association, held in Elgin, October 16, the decision was reached to put an organizer into the field to form local societies and in every other way increase the organization's effectiveness. The meeting was marked by unusual enthusiasm. The secretary and the treasurer of the Chicago Association were present.

A good illustration of the truly national character of the N. A. R. D. is the fact that the last two associations to become affiliated are those of Charleston, South Carolina, and Burlington, Vermont. These associations represent practically the entire drug trade of the two cities.

The national secretary's office was moved during the week from the ninth to the sixth floor of the Association building. An additional room is thereby secured (a need long felt) and the new arrangement is for many reasons advantageous to the work.

Since Bulletin No. 9 was issued the following manufacturers, in addition to those given therein, have adopted a definite list of wholesale distributors: A. C. Meyer & Co., Baltimore; B. O. & G. C. Wilson, Boston; The B. J. Kendall Co., Enosburg Falls, Vermont.

Chicago, Nov. 3, 1900.

It is a pleasure to note that the last cutter in Stephenson County, Illinois (Freeport county seat), has restored prices. This is due to the benign influence of the vigorous Northern Illinois Association.

The secretaries of the associations in membership are requested to write to the national secretary without delay as to the action taken by their respective bodies concerning the letters to the affiliated societies issued August 17 and October 1.

In the territory covered by the Northern Ohio Association three aggressive cutters have recently restored prices on proprietaries. The work of this society is a credit to the tireless and unselfish men who are directing its efforts.

The Sterling Remedy Company reports highly satisfactory results from their N. A. R. D. offer.

New York and Vicinity.

NEW YORK JOBBERS WILL ENFORCE N. A. R. D. PLAN.

An informal meeting attended by representatives of every jobbing house in this city was held in the rooms of the New York Board of Trade and Transportation, Thursday afternoon, November 8, for the purpose of discussing the situation in New York City. The sentiment of the meeting was focussed in a set of resolutions which were unanimously adopted, reaffirming and reasserting loyalty to the retail trade in upholding the N. A. R. D. plan, in most positive terms.

There were also present at the meeting C. F. Shoemaker, chairman of the Proprietary Committee of the National Wholesale Druggists' Association, and F. E. Holliday, chairman of the Executive Committee of the National Association of Retail Druggists.

The resolutions, it is understood, have been signed by every wholesale house in the city, the following names appearing: Schieffelin & Co., Lehn & Fink, C. N. Crittenton Co., O. H. Jadwin, Bruen, Kitchey & Co., R. W. Robinson & Son, Elmer & Amend, H. Klein & Co., McKesson & Robbins, Patterson & Purdy, Max Zeller and Townes & James, of Brooklynn.

On Wednesday, November 7, a meeting of all the wholesale houses in the State outside of Greater New York, was held in Hotel Ten Eyck, Albany, and it was unanimously decided to support the N. A. R. D. plan.

A meeting was also held in Baltimore recently, when like action was taken.

WILL SUPPORT THE N. A. R. D.

Ald of Druggists in Greater New York to Be Invited to Uphold the Plan.

Fifteen pharmacists, representing four of the five pharmaceutical associations in Greater New York, viz., Manhattan Pharmaceutical Association, Retail Druggists' Association, Kings County Pharmaceutical Society and two associations from New Jersey, the Jersey City Druggists' Association and the North Hudson Druggists' Association, met in the New York College of Pharmacy, Monday afternoon, November 5, to devise means for putting the N. A. R. D. plan into effect in Greater New York. The meeting resulted in a unanimous vote favoring the presentation to the various bodies represented the following schedule of prices: All 5c. and 10c. articles to sell at full price; all 25c. articles to be sold for not

less than 20c.; all 35c. articles for not less than 25c.; all 50c. articles for not less than 45c., and all \$1 articles for not less than 85c.

The meeting was opened by Chairman George E. Schweinfurth shortly after three o'clock, and after the purpose of the gathering was announced, William Muir was chosen permanent chairman with G. E. Schweinfurth secretary.

It was reported that the German Apothecaries' Society had failed to send a delegation because it was believed the meeting was confined to members of the N. A. R. D., and the German Society had withdrawn from that body. A resolution of regret that the German Apothecaries were not represented was adopted, and the secretary was instructed to inform the German Society of the action and invite a delegation from that organization to be present at the next meeting.

Mr. Goldwater said he might be under a misapprehension, inasmuch as his society (the Greater New York Pharmaceutical Association) had not joined the N. A. R. D. The organization was composed of managers and clerks and although it had expressed itself in favor of the N. A. R. D. it had not yet joined.

Chairman Muir stated that the meeting was not an organization affair, but was open to every pharmacist. "We want the assistance of every pharmacist," he said. W. C. Anderson believed that the committee should go on record to that effect and a motion was unanimously adopted to invite all pharmaceutical associations, whether members of the N. A. R. D. or not, to be present at the next meeting.

Secretary Schweinfurth read Resolution B of the N. A. R. D. plan, following which the chairman called on J. C. Gallagher, of the Jersey City Druggists' Association (which has adopted a price list similar to the one proposed before the committee) to explain how the plan was working in Jersey City. Mr. Gallagher referred to F. O. Cole, also of the Jersey City Association, and Mr. Cole offered the price list as given above.

This started a long discussion, in which many suggestions were offered for the amendment of Mr. Cole's schedule. Some thought each article should be taken up separately and a price fixed, others thought a general advance to about 15 per cent. below list price would be proper, and others believed that articles listed for 75c. should be included. Mr. Cole stated that his price list was by no means a permanent one. The committee should adopt it informally and present it to the different organizations for approval, then report back to the committee the action taken. If the N. A. R. D. was worth anything it would sustain the action taken by the druggists in Greater New York, but before it could do this the druggists themselves must accomplish something. The druggist must not be afraid of every cutter within a block or ten blocks of his store, as then he would never come to a solution of the problem. The manufacturers have bound themselves not to sell to jobbers outside the accepted list and these jobbers have given assurances they will not sell to designated aggressive cutters.

It was asked if all the jobbers had agreed to the plan and the reply was that about 99 per cent. had come in.

Mr. Anderson was in favor of dividing Greater New York into districts and give every man twenty-five or thirty stores and ascertain whether the druggists in each section favor the price list.

Mr. Bakst wanted to take up each article and fix a definite price on it.

Alexander Goldman thought it must not be forgotten that the committee was composed of retail druggists and in conceding certain things to the manufacturer as proposed in the N. A. R. D. plan, the retailer sold some of his rights. "Certainly if he grants us certain things," he said, "he expects something in return and that something is that if any one comes into our store and asks for Hood's Sarsaparilla we are to give him that and not our own. We are to make a few cents profit on the sale, where by selling our own preparation we could make much more." It was explained to Mr. Goldman that the manufacturer did ask the retailer to give out the manufacturer's goods when asked for it, but if asked for a blood purifier the druggist was at liberty to sell his own. Mr. Goldwater said he would feel better to sell

five customers what they asked for and have them go out satisfied than endeavor to urge something else on them and have two of them dissatisfied.

Mr. Weinstein thought an advance of prices should be made within 10 per cent. of the list prices, but when this was put to vote it was lost. Mr. Cole's price list was then unanimously adopted.

Chairman Muir then suggested the best plan for canvassing the trade would be to hire several young law students and that the expense be borne by pro rata assessments among the societies represented.

It was decided to hold the next meeting at the New York College of Pharmacy, Thursday afternoon, December 13, at 2.30 o'clock.

There was contributed \$4.75 for the contingent expenses of the secretary.

DRUGGISTS OF ESSEX COUNTY (N. J.) ORGANIZE.

Enthusiasm, backed by a strong determination to operate the N. A. R. D. plan, was the feature of a meeting held in the New Jersey College of Pharmacy, 224 Market street, Newark, N. J., Thursday evening, November 8, by twenty-three retail druggists of Essex County. The result was the permanent organization of the Essex County Retail Druggists' Association.

The meeting was the result of a call issued by the County Committee for the Formation of Local Associations, appointed by the New Jersey Pharmaceutical Association, and composed of the following well-known retailers: J. B. Thompson, Arlington; S. L. Beegle, Orange, and Charles Wuensch, Newark. These men began sounding the county some time ago and found sentiment greatly in favor of organization and the call for the meeting was signed by the following druggists: L. L. Staehle, E. Reichle, A. Maasman, F. L. Feind, C. Roenbeck, E. Avery, John Eckert, A. De Leemans, George Arndt, F. F. Crissy, C. Wuensch, W. Saul, J. Breunig, T. P. Van Ness.

The meeting was called to order shortly after 10 o'clock by Charles Wuensch and L. L. Staehle was chosen temporary chairman with Mr. Wuensch secretary. The chair then called on J. C. Gallagher, of the Jersey City Druggists' Association, for a few remarks. Mr. Gallagher related the history of the N. A. R. D. from the time of its organization to the present day, discussing the various obstacles that had come in the way and finally the success it had achieved. He alluded to local conditions, spoke of the work done by his own organization and concluded by advising the druggists present to take up a similar plan with a determination to make it a success, and with the backing of the N. A. R. D. it would certainly be accomplished.

Many speakers then reported for other men who had signified their desire to affiliate with the organization, but could not be present at the meeting. Among those reported was Charles Holzhauer, of Newark, who, Chairman Staehle stated, was heartily in favor of any decisive move the druggists might make as an association. He had thought such a project should have been started some time ago, as conditions warranted it, but now that a movement had been started he would further it in every way he could. He also mentioned that there was on deposit in one of the banks in Newark \$75 of the treasury of the old druggists' associations which was working in Newark many years ago. He thought this could be turned over to the new organization. This was received with applause.

Mr. Wuensch and a number of others spoke for absentees, and it was believed that of the 125 or more druggists in Essex County over 40 per cent. had declared in favor of the plan.

Frank C. Stutzlen, of Elizabeth, secretary of the State Pharmaceutical Association, and prominently identified with an organization of retail druggists in Elizabeth, was next called on. He related briefly the history of the Elizabeth Association. It had been formed six years ago and the start was discouraging, but after three months a price schedule was adopted as follows: Full prices for all articles of 25c. and under, 45c. for 50 c. articles and 85c. for \$1 articles. With a few amendments this schedule had been used ever since and was in effect now. Mr.

Stutzlen said he was confident if his association had put money in the pockets of himself and fellow druggists it would do the same for the trade in Essex County. His association had had no trouble with any cutters, but had agreed should occasion arise to establish a store next or near the one the cutter would open and undersell him in everything he offered for sale.

Frank Crissy favored taking immediate and positive action toward the wiping out of the cutters in the county and Mr. Gallagher again spoke of the N. A. R. D. plan for accomplishing such an end.

Mr. Crissy said the 75 per cent. feature of the N. A. R. D. plan was an important one and he believed a committee should be named to secure the consent of retail druggists in Essex County for the immediate adoption of the plan. He believed this committee should report at a meeting to be held November 22. Andrew F. Burkhardt suggested that every man present should be a committee to get every druggist possible to favor the plan. Mr. Crissy thought this would cause confusion and John Bruening urged that a committee of five be named, one member each to come from the north, east, west, south and centre portions of the county. This was carried and the following were named, with the privilege of sub-dividing the work among other members whom they should name: Frank Crissy, E. B. Gillbard, John Eckert, E. Beltman and Julius L. Katchen.

Secretary Wuensch then moved that a permanent organization be effected and this was unanimously carried without debate. A constitution was also adopted declaring the organization to be in favor of the N. A. R. D. and making provisions as follows: Five members may call a special meeting; dues to be \$1 yearly; meetings second Wednesday of every month at 3 o'clock in the afternoon; fifteen members constitute a quorum; the Board of Trustees shall consist of five members to be appointed and the Executive Board shall consist of five members and also the four officers; five shall constitute a quorum of the Executive Board.

The following officers were then unanimously chosen: President, L. L. Staehle; vice-president, Andrew F. Burkhardt; secretary, Charles Wuensch; treasurer, Dr. Julius K. Egge. President Staehle named as trustees Frank Crissy, E. B. Gillbard, John Bruening, Joseph Gibian and John Eckert.

A vote of thanks was tendered Messrs. Gallagher and Stutzlen, following which the meeting adjourned, after which all present subscribed to the constitution and paid one year's dues. The next meeting will probably be held in two weeks.

BAYONNE (N. J.) DRUGGISTS ORGANIZE.

In response to a call issued several days ago nine of the thirteen druggists of Bayonne, N. J., met in Brown's Music Hall, Bayonne, Monday evening, November 5, and formed what is to be known as the Bayonne Retail Druggists' Association. The movement is to further the plan of the N. A. R. D. defined in Resolution B of the National Association and is for the elevation of prices on all proprietary articles.

Frank O. Cole and J. C. Gallagher, of the Jersey City Druggists' Association, who have done much good work in organizing in New Jersey, were present. Mr. Cole called the meeting to order and described the benefits to be obtained from association. He alluded to the success of various organized movements throughout the State, made stronger now by the backing of the N. A. R. D., and urged that those present enter into the plan with a determined idea of success which would surely come to persistent endeavor.

J. N. Peterson was chosen temporary chairman of the organization and Max Strauss was named secretary. Secretary Strauss read a form of constitution which was adopted. It provides for meetings once every three months, January, April, July and October, the third Tuesday evening being designated as the time of gathering; seven members will constitute a quorum. The annual meeting will be held in January and the dues were fixed at \$3 yearly.

It was decided to begin an active crusade for membership and to this end the following committee was named with the section each member is to cover: C. D.

Ayers, Bergen; A. C. Nuber, Centreville; Abram Schleimer, Bayonne, and Charles Mitzenius, of Panrappo. Adjournment was then taken to Monday evening, November 19, at the same place at 10.30 o'clock. Among those at the meeting were: J. N. Peterson, Max Strauss, C. H. Landell, A. C. Nuber, John H. Burchill, Charles Mitzenius, William Whitehead, C. D. Ayres and Abram Schleimer.

WHITALL, TATUM & CO. ROBBED.

Oscar Weincke, assistant cashier for Whittall, Tatum & Co., 46 Barclay street, and private secretary to Charles A. Tatum, a member of the firm, has been missing since Monday, November 5, and the firm is minus a large sum of money, just how much is not yet divulged. Experts are now working on the books and it will be impossible to ascertain the exact amount taken until their labors shall have been completed.

At the firm's offices it was stated that Charles A. Tatum, who has all information concerning the theft, was out of town. Mr. Tatum has told reporters for the daily papers that the matter of locating Weincke had been placed in the hands of the Drummond Detective Agency and something like a dozen detectives were working on the case. But whether Weincke stole \$100 or \$100,000 Mr. Tatum had said he would take as much trouble to find him. He further says that if Weincke took all the money which passed through his hands in a year it would not have crippled the firm in the slightest degree.

Weincke lived in lavish style at his home, 309 High street, West Hoboken, and this, Mr. Tatum surmises, was the outlet for the money he took as he was not known to gamble or speculate in stocks.

Weincke is a trustee of the West Hoboken Methodist Church and has been held in high regard. He originally came from Jersey City, where he married in a respectable family and his wife and two daughters, aged seven and eleven years, are still living at the house in West Hoboken. The place has been under surveillance since the day Weincke disappeared and recently attachments were issued against all of Weincke's property which could be found, although on Saturday, November 10, two trunks full of stuff were removed, despite the protestations of the deputy sheriff in charge.

The last that Mrs. Weincke heard from her husband was in a letter mailed from Weehawken Tuesday afternoon, November 6, stating he had been called to Boston on business and would return Wednesday evening.

HOBOKEN ASSOCIATION FAILS TO MEET.

Thursday afternoon, November 8, was set as the time for the second meeting of the Hoboken Druggists' Association, but owing to unforeseen circumstances the meeting was not held although some of the members who attended the last meeting were on hand and a number of new ones with them. It was decided to adjourn to Thursday afternoon, November 22.

VIOLATORS OF PHARMACY LAW FINED.

The following druggists were convicted and fined \$50 each in the Court of Special Sessions on November 5 for violation of the pharmacy laws: George Schoenchen, 622 Ninth avenue; Oscar G. Hickstein, 533 Hudson street, and Dr. Concezio Fusilli, 2359 Arthur avenue. Hickstein was convicted and fined for violation of the pharmacy laws December 19, 1899.

Wilson Locates Another Store Uptown.

William Wilson, who owns four retail drug stores along Broadway from Wall street to Thirty-fourth street, has leased the store property on the northeast corner of Forty-second street and Broadway, and expects to open a retail drug store in the premises, December 1. This store will not be an addition to Mr. Wilson's list, however, as he is compelled to remove from No. 373 Broadway, where the building is to be torn down. Mr. Wilson has been at No. 373 Broadway for about six years. The lease of the new premises at Forty-second street is for a term of five years.

NOTES.

—The last meeting of the Retail Druggists' Association was held Friday evening, November 9. J. Bakst reported the proceedings of the Conference Committee meeting, as reported in another column of the Era, but owing to the late hour, definite action on the matter was delayed until the next meeting. The subject of a price list was discussed, however, in its several phases. Other matters taken up were complaints against certain druggists on the East Side who had violated the by-laws of the association, and each charge was referred to the Grievance Committee for action. It was decided to send out letters to each member of the organization, notifying him to be present at the next meeting for the purpose of expressing himself on the proposed plan of the Conference Committee to abolish the cutting of prices on proprietary medicines. In these letters it was also decided to call attention to an article in the by-laws of the association prohibiting the distribution of presents.

—About thirty of the friends of C. S. Erb, in the drug trade and Masonic circle, gathered at his home in 104th street, Friday evening, November 9, to meet Mrs. Erb and incidentally to show the heretofore bachelor that their strong friendship for him did not cease when he crossed the threshold separating single and double blessedness. An orchestra imported for the occasion, and composed of a cornet, mandolin, guitar and small drum performed their duties well at the house, and when the din had subsided, Mr. Erb introduced Mrs. Erb to the party. Then followed an informal social hour, during which refreshments were served.

—Isidore Garfield, druggist at Ninety-sixth street and Lexington avenue, is looking for a Mr. Borman, to whom he sold a store at No. 24 Catherine street, some time ago, taking part payment in cash and the remainder in a chattel mortgage. On November 1 Mr. Garfield visited the Catherine street store to collect some money, when to his surprise he found the place vacant, but one of the doors had been left open. All the stock had been removed, and from appearances it was evident Mr. Borman had been absent several days.

—The investigation of the Fire Marshal into the cause of the Tarrant fire has continued during the last week and will not be concluded before Saturday of this week. Many of the hearings have been private, but nothing has been brought out except what is already generally known. A. E. Phillips, engineer of the Tarrant building, testified during the week, and Fire Marshal Seery said that he was a very competent man, and that it did not appear that defective electric wires had caused the fire.

—The Kings County Pharmaceutical Society met Tuesday afternoon, at which time a testimonial was presented to Dr. P. W. Ray for his faithful services with the society and also as a souvenir of his fifty years as a pharmacist in the same store. E. L. Young was present at the meeting and outlined a plan by which proper organization druggists' sundries may be purchased at lower rates. A more detailed report of the meeting will be presented next week.

—The Alumni Association of the New York College of Pharmacy has decided to give a Students' Reception in the college building on Wednesday evening, November 21. Final arrangements were also completed for the annual Alumni dinner, to be held November 28 at the Arena, corner of Thirty-first street and Broadway. George E. Schweinfurth is chairman of the Committee of Arrangements.

—The regular monthly meeting of the New York Section of the American Chemical Society was held Friday evening, November 9, in the assembly room of the Chemists' Club at 108 West Fifty-fifth street. D. C. Eccles read a paper on "A Brief Review of Antipyrine and Its More Important Derivatives." Suitable action was taken touching the death of Dr. E. R. Squibb and routine business was transacted.

—Two aggressive cutters in Indianapolis came to this city last week to secure fresh stocks, their own jobbers having refused to sell them. Long before they reached here every jobber in this city has been visited by representatives of the local retailers, and the result was that the Western men not only failed to secure goods, but were warned against looking elsewhere.

—O. P. Damm, an employe of Schieffelin & Co., and supplying the place of night watchman in the absence of Hugo Petzold, who is ill, was found dead near the Beekman street entrance to the building, Thursday morning, November 8. He was fifty years old and lived at 130 East Third street. Death is supposed to have been due to heart disease.

—The Alumni Association of the New York College of Pharmacy will hold its annual ball this season at Lenox Lyceum, Fifty-ninth street and Madison avenue, on Wednesday evening, January 30, 1901. Elaborate preparations are under way and the event promises to eclipse all previous records of the association.

—The seventy-third annual meeting and dinner of the Paint, Oil and Varnish Club of this city, will be held in the rooms of the Drug Trade Club this evening. Reports will be read from the meeting of the national body during the summer at Old Point Comfort, Va., and an orchestra will furnish musical selections.

—The early closing movement which was inaugurated by C. O. Bigelow some months ago on the West Side below Fourteenth street and above Canal street, is still in force and Mr. Bigelow said that only about 25 per cent. of those who had agreed to the proposition had broken it.

—W. S. Torrance, a druggist at Derby, Conn., who recently made an assignment, has come to an agreement with his creditors on a basis of 85 cents on the dollar. Mr. Torrance will be succeeded by C. M. Thompson and the store will be known as the Sterling Pharmacy.

—Dr. Greene's Tablet Co. has incorporated in this State to manufacture drugs and medicines, with the principal offices at Rochester. The capital is given at \$10,000 and the incorporators R. J. Strassenburgh, C. Blauw and R. E. Saffold, all of Rochester.

—Among the druggists who visited the trade last week were: F. A. Seaman, Perth Amboy, N. J.; Warren Smith, Chicopee, Mass.; H. Woodward, Middletown, Conn., and Mr. Whittlesey, of C. M. Whittlesey & Co., New Haven, Conn.

—Dudley T. Larimore opened his new pharmacy at 537 Fifth avenue yesterday and John Morris, who was formerly with Haas, is the manager. The store is one of the handsomest along Fifth avenue.

—The Rockefeller Soap Co., of Brooklyn, has incorporated in this State with a capital of \$1,000 to manufacture soap and soap powders. The incorporators are E. Rockefeller, D. B. Dugan and E. J. Dugan, Jr., all of Brooklyn.

—Carl Mittenzweig, who has a store at Central and Palmetto avenues, Brooklyn, will open another store Saturday at Evergreen avenue and Madison street, Brooklyn.

—Imports of drugs, chemicals, etc., to this port for the week ending November 9 amounted to \$941,189. The largest importations were argols, \$84,509, and quinine, \$38,083.

—B. Kalish, who was formerly manager in a drug store at Fifty-seventh street and First avenue, has opened a store at Seventy-ninth street and Lexington avenue.

—Rudolph Gies, for some time assistant librarian of the New York College of Pharmacy, has resigned and will hereafter devote his time to the retail drug business.

—James V. Case, of Somerville, N. J., called on old friends in the trade last week. Mr. Case has recently returned from his summer home at Lake Hopatcong.

—B. B. Hamlin, New York manager for Wm. R. Warner & Co., has moved his residence from Harrisburg, Pa., to 118th street and Morningside avenue, this city.

—The Mallinckrodt Chemical Works has moved its New York offices from William street to its new building, part of which has been completed in Platt street.

—Among recent guests at the Drug Trade Club were J. F. C. Myers, of Savannah, Ga., and F. W. Olin, of St. Louis.

—Dr. F. B. Morgan has joined the local forces of W. R. Warner & Co. and will do detail work in this city.

—C. F. Grant, a druggist of Carteret, N. J., is spending a few days among friends in Ulster county.

—George E. Burrows, New York State salesman for Schieffelin & Co., was in town last week.

—Mr. Sibley, clerk at Atwood's Pharmacy, 846 Broadway, is away on a vacation.

—Mr. Schwartz, of Chicago, has accepted a position in the Longacre Pharmacy.

IN AND ABOUT BOSTON.

—Word has come of a recent attempt at suicide at Bangor, Me., by Mrs. Edith B. Jones, wife of David B. Jones, a drug clerk. She took morphine and strychnine internally and hypodermically, and became dangerously ill. Her action can hardly be said to be a surprise. Mr. and Mrs. Jones were married in Lexington last May, and before her marriage Mrs. Jones (as Miss Edith Worthington) had been a successful trained nurse. Mr. Jones met her while he was a student at the College of Pharmacy and after the marriage he took a place in Young's drug store in Malden. It may be recalled that the Era not long ago told how Mr. Jones went away without any notice and stayed away some time, so that Mrs. Jones consulted the police as to the advisability of getting out a warrant for her husband on the ground that he had deserted her. He suddenly reappeared, however. Mrs. Jones was born in Maine and spent some time in Montreal, coming from that place to Massachusetts and establishing herself as a professional nurse in and around Boston. She is a striking looking woman about twenty-seven years old.

—Richard P. Winkleman, formerly a druggist at Adams and Park streets, Holyoke, but now of New York, was at first believed to have perished in the recent explosion at Tarrant & Co.'s, but in reality he works at a drug store not far from that place. New York papers even went so far as to say that he was among the victims of the explosion, but happily such is not the case. The Winkleman boys are all in the drug business, one brother, Paul, being in a pharmacy in Springfield, and a third brother, Charles Winkleman, a druggist at Wollaston, Mass.

—Walter Reed Dolliver, for a long time clerk at the drug store of George C. Goodwin & Co., in the old days when this firm was on Hanover street, and who now is a member of the force of the Eastern Drug Co., was married in Brookline on the evening of October 31 to Miss Wilhelmina Elizabeth Horner. The wedding was quietly celebrated. Mr. Dolliver and his bride are to make their home at 892 Huntington avenue, where they will welcome their friends after December 1.

—A bowling contest between the first and second teams of the Eastern Drug Company was rolled this week at the Carruth alleys, resulting in victory for the first team. The scores were as follows: First team—Grant, 276; Quinn, 248; West, 260; Maloney, 223, and Williams, 279. Second team—Higgins, 253; McLeod, 249; Clements, 243; Cullen, 237, and Richardson, 235.

—A branch office of the Postal Telegraph Company has been established at Booth's drug store, Chicopee Falls, and this made possible the announcement promptly of election returns from New York on election night by means of a direct wire. Mr. Booth purchased a big stereopticon and with this the returns, etc., were thrown on to a canvas.

—The old-established firm of Billings, Clapp & Co., manufacturing chemists, has become transferred into a corporation to be known as "The Billings, Clapp Co.," which will carry on the business as heretofore at its offices, No. 404 Atlantic avenue, this city.

—The Cardo Medicine Company at Claremont lately attracted some public attention through an amusing exhibition at its place of business. A prize was offered to the woman who could drive ten nails into a block of wood the quickest. A Mrs. Thomas won the prize.

—A new corporation is the Thermo-Ozone Association, lately organized at Portland, Me. E. H. Talbot, of Boston, is president, and Levi Turner, of Portland, treasurer. Capital stock, \$25,000, nothing of which was paid in.

—The week's exports from the Port of Boston include, among other things, drugs and chemicals, \$9,514; india rubber manufactures, \$7,084; hops, \$1,238; soap, \$1,246; wax, \$988, and spirits, \$49,595.

—At Cofren's drug store, Faulkner street, in the Faulkner district of Malden, a car station has been opened for the convenience of patrons of the new Cross line of electric.

PHILADELPHIA.

PHILADELPHIA RETAIL DRUGGISTS.

Philadelphia, Nov. 5.—The Philadelphia Association of Retail Druggists held its regular monthly meeting November 2, over two hundred members and visitors being present. The recording secretary reported that several Philadelphia jobbing houses had signified their intention to co-operate with members in securing orders for the Sterling Remedy Company's goods on the plan proposed at Detroit. A cash balance of \$445.19 was reported. The following druggists were elected to membership: H. E. Jones, G. S. Seldes, W. C. Schofield, W. R. Davies, J. L. Kooker, A. S. Erney, M. J. Wilson, C. L. Dobson, Alex. Wilson, F. M. Mooney, F. Hertel, C. M. Supplee, Henry Audt, F. J. Voss, C. A. Heyl, J. D. Watson, Fannie B. Margolin, Harmon Dilks, W. J. Wilkinson, W. M. Rickert, D. J. Rauch, L. K. Slifer, J. H. Bailey, H. T. Comp, A. G. Gerhard, C. H. Dwyer and G. Slominsky.

The Executive Committee reported a list of 106 proprietary articles which the members had agreed to place on the advanced price schedule. This list was that submitted by the leading cutter of the city and one which he would agree to observe. Only one cutter refused to agree to the list, and steps had been taken to bring him to terms. The Committee on Department Stores made a report in which it was assured there would be but little trouble in the future from department store competition. A proposition from Isaac Cohen to give three per cent. on all sales of his firm's "Foodigests" to the jobbing houses of Philadelphia for the next three years to the P. A. R. D. was received. Mr. Cohen was present and explained his offer, which was accepted. The regular business of the association was completed, and President McIntyre opened the "mass meeting" of Philadelphia druggists, reported in this journal last week (see Page 521). Among the points brought out in the discussion of the Board of Pharmacy prosecutions were these: A "relief clerk" must bring his registration certificate and renewal receipt to the store where he relieves; the owner of two stores can keep his certificate in one store and display his manager's in the store he is in charge of, and both registered certificate and renewal receipt must be displayed at the same time, but not necessarily together in one frame.

Amicable Settlement of the State Board Suits.

Philadelphia, Nov. 10.—An understanding as to the course to be followed in the prosecution of suits against druggists who had been indicted for violations of various provisions of the State Pharmacy law has been reached by the committee from the Philadelphia Association of Retail Druggists and the State Board. Through its counsel, Mr. Stewart, the board has agreed to withdraw all suits entered against druggists in which the only violation of the law has been the non-display of renewal receipt, and certain others where the certificate of registration was not properly displayed, and an official communication to this effect was received yesterday by the P. A. R. D. committee. All other violations are to be prosecuted vigorously.

As a further indication of its willingness to act fairly by Philadelphia druggists, the State board has arranged that its attorney shall to-day meet all druggists who have been summoned and go over their cases with them, and on the presentation of satisfactory evidence that the violations have been only those referred to above, will withdraw the cases. This information having been conveyed to the Executive Committee of the P. A. R. D. Thursday afternoon, a special meeting of the committee was called and arrangements were made to notify every druggist in the city as to the decision of the board. A letter was mailed to all druggists last night containing the request of the P. A. R. D. committee, the reply of the State board and instructions to the druggist how to proceed to escape payment of a fine. The question of \$12.50 is now up to the druggists themselves, and if they do not avail themselves of this opportunity to settle their cases out of court, the suits will be rigidly prosecuted.

A little figuring by a party who is in a position to know the facts in the case shows that this prompt and

vigorous action of the local association will save the druggists of Philadelphia something like \$1,800 in fines and costs, to say nothing of the establishment of a feeling of mutual respect and cordiality between the druggists and the State board. And still there are some who say that they cannot see the benefits of druggists' associations, but perhaps their experience has been with one or two that are quietly slumbering. It would be of much benefit to druggists of some of our near-by cities if they would come to "slow Philadelphia" and see how a druggists' association can be run so that it will be a power in the land and a protection and a profit to the druggists of its city.

Philadelphia, Nov. 12.—Between 100 and 125 druggists availed themselves of the opportunity to settle their suits for violation of the pharmacy law afforded by the arrangement of the State Board.

Attorney Stewart, at 1715 Vine street, all day Saturday and Sunday heard the druggists' side of the story, and in every case where there was a reasonable excuse offered, crossed off the suit from his list. Only one druggist "kicked," and he will have the opportunity of doing it again before the magistrate, Monday—and paying for it. Every one concerned is highly pleased with the turn of affairs, and so ends an episode that threatened to be exciting.

College Notes.

The November "Social Meeting" under the auspices of the Alumni and students of the P. C. P. will take place in the Museum Hall of the college on Tuesday, November 20, at 8 P. M. These little functions have for many years proven to be a most delightful feature of the college year, and those who once attend usually come and come again. This bringing together of students, and perhaps future employes, and successful druggists makes acquainted the future and the present representatives of pharmacy in a manner that lays a firm foundation for mutual respect and friendship in the years to come. All druggists are cordially invited to attend and to bring their wives and sisters and cousins, these latter for the "other fellow," to enjoy the music, dancing and entertainment of the evening.

The November "Pharmaceutical Meeting" will also be held on November 20, at 3 P. M., in the Museum Hall. The programme for the meeting is one of great interest and will well repay the druggist for his attendance, especially the discussions that usually follow the reading of a paper, in which everyone is invited to take part.

These "Pharmaceutical Meetings" have been held almost continuously since 1842, with the object of presenting original communications on pharmacy, the exhibition of apparatus and specimens and the discussion of questions of general interest to pharmacists. They are open to all members of the profession, and all are cordially urged to attend and take part in the presentation of papers and specimens. The members of the committee in charge of these meetings are Dr. R. V. Mattison, Prof. J. P. Remington, Mr. F. W. E. Stedem and Prof. Henry Kraemer. These gentlemen will always extend a hearty welcome to any pharmacist having anything of interest to communicate before the meetings.

NOTES.

—Quite a number of changes in ownership have occurred during the past week. A. B. Reed has succeeded E. E. Wilson at Huntington and Mascher streets, Mr. Reed having been manager of this store for years. C. A. Eckles, the man of many stores, has added another to his circuit by purchasing Crother's pharmacy at Eighth street and Girard avenue. T. D. MacPhee, of Ninth and Vine streets, and Fifteenth and Columbia avenue, has bought the Twentieth and Fairmount avenue store of Crothers Brothers. In selling these two stores, Mr. Crothers permanently retires from the drug business, in which he has for so long occupied an honorable position.

—A very sad and unusual accident occurred at the magnesia works of Keasbey & Mattison, at Ambler, Pa., last Saturday, one of the workmen falling into a vat of hot magnesia and dying before he could be rescued.

The man was but newly employed around the works and was unfamiliar with the surroundings, so while working over the magnesia room he lost his footing and plunged head first into one of the vats. Nothing could be done to rescue him until the vat was emptied, and then it was too late, the flesh having actually been cooked off the bones of the victim by the action of the heated alkaline mixture.

—M. S. Apple, who has the reputation of being the most devoted disciple of the "gentle Isaac" among Philadelphia druggists, has at last after months of patient toil and tribulation succeeded in breaking all records in landing two rock fish weighing thirty-four and twenty-five pounds respectively. These weights were checked off according to the most up-to-date methods of prescription checking, and were further corroborated by being reduced to metric system. Not satisfied with his success, however, Mr. Apple has set aside one day of every week for efforts to place the "record" at a still higher notch.

—On Thursday evening last Dr. A. W. Miller delivered a lecture at the Philadelphia Drug Exchange, entitled "Rambles Through Paris and Germany." The Doctor exhibited many botanical and historical specimens that he had collected, and, being in his best vein, transplanted his audience through the magic of his eloquence to the beautiful valleys of France and the picturesque banks of the Rhine, whose scenes he so graphically pictured. A very large audience listened to the lecture, many ladies being present, and a most enjoyable evening was spent.

—Robert T. Young has moved into his new store at the corner of Seventeenth and Chestnut streets. The new store is large and roomy, with elegant appointments and fixtures and with every modern convenience for quick and accurate dispensing. Even among the many handsome Chestnut street stores this is one that attracts the notice of the passer-by because of the beauty and tastefulness of its arrangement.

—Smyser & Scott have purchased the well-known drug store at Chelton avenue and Main street, Germantown, formerly owned by F. F. Riedenauer. Mr. Smyser is a well known West Philadelphia druggist, owning the store at Fortheth and Girard avenue, and is a member of the City Council from the Third Ward. Mr. Scott, who will manage the new store, has been head clerk for Mr. Smyser for many years.

—A. H. Bolton, Jr., will enter the ranks of the great "married men's club" next week and is preparing himself for the ordeal of congratulations by a stern training. The future Mrs. Bolton is a well known belle of Bridgetown and is quite prominent in society there.

—C. W. Ellsperman, Eleventh and Susquehanna avenue, has added and fully equipped a laboratory to the rear of his store for the manufacture of his pharmaceutical preparations and specialties, making it one of the most complete pharmacies in the city.

—One of the handsomest up-town stores is that recently opened by Voshage at Broad and Columbia avenue. The fountain, in Moorish style, is easily the most beautiful one in the city and the rest of the store is in keeping with its lavish adornment.

—The drug store of W. H. Morrison, 300 East Page street, Germantown, has changed hands and is now known as the "Schroeder Pharmacy." This will be in charge of P. H. Langer as manager.

—The numerous friends of J. W. Pechin will rejoice to learn of his recovery from his recent trying illness. Mr. Pechin is once more attending to business and says he is mighty glad to be doing it.

—Julius Brulius has moved from Manayunk to 4734 Richmond street.

The Allenbury's Foods.

These foods are a progressive dietary suitable to the growing digestive powers of the infant. Milk Food No. 1 is suitable for the first three months of life. No. 2 for the second three months, while their Milk Food No. 3 is designed for those over six months of age. Price list and literature are furnished to any druggist interested, from the United States branch, Allen & Hanburys, No. 82 Warren street, New York.

BALTIMORE.

Winkelmann & Brown Drug Co. Reorganized.

Baltimore, Nov. 12.—At a meeting of stockholders to take place to-morrow, a reorganization of the Winkelmann & Brown Drug Company, on Hopkins place, will be effected. J. H. Winkelmann, a member of the company since 1888, will retire, and James G. Stanley, formerly a member of the firm of Boykin & Stanley, North Liberty street, together with Paul Muller, for years past connected with the Winkelmann & Brown Company's establishment in the capacity of bookkeeper, will come in. Mr. Stanley will be elected president of the company, Kerner F. Brown treasurer and Mr. Muller secretary. These three will hold upwards of 90 per cent. of the \$80,000 capital stock, the company being made up in addition of two other persons with nominal holdings. Mr. Stanley, the new senior member, withdrew from the firm of Boykin & Stanley, formerly Boykin, Carmer & Co., and now the Boykin & Carmer Company, two years ago. It was his intention at that time to spend the rest of his years in comfortable leisure, he having acquired a competency. But his business career had been too full of activity to make idleness endurable. The contemplated withdrawal of Mr. Winkelmann offered a desirable opportunity to take up active business relations once more, and Mr. Stanley proceeded to acquire a substantial interest in the corporation. Mr. Brown is one of the original members of the company, and will continue to give it his best efforts. Mr. Winkelmann will not retire to private life, as it is his intention to engage in the manufacture on a large scale of four specialties taken over from the Winkelmann & Brown Company. He has not yet decided definitely where he will locate. He was a partner in the old firm of Vogeler, Winkelmann & Co., at the corner of Liberty and German streets. He withdrew from this concern, which has since passed out of existence, to embark in business on his own account, under the firm name of J. H. Winkelmann & Co., and for years did a prosperous trade in drugs and specialties manufactured by him on South Sharp street, below Lombard. A big fire in the summer of 1888 swept away this establishment, together with a number of others, and after the insurance had been adjusted he acquired a large interest in the firm of Wm. H. Brown & Brother, the name being changed to the Winkelmann & Brown Drug Company. This firm has enjoyed an excellent standing in the trade of the Eastern States, and continues to command the highest credit. It manufactures perfumery on a large scale, besides dealing extensively in drugs.

The Drug Trade Bowlers.

Baltimore, Nov. 10.—The Drug Trade Club bowlers continue hard at work. Last Tuesday night found the teams of the Winkelmann & Brown Drug Company and the Root and Herbs engaged in three contests at the Diamond and the former quintette lost all three games. Last night Sharp & Dohme met James Baily & Son and managed to capture one of the three contests, the scores being: James Baily & Son, 776, 827 and 704; Sharp & Dohme, 668, 779 and 789. Holtzman, of James Baily & Son, made high score, 212, and high individual average, 180 2-3, while Kornmann was high man for Sharp & Dohme with 180 and 161 respectively. The several teams now stand as follows:

Teams.	Games Won.	Games Lost.	Per cent.
Root and Herbs.....	8	1	.889
McCormick & Co.....	7	2	.778
James Baily & Son.....	7	5	.583
Sharp & Dohme.....	6	6	.500
Muth Bros. & Co.....	4	5	.444
Winkelmann & Brown Drug Co.	3	9	.250
Parke, Davis & Co.....	1	8	.111

NOTES.

—Druggist Koldewey has removed from the corner of Calhoun and Cumberland streets to the late Charles H. Teipel's old place, at the southwest corner of Frederick road and Bentalou street, in the southwestern section of the city. The stand is an excellent one.

—Harry Waller, for a number of years with Muth Bros. & Co., of this city, has accepted a position as

Eastern representative of the Mallinckrodt Chemical Company, of St. Louis. He will assume charge of his new duties during the next few days.

—Among the druggists from a distance in town last week were: Mr. Purcell, of Mott & Purcell, Leesburg, Va.; J. C. Roden, Waynesboro', Va.; Dr. E. Wolff, Cambridge, Md., and F. Forthman and J. Miller, of Forthman & Miller, Waynesboro', Pa.

—Dr. Oscar Ross has just equipped his downtown pharmacy at 108 East Baltimore street, with what is said to be the largest and most attractive hot soda fountain in the city. James Stillman, a popular young druggist, is the manager of the store.

—S. N. Appleby has sold the retail drug store at the corner of Calvert and Pleasant streets to Thomas F. Russell. Mr. Appleby has another pharmacy, at Huntington avenue and Twenty-seventh street, which he will continue to conduct.

—M. Lytle, for years a clerk in the pharmacy of Mr. Bailey, lately deceased, at the corner of Paca and Pratt streets, has assumed the active management of the place as the representative of Mrs. Bailey.

DETROIT.

An Election Jollification.

Detroit, Nov. 10.—On election night Williams, Davis, Brooks & Hinchman Sons created an innovation by holding a reception at their offices. The guests invited were all the retail druggists of the city and their wives and all the retail drug clerks and their wives—or sweethearts. The reception was from seven until after midnight, and about 500 availed themselves of the invitation. Lunch was served, the caterer being one of the best the city produces. Wires from the Western Union and Postal Telegraph companies were brought into the office for the occasion and election returns were given out as they were received over these lines and by long distance telephone. Great enthusiasm was exhibited as it became more and more sure that the country had gone Republican. If any Democrats were present they did not show their colors.

NOTES.

—While taking another \$10 order for Cascarets to-day, the 10th, Mr. Harry T. Carver, of Farrand, Williams & Clark, discovered that N. A. R. D. means Not A Republican Defeated. Mr. Kramer's thousand-dollar-a-minute idea seems to have taken very well in Detroit.

—J. J. Goodyear, prominent druggist of Ann Arbor, was among the out-of-town druggists who came in to see the Michigan-Iowa football game on Saturday, the 10th.

—G. T. Kast has moved his drug stock from Fort street West to Dix avenue, Detroit. Dr. Hamilton, formerly of Maybee, Mich., will move into the store vacated by Mr. Kast.

—The annual meeting and election of officers of the Detroit and Wayne County Retail Druggists' Association will be held next Wednesday afternoon.

Hot Soda Fountains.

James W. Tufts, in his advertisement in this issue, says truly that it is the experience of careful dispensers that soda water sales are directly affected by the appearance of the fountain. This is especially true of hot soda, and there is nothing that will quicker increase the sales of hot soda than an attractive apparatus. The James W. Tufts branch of the American Soda Fountain Company, in making soda fountains, has not overlooked the hot soda part of the business, and their designs this season are the handsomest they have ever offered. They present them to the druggists of the United States with the assurance that no better soda water can be served to the public than that drawn from one of their fountains. They have extremely handsome illustrated catalogues which they send on application, and solicit correspondence with druggists who want a new fountain or want to dispose of their old one. James W. Tufts' address is No. 282 East Congress street, Boston, Mass.

CHICAGO.

Many Marriages.

Chicago, Nov. 10.—Prosperity among the retail druggists is indicated by the number of weddings which have taken place among them during the last two or three months. For instance, William H. Brown, of Irving Park, former vice-president of the Illinois Pharmaceutical Association, was married on Wednesday, November 7, to Miss Minnie O. Perry, at the residence of the bride's parents in Minneapolis, Minn.

Adolph Dauber, proprietor of the Drexel Pharmacy, at Seventy-fifth street and Drexel avenue, was married on October 31 to Miss Laura Ellfeldt, at the home of the bride's parents in Chicago.

C. M. Turnquist, No. 2458 Wentworth avenue, was married on September 12 at Cedar Lake, Ind., to Miss Ada Hlowkinson.

Other druggists who have recently become benedicts are Anton P. Hess, No. 3700 Wallace street; E. B. Macy, South Chicago, and E. T. Hitchcock, No. 5501 South Halsted street.

New Swindling Scheme.

Chicago, Nov. 10.—A man styling himself Dr. Joseph Schmitz recently arrived here from New York City, and soon afterward opened correspondence with druggists in New York, offering them positions in an insane asylum alleged to be located in Blue Island, Chicago. The stationery was stamped, "Insane Asylum, Blue Island, Chicago, Eighth Sanitary District," and was signed, "Dr. Joseph Schmitz, Superintendent." These letters were addressed to pharmacists offering them a large monthly salary, with board and lodging free, and the position of first pharmacist in the asylum. The doctor would meet his victim at the depot, suddenly find that he had come away without his check book and had to pay a fee in the office of the Board of Health, borrow all the victim's cash, and disappear not to return. The "Doctor" has gathered in four victims already, and the police have got no nearer than his trunks, which they have confiscated. In them were found "asylum" stationery and seals, and some of the stationery of the Board of Health obtained by some means or other. About four years ago he became notorious in Chicago, figured in several swindles, forged a check or two and disappeared. His latest venture is even more ingenious than his former ones.

NOTES.

—In the campaign bets that were made in Chicago last week the odds were often as high as ten to one in favor of McKinley. A striking instance was the wager made by two Chicago business men. Frank Nichols, of Nichols & Co., No. 202 Washington Boulevard, wagered \$1,000 on McKinley's election to the \$100 of Bryan money put up by George W. Wissack, a druggist at Halsted and Madison streets. Mr. Nichols had some difficulty at first in finding a Bryan man who was willing to bet on the election even at the odds of ten to one.

—Morrison, Plummer & Co. wish to announce that they have no one in their employ by the name of George Reynolds. A man calling himself by that name has been traveling about the State victimizing hotels and drug stores for small sums. He represents that he is employed by Morrison, Plummer & Co., and is away on a vacation, finds himself a little short, etc.

—Peter Van Schaack & Sons were incorporated last week with a paid-up capital stock of \$200,000. The incorporators are Peter Van Schaack and his two sons, Cornelius P. and Robert H. Van Schaack. The senior member of the firm, Peter Van Schaack, will retire from active business and indulge his propensity for travel, while the business will be managed by the sons.

—Robert Abel, for many years head clerk for D. C. Prader, at Monticello, Iowa, paid a short visit to Chicago this week on business.

—H. W. Gifford, a druggist at No. 4450 St. Lawrence avenue, Chicago, received a final discharge in bankruptcy on October 22.

—Mr. Lemmon, a well known druggist of Guthrie Center, Iowa, was in Chicago recently on business.

THE NORTHWEST.

Druggists After Game.

St. Paul, Minn., Nov. 9.—F. A. Conger, of St. Paul, who would be offended seriously should anybody deny his title as the hottest sport in Minnesota, has been hunting at Elbow Lake, Minn. He and his companion brought down thirty-six ducks in one day.

A good story leaked out this week about the hunting trip of Hans Matson, the West Side druggist, and Dan Galim, railroad conductor. They had come upon a slough and saw two ducks in a nice open spot. Hans picked up his rifle and said: "Just see me pick one of them." The ball struck the duck's tail. Said Hans: "I will nait her to the cross this time," and shot again. The ball struck near her bill. Just then a man in the rushes yelled out: "Look out there, partner. You are liable to shoot some one and if you shoot one of my decoys you will have to pay for them."

NOTES.

—Some months ago Carl W. Nelson, a druggist in the employ of F. M. Parker, of this city, forwarded to his parents in Denmark an invitation for them to come to St. Paul and make their home with him. It had been twenty years since Mr. Nelson left the old country. His parents started and arrived in St. Paul last week. The pleasure of the meeting, however, was marred by the serious condition of Mr. Nelson, Sr. on the trip across the ocean Mr. Nelson fell from his berth and sustained injuries that resulted in his death this week. The old gentleman's age was eighty-four.

—D. R. Noyes, the St. Paul wholesaler, is credited with a quotable election bon mot. The day after the great event he telephoned City Controller McCurdy: "What do you think of the election?" "It's a peach," replied the controller. "Yes," rejoined Mr. Noyes, "There does seem to be a little down on it for Bryan and some others." Mr. Noyes is one of the many business men here who are gratified because money can now be secured in New York at 1 per cent.—a reduction of 1 per cent. from the ante-election rate.

—Successions: J. E. Wilson, Pioneer, Ia., by Reed & Orr; Fred. Cramer & Co., Birmingham, Ia., by Charles W. Buck; E. D. Putnam & Co., Harris, Ia., by I. J. Bulreson, Jr.; W. G. Carroll, Linden, Wis., by J. N. Vial; William Skillborn, Glenwood, Ia., by H. S. Tubbs & Co.; W. D. Christy and H. C. Carr, Shannon City, Ia., by Willis Wolfe.

—John M. Bradford, as receiver of the estate of Edgar F. Atwood, bankrupt, at Staples, Minn., has brought suit against John D. Marlin, Jr., alleging that he unlawfully took a stock of drugs worth \$2,100. The defendant has demanded a change of venue to the District Court of Todd County, of which county he is a resident.

—N. Nelson, Grand Meadow, Minn., has been closed under chattel mortgage.

—Otto Zuercher is leaving St. Cloud to work for F. H. Minneapolis to work.

—Ed. Collins is closing out at Whitney, Neb., and expects to move to Merriam.

—O. S. Berg has left Hudson, Wis., and gone back to Minneapolis to work.

—A receiver has been appointed for C. S. Tobey & Co., Des Moines, Ia.

—Joseph Greulich, Appleton, Wis., has filed a petition in bankruptcy.

—The Woodworth Drug Co. has incorporated at Albany, Ore.

—C. P. Murch has gone to work for Batto Bros., of this city.

—John Sturdevant will start at Naper, Neb., November 15.

—J. S. Peterson has gone to Brainerd to work for Dunn & Co.

—Charles C. Crawl, of Randolph, Neb., is dead.

—E. O. Heinrich is starting at Fern Hill, Wash.

—George W. Fine is closing out at Cozad, Neb.

—J. C. Smith, Adams, Ore., advertises to sell

—Jay P. Heck is now in Memphis, Tenn.

ST. LOUIS.

Can He Buy in St. Louis?

St. Louis, Nov. 10.—J. D. Pearson, of the Pearson Drug Company, Indianapolis, Ind., has purchased the Frost-Johnson Drug Company, No. 518 Olive street. This transaction has created some little speculation among the druggists of this city. It seems that the Pearson Drug Company, of Indianapolis, is the only cut rate store of that city, and that as the N. A. R. D. plan is in operation there, this firm is shut off by the local jobbers. The question is, cannot this firm purchase goods in this city and forward them to that point? Mr. Pearson returned to Indianapolis soon after the deal was made, and so could not be seen. The jobbers here are heartily in sympathy with the retail druggists and their welfare, and stand ready to co-operate in carrying out the plans of the N. A. R. D., but as yet have received no official information or instruction which would justify them in refusing to sell to Mr. Pearson. (New York jobbers will not sell him).

NOTES.

—At the regular weekly meeting of the Druggists' Cocked Hat League last Thursday night, the following results were recorded: Moffit-West Drug Company, 3; Mound City Paint & Color Company, 2; J. S. Merrell Drug Company, 4; Meyer Brothers' Drug Company, 1; The Searle & Hereth Company, 3; Eli Lilly & Co., 2. The members were all in excellent condition and recorded exceptionally high averages. Mr. Aszman, of the Mound City, and Mr. Kunz, of the Moffit-Wests, scored a 60 average for the five games. Single games of 74 and 75 were quite common.

—A young man by the name of Alfred O. Weller, claiming to be a druggist from Chicago, took the greater portion of a bottle of poison with suicidal intent in this city last Sunday. Coroner Dr. Henry Lloyd chanced to be passing, and upon seeing what the young man had done, immediately called a policeman and an ambulance. After the young man had been thoroughly syphoned out at the City Dispensary he was thankful for being saved, and gave as his reason for his rash act that he was out of money and work and very despondent.

—H. H. Fricke, proprietor of the drug stores at Nineteenth and Madison streets and Eighteenth and Washington avenue, is erecting a very handsome new building at Page Boulevard and Union avenue, which he will occupy as a dwelling and store building. He expects to open here one of the handsomest and most complete pharmacies in the city.

—Milton Culbertson, representative of the Moffit-West Drug Company, was seriously assaulted by two notorious North Side thugs on last Wednesday. Their provocation for doing so was that Mr. Culbertson's horse occupied too much time and space in drinking at a public watering tank. They are both awaiting trial, which is set for next week.

—W. A. Raines, formerly representing the Moffit-West Drug Company, has removed from Brookfield, Mo., to this city, and is now house salesman for the Meyer Brothers' Drug Company.

—Henry Schmidt, chief clerk for E. H. Schnietz, was married on the 8th inst. to Miss Carrie Lonzetel, of this city. He will continue with his old proprietor at High and Biddle streets.

—Jack Schoettler, manager of the Fair Grounds Pharmacy, is the possessor of six new hats as a result of being a good judge of how the election would turn out in this city.

—E. J. Waldeck, Broadway and Salisbury street, received an injury while bowling last week, which will prevent him from participating in the contests for several weeks.

—Dr. D. E. Curtin, representing the Meyer Brothers' Drug Company in western Missouri, was recently married to a prominent young lady of Des Moines, Iowa.

—Charles Bleser, formerly with the Moffit-West Drug Company, has returned to his old position as chief clerk for E. A. Medler, Twentieth and Ferry streets.

—Otto Sassman, formerly owner of the Sassman Pharmacy,

is now chief clerk for W. R. Grant, No. 3718 Olive street.

—Dr. A. H. Vordick has just placed a new set of fixtures in his store at Jefferson avenue and Benton street.

—Charles Milne has been placed in charge of the Reinholdt Pharmacy, Vandeventer and Washington avenues.

—Dr. H. E. Doehring is opening a handsome new drug store at Jefferson avenue and Hebert street.

—George Karsch, a South Side relief clerk, was married last Tuesday to Miss Anna Schimpf.

—J. J. Evans, proprietor of the Belt Avenue Pharmacy, is just recovering from a long illness.

LOUISVILLE.

Louisville, Ky., Nov. 9.

—The Southern Pharmacal and Chemical Company is no longer an experiment, but a success. The company was recently organized and premises secured in the eastern part of the city. The scheme was to supply the drug trade of the South and it has worked admirably. The new company manufactures pharmaceuticals only and is conducted on a sort of co-operative plan. The stockholders are mostly Louisville druggists and about \$50,000 has been invested. It was predicted that the new concern would be a failure, but from the outset it has been a paying investment and there is every indication that the plant will be enlarged.

—In Louisville were many funny election bets and the druggists seem to have suffered from the affliction. Clerks wearing brimless hats or sleeveless coats may be seen at any store. It remained, however, for James Wilson, a clerk at Jacob's drug store, to make the prize bet. It was his confidence in the election of Bryan that led him astray. He and Walter Semple, another drug clerk, made a most wonderful wager. The loser was to stand a half hour in a well five feet deep in water. Wilson paid the bet on Thursday afternoon, just after the thermometer had fallen about ten or fifteen degrees. He is now seriously ill.

—James E. Robertson, a druggist of Paducah, quarrelled with Claude Baker, a prominent citizen, and shots were exchanged. Robertson is a friend of Ellis Headley, who is being tried on the charge of bribery, and became one of his bondsmen. Baker made some disparaging remark about the character of the accused's bondsmen and Robertson resented it. The druggist fired at Baker but the shot went wild. He was arrested, but was later released on \$300 bond.

—At Scribner's pharmacy on Tuesday night the election returns were received by the Associated Press wires and by means of a stereopticon were thrown upon a canvas located across the street. Several of the local druggists were invited to gather at the store and listen to the returns.

—Hugh N. Thomas, formerly with Kelley & Lively, Bowling Green, has resigned his position and accepted one with Winstead & Scherer, on Main street.

—E. F. McIntyre is now putting the finishing touches to his new drug store at Dixon, Ky. He was in Louisville this week purchasing his stock.

—G. E. Countzler, of Sebec, will open a drug store at Greenville on December 10 in the Tinsley building. This is Mr. Countzler's first venture.

—John X. Taylor, of Cromwell, has purchased the stock of drugs of Campbell & Co., Earlinton, Ky., and will take possession next week.

—F. G. Gabriel will open a new drug store at Paducah within the next fortnight in the Brown building at First and Broadway.

—A. N. Martin, one of the best druggists at Hawesville, Ky., has accepted a position in Patterson's drug store.

Virgin Olive Oil.

Manheimer & Eben, No. 23 Gold street, New York, are the sale agents in this country for Warrick Freres', Grasse, France, Virgin Olive Oil, an oil which is guaranteed to be absolutely pure and of which a sample will be sent to any druggist on application. They also handle Warrick Freres' Pomades, Floral Waters, Essential Oils, etc.

ملفوظات مولانا مفتی محمد شفیع صاحب

Address, THE PHARMACEUTICAL ERA,
New York.

WISCONSIN: Berlin.—Kolpal & Lamprecht, succeeded by
Fred. W. Lamprecht.

pulverize all wet and oily substances, peanuts, coffee, horse radish, raw and cooked meats, carbonate of ammonia, all kinds of drugs, spices, herbs and roots, ice, vanilla beans and tonca beans, whether mixed with sugar or not. It will even grind raisins, with or without seeds. The mill illustrated here is their No. 1 & mill, which is sold for \$4. It is not a cheap meat cutter, but it is a mill that will grind fine. It will pay retail druggists who are interested in anything of this sort to write Messrs. Straub & Co.

SOLUTION OF NITRO-GLYCERIN, 1 and 10 per cent., will not be sold in future in larger than 5-lb. packages and bottles will be packed in sealed cans for which extra charge will be made.

Book Reviews.

VETERINARY COUNTER PRACTICE.—A treatise on the diseases of animals and the most suitable remedies for them. Written expressly for chemists and druggists by qualified and experienced members of the Royal College of Veterinary Surgeons. Third edition. 12 mo., 344 pages; cloth. London, The Chemist and Druggist.

This is a new edition of another of our British contemporary's practical handbooks for the pharmacist. The greater part of the work is new and adapted to present day conditions, and there is no reason why a pharmacist should not inform himself sufficiently with such a book at hand to become able to understand veterinary cases detailed to him at his counter and to supply the most suitable remedy. In addition to the treatment of the diseases of various domestic animals, it contains a posological table of the most generally used drugs and medicines, many miscellaneous veterinary formulæ, and the regulations "enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal," etc., under which veterinary surgery may be practiced in the United Kingdom.

THE ART OF DISPENSING.—A treatise on the methods and processes involved in compounding medical prescriptions. Sixth edition, revised and enlarged, by Peter MacEwan, F. C. S., Pharmaceutical Chemist, editor of *The Chemist and Druggist*. 12 mo., 490 pages; cloth. London, The Chemist and Druggist.

This new edition of the *Art of Dispensing* is nearly twice the size of previous editions, the entire work having been "recast," as they say on the other side. It contains so much practical matter on dispensing and dispensing difficulties that its possession seems to be almost a necessity among pharmacists and students. We have already spoken in terms of high commendation of this work, and this last revision increases its claims upon our favor.

THE STUDENT'S MEDICAL DICTIONARY, including all the words and phrases generally used in medicine, with their proper pronunciation and definition based on recent medical literature. By George M. Gould, A. M., M. D., author of "An Illustrated Dictionary of Medicine, Biology and Allied Sciences," editor *Philadelphia Medical Journal*, etc., etc. Eleventh edition, enlarged, with many illustrations. 8vo.; cloth; \$2.50. Philadelphia, P. Blakiston's Son & Co.

This volume, though primarily intended for the student, contains a large amount of information not found in the ordinary medical dictionary. We refer to the tables of the bacilli, micrococci, leucomains, ptomaines and those of the arteries, ganglia, muscles, nerves, etc. These are so arranged that, instead of getting a simple definition, one really gets a bird's-eye view of a whole subject. There are also tables of weights and measures, analyses of the waters of the mineral springs of the United States, etc., etc.; a new table of eponymic terms and tests. We have examined this work with special reference to the needs of pharmacy students, and we find the definitions of the terms relating to the various branches of pharmaceutical science most satisfactory and reliable. Pharmacists and students need have no hesitancy in accepting this book. It is more than a good dictionary merely; the large quantity of added material makes it a most valuable work of reference.

May Itosson Lung Balsam.

This most excellent cough preparation is offered to the trade in three sizes, 25c., 50c. and \$1, and sold to druggists at \$2, \$3.75 and \$7 per dozen respectively. The manufacturer is Dr. J. C. Hood, Louisville, Ky., but the goods are kept in stock by nearly all jobbers.

Selick's Florentine Cologne, 10c. style, is sold at wholesale by McKesson & Robbins, New York. It comes two dozen on a handsome display card, at \$1.50 a card. The manufacturer is C. H. Selick, No. 56 Leonard street, New York, who will send free samples to any druggist interested enough to write for them.

OBITUARY.

CHARLES H. PINKHAM, president and manager of the business department of the Lydia Pinkham Medicine Company, founded by his father and mother, Isaac and Lydia E. Pinkham, died at his home in Lynn, Mass., on November 10. He was born in that city December 9, 1844, and always had made his home there. After going through the public schools of Lynn, Mr. Pinkham, at the age of 17 years, enlisted in Company F, Eighth Regiment, known as the Lynn City Guards, and served in the one-hundred-days and the nine-months campaigns in the Civil War. After the close of the war he returned home and became one of the conductors on the Lynn and Boston Railroad. Later, however, he was obliged to devote his time to the financial and business part of the enterprise founded by his mother, because he was the eldest son. Under his management the medicine business prospered, employing hundreds of men and women who now revere and honor his name. To them he was always kind and considerate. As evidence of his position in the community, he had no more devoted friends than those whom he employed, who saw him every day and labored under him. The success of the great business, known as one of the largest in the proprietary medicine line in the United States, is due in part to the fact that Mr. Pinkham was one of the most liberal advertisers in the world, and spent hundreds of thousands of dollars every year in keeping the business in the public eye. Mr. Pinkham was a man of liberal spirit, and took a deep interest in public affairs, but always declined to accept any public office. He had been repeatedly urged to become a candidate for Mayor, but invariably refused. He was, however, induced to become Park Commissioner. He was a large giver to public and private charities. He was a prominent member of the First Universalist Church, of Lynn, and belonged to several societies and organizations and many clubs, including the Park, Oxford, Lynn Press and Lynn Republican Clubs, of the former of which he was president; the Sphinx Club, of New York, and the Artoles Club, of Boston. He leaves a widow and six children.

ARTHUR STEPHENS CRON died of consumption after a long and lingering illness at the home of his parents, Gallatin, Tenn., on the evening of November 5. He was born near Gallatin, Tenn., November 22, 1878, and with his parents removed to Gallatin when ten years of age, entering the schools of that place. At the age of sixteen he began as an apprentice to learn the drug business under H. A. Holmes, with whom he remained until 1895, when he accepted a position with Claude E. Perkins & Co., later becoming a member of the firm, from which he retired soon after on account of declining health. Mr. Cron was a young man of high moral character, gentle and refined in disposition, and exceedingly studious and ambitious. In 1898-99 he took the Era Course in Pharmacy, from which he graduated with high honors. In the death of Mr. Cron, Gallatin has lost a most exemplary young man, his parents a dutiful and devoted son and drug circles an able and loyal comrade.

ERNEST C. STIEFEL, aged 34, a druggist at Wylie avenue and Fulton street, Pittsburg, died suddenly of apoplexy on October 10. He started in business about five years ago, and soon established one of the most successful stores in the city. He is survived by his mother and one brother.

Ideal Atomizers.

The Ideal Rubber Company, No. 28 Rodney street, Brooklyn, advertise in this issue one of their Ideal Atomizers with unbreakable tubes. These atomizers are made in all styles, throat, toilet, nasal, medicinal and for vaseline and oils. They guarantee them to produce a continuous spray, and offer them to the trade with the assurance that no atomizer in the market will compare with them. Their advertisement runs at frequent intervals in the Era, and their space is utilized for the illustration of new goods each time.

THE SCALE OF FAHRENHEIT'S THERMOMETER.

By SAMUEL WILKS.

My best endeavors made for many years have altogether failed in obtaining an authentic account or reason as to the principle on which Fahrenheit constructed his well-known scale, which is now universally used in England. No mention of its meaning is to be found in any work of natural philosophy or chemistry with which I am acquainted and I have not yet met with a professor (and I have interrogated some of the most distinguished) who could give me any information about it. Most of them admitted that they were quite ignorant of its origin and two surmised that the number 180, marking the degree between freezing and boiling, had something to do with the half circle. My friend Mr. Stromeyer, an engineer, told me some time ago that he believed the scale was made from the temperature of the blood and probably this information was gained from the *Encyclopædia Britannica*, to which I shall presently refer.

Sir Isaac Newton's Scale.

I should have taken no further trouble in the matter had not my interest in it been again revived by reading a paper in the "*Philosophical Transactions*" for the year 1701, in which it is proposed to make a thermometer founded on the temperature of the human body. The paper is anonymous, but I believe it is the opinion of Lord Kelvin that it was written by no less a man than Sir Isaac Newton.

The paper in the "*Philosophical Transactions*" supposed to be written by Newton is to be found in Vol. XXII., p. 824, April, 1701. It is written in Latin and entitled "*Scala Graduum Caloris*." The following are the portions which I quote:

In hujus tabulæ columna prima habentur gradus caloris in proportionem arithmetica computum inchoando a calore quo aqua incipit gelu rigescere tanquam ab infimo caloris gradu seu commune termino caloris et frigoris, et ponendo calorem externum corporis humani esse partium duodecim.

Patet autem per hanc tabulam quod calor aquæ bullentis sit fere triplo major quam calor corporis humani.

Ex his inventis ponendo calores olei ipsius rarefactione proportionales et pro calore corporis humani scribendo partes 12 prædicit calor aquæ ubi incipit bullire partium 33.

Before this time thermometers had been made by Hooke and others but found to be of little value. Newton (if he be the author) used linseed oil in a glass tube, and in his paper he gives a table showing the height on this instrument at which different liquids boiled, saying: "In the first column we have that degree in which water begins to freeze at the lowest degree and making the external heat of the human body 12 degrees. Now it appears that the heat of boiling water is almost three times greater than the heat of the human body, being 34 degrees." I might remark that the duodecimal system was then in universal use and therefore Newton, wishing to make the temperature of the body in accordance with this, he marks it 12, leaving room for the higher temperatures, zero being freezing point.

Fahrenheit's Scale Founded on the Body Temperature.

A few years after the publication of this paper Fahrenheit made his thermometer, and followed Newton by making the temperature of the body his first resting place, counting upwards and downwards from this fixed point. Whether he knew of Newton's essay I am not aware, but in all probability he did. He found he could get a greater cold than that of freezing water by mixing together ice and salt. This point, therefore, he made his zero. He thought also that it would be better if he enlarged the scale by doubling the numbers and making that of the body 24 instead of 12, starting, of course, from his own zero. This made the freezing point 8 and the boiling point 53, which, as his predecessor had said, was about three times that of the human body. His scale then stood thus: Zero, that of ice and salt mixed; 8° for freezing, 24° for the human body, and 53° for boiling. He then further extended the scale by dividing each degree into four parts, so if it is multiplied by four we

have the scale now in use—32° for freezing, 96° for the body and 212° for boiling. In this way the thermometer seems to have been evolved. Subsequently these degrees were still found to be too large for accurate measurement and so were divided into ten parts each. This is a modern innovation, for the decimal system did not come into vogue for many years after Fahrenheit's time.

This information is gained from the *Encyclopædia Britannica*, and I apprehend that the writer of the article must have obtained it from authentic sources—from the writings of Fahrenheit himself or from some of his contemporaries. His thermometer, which I always regarded as an abomination, is now looked upon by me with a great and two-fold interest. Its scale being founded on the temperature of the body, and this naturally under the duodecimal system receiving the round number 12, became the point from which every other number proceeded. The paper does not state how the temperature of the body was ascertained; possibly in various ways, which accounts for the figures being not quite accurate and not in accordance with the fixed figure on our modern instrument; Newton, however, is careful to say the "external" heat of the body.

Another Theory of Fahrenheit's Scale.

Some amount of doubt must still remain as to the explanation of the scale which I have given, seeing that no mention of its origin is to be found in scientific books, and the account given in Brande's "*Dictionary of Chemistry*" is of a totally different kind, although the author of the article hesitates in attributing it to Fahrenheit. It is said therein "that the 180° between freezing and boiling was chosen by Fahrenheit—or probably Reaumur—for some of his experiments on the expansion of the mercury. When he plunged his thermometer into melting snow the 11.156 parts of mercury which it contained expanded when placed in boiling water to 11.336, being an increase of 180 parts." This is said to be the origin of Fahrenheit's scale, the constructor carrying it still lower when he found he could obtain a greater degree of cold. In this account it is not stated why he used this amount of mercury and therefore it can only be inferred that it was the quantity contained in the bulb. It is difficult to understand how a scientific man could have adopted so arbitrary a method and therefore probably the description is incomplete. It may be remarked that Newton experimented in the same way and his results are mentioned in the paper referred to; he there showed the increased space which 1,000 parts of oil occupied when raised to the temperature of the human body or that of boiling water.

Conclusion.

I should like to say that I am inclined to put full credence in the account I have taken from the *Encyclopædia Britannica* as to the origin of Fahrenheit's thermometer, and although I know that sentiment should have no place in a scientific investigation, I cannot but hope that it is correct, for I must admit that to a certain extent "my wish is father to the thought." For the future, whenever I see a thermometer in use to mark the temperature of the body I shall be reminded that it was first used for this purpose in order to mark the starting point of the scale from which all other temperatures were to be reckoned. At the same time there will be the pleasing remembrance that it was our great Newton who, in all probability, suggested the temperature of the body as the starting or determinate point in the thermometer and marking it by the round number 12. (*Pharm. Jour.*)

Pure and Ground Drugs and Spices.

McCormick & Co., Baltimore, Md., have added to their business a complete plant for the powdering, granulating and grinding of drugs and spices, and they are now prepared to offer to the druggist pure Jamaica ginger, granulated or powdered, high grade mustards and other spices, insect flowers, orris root and talcum. Their Jamaica ginger, granulated, is a particularly fine article. Druggists who may be dissatisfied with what they are now getting, should write to Messrs. McCormick & Co. for samples and prices, which will be cheerfully given.

WORKING FORMULAE FOR PEPTONATES AND THEIR COMBINATIONS.

By E. G. RAEUBER.

The various combinations with peptone such as the solution of peptonate of iron, peptonate of iron and manganese, and these again in combination with arsenic, quinine, strychnine, mercury, etc., enjoy a varied and extensive use in the practice of medicine.

The practice of medicine and pharmacy has kept pace with the modern advancement in all lines. It is the aim of the pharmacist to produce preparations not only elegant in appearance, but at the same time palatable and effective. The originators of the various combinations of iron and manganese with peptone claimed for them easy absorption and assimilation by the human economy on account of the predigested form of the peptone. Since the peptonates have become so important an item for the pharmacist, greater familiarity with their composition and mode of manufacture should be of interest to him. The peptonates are the product of the action of a digestive ferment upon some form of an albuminoid such as egg-albumen, fibrine or casein.

This soluble peptonate is then combined with iron, manganese, etc., to form the various peptonates used in medicine. The most simple formula for, e. g., 1 liter of a solution of peptonate of iron and manganese would be: 15.5 grams of dry peptonate of iron and 0.4 grams of manganese sulphate are dissolved in water. To this solution is added a mixture of aromatic fluid extract, 2.3 grams; tincture of vanilla, 2.40 grams; oil of sweet orange, 0.06 grams; glycerine, 62.5 cc.; alcohol, 62.5 cc., and acetic ether, 0.06 grams. Sufficient water is then added to make one liter and the solution filtered. If the simple peptonate of iron is wanted, the manganese salt is omitted, otherwise the formula is the same.

These solutions form the basis for the many combinations with the peptonates, the required amount of quinine, strychnine, arsenic or mercury being added as the case may call for. However, it is difficult to obtain a standard preparation of dry peptonate of iron, inasmuch as it does not appear to be a definite chemical compound. It is advisable, therefore, to make your own peptonized iron solution and then add aromatics to make it palatable. In the preparation of the peptonized iron solution, great care and attention must be paid to all details. For the preparation of five liters, the following formula may be employed. It is a slight modification of Dieterich's original formula, and is the one employed in the laboratory of the Wisconsin Pharmaceutical Company:

Fifty-one grams of dried egg albumen or 400.0 grams of fresh material, are dissolved in a solution of 0.5 grams pepsin and 82.0 grams hydrochloric acid in four liters of water. This solution is then kept at a temperature of 40° C., preferably on a water bath, for from twelve to twenty-four hours. The solution is tested from time to time to ascertain whether all of the albumen has been converted into peptone. This is done by adding to a small portion of the liquid a few drops of nitric acid. If the liquid remains clear and shows no cloudiness, albumen is no longer present. Allow the liquid to cool, filter and neutralize carefully with sodium hydroxide solution. To this neutral solution 586.0 cc. of solution of iron oxychloride (Ph. Ger.), previously diluted with four liters of water, are added and the resulting liquid is again neutralized very carefully with sodium hydroxide. The precipitate is now washed until free from chlorine. The magma is then placed in a porcelain dish, 7.0 grams of hydrochloric acid are added and the mixture heated on a water bath, while stirring, until the precipitate is dissolved. Then enough water is added to measure four liters, and subsequently a mixture composed of aromatic fluid extract, tincture of vanilla, oil of sweet orange, glycerine, alcohol and water enough to make five liters. Finally filter.—Pharm. Rev.

—The Minnesota Board of Pharmacy at its last meeting examined a class of forty. Certificates as pharmacists were granted to Charles L. Adams, Theodore E. Damaschke, Carl V. Lindberg and Mary E. Adams, all of St. Paul; Walter P. Meyer and Alexander Person, of Minneapolis; Leonard E. Conger, Mora; Martin E. Dahl, Twin Valley; E. Theodore Dillner, Henning; Irving L. Emerson, Sauk Center; Olaf T. Kjørlaug, Battle Lake; Victor E. Lofstrom, Litchfield; Joseph J. Meurer, Anoka; Emil C. Molstead, Alexandria; John Onstad, Clinton. The following were granted the certificate of assistant pharmacist: John T. Bush, Edward L. Lamm, Sylvester W. Macho, Jeppe D. Peterson and Fred I. Smith. Four licentiates of other state boards were granted registration as pharmacists without further examination. Secretary H. G. Webster reported thirty-six successful prosecutions thus far this year for violation of the law.

—The California State Board of Pharmacy held a meeting on October 9 to 13 at the College of Pharmacy, San Francisco. Members present: Messrs. Searby, Oberdeener, Orena, Waller and Seifert. Absent: Messrs. Sale and Baer. The following were granted certificates as graduates: R. G. Shoults, J. H. Allen, Jr.; O. A. Brehler, W. H. Cole, C. W. Hibbard, W. G. Walker, H. A. J. Westphal, T. B. McClintock, A. E. Jacobs, F. G. Ulman, H. C. Stauffer and W. A. Kampmann. Licentiates by examination: F. C. Englesby, G. H. H. Phillips, R. R. Clark, E. C. Laux, L. Laing, C. Rosson, M. Flentge, W. S. Quinn and T. M. James. Assistants on certificates: M. D. Barrett, F. C. Hesser, A. B. Clapp, E. McKinlay, R. C. Ramage, M. Muller and A. H. Jackson. The next meeting of the board will be held at San Francisco on the 8th of January, 1901. John Calvert, secretary.

Court Sustains Apollinaris Company.

At the October term of the United States Circuit Court for the Eastern District of Wisconsin a final decree was entered making perpetual the injunction obtained last June by the Apollinaris Company, Ltd., against Andrew C. Powers and others of Chicago, who did business under the name of the American Mineral Water Co. The labels of the defendants were enjoined by Judge Seaman solely on account of their color and shape which were held to sufficiently resemble the color and shape of Apollinaris labels as to be liable to deceive the public, even though the printed matter was entirely different.

The Apollinaris Co. has always claimed, by virtue of prior adoption, the exclusive right to use for mineral water orange or yellow labels of the shape and arrangement first made familiar by it.

This is only one of several cases in which such claims have been upheld by State as well as Federal Courts.

Order Before Freezing.

Order Welch's Grape Juice before freezing. Grape Juice freezes at about 20°. If frozen or thoroughly chilled there appears a deposit that is mostly tartaric acid. This deposit is called sediment by most people and really makes the Grape Juice unsalable. If desired some favor will be given in dating, but do not miss having stock to last until March. Welch's Grape Juice is more than a summer drink. Physicians prescribe it. Churches use it. People drink it the year round. The Welch Grape Juice Company have about 150,000 gallons for their 1901 trade. This Grape Juice is pressed on the spot where the grapes are grown. The best Concord grapes, the quickest and best methods make Welch's the standard of grape juices. Write the Welch Grape Juice Co., Westfield, N. Y., for their "before freezing" proposition. Welch's Grape Juice received highest award at Paris.

The Tyrian Specialties.

Probably the line of syringes, atomizers and druggists' rubber sundries most widely advertised is that of the Tyer Rubber Company, Andover, Mass. The name "Tyrian" on an atomizer or a fountain syringe is a guarantee of good quality, and a druggist who buys Tyrian goods knows that he is getting the best there is made and that he will have in stock goods which can be sold without any effort.

THE NEW ORLEANS COLLEGE OF PHARMACY.

The New Orleans College of Pharmacy which was organized in the Crescent City last summer, opened its doors for the first session November 5. The college building is located on Carondelet street, near Lafayette, is three stories high and fully equipped with the apparatus for laboratory and class room work. About forty students have already matriculated and the opening session was made the occasion for a short programme of addresses by the officers, members of the faculty and prominent local pharmacists. The officers and faculty of the new college are: President, William M. Levy; vice-president, George D. Feldner; secretary-treasurer, Walter T. Taylor. Directors—George S. Brown, Max Samson, J. L. Hunter, M. D., M. T. Breslin, J. A. Legendre, William M. Levy, F. C. Godbold, T. S. Dabney, M. D., J. A. Storck, M. D., George D. Feldner, P. Asher, M. D., Walter T. Taylor. Faculty—Philip Ascher, M. D., dean and professor in chemistry; Walter T. Taylor, Ph. G., professor of pharmacy; J. A. Storck, M. Ph., M. D., professor of botany, physiology and materia medica. Instructors—S. K. Simon, B. A., assistant in chemistry; George A. Moffett, assistant in pharmacy; E. J. Hubner, M. D., assistant in botany, physiology and materia medica.

Local pharmacists are enthusiastic in the belief that the college has made a splendid beginning. The course of instruction is divided into junior and senior years of six months each, leading to the degree of graduate in pharmacy. For the present the lectures will be delivered in the evenings.

The Story of Cinderella Applied.

The Perfumer Maubert, of Paris, in introducing his new Cendrillon Soap in America has employed a very unique method of advertising. The name Cendrillon (Cinderella), being taken because of the unique parallel seeming to exist between the transformation of the poor kitchenmaid to the beautiful princess and the transformation of a flock of sheep into a delightful toilet soap, Maubert has caused to be printed and sent to his American agents, Thomas F. Condon & Co., 15 Jay street, a quantity of handsome booklets, entitled "The Story of Cinderella Applied." The booklet is gotten up in colors and gold and will have druggist's name on in gold. This will be an advertisement for you that your best trade will appreciate and may be had for the asking.

Lehn & Fink, New York, are the sole agents in the United States for Geo. Allen & Co.'s English Narcotic Herbs and Extracts. These goods are all well known in the trade and need no extended reference. They have been the standard of excellence for over fifty years and are used throughout this country by pharmacists who are particular about the quality of the crude drugs from which they make their preparations.

Chiolol.—Trade name for a solution of resins in fatty oils, ether and alcohol, used as a sterilizer of the hands in surgical operations. The surgeon and attendants dip their hands in a beaker of chiolol for a few moments, opening and closing them so as to insure the contact of every portion of the skin with the liquid. On withdrawal, the solvents evaporate immediately, leaving the hands protected by an impervious elastic coating. After the operation the "chiolol" is removed at once by dipping the hands in alcohol.

Carnosol.—New organic base with the formula $C_6H_5N_4O_5$. According to the statements of Gulewitsch and Anuradzbl, it is obtained by precipitating an aqueous solution of meat extract with phosphowolframic acid, removal of the voluminous deposit and decomposing it with baryta water. Any excess of baryta is removed by passing a stream of carbonic acid through the mass. The filtrate is then treated with nitric acid to neutralization, silver nitrate is added and the liquid again filtered off from the resulting precipitate. The filtrate is treated with baryta and silver nitrate. The resulting precipitate is thrown down by hydrogen sulphide, the liquid filtered off, neutralized with hydrochloric acid and the hydrochlorate of base is taken up from its aqueous solution by means of alcohol.—Nat. Dr.

STATE OF TRADE.

Increasing Business.

New York, Nov. 13.—There has been a gradual increase in the volume of general business since the close of the political campaign, and the result of the Presidential election appears to have inspired confidence in all branches of commercial industries. More seasonable weather also has stimulated the demand for a number of articles, especially those which enter largely into the composition of cough remedies, while cod liver oil and similar commodities are receiving increased attention. Quinine, however, has remained inactive, the recent decline in prices having apparently checked the demand. Cables from London report that market quiet, with very little doing in a speculative way, but while quotations there are comparatively low, it is believed that manipulation is responsible for prevailing conditions, and the rumor is again current that the depression abroad is wholly the result of efforts on the part of large operators to shake out weak holders. The cables also state that an early reaction is expected.

Opium is decidedly stronger, both here and in foreign markets, and the demand has been more active than for some time past. The principal stimulating influence was the unfavorable outlook for the next crop. Cables from Smyrna reported a further advance in values of both high and low grades, with continued drought in growing sections, and it is claimed in some quarters that the bulk of the autumn sowings are irretrievably lost. It also is stated that speculators in producing markets have sold short, and that their efforts to cover have thus far not met with much success. Spot quotations for round lots show a further advance of fully 5c. per pound and values of powdered are 10¢15c. higher, with the tendency still upward. Owing to somewhat keen competition from outside holders of cinchonidia the market is more or less unsettled, and manufacturers have reduced their quotations 2c. per ounce. Lycopodium has continued in active demand, and spot quotations have steadily hardened under the influence of diminishing stocks, the available supply being so small that transactions have necessarily been limited to jobbing transactions. Fresh supplies have begun to arrive from primary sources, but as they are coming upon a practically bare market, values have not yet been unfavorably affected. At the November auction sales of cacao butter in London and Amsterdam on Tuesday of last week, prices declined, as was expected, on account of the unusually large quantity offered, and holders in the local market have modified their views slightly. Harlem oil is firmer, in sympathy with higher foreign markets, and some holders have advanced their quotations, but others are yet willing to sell in a limited way at old figures. German ergot is stronger both here and in Europe, and dealers anticipate further improvement, in view of reduced stocks, which are gradually coming under closer control. Ipecac declined at the regular drug auction in London on Thursday last, and spot quotations are correspondingly lower, with the consuming demand of about the usual character. Aconite root is a shade firmer and golden seal is higher in sympathy with producing markets.

In the department of essential oils, general business is satisfactory with leading descriptions moving steadily in a jobbing way, but there are very few price changes or new features of more than ordinary importance. Natural wintergreen is higher owing to scarcity, spruce is stronger under a similar influence, and myrbane shows an advancing tendency owing to increased cost of raw material.

Buoynant Feeling in Boston Trade.

Boston, Nov. 10.—Despite the fact that everybody's mind has been deeply concerned with the election and its results, the week has proved a pretty good one. The election results have given some stimulus to trade and there is an undercurrent of confidence and a feeling of prosperity ahead. In the general market a stronger tone is apparent and dealers look for increased volume of business soon. Cacao butter has eased a bit. Opium and quinine are firm. In chemicals, cream of tartar and English bleaching powders are among the more active lines. With prices steady, as a whole, a fair amount of trade in dyestuffs and tanning materials is found. No great amount of business is apparent in alcohols, which, however, are steady as to prices. Waxes are moderately sought.

Philadelphia Has a Quiet Week.

Philadelphia, Nov. 10.—Business slacked off quite a bit this week, owing probably to the election excitement, but has begun to pick up a little with the coming of the cold snap of yesterday. The peculiar weather of this last few weeks has been a boon to the druggists, as almost everybody is suffering from coughs and colds, and remedies for such are in good demand. Outside of this increase things have been rather dull. Although comparatively little excitement prevailed around election day in this city and almost everybody had discounted the results, there seems to have been a general holding back of orders to wait for positive knowledge of the conditions to govern the future, and now that it is all over, all hands

are getting ready for the rush to come. The representatives from one or two New York firms were in Philadelphia during the week looking for holiday orders and it is reported that these have been very good, particularly in the finer lines of goods. Very few druggists in the central parts of the city will lay in much stock, there being too much competition from the department stores, but those in the suburbs are making up for this deficiency. The jobbing houses report a quiet week, with orders slightly below those of the past ten days.

A Quiet Election Week.

Baltimore, Nov. 12.—As was to have been expected, election week proved to be exceptionally quiet in the wholesale and manufacturing drug business, except in so far as operations in the laboratories were concerned. Inactivity prevailed not only with respect to local trade, but also in the out-of-town market. Relatively few orders were received and the quantities called for did not exceed very moderate proportions. The result of the election here, however, has been received among drug men with a feeling of satisfaction and the future is regarded with confidence. The voters of the country having declared for a continuance of present policies, prolonged stability and permanent prosperity are believed by many to be assured.

A Little Dull in Detroit.

Detroit, Nov. 10.—Country departments at the wholesalers' report a busier week than the city departments. Retailers complain of a very dull week here. They say they are selling a few cough syrups, but that is about all. Horehound candy drops in immense quantities fill up the windows of many of the stores, and their sale for the week has been very large, it is said. Election went the way most of the Detroit druggists wanted it to go and they are very well content.

Average Week in Chicago.

Chicago, Nov. 10.—All lines of manufacturing and jobbing in the drug trade this week have been fairly busy. The election took one day out of the week and the talking about it before and afterward has taken out one or two more, so that the week's results have not been much more than normal. Business has been active while it lasted, and everyone looks forward to a very large winter business. The outlook commercially never was brighter for the drug trade of the West than it is now.

Very Busy in the Northwest.

St. Paul and Minneapolis, Minn., Nov. 9.—The relief from uncertainty which election day brought was manifested strikingly in a large St. Paul jobbing house which was nearly swamped with orders which came as fast as the mail could bring them when the results of the balloting were known. With the retailers, however, no difference due to this cause is discernible. Most of them are quite busy—several indeed being overworked—but this condition is in no degree due to the act of the voters. Here and there a slight improvement in collections is noted, but as a rule they are by no means satisfactory. The deliberateness of some customers in settling their accounts is inexplicable. The market for Western products is steady and entirely unchanged.

Compressed Tablets.

It has been said of the drug business that this might properly be called the Tablet Age, for about every conceivable medicinal agent is now dispensed in tablet form, some even going so far as to say that the tablet is ruining the drug business. Be that as it may, the compressed tablet is an important item of the druggist's daily sales, and it looks as though it had come to stay. With it has come, of course, the tablet machine, enabling druggists to make their own tablets. One of these, the Freck Prescription Tablet Machine, is illustrated on another page of this issue. It is made by the William Freck Company, No. 120 South Clinton street, Chicago, and is furnished to druggists with two sets of dies complete, for \$10 net. They make larger machines, however, suitable both for hand and for power, full descriptions of which may be had by corresponding with them. They also call druggists' attention to the Freck Suppository Machine, furnished with three molds, for \$13 net. They have, too, extra attachments which they will furnish on application.

MARKET REPORT.

New York, Nov. 13.—Very few price changes occurred in the jobbing market during the past week, but there has been a steady improvement in the volume of general business, and prevailing conditions are satisfactory to dealers, with the undertone fairly firm.

OPIUM.—The jobbing market has at last felt the stimulus of the firmer conditions at primary sources of supply, and a decidedly stronger feeling has developed, with quotations showing an advance to \$3.50@3.60 for 9 per cent, and \$3.60@3.70 for 11 per cent., according to size of order.

POWDERED OPIUM.—The movement into consuming channels has continued moderately active, with values higher in sympathy with the improvement in gum, and the revised quotations are \$4.60@4.75 for 13 per cent, and \$5.25@5.35 for 16 per cent., as to quantity, the outside figures for single pounds.

MORPHINE.—There is a continued steady demand for consumption, and the market is firmer in tone, under the influence of the stronger position of opium, but values are unchanged on the basis of \$2.40@2.60 for eighths, according to brand and quantity.

QUININE.—Quotations have not undergone any further change since the decline noted last week, and the consuming inquiry has been only moderate, but large operators consider the outlook favorable to an early improvement, and jobbers are not anxious sellers at current prices, which remain nominally steady on the basis of 42@43c. in ounces, according to brand.

CINCHONIDIA.—Keen competition among manufacturers and dealers has resulted in a general reduction of 2c. per ounce, and jobbers are now quoting 30@31c. in 100-ounce tins, 34@36c. in five-ounce tins and 39@43c. in ounce vials.

LYCOPodium.—The firmer feeling referred to last week continues without abatement, and the exceedingly small stock in the hands of jobbers is steadily held at the recent advance to 70@75c.

CACAO BUTTER.—Although the import cost is a shade lower, the decline is not considered sufficient to warrant a reduction in jobbing quotations, and leading brands are held at the old range of 51@52c. by the case and 55@60c. for broken lots.

OIL WINTERGREEN.—The market is decidedly stronger in sympathy with higher prices at producing points, and quotations in a jobbing way have been advanced to \$2@2.25, as to quality and quantity.

HARLEM OILS.—Some of the large importers have advanced quotations to correspond with the higher markets abroad, but jobbers are yet willing to fill orders from regular customers at prices within the old range of \$2.50@2.75 by the gross and 35@50c. per dozen for less.

IPECAC.—Lower markets abroad have influenced an easier feeling among importers, and jobbers have reduced their quotations to \$3.35@3.60 for whole, \$3.40@3.65 for ground and \$3.50@3.85 for powdered, according to quality and quantity.

GOLDEN SEAL ROOT.—Values show a continued hardening tendency both here and in producing markets, and jobbing quotations have been advanced to 75@85c. for whole, 80@90c. for ground and 85@95c. for powdered.

ACONITE ROOT.—A generally firmer feeling has developed among holders, and jobbing prices show an advance to 22@27c. for whole, 25@30c. for ground and 27@32c. for powdered.

ERGOT.—Russian has been advanced both here and in foreign markets, and jobbers now quote 70@80c. for whole and 80@90c. for powdered.

Some of our subscribers who have ordered druggists' tie pins from the J. Arthur Co., 18 Colonial Arcade, Cleveland, O., have written to us that their orders have not been filled promptly. This the manufacturers explain by telling us that they have not been able to get the goods made up fast enough, the people with whom they had a contract for making the goods having disappointed them. They now have made different arrangements and say they will be able to fill all orders hereafter as fast as received.

We are advised that 1,000 druggists have already taken advantage of the Old Pioneer window attraction offer of the Lightning Medicine Co., of Muscatine, Ia., which is advertised on another page of this issue. We are not surprised, as the offer is a good one and will continue for a short time only. A good thing for a holiday window and winter scene.

New Class Now Forming.

N. W. D. A. WINS AGAIN.

The victory just achieved by the National Wholesale Druggists' Association in the suit brought against it collectively and its individual members by the John D. Park & Sons Company, of Cincinnati, and which is set forth in the decision of the Supreme Court, printed elsewhere in this issue, is very important and cheering. This decision, in which every judge on the bench concurred, establishes what all the trade has believed, that the manufacturer of a proprietary medicine has a right to choose his customers and to impose upon them whatever reasonable restrictions he may deem fit for the protection of his own business and for the welfare of the trade as a whole. This is merely common sense, and we are glad to see that it is deemed good law, too. It is along exactly the same lines as the decision in the Phenyo-caffein case a short time ago. The would-be purchaser of a manufacturer's goods is not compelled to buy them, and it is perfectly proper to ask him to comply with specified restrictions failing which compliance he may not be supplied. The Park Company has never seemed to us to have a sound contention, and the decisions at various stages of the long litigation have been quite uniformly adverse to them. It would seem the better part of wisdom on their part to give up the contest at this point, for, if precedents go for anything, it is reasonably sure that the last round with the final decisive knockout could be the only result of farther contentiousness.

The outcome of this case will prove an influence of no little weight in furthering the cause of the N. A. R. D., and the retailers are also to be congratulated upon the victory which the wholesalers have won.

QUESTIONS OF BOARDS OF PHARMACY.

In looking over the sets of examination questions used by various boards of pharmacy, we have been impressed by the very obvious lack of care in preparing these questions. This has suggested the query whether board members are uniformly chosen with due regard to their qualifications for the duties which are to be placed upon them. The board in its examinations is supposed to require from the candidate great care and thoroughness in the framing of his answers, and it is certainly proper to ask why does not the board exercise equal care in framing the questions?

Taking up the questions of several boards at random recently we have noticed many queries which would puzzle the best of students to con-

strue properly, and others which evidence lack of qualification on the part of the examiners themselves. For instance, one question was "How much sulphate of potash can be made from fifty per cent. of sulphuric acid?" In this question there is nothing upon which the candidate can base his calculations. No quantities of acid or of alkali are given, and the question as a whole is consequently very faulty.

Other questions, not only in the particular set to which we refer, but in those of a number of other boards, are strange mixtures, conglomerations, of Latin and English. No care is shown in the abbreviations of titles; no care in the use of proper Latin terminations, and when prescriptions are given for study, all too frequently they are written in a compound of hog Latin and faulty English which is astonishing. We could easily be specific, but the end is accomplished if this suffices merely to call to the attention of boards of pharmacy a fault on their part which it should be their best endeavor to remedy. They cannot expect from candidates for examination accuracy and care, unless they exercise the same qualities in their portion of the work.

To select a good examiner is not an easy thing. Examination is an art. It is feared that frequently board members are elected or appointed more as a matter of personal compliment to them or as a recognition of their professional standing in the community, than with due regard to their qualifications as examiners. It is sometimes charged that the members of boards of pharmacy could not answer the questions they propound, and, while we do not believe that this charge is justified, yet there is necessity for considerable improvement in the particulars pointed out. The examination of candidates for their fitness to practice pharmacy is a most serious and important duty. It should not be entered upon carelessly, or left to those not fitted educationally and otherwise to discharge it justly and honestly. The personnel of the board of pharmacy is a matter which should be looked after with all the vigor, common sense, and just appreciation of the interests involved which can be exercised by the pharmaceutical body as a whole.

FOR PURE FOODS AND DRUGS.

Sentiment is fast growing in favor of what is known as the Brosius bill, and it is believed that it can be enacted into law early in the coming session of Congress. Many of the objections heretofore raised against the bill have been silenced when the objectors have had its provisions and their probable effects properly explained to them. Various trades other than the drug trade are discussing the matter thoroughly, and the majority of sentiment seems to be strongly in favor of this legislation. Any one who is free from prejudice and in favor of what is right and just cannot find any provision in the Brosius bill which is antagonistic to his inter-

ests. If this bill were more generally understood we are confident there would be no objection to it from any honorable business house. With respect to drugs, it provides only for those mentioned in the national pharmacopoeia. If any one wishes to sell a mixture or an adulterated article he is free to do so under the provisions of this bill, with the only proviso that he shall label it for what it is.

There have been a good many propositions to amend this bill to meet this or that objection, but the amendments proposed are not important and would only result, probably, in delaying the action and, possibly, in the defeat of the measure as a whole.

There is imperatively needed pure food and drug legislation for the country at large. While the Brosius bill is by no means perfect, it is infinitely better than nothing, and so far as we can see, from a careful study of it, it will work no injury to the interests of any honest merchant, but is calculated to make it rather warm for the wilfully dishonest adulterator of foods and medicines. In the matter of labeling food and drug products, it requires nothing more than the purchaser has a right to demand, a true statement of the composition of the article on sale. The present status of the bill is that it has been reported favorably to the House, with the recommendation by the Committee of Inter-State Commerce that it be passed. It is now on the calendar and would not be reached in the coming session in the regular order of business, and must therefore be made a special issue. The promise has been made to get the Committee on Rules to introduce a special order to have this bill considered before the holidays so that it can pass the House and go to the Senate. If our leading business men would write to Mr. Brosius, to Speaker Henderson, and to the honorable members, John Dalzell, Charles H. Grosvenor, James D. Richardson and Joseph W. Bailey, urging them to secure immediate action on this bill it would have a very favorable effect. There is no doubt the bill would pass by a large majority if it can be brought up for consideration.

SULPHONAL POISONING.—According to Dietrich (Therap. Monats.; Dr. Cir.), sulphonal is by no means so free from toxic action as is generally supposed. At least thirty cases of death from the use of the drug have been recorded in medical literature, he says. The dose which produces these harmful effects appears to be very variable. Oestreicher quotes a case in which a patient took 1,500 grams of sulphonal in six years without any ill effects. On the other hand, Schulz reports a case which ended fatally, in which only sixteen grams were given in the month, and Helweg, another fatal case resulting from the administration of 90 grams in three months. Numerous similar cases have been recorded. In the majority of these, the patients were in a weakened condition, anæmic, with much impaired digestion, so that the sulphonal, which, in healthy individuals is dissociated and reabsorbed with difficulty, in these cases acquired a cumulative action which terminated disastrously. The symptoms of poisoning are intestinal pain, nausea and constipation. The urine is colored a deep cherry red. This coloration is often the first indication of the commencement of the toxic action.

THE STAMP TAX.

Matters seem to be coming to a head in respect to the movement to secure the repeal of Section B of the Stamp Tax act. The drug trade is aroused to the necessity for prompt and vigorous action and many influences are at work in its behalf. The past week has seen some important developments. The newspapers have been prodigal in intimations that the tax is to be repealed at the next session of Congress. The Committee on Ways and Means is said to view the proposed repeal with approval, and this committee is this week listening to arguments from the representatives of the drug trade.

There seems to be no difference of opinion regarding the desirability of the repeal of the tax. The only question has been whether it is feasible at this time. It is stated, however, that from the president down, the law-makers of our national government believe that it can be done now with little prejudice to national affairs and with very much advantage to the interests which have so long suffered from the weight of this unjust and unequal load. The newspapers seem to be quite a unit in favor of the repeal of the tax on medicinal preparations, a very different attitude from that they held but a few months since. The officials of the government, also, upon whom has been the duty of collecting the tax, are in favor of its abolition on proprietary medicines, and those who have in charge the finances of the national government are reported as believing that ways may be devised whereby the loss of revenue resulting from the repeal may be easily and more justly made up in other ways.

Before the Committee on Ways and Means this week have appeared prominent members of

the Proprietary Association, of the National Wholesale Druggists' Association, officers and committee chairmen of the National Association of Retail Druggists, and numerous others appearing in their individual capacity or representatives of other organizations in the drug trade. The movement conducted by this paper in the past few weeks has borne abundant fruit in the shape of many thousands of signatures to the petition to Congress, and all this has been laid before the committee as representing the majority sentiment and desire of the drug trade.

While the result of the conference is not yet disclosed, enough is known to warrant the prophecy that the drug trade will have as a Christmas present the repeal of this section at least of the War Revenue act. We sincerely hope that our prophecy will be fulfilled. In the meantime it is very important that every member of the drug trade as an individual shall bring to bear what influence he can, great or small, upon his representatives in Congress. Let every druggist write a personal letter to his Congressman, requesting that the repeal of the tax be urged and insisted upon. There is no reason for its continuance, every reason for its abolition. A little hard work and work all together will bring the desired relief; the druggists will have only themselves to blame if because of their supineness and lack of effort our law makers decline to repeal the tax.

Send a postal card to us for a copy of the petition to Congress and take it to your brother druggists. Get the signatures of as many as possible and return it promptly to be included in the monster petition which at the proper time will be laid before Congress.

Petition to the Congress of the United States.

We, members of the drug trade of the United States in its several branches, retail druggists, wholesalers and jobbers, and manufacturers of proprietary preparations, herewith respectfully petition the Honorable Congress of the United States to repeal the special tax imposed under Schedule B, Section 25, and its dependent sections of the War Revenue Act of 1898, now in force, so far as such tax is laid upon medicinal preparations.

We seek this repeal for the following reasons:—

- 1.—This tax on medicines is class legislation, unjust and unduly burdensome.
- 2.—The tax is unequally distributed, being placed upon medicinal preparations which are necessities, and at the same time allowing to escape taxation a large number of articles which are as truly proprietary and which enjoy special protection under the copyright and trade mark laws.
- 3.—The revenue created by the enforcement of the law is no longer necessary, and the amount collected under this Schedule B is but a small proportion of the total revenue derived.
- 4.—The drug trade is already heavily taxed. Alcohol, which enters so largely into the manufacture of the preparations sold by us, is already taxed about 1,000 per cent., and the imposition of further taxation, as provided by this act, makes its operation oppressive.
- 5.—The intent of the law was to tax proprietary medicines only, but owing to its peculiar phraseology and the construction placed upon it by the officials, it does not reach nor apply to a large class of medicinal chemicals protected by trade mark, while on the other hand, it applies to nearly all drugs and medicines which are a necessity to the sick.

We ask relief, believing that the honorable members of Congress will realize the justice of our claims by repealing these unjust and burdensome provisions of the War Revenue Act.

NAME.

ADDRESS.

THE DRUG TRADE WANTS REPEAL.

We enclose herewith one of the petitions to Congress sent to us some days ago to have filled out; we will forward the other within a few days. We certainly hope the method you have taken in this matter will result in the removing of the stamp tax on proprietary goods—if not in full, in part. If there is anything further that we can do in the matter, we shall be glad to hear from you.

GARFIELD TEA COMPANY.

Brooklyn, N. Y.

Per C. G. Painte.

We enclose herewith another list of signatures to the petition to Congress for the repeal of the War Revenue Stamp tax. We expect to send you more like these in a few days; our salesmen report that it was no trouble at all to get signatures.

HANCE BROS. & WHITE.

Philadelphia, Pa.

C. B.

Several days ago we sent you a petition to Congress of San Francisco druggists in reference to the repeal of the proprietary tax law. We herewith hand you another petition filled out with Los Angeles druggists, which we trust will be of value to you.

CLINTON E. WORDEN & CO.

San Francisco, Cal.

W. W. Worden.

We herewith enclose petition filled out; we are heartily in sympathy with the movement. Wishing you success, and thanking you in the name of the drug trade for your interest in this matter, we are,

THE UWANTA CHEMICAL COMPANY.

New York.

Louis Lurie, Proprietor.

We enclose petition signed by our two druggists, as well as our neighbors in Sunbury; this is every druggist in each town. We all have the same desire to be relieved of this unjust tax.

Northumberland, Pa.

S. M. G. WENCK & SON.

The petition you sent us some time since, we had signed and presented the same to our Congressman, Hon. H. C. Smith, who promised to do what he could for it, as it was in accord with his views.

Hudson, Mich.

THE KINNE MEDICINE CO.

I herewith enclose petition signed by all the druggists in our city for the repeal of this burdensome tax, which we sincerely hope you will be successful in having removed.

Corry, Pa.

W. M. DURHAM.

HOW TO MAKE A DRUG STORE PAY.

In answer to this query a wag would naturally say, "enter suit"—but we'll pass over that.

Taking it for granted that you understand the business in which you are engaged, that you are a thorough pharmacist, a good financier, a close buyer, with progressive ideas; that your clerks are reputed to be first class drug men and also good salesmen (combinations that bear the same ratio to the masses that yellow fire crackers bear to the red ones); that your stock is well assorted and your stand considered as "A1"—and if, with all these advantages, your bank account doesn't seem to grow, then there are leaks, and you must go on a still hunt for them and stop them as soon as possible.

Of course, your clerks are honest, well-meaning fellows, but what kind of a system do you observe in handling every transaction? When night comes and you review the day's business, can you approximate the amount of profit in the gross sales for that day? If you cannot, then you have not the full control over your affairs that you should have. You should know more than any one else about the smallest detail of your establishment.

Again, do you know that all of your clerks are sufficiently interested in your welfare to always sell your goods at a legitimate profit? Why shouldn't you know about this? A clerk may, to all outward appearances, be what is termed a "hustler," but the gross sales of any one clerk are not always an index of his worth to you. See that an itemized record is made of his every transaction, and judge of this matter for yourself, whether your stock is being given away or sold.

Of course you keep a want book in which are noted, more or less punctually, the shortages in the regular stock. But now and then you will see a clerk go forward to wait on a prospective customer; a few words are exchanged, possibly some stock is shown, but the would-be buyer walks out without purchasing, and the clerk goes back to his routine duties. This may happen a dozen or more times during the day. Did you ever stop to consider that your lost customer is going straight to the store of your competitor? Why are you losing this business? If something out of your usual line of drugs or sundries is called for, possibly the clerk did not deem it of sufficient importance to note in the want book. Then arises the question, "Who is running your business, you or the clerk?" Perhaps you may never have a

second call for that article, and then you may never have a second visit from that customer.

You can't buy everything that is called for, because it would take a bigger store than yours to hold it all. I have devised a plan by which the buyer of the stock can judge for himself whether or not an article is called for often enough to merit a place on the shelf. The scheme is, in my conceit, purely original, as I have never seen it in operation elsewhere. It is this: Have printed forms in pads placed conveniently for the employees, and worded as follows:

NO SALE.

Salesman
 Customer (transient or regular).....(white), (colored)
 Article wanted
 Priced at
 If in stock, state reason why sale was lost.

If not in stock, state as nearly as possible kind, quality and price of article wanted.

This form, properly filled out each time a sale is lost for any reason whatever, may be filed with the cashier, if your trade is sufficiently brisk to warrant the cashier system. If not, then have a file placed in some accessible place where outsiders will not be apt to see them. A perusal of these slips each night will furnish you with much food for thought. You can jot down in your want book such items as you may see fit, and reserve the balance of the slips for comparison with future slips. Some of these slips have a humorous vein, and at the same time will give you an opportunity to "coach" a clerk who may think he knows it all. For instance, I have before me a slip filled out by the Junior, as follows:

NO SALE.

Salesman....."H."
 Customer....."Transient".....("White").....(Colored.)
 Article Wanted....."Pipe Clay, 15c. worth."
 Priced at....."Sent him to the milliner."
 If in stock, state reason why sale was lost.
 "Probably wanted Clay Pipes."
 If not in stock, state as nearly as possible kind, quality and price of article wanted.

....."Not in Stock."
 —("Dad." Meyer Bros. Druggist.)

Propionyl-Salicylic Acid.—A new combination of salicylic acid obtained by causing it to be acted on by propionyl anhydride. It crystallizes in white leaflets, which melt at 40° C. It is readily soluble in alcohol, ether, chloroform and benzol, but dissolves with difficulty in water.

Journey by Rail and Stage Through the
Grandest Scenery of the World.

THE STORY OF A PRIZE TRIP

PRESENTED BY

THE PHARMACEUTICAL ERA,

—TO—

STUDENTS OF THE

ERA COURSE IN PHARMACY, 1899-1900.

MISS LAURA B. HEMENS,
South Lyon, Mich.

WE were, both of us, delighted beyond measure to know our good fortune—that we had won the coveted prize offered by The Pharmaceutical Era, of a trip to Yellowstone National Park. Nothing remained for us to do after our notification but to live up to the schedule so thoroughly laid out by the donors. So, Chicago being our meeting and starting place, we set out from our respective homes, arriving at our destination in time to take passage on the 11 p. m. train for Omaha, the initial stage of our journey. One of us, on the Pennsylvania Railroad, came from Pittsburg, passing through the agricultural States of Ohio and Indiana just in the full burst of harvest, and despite the many hours of riding before Chicago was reached, felt equal to continuing where so much traveling comfort could be had. The other, from South Lyon, Mich., over the Grand Trunk Line, which runs through the industrious farming regions of that State, and finally, after skirting the lake front for a short distance, into Wells Street Station,

Chicago, could say with verity that she had thoroughly enjoyed the scenery and the railroad luxury.

It was almost midnight of the same day when we steamed out of Chicago on the Chicago, Burlington and Quincy Railroad. Though eager for sight-seeing, we were compelled by the darkness of the night to abandon all attempts until the morrow. So soundly did we sleep—most unusual in railroad travel, and speaking well for this line—that long after sunrise, which sight we had promised ourselves before retiring, we first came to the knowledge of daylight by a courteous voice, presumably a porter's, waking us. We somewhat hastily ate our surprisingly splendid breakfast, and then enjoyed fully the kinetoscopic views rushing past us. We caught passing glances of the cities of Burlington and Ottumwa, Ia., sufficient, however, to give us the impression of their apparently being the most flourishing cities of this State, and marveled at the immense rolling farmlands that were laden with a laborious harvest. But the piling

INTERIOR OF BURLINGTON ROUTE DINING CAR.

of eighteen hours of travel soon wearied us, despite the beauty of the farm lands of Illinois and Iowa, and made us glad of the day's respite we had at Omaha.

Here we enjoyed the full limits of our sojourn. We presented our letter of introduction to the Millard Hotel and made ourselves comfortable for the night. The next day we visited Hanscom Park, well worthy of our trouble, passing on our way the handsome mansions, the City Hall, the Court House and the Post Office buildings, of all of which the city can be proud. Then we went into the smelting furnaces, the largest in the world, and to South Omaha, where are the great packing houses and stock yards. This city is an extensive railroad center, owing, of course, to its commercial importance, and the Chicago, Burlington and Quincy, and the Union Pacific have extensive yards, and each a very handsome station.

However, nightfall of our third day from Chicago saw us many miles west of the Missouri, rushing over the Great Western Plains. The Union Pacific Line has a splendid train service which does credit to its present management, and passes over a marvelous route—through the Valley of the Platte, over the Rockies to the Salt Lake Valley—the selection of which redounds to the honor of Oakes and Oliver Ames, the pioneers of its origin. The monument that we saw at Sherman, Wyo., is a just tribute to their genius, for they were not only the builders of a railroad, but the sowers of the ever-multiplying seed of civilization.

Beyond Sherman we crossed Dale Creek on a marvelously stilted bridge 700 feet in length and 150 feet high. Here we drew our first breath of awe, sustained

American city. It has also plenty of natural beauty, particularly in its suburbs, one place which we visited being Salt Air Beach.

At last, our time of stay here being passed, we started on the Oregon Short Line for Monida. We half expected the facilities on this line for passengers would be in keeping with the nature of the country through which we were running, but we were agreeably disappointed in the

PLATTE RIVER, NEAR FREMONT, NEB.
Union Pacific.

dining car, where the table was better than some first class restaurants, and in the observation car through which we saw all that the speed of the train permitted. The name of Short Line is misleading, for the railroad is by no means abbreviated. Its extreme points are Butte, Montana, on the North, McCune, Utah, on the South, Granger, Wyoming, on the East and Huntington, Oregon, on the West, several hundred miles in both directions. It forms a gigantic cross covering six of the largest of the Western States, with its intersection at Pocatello and McCammon, Idaho. Although it runs through this "Wild and Woolly" region, to all appearances and in comfort and all that a traveler demands it is one of the great eastern roads taken bodily and planted in the West. It passes above the grand Ogden Bear Canyon, a branch of the main body of the Rocky Gorge, Pocatello, the nearest town to the Shoshone Indian Reservation, and climbs the Rockies to a height of about 7,000 feet. In Monida, Mr. Humphreys, an agent, of the Monida and Yellowstone Stage Company, under the ownership and management of Mr. F. Jay Haynes, met us, and, having seen that we were comfortably placed, started us off in one of its easy-running coaches, on the next part of our trip. These vehicles—we suppose that at some time in the near future they will be supplanted by automobiles—are the essence of comfort. The company seems to take a pardonable pride in their perfection. Their springs must have been made of some metal whose composition is a secret,

by the successively passed Echo Canyon, Castle Rock, Devil's Slide and Rock and Pulpit Rock, alike famous to tourists and the world at large.

This last is a misnomer. Better had it been named Scythia; for in no other place in the world could Prometheus have suffered the bondage of torture which mythology teaches us was his lot. These behind us—for it was only a flitting glance we had—we precipitated into the Salt Lake Valley to Salt Lake City.

Here we spent several hours of pleasant sight-seeing. The famous Temple Block, of course, was the first we saw of all the wonderful sights in this strange city; here is the Assembly Building, the Tabernacle and the world-famous Temple. Across the street from these buildings is the titling station, where all good Mormons pay one-tenth of their incomes to their religion. Then the City and County Building, the most beautiful, perhaps, west of the Mississippi River, also drew our attention in a spell of wonder. This City of Zion, as it is named, truly has every mark of advancement that one meets in any city of the East. Its buildings, its streets, its commerce and all that goes to make a thorough

A MONIDA PARTY IN THE PARK.

for, despite the naturally rough roads, we could not know, except by our environments that we were not speeding along the Speedway of New York City or the splendid drives of Chicago or San Francisco. The driver of our coach was a human Baedeker, so perfectly did he keep us informed, not only of what we could see, but of the nature and aspect of what was beyond our vision. Throughout the Park we found him an invaluable guide, willing and courteous, and, above all, patient with our vagaries. This company has a great many coaches of various sizes and description, capable of carrying from

MAMMOTH HOT SPRINGS.

offers. In short, it is decidedly the best means of traveling through and seeing the sights of the Yellowstone.

We drove along a road which winds about the foot-hills of the mountains, skirting the sweeping Centennial Valley and the Red Rock Lakes, and through the Alaska Basin. Finally we crossed the Continental Divide to Henry's Lake, Idaho, and, very hungry and tired, partook of luncheon and an hour's rest. From here the road threads the mountains, gradually rising and just as gradually falling, till at nightfall we ended our first day's ride at Graying Inn, a log cabin, situated on the south fork of the Madison River.

Up betimes the next morning after a sound night's sleep, despite the barking of the prowling coyotes, we resumed our way and soon entered the Park. Yellowstone Park is a place of conjuration; even its history is surrounded in myth. In 1871, Prof. Haydon, United States Geologist, gave to the world the first rational and nearly complete account of the hitherto unexplored plot, known to the Indians as the "Land of the Evil Spirits." Ignorance always gives to what it cannot comprehend a supernatural name. Yellowstone Park, if anything, is Nature most natural—Nature in its pristine grandeur, fear-inspiring in its aspect and moods, yet fascinating to the mind receptive of beauty. It is, too, a land of contradictions; the peaceful, almost sylvan Yellowstone Lake feeds the turbulent, passionate Yellowstone River of the Upper and Lower Falls; and the stillness which suddenly breaks into a volcanic geyser and the marvelous coloring are the very speech of contemplative beauty—set against the nausea of the Paint Pots and the harsh magnificence of the Grand Canyon, and the harmless aspect of the river, which suddenly plunges as to destruction—these are but a small part of the whole galaxy of paradoxes. But all things are the same; they are only enhanced in intrinsic interest by the uses of contrast. Perhaps to epitomize this wonderful land, we should call it realism and idealism with the same breath—realistic in its naturalism and truth to Nature's traceable forms, and idealistic in the impression it gives. We see great peaks and small peaks, snow-capped and bare, the whole aspect distilling awe into the very soul in the knowledge of its origin taught by science. One comes also to appreciate the insignificance of one's bit of life compared with the earth which itself is but an atom of a universe beyond conceptive measurement. The low rumbling that reached us, harmonizing with the eye, was as though each mountain found a voice to tell its infernal agony with a breath of mist, or as though earth were mortally wounded by some Brutus, and was forever crying, "Et, tu, Brute?"

From Fountain Hotel, which we had reached, we drove easily to the Fountain and Great Fountain Geysers. The latter is a mammoth waterfall on which reversed gravity holds force. Viewed at some distance it has the appearance of a giant ghost that has suddenly leaped from the underworld and stands swaying its mistiness hesitatingly, as though dazzled by reality. On approaching, one appreciates its beauty as well as its awe. The sunshine, making it a rainbow whose beginning is not far to find, gives it a vague milky outline. This great body of water flung one hundred feet into the air is like piling cumuli descended to earth and as though painted

GREAT FALLS OF THE YELLOWSTONE.

four to thirty persons, according to its kind; and the drivers are all men of wide experience, thereby being able to act at the same time as guides. Its rates are astonishingly low, considering the distance from Monida to and through the Park, and all of the manifold facilities it

FORT YELLOWSTONE.
THE GRAND CANYON.

GOLDEN GATE, EAST ENTRANCE.
GIANT GEYSER.

by Proteus; a volcano of beauty into which all art must dip its brush. The crater of this geyser is fully ten feet in diameter, and when in action throws upward a solid column of the same measurement for a period of ten to twelve hours. The water as it rises becomes as though effervescent, seething into a white cloud which descends again in a drenching mist, but some of which is carried off in trailing ribbons by the prevailing winds.

All the geysers of the park are not alike in appearance. "Old Faithful," in the Upper Basin, looks like a column of foam melting at the crest into a thin mist and spreading horizontally at the feet for many yards around. The Giant, the largest of the Park, rising to a height of 250 feet, is like the former in its towering aspect, but has a billowy lightness that seems rather to be drawn than forced upward. It bends and sways in a strong wind and scatters little clouds that gradually diffuse. Excelsior Geyser, like the Great Fountain of the Lower Basin, gives the idea more of mass than of form, which is the feature of both Old Faithful and the Giant. It covers a wide space with its white mist, and bursts rather than darts upward into a seething cloud, contrasting with, but taking somewhat of, the hue of the surrounding soil; while the Fountain, covering as much ground and of similar type, has more the appearance of a gigantic white flame. Then there is the Grotto, excellently described by its name, whose crater consists of many small orifices, each giving its share to the immense body of water that pours upward from it. Here in this Upper Basin, on an area of about four square miles, are twenty-six geysers and about four hundred hot springs, all playing their parts in this magnificent drama.

Near the Lower Basin are the Mammoth Paint Pots, though in a basin of their own. Contrasting greatly with the Geysers, instead of rushing skyward, the substance of their craters, like boiling lime, merely bubbles, giving out a strangely offensive odor, as of decomposition. Their prismatic slides give to them the name they bear; they look as though some giant brush in dipping had splashed many different pigments upon them.

On our way to the Grand Canyon we took passage on a steamer over the Yellowstone Lake, intending to sleep that night at the Lake Hotel. During our forty mile sail we felt rather than saw the beauty of our surroundings; but none the less the lake, dotted with

little islands, the splendid irregular curves of its shore line and the mountains surrounding it, gave plentifully to the eye. Its elevation, nearly eight thousand feet above the sea level, the highest of its size in the world, makes the atmosphere cold at all times of the year, so much so that in consequence no human being could sustain life very long in it. It has an area of about one hundred and forty square miles.

After a night's complete rest at the Lake Hotel, we started out early for the Grand Canyon and the Upper and Lower Falls, which are about fifteen miles from the source of the Yellowstone River. As we neared the Canyon along the road, which follows the bank of the river, a muffled roar was the first sign of the grandeur that awaited us. The scene gradually grew more imposing as we left the lake behind, but the river glided along with apparent equanimity. We were surprised, therefore, to hear the low rumble increase in volume and distinctness, and yet notice no change in the flow of the water; then a slight bend of the road disclosed to our wonderment the sudden revelation of not only the Upper Falls, but the long vista of the Canyon lying beneath. Here the calm sweep of the current, giving no hint, abruptly plunges downward a distance of 140 feet, as though the river floor had fallen away. Below, when one looks at the face of the falls, the flood shows the full measure of its latent power. It looks what it is—a torrent of foam and mist mysteriously impelled over and between the ragged rocks, and dashed like a crystal vase into a million fragments at the bottom. To the left of where this flood strikes the river beneath, arrows of spray bright and silvery in the sun dart outward like a ribbed fan against the walls of the precipice, while to the right a billowy mist evanescently rises, and both, splashing and seething down again to the main body, push onward to the falls below.

Beyond here the river widens to 250 feet, and, sweeping feverishly on for about a quarter of a mile, gathers itself together like a tiger crouching for a spring, to make its second, greater leap. Three hundred and fifty feet, straight and unbroken, of falling water that bursts with the hissing roar of a burning world into foam and continually rising clouds! Brushing, in its ascent, against the yellow, vertical west wall of the Canyon, the mist nourishes a drapery of mossy vegetation, green and scintillant, and streaming and dripping in little rivulets

CASTLE ROCKS, CAMP DOUGLAS, WIS.
ON CHICAGO & NORTH WESTERN RAILWAY.

from projection to projection back to the river. To go nearer than about one hundred yards to the bottom of the falls would be as sane as jumping fully clothed into water; even at far greater distance the spray is felt and materially adds discomfort to the spectator.

Beyond here the river runs through the Grand Canyon, whose almost perpendicular sides attain a height of twelve to fifteen hundred feet, and disappears behind a mountain. For ten miles it winds in and out like a ribbon fluttering in a wind through this gigantic cleft in the earth, beyond which, swelled by minor streams, it joins at last after 1,300 miles, and enters the Missouri River.

The Grand Canyon is a sight never to be forgotten. Imagine a continuous, scarcely broken mountain ten miles in length, split lengthwise in a long winding gash of varying width, at one place—the Gorge—it being but a biscuit-throw across. Imagine the sides of this canyon ragged and precipitous, columned and towered as with the ruins of thousands of mediæval castles; and splashed with colors, variant beyond human powers, and glistening with the brilliancy of a million prismatic gems. Imagine, too, near the falls an echoing roar beating its way into the distance, and far enough beyond the reach of this sound, a foreboding stillness broken at times by the hissing of the waters below where they break into a torrent. Imagine all this, and an impressionistic picture will unfold which has a resemblance to the canyon.

The next morning we set out for the Mammoth Hot Springs, passing en route through the Golden Gate, which makes the eastern entrance of the pass formed by Terrace Mountain and Bunsen Peak. Here a ragged, many-colored cliff towers over one side of the road, while on the other stands a column of rock, a little over twelve feet in height, the combination of which, in conjunction with the bright yellow color of both, gives the passage the name of Golden Gate.

The Mammoth Hot Springs are situated on the slope of the mountain overhanging Gardiner's River, and extend from the short line up the incline all of a thousand feet, in all about six to seven thousand feet above the sea level. Our path climbed the hill past scores of extinct springs until we came in the vicinity of a large one in full activity. This is made up of, perhaps, hundreds of semi-circular basins in series of irregular terraces or steps; the whole being a hill of forty to fifty feet in height flooding hot water over its sides. It is, however, at the top only where the water boils, for as it overflows from the

cup to a lower, it cools, and one might have a bath any desired temperature. From this pile of basins rise little jets of steam like hundreds of tea kettles boiling. The torrent that pours from rim to rim is of a beautiful transparent blue, through which glisten varying hues underneath, ranging from pure white to crimson. To contrast these colors the whole aspect, except where the stunted vegetation exists, has a creaminess, and, combined with Nature's wonderful architecture in the beauty of the Springs, gives to one's mind a vividness that is a lasting impression.

Not far off stands a dead geyser, Liberty Cap, so called from its formation. It is a column fifty feet high and twenty feet in diameter, composed of layer upon layer of calcereous substance. About it is more than a score of semi-circular and circular cups, some of which are still active. Further down on our way to the road

again, we met with scores of hot springs, which we learned were gradually subsiding, whether permanently or not was not to be ascertained.

From here we passed Sepulchre Mountain, a dismal spot, and had just begun to lose ourselves again in the scenery when we found that we had descended several thousand feet and had entered Cinnabar. We had to resign ourselves to the fact that our pleasant and wonderful journey was ended.

It had been a week of delight in the mysteries of geysers, mud springs, hot springs, the Lake, the two falls, the canyon and the remaining minor but still wonderful sights of the Park, the whole en masse now passing through our minds with regret that we must leave behind the reality, and satisfy ourselves with the never-failing mental picture that remains. It had also been made so comfortable and safe throughout the Park from Monida in one of the Monida and Yellowstone Stage Company's vehicles, and more pleasant than it perhaps would have been had we not taken that means of transit by the instructively garrulous stage driver and his courteous treatment of us, that we wished that we might retrace our steps. To give praise where praise is due, of the different lines over which we had passed during the two weeks of touring, this, the most ancient in its system, its motive power being horses, not steam, was the most pleasant, and to any one contemplating the tour, we know of nothing we had experienced that we could recommend so heartily.

There is no need to dwell upon regrets; enough that

MINNEHAHA FALLS, MINN.
ON CHICAGO & NORTH WESTERN RAILWAY.

we boarded a train for St. Paul, and we were glad when we arrived at the Twin cities.

St. Paul and its twin, Minneapolis, make one city whose dividing line is difficult to ascertain; truly a model one in all that makes urban life interesting. Near Minneapolis is Lake Harriet, a summer resort and favorite recreation ground that well deserves its popularity. Minnehaha Falls, near here, is well described by its name, which is the Indian of Laughing Water, and brings to mind Longfellow's poem, Hwawatha. It is very unlike the great, heavy-throated Upper and Lower Falls of the Yellowstone, in both appearance and voice. Its waters do not beat downwards like a thunder storm, but seem to step airily from the top onto a carpet of bubbling foam and murmur away. The very contrast in the analogy made this seem so peaceful and ease-giving.

During our stay in St. Paul, we visited the new capitol building in course of erection, which is being built of Georgian Marble at the cost of about two millions of dollars. We saw also the St. Paul Exposition Buildings, the State University, and the City Hall and Court House. We had also a pleasant drive through Como Park which covers an area of almost four hundred acres. Some of the parks of larger and more noted cities could take pattern with great benefit from this one; its artistic arrangements of walks, flower-beds, driveways, and its bicycle path surrounding the lake, affording a pleasant comparison with others we had seen.

Not only are the twin cities interesting in their beauty, but also in their commercial importance. While Minneapolis ranks as the first city in the United States, and therefore in the Western Hemisphere, as a milling and lumber center and as a grain market, St. Paul's position is high in general jobbing, the carrying of livestock, and its manufacturing interests. Like a good, old New England city, they are the very essence of industry and commerce.

The same day, at 8 o'clock p. m., found us traveling again, new to Chicago, on the Chicago Northwestern Railroad. This road runs through Wisconsin, passing Madison, the state capitol, and the northeastern corner of Illinois. It is commonly called the pioneer line West and Northwest of Chicago, but if that sobriquet emanates from the railroad company itself, it is too modest; for it is not only the pioneer of enterprise and good management, but it is the thread which binds Wisconsin, Iowa, Minnesota, North and South Dakota and Nebraska to the great commercial center of the interior of this country, namely Chicago. Its spirit of advancement pushed through what was once only a wilderness almost valueless, and turned the whole country that it touched, as if by magic, gradually into groups of fertile, populous and civilized communities. It now runs in many branches from Chicago criss-crossing all northwest of that city, with its lines; and is a favorite road with tourists, and those bound for the many summer resorts in this vicinity, because, as we have experienced, the traveling on it has ease and luxury at no greater rate than that of other roads. After a quick run and a comfortable one, considering our weariness by this time from journeying hither and thither, we steamed into the great Lake City—Chicago, surnamed the Windy City, owing, perhaps, to its exposed position to the north winds sweeping southward over Lake Michigan. Interested in its very much. We had not the time to spend here at the beginning of our trip, but we more than made up for that disappointment during the few hours we now had. We visited the Masonic Temple, which is the prototype of the famous tab buildings of New York City; and from its top had a fine bird's-eye view of Chicago. As we looked over the thousands of house-tops it was hard to realize that less than thirty years ago this great city was a heap of burned debris; it was almost a mushroom growth that had given it the size of the present. But not like a mushroom will it disappear again; it is to be hoped that this sign of American industry will last as long as the country has life. Next we drove through Lincoln Park that sits on

ST. PAUL, MINN.
ON CHICAGO & NORTH-WESTERN RAILWAY.

the Lake side, and saw the Grant monument and the statue of Lincoln, and other famous points of interest, including the Zoo, after which we bade each other good-by with many happy remembrances to take with us, personal, and of the opportunities so generously offered by The Pharmaceutical Era, and finally separated, each to her respective home.

CENTRIFUGAL ANALYSIS OF URINE.—Purdy describes a rapid method of urinary analysis, useful where a number of samples have to be regularly examined. The essentials are a centrifuge the standard radius of arm, an efficient motor capable of running at a uniform standard speed, with a gauge for regulating, and accurately graduated percentage tubes. The author employs a centrifuge with a radius of 6½ inches; the tubes hold 15 C.c. and the motor is run at 1,200 revolutions a minute for exactly three minutes. The following is the method for the determination of chlorides, phosphates and sulphates: The urine is first filtered, if not clear; three of the percentage tubes are filled with the urine to the 10 C.c. mark; to the first tube is added 1 C.c. of strong nitric acid and 1 C.c. of standard nitrate of silver solution. To the second tube is added 2 C.c. of 50 per cent. acetic acid and 3 C.c. of uranium nitrate solution. To the third tube is added 5 C.c. of the standard barium chloride solution. The tubes are inverted three or four times to insure mixing, allowed to stand aside for three minutes and then centrifugalized, a fourth tube filled with water being inserted to balance the arrangement. By means of tables given in the paper the chlorides, phosphates and sulphates can be estimated. The author claims that these three determinations can be carried out in ten minutes, and with an accuracy comparable to the best gravimetric methods.—(Journ. Amer. Med. Assoc.).

EXPLOSION OF SODIUM PEROXIDE.—An account is given in the *Chemiker-Zeitung* (Science) of a dangerous accident occurring in the shipment of sodium peroxide. The material was destined for Japan and was in nine cases of sixty kilos each. It was contained in thin zinc boxes. In unloading, one of the first two cases exploded with a very loud report, a number of workmen were injured, several fatally and a fire was caused. Serious consequences to the shipper may ensue, for the cases were merely labeled "chemicals," no evidence of the dangerous nature of their contents being furnished.

Sileo.—Trade name for a new organic iron preparation, made from fresh beef blood, by defibrination, removal of fatty substances and evaporation in vacuo. It contains 84.5 per cent. of albumen, 0.333 per cent. metallic iron, the residue being saline and fatty matter. It is said to be well borne by patients, and to be useful in anemia, chlorosis, etc.

Amnesthol Spüler. Trade name for a solution of methylen chloride in ethyl chloride. It forms a limpid, transparent, colorless, mobile liquid, which on account of its great volatility, must be preserved in sealed glass tubes. It is used in the same manner and for the same purposes as ethyl chloride, and finds special use in dentistry and in surgery of the mouth.

MEDICAL CERTIFICATION OF NEW REMEDIES.

At the close of the recent meeting of the German Naturforscher Association in Aix-la-Chapelle, an interesting discussion took place in the general meeting of medical sections, on the publication of medical certificates relating to new remedies, and reports on the subject were presented by Prof. His, junior, of Leipzig; Dr. A. Eichengrün, and Prof. Kobert, of Rostock. This subject had previously been under consideration at the Medical Conferences in Cassel and Nuremberg, but only from a purely ethical point of view, and without leading to any definite practical results, since no binding resolutions were arrived at. Admitting at the outset that the systematic endeavor to produce new medicinal remedies and new food preparations is an important branch of industrial science, and that chemical manufacturers engaged in that work have a perfect right to make known by advertisement the results of their enterprise, Prof. His made a distinction between manufacturers' own trade advertisements having that object in view, and the issue of medical certificates and recommendations professing to furnish trustworthy and authoritative information to medical men, when they are really used merely as trade advertisements. The principle to be observed, according to Prof. His, is that in the introduction of new preparations the means adopted for making them known should be of such a nature as to satisfy the just claims and requirements of chemical industry without prejudice to the credit of the medical profession.

But the exigencies of advertising not infrequently lead to an abuse in various ways of certificates given by medical men, and, therefore, the opinion was expressed that a medical man in practice should not, in any case, give such certificates, but that any requisite trial of, or report upon, new remedies, etc., should be made only by officials at the head of large hospitals. Such assistance as the practicing physician may be required to give to the manufacturer of a new remedy should be given for private information only, and not to be used for advertising purposes. In this connection the medical press was referred to as being in some degree responsible, and requiring to make a stand against the publication of such papers as may seem likely to be reprinted for trade purposes. On the subject of remuneration for the experiments on animals which are always necessary before a new remedy can be used for human patients, the opinion expressed by Prof. His was that to some extent suitable remuneration for services of that kind is indispensable, but that sometimes reports of such experiments are too suggestive of the idea that they are written to order. The only means of counteracting such malpractice would be to strengthen the authority of medical societies, and thus enable them to exercise a repressive influence on members of the profession.

Dr. A. Eichengrün, speaking in the interest of chemical industry, was of opinion that the evil complained of was mainly due to the optimism of medical men who carry out the investigation of new remedies. He agreed that in such cases greater stringency is required and desirable, but added that medical men were too eager to make use of any novelties presented to them. At the same time he condemned the practice of introducing articles as new remedies, under fancy names which suggest that they are definite chemical substances, though the preparations to which they relate may be only mixtures of well known articles. The supply of reprinted papers on new remedies was defended on the ground that the circulation of the journals in which such papers appear is too small to insure a knowledge of their contents to every one of the twenty-five thousand medical practitioners in Germany, so that the issue of these reprints is necessary as a means of making known the introduction of any medicinal novelty.

Prof. Kobert took objection to the treatment of this subject as though it involved a question as to the advantage or prejudice of German chemical industry; on the contrary, he contended that the object was to put a stop to abuses, the existence of which could not be disputed. It was not a muzzle but a protection that had to be provided for medical men; nor would he cast

reproach upon chemical manufacturers acting within their proper capacity. But he strongly deprecated the practice of sending travelers to medical men to recommend their articles, and the equally reprehensible endeavor to extract from medical men certificates that could be used for purposes of trade advertisement. Unfortunately, some members of the medical profession were disposed to consider the giving of recommendatory certificates a legitimate source of income, and thus it has come to pass that many physicians refuse to pay any attention to new remedies, or to consider the merits they are alleged to possess. But without taking that extreme position, or disputing the value of some new remedial agents, Prof. Kobert contended that, before introducing a new preparation for medicinal use, careful preliminary investigation of it should be carried out from a practical as well as a theoretical point of view. To provide for such inquiry being properly conducted and reported upon, he suggested that the work should be entrusted, partly, to the officials in charge of pharmacological, physiological or bacteriological institutions, and partly to medical officers of large hospitals, but not to hospitals connected with the universities, because in that case particular doctrinal views might exercise undue influence, for though it is the proper province of universities to educate and to cultivate in young medical men a capacity for taking critical views of pharmacological or therapeutical subjects, such an acquirement is at the present day too frequently wanting. While, in regard to the production of new remedies, Prof. Kobert considers that the object of a chemical manufacturer is naturally to carry on profitable trade, he is also of opinion that the new issue of the German Pharmacopœia has not fulfilled the expectations that had been formed in regard to new remedies, and that the Commission has proved to be behind the time, while its work is already out of date. He thinks that the State is to blame for the perplexity or failure that may consequently attend the physician who seeks guidance in that quarter. Manufacturers sometimes undertake to select from among the multitude of new remedies those which they consider are good and trustworthy, but that is work which should be done as a general rule by leading medical authorities. The editors of medical journals do not occupy that position, and in some instances they have no influence at all in regard to the contents of the trade advertisements which are inserted in those journals by various firms. And thus it happens that the advertisement pages of the medical journals sometimes present instances of the objectionable puffing against which the commendation of the editorial part of the journal may be directed.

As a remedy for the evils referred to, Prof. Kobert recommends the establishment of an institution charged with the duty of investigating and reporting upon new remedies, and having power to pronounce an opinion as to their merits, as well as to decide which of them may be sold without restriction. Something of the same kind is already in existence for the testing of serum, and to meet immediate requirements the formation of a central committee of members of the Naturforscher Association was eventually decided upon at the suggestion of Prof. Kobert, the members elected for the purpose being Profs. Kobert and His, junior, and Dr. Paul, of Tübingen.—*Pharm. Jour.*

TESTS FOR IODOFORM.—Deniges (*Bull. Soc. Pharm.; Dr. Cir.*) has devised the following test for iodoform: The sample is treated with ether, the solvent evaporated and to the residue is added a few drops of dimethyl anilin. If iodoform is present, the liquid becomes of a deep brown color, and on warming almost to boiling and adding a little alcohol, the product assumes a violet or red tint, according to the amount of iodoform present. The absorption spectrum of the liquid shows the characteristic methyl violet band, and with a hand spectroscope 0.1 milligram of iodoform can be readily detected. If the iodoform is mixed with a substance soluble in ether, like guaiacol, the violet coloration is hardly discernible, but the spectrum shows the characteristic band. The author suggests that the formation of the brown color in the first step of the process affords a means of colorimetric assay.

THE OTHER SIDE OF THE QUESTION.

The Medical World is a journal which advocates dispensing by physicians, and its editorial utterances on this subject are by no means ambiguous. It is therefore quite refreshing to find in its columns a brief but practical paper on the other side of the case, such as appeared in the June number.

Dr. James T. Hurd, of Galeton, Pa., takes issue with the World's position on this question, and does it in such a matter-of-fact, horse sense way as to put completely out of business all the fine-spun arguments brought out in favor of dispensing. He touches on several questions related to the commercial side of the practice of medicine and says:

"I am sorry to notice that some doctors talk business like farmers. I was several hundred dollars in debt when I started out to practice medicine, and am still what I consider a poor man and a poor business man; but I find it possible, and much cheaper, to 'pay as you go.'

"Then, since I quit keeping a stock of medicines on hand to give away to every scoundrel that came along (I now send them with a prescription to a drug store), I have gotten along better financially. I have observed for years that the doctors who dispense all their own medicines are generally financially behind, and half the time they do not know the composition of the medicines they are giving; they are following the directions of the manufacturers—B's renal mixture, which contains couch-grass, uva ursi, etc., and they do not remember what all, has always worked well. It costs pretty well, but they always give him time on their goods.

"Then people get to regard a doctor as a medicine seller. A woman, a leader in her town, came to me and told a long story about her ills, and then said she would like to get ten cents' worth of medicine for what ailed her, not thinking that she owed me anything for my time that she had taken.

"I learned that 90 per cent. of the people who object to going to a drug store with a prescription are bad pay, and most of them will often pay out 50 cents to \$2 for quack medicines rather than come to a doctor. They often counsel with the druggist first, who, if he is generally boycotted by the doctors, sells them something, and if he is filling a good many prescriptions from any doctor, he advises them to go to him. I do not, and never did, have any financial interest in any drug store, but I have been well treated by druggists, and I believe that if physicians would go to the druggists with their grievances against them they would do right. I believe that every doctor should keep and carry some medicines, but it will be to his advantage to prescribe some, too."

Talk about sledge-hammer arguments—what is the matter with these?

This physician takes a business view of the question. He does not profess to be governed by anything but self-interest in the matter, does not claim to be inspired by any lofty motives, but what he says is full of good sense. He knows what he is talking about.

We recall at this moment several physicians who used to do their own dispensing. They used costly proprietary goods on a lot of old dead-beats that no druggist in town would trust as far as he could throw them by the heels. They apparently did a thriving practice until it came time to pay their bills. They owed the drug stores anywhere from \$150 to \$300 during the year. All the money they could scrape together from collections had to go to pay for their medicines. Even then they did not have enough, and so it went on from year to year, and they got further behind all the time. The druggists made no money on them, either, as only a straight ten per cent. profit was charged, and as the dispensing physicians in that particular town rarely if ever got their bills paid up, the result was that the druggists did not get more than actual cost for their goods. The only people who profited by such an arrangement were the loafers and bums, who never paid their doctors' bills.

Leaving out all ethical considerations, all questions of qualifications, of safety and convenience, it would appear that it does not even pay for the physician to act as pharmacist also.

When a thing does not pay, what is the use of keeping it up?

It might be worth while for druggists to place Dr. Hurd's letter in the hands of dispensing physicians, and request them to consider it carefully. It could hardly do any harm and might do some good, particularly if accompanied by the druggist's assurance that he would meet the physicians half way and see that they had no cause for complaint, as far as he was concerned.—(New Idea.)

THE OCHRE INDUSTRY OF FRANCE.—From reports of the United States Consuls at Havre and Marseilles it appears that the extraction and preparation of ochre has been an industry in France for nearly two centuries, and that the supply of the world is almost wholly French, as French ochres are peculiarly rich in oxides of iron and are manufactured with exceptional care. Vaucluse is the main seat of the industry. The total production last year was about 18,000 tons, of which Germany took 7,000, Russia 4,000 and the United States 3,000 tons. The consumption in France itself is insignificant. Around Apt, in Vaucluse, which is the center of ochre production, the country is dotted with hills of alluvial clay, all more or less rich in ore. Sometimes shafts are sunk, with radiating tunnels to reach the ochre; sometimes it is quarried. Owing to the expense of timber, a large amount of the material remains in the mines in the shape of supporting pillars, and all the operations are carried out in a very primitive manner. The clay is carted several miles to the valley below, and there washed, although buckets on overhead cables or some other gravity system could easily be introduced. The clay is mined in the winter only, the watercourses drying up in the summer; it is flooded with water, and the ochre falls into settling basins. By means of a succession of basins, various degrees of fineness are secured. At the end of winter the tanks, or basins, are filled with pure ochre in the form of heavy mud, which, when sufficiently dried as the hot weather advances, is cut into bricks of regular size and completely dried in the sun. Sometimes the mineral is shipped in bricks, but more often it is crushed into powder. The main difficulty is to secure uniformity in shade, as the deposits are of an infinite variety of colors, from dark red to yellow or gold, but the market value declines as red asserts itself. The mines at Apt have been worked for years, and are unlikely to be exhausted for a long time. One particular mine is able to supply the world with a special shade. About forty firms are in the business locally, but all in a small way, and most of them sell to the shippers, but do not ship themselves. The condition of the industry at present is not prosperous, so far as the average qualities are concerned, but the high class of yellow ochres in demand in America still maintain their prices. The prices of this class of Apt have lately ranged from \$1.20 to \$1.65 per 220 pounds. Ochre is produced in other countries, but the tint is inferior. The French ochre is largely used by manufacturers of paper, linoleum and colors.

PIPERAZINE QUINATE.—This salt has been introduced under the name of sidonal; it, as well as the salt of dimethyl-piperazine and the compounds with alkaline quinate, are recommended as suitable for preventing formation of uric acid in gouty patients. The method of preparation is simply mixture of quinic acid with equivalent proportions of the base, and precipitation from a concentrated solution by adding strong alcohol; but it has been made the subject of an English patent by Messrs. Benno Jaffe and Darmstaedter, of Berlin.—(Pharm. Jour.).

Hedonal.—Trade name for a new hypnotic—chemically, methyl-propyl carbinol urethan. It is said to be a pure hypnotic, with no evil sequelae. The dose is about one-half that of chloral hydrate, the remedy being administered as a dry powder, to be held on the tongue until it dissolves. Sleep ensues in from 20 to 30 minutes. Hedonal appears as minute, colorless crystals, entirely soluble in boiling water, but less soluble in cold water. Its taste is very similar to that of peppermint.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Information Wanted.—(T. & F.) want the name and address of the manufacturer of Legear's veterinary remedies.

Ethereal Antiseptic Soap.—(B. & H.) See this journal, July 5, 1900, Page 10.

Removal of Superfluous Hair.—(H. W. P.) See "depilatories," this journal, August 9, 1900, page 133.

Rosenwasser Percolators.—(J. G. C.) Address the inventor, N. Rosenwasser, No. 939 Woodland avenue, Cleveland, Ohio.

Dr. Jacer's Formula for the Itch.—(J. N. H. Co.) is in quest of a formula of "Dr. Jacer's for the Itch," which appeared in the London Lancet some time between the years of 1860 and 1864.

Not having access to a file of the London journal within the period named, we are unable to run down this formula, notwithstanding the fact that we have made quite an extended search through contemporaneous literature and reference works. May be some reader of the Era can supply the information wanted.

Solution of Sodium Phosphate.—(Mrs. F. M.) Several formulas for a liquefied preparation of sodium phosphate have been published. The following is from the Formulary of the Cincinnati Academy of Pharmacy: Triturate together and heat on a water bath until liquefied 100 grams of sodium phosphate with 23.4 grams of citric acid. Strain through a pellet of cotton if necessary. This preparation crystallizes at 15° C., but will readily liquefy again upon warming. It is miscible with water or syrup in all proportions without separation. Each fluid dram represents about 75 grains sodium phosphate. The preparation is said to be cathartic and antilithic, and a stimulant of biliary secretion. It is useful as a mild laxative and in calculi of the bladder. Another formula by Westcott is as follows: Triturate together until they liquefy 3,650 grains sodium phosphate crystals, 475 grains citric acid and 73 grains sodium nitrate and then add a sufficient quantity of water to make 8 fluid ounces. See also article on sodium phosphate solutions in this journal June 9, 1898, page 869.

Paste Soap.—(J. M. R.) We cannot give the formula for the proprietary article. A "paste soap" recommended for the removal of grease, oil, dyes, etc., from the hands is the following:

Extract quillaja	1 ounce
Borax	$\frac{1}{2}$ ounce
Fuller's earth	$\frac{1}{2}$ ounce
Soft soap	6 ounces
Perfume, q. s.	

Triturate the borax with the extract of quillaja and afterward with the fuller's earth; then incorporate with the soft soap, using sufficient water to make a paste. Lastly perfume as desired.

Benzine Paste.

A so-called "benzine paste" for the removal of stains both from the hands and clothing may be made as follows: Melt 100 parts of stearic acid at 30° to 50° C., and add to it 40 parts of 15.6 per cent. of caustic potash solution, stirring well; then add to the half solid mass at the above temperature, 8 to 10 parts of strong ammonia water; mix well, and stir in 40 parts of melted tallow. Finally add benzine to convert the whole into a nice, smooth paste.

A soap bark paste may be made by first making an aqueous infusion and then evaporating to the consistency of a soft extract.

Cures for Alcoholism.—(N. M. P.) We have no faith in any of the so-called "cures" for alcoholism or drunkenness. Taking medicine will not reform a drunkard or keep him from drinking. With this statement of belief we give the following formulas for what they are worth:

(1) Hydrastis	12 grains
Cinchona	12 grains
Capsicum	3 grains
Ginger	72 grains
Glycyrrhiza	96 grains

Mix and divide into 24 powders.

(2) Ginger	$\frac{1}{2}$ ounce
Canella	$\frac{1}{2}$ ounce
Fennel	1 dram
Cassia	2 drams
Glycyrrhiza	2 ounces

Mix and divide in powders of 12 grains each.

To improve the appetite and digestion after an alcoholic debauch the following has been prescribed:

Tincture of capsicum	1 dram
Dilute hydrochloric acid	4 drams
Tincture of nux vomica	1 dram
Compound tincture of gentian, enough to make	3 ounces

Some other formulas were given in this journal October 25, 1900, page 455.

A BRACE OF POINTERS.

It is with interest that I peruse the columns of the Era every time it reaches the store. I thought I would send you an item which I am sure will interest many of your readers, especially the most recent graduates and students. I am sure it will also interest pharmacists generally, as they don't always know everything.

ICHTHYOL IN CAPSULES.

Ichthyol is a tarry-like substance obtained from the fossil remains of aquatic animals. In the process of preparation it is treated with sulfuric acid, making it a "sulfonic" derivative, and subsequently it is treated with KOH, NaOH or NH₄OH, making the product a "Sulfo-Ichthyolate of Ammonium, Sodium or Potassium."

This viscid liquid, or even sometimes solid, is occasionally prescribed in capsules, and unless the dispenser has soft capsules and a capsule-filling apparatus, it is almost impossible to fill it in the ordinary gelatin capsules. So it becomes necessary for the pharmacist to make a workable mass of the liquid.

This is accomplished most easily by simply adding powdered althaea in sufficient quantity to mass; you can even make a pill mass by adding powdered tragacanth in small quantities until the mass is of sufficient hardness.

This also applies to such viscid liquids as copaiba and oil of tar.

CHAS. A. LOTZ,

With R. Lucke Pharmacy, New York City

BORACIC ACID AS A CURE FOR TOOTHACHE.

I have been told by reliable customers that boracic acid, when rubbed into the gums produces relief, and is also a cure for toothache and neuralgia of the gums.

One customer said she was first told of this by a nurse from California, where it was used to good effect in one of the large hospitals.

Boracic acid is often used as a mouth wash, as a gargle and more often as an eye wash; in the latter cases it produces very beneficial effects.

WILLIAM FRASER, N. Y. C. P., "1902."

With Carl Schnackenberg, New York

CARBONATED COD LIVER OIL.—By impregnating cod liver oil with carbonic anhydride, the disagreeable taste of the oil is to a great extent masked, alteration of the oil is said to be prevented, and its administration facilitated even in the case of a person who has a strong objection to the oil. Similar advantages are said to be secured in the case of castor oil by saturating it with carbonic anhydride. A German patent has been secured by the Helfenberg Company for the method of preparing effervescent oils. —(Pharm. Zeit.; Pharm. Jour.)

NEWS AND TRADE DEPARTMENT.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of Era Readers.

FOREIGN.

China.

Prince Tuan, father of the heir-apparent to the Chinese throne, and leader of the Boxer movement, has been arrested by the Chinese government, been degraded from office and from caste, and may be exiled or condemned to death. Governor Yu Hsien has also been arrested, and is likely to meet a similar fate. The Chinese authorities have declared their willingness to pay \$10,000 as the first instalment in settlement of American claims.

The powers demand as the main terms of settlement with China: 1. The prohibition of the importation of arms; 2. A large permanent guard in Peking for the legations; 3. The dismantling of the sea coast fortifications; 4. A permanent foreign military occupation of the road from Tien-tsin to Peking; 5. Punishment of guilty officials; 6. Indemnity; 7. Rational intercourse with the Emperor and foreign office.

The administration at Washington strongly disapproves of the proposition to destroy the tombs of the Ming dynasty. Such an act, it is believed, would lead to fresh outbreaks of violence in the empire.

Chang Chi Tung, the Wu Chang viceroy, is said to be raising 100,000 troops, and to have proposed to the Nankin viceroy that they should combine forces to oppose the allies.

Further details of the Russian atrocities in Amur Province make it appear that about 12,000 defenseless persons perished by the sword, bullet or by drowning in the Amur River. Many women and children were among the victims. A Belgian traveler writes that the Amur River was choked with the bodies of Chinese slain by the Russians.

The Philippines.

Gen. MacArthur, who is in command of our forces in the Philippines, declares in his annual report, which has just been made public, that "for many years to come the necessity of a large American military and naval force is too apparent to admit of discussion."

Now that the Filipinos are deprived of the hope of any help from the Democratic party, the war will be pushed aggressively for the next few months in the hope that the natives, discouraged, will give up the fight.

The term of the volunteer troops in the Philippines will expire next June, and if the Filipinos prove stubborn, a large addition to our regular army will have to be provided for by Congress, to take the place of the returning volunteers.

Gen. MacArthur reports that in the four months of May, June, July and August last, the casualties were 268 Americans killed, 750 wounded and 55 captured, the Filipino losses in the same time being 3,227 killed, 694 wounded and 2,864 captured.

Col. Greenleaf, in an accompanying report, adds a statement that is not very reassuring. He says: "The number of deaths in the army has steadily increased, and a diminution of the death rate can scarcely be expected. The number of men shot from ambush by small guerilla bands now exceeds those killed at any previous time, and as time proceeds and the men become more and more debilitated by the tropical service, the more marked will become the ratio of deaths. For the six months from January 31 to July 31, 1900, there died 21 officers and 971 enlisted men, of whom 4 officers and 204 enlisted men were killed in action, and 3 officers and 43 enlisted men died of wounds, the other deaths occurring from various diseases. This is an average of 17 daily."

Gen. MacArthur says that the Filipinos are united in their opposition to American rule, except the Moros in Mindanao and the Sulu Islanders, who seem entirely satisfied with present conditions.

The war in the Philippines is costing about \$300,000 a day.

The discouraging tone of the report is believed to account for the delay in its publication until after election.

The school board of Minneapolis, Minn., will educate eight Filipinos free, for teachers in the Philippines.

The censorship on cable dispatches from Manila has been removed.

South Africa.

Boer commandoes continue to destroy the railways of the Transvaal and the Orange River Colony.

The Portuguese governor of Lorenzo Marques has requested the consuls of the two former South African republics to haul down their flags, as he does not consider that the two republics any longer exist.

Commandant-General Botha, according to a dispatch to the London Daily Mail from Pretoria, has sent to Lord Roberts a statement of the terms on which he will surrender, but the report lacks confirmation.

The Boers are reported to be emigrating in large numbers into German South Africa.

Other Foreign News.

Emperor Nicholas of Russia is seriously ill with typhoid fever. The czar has been a potent factor for peace in the affairs of Europe, and the possibility of his death is viewed with profound concern.

A resolution has been introduced into the German Reichstag doing away with child labor.

A crazy woman threw an axe at Emperor William as he was riding in Breslau last week, but her aim was poor and nobody was hurt.

Adolph Piehler, the Austrian poet and novelist, is dead. The Paris Exposition closed last week. It had 70,000,000 visitors.

DOMESTIC.

Politics.

It is reckoned that President McKinley had a plurality of about 700,000 votes in a total of about 15,000,000, or a plurality of less than 5 per cent.

Attorney-General Griggs has announced that he will retire from the Cabinet on March 4 for purely business reasons.

The President is said to be opposed to a reduction of Southern representation in Congress, and on that account the question is not likely to be pressed at the coming session.

The most important matters that are likely to come before Congress are a re-arrangement of Congressional representation to fit the new census, a shipping subsidy measure, an isthmian canal measure, a Pacific cable measure and some action on the status of the Philippines.

A bill aiming at the disfranchisement of the negroes was introduced into the Georgia Legislature last week.

Other Domestic News.

Statistics just issued by the Treasury Department show that the amount of exports in October broke all monthly records in the history of the commerce of the United States, and the ten months of 1900 ending with October also break the record of exports for the corresponding period of all preceding years, and give assurance that the calendar year 1900 will show the largest exports in the history of our foreign commerce. The total for October was over \$165,000,000, practically double the exports of October, 1894, and the total for ten months is about \$1,195,000,000, or practically double that of the corresponding period in 1894.

Bishop Potter, of New York, wrote a scathing letter to Mayor Van Wyck last week, calling his attention to the police protection given to vice. The Mayor, in his reply, promised his co-operation in any movement looking to the suppression of vice, and issued orders to the police department to investigate the Bishop's charges and eradicate the alleged evils if they are found to exist.

Mr. Croker, upon the earnest sollicitation of his friend, Isidor Straus, president of the Hebrew Educational Alliance, called a meeting of the Tammany Hall Executive Committee a few days before he sailed for Europe and instituted a Tammany anti-vice crusade.

Senator Platt, shocked by the failure of the city police to suppress vice, has announced his intention of having a State Constabulary Law passed by the coming Legislature that will place the police of New York City, Albany, Troy, Utica, Syracuse, Rochester and Buffalo under State instead of city control. State control of police has been tried in Massachusetts and Missouri, and has not produced the good results expected. There is a storm of opposition to Mr. Platt's plan, perhaps enough to prevent him from carrying it out.

Ex-Gov. Rinsdell, of New Hampshire, died last week. A negro lad was burned alive in Limon, Col., last week for the murder of a little girl.

A severe earthquake shock was felt last week in the island of Ceylon.

The Chilean Congress has voted \$500,000 for the Chile exhibit at Buffalo next year.

The Cuban constitutional convention has done nothing definite so far. The session seems likely to last for months.

According to Immigration Commissioner Fitch of New York, immigrants from all countries have been arriving since last July at the rate of 1,000 a day.

Secretary Long has at last reached a settlement of the armor plate controversy. The Carnegie and Bethlehem companies are awarded contracts on a basis of \$120 a ton for Krupp armor and certain royalty fees not exceeding 10 per cent. Total cost of \$454,524 a ton. The total amount of armor contracted for under the agreement is 24,250 tons. These two firms have a monopoly of the market, and originally demanded about \$550 a ton, so that Secretary Long's bargain is considered a big victory.

Andrew Carnegie has offered \$100,000 for the endowment of a polytechnic school in Pittsburg if the city will build one.

The United States Supreme Court will take up the cases involving the question of the extension of the Constitution over annexed territory December 17.

Marcus Daly, the copper king, died in New York City last week.

THE DRUG NEWS.

THE REBATE PLAN UPHELD.

The chairman of the Committee on Suits, N. W. D. A., is sending to members of the association the following opinion in the famous Park case, handed down November 9:

State of New York, Supreme Court—Appellate Division, First Department, October, 1900.—Chas. H. Van Brunt, P. J.; William Rumsey, Edward Patterson, Morgan J. O'Brien, Chester B. McLaughlin, J. J.

John D. Park & Sons Company, Appellant, vs. The National Wholesale Druggists' Association, et al. Respondents, No. 2412. Appeal from final judgment entered upon demurrer to complaint. Henry T. Fay, for Appellant, Henry G. Ward, for Respondents. Rumsey, J.:

The plaintiff is a foreign corporation engaged in the business of selling drugs and medicines, and especially proprietary articles, so-called, and has been thus engaged for a long time. The defendants are wholesale dealers in articles of the same kind, or are manufacturers of such articles. The complaint alleges that before 1881, manufacturers of these goods had been accustomed to sell them through agents direct to the retailers, giving to each agent commissions on his sales, and charging each buyer such prices and selling to him on such terms as they saw fit. The goods were sold to wholesale dealers in the same way. The result of that manner of dealing, as set up in the complaint, was that the wholesale dealers in these articles were unable to make a living profit in the business, and they set about to devise a plan by which the prices of proprietary articles should be fixed, and the wholesale dealers obtain a fair profit from dealing in them.

The Wholesale Druggists' Association, which had the matter in charge, is composed of wholesale druggists, who are active members and have control of the association, and manufacturers of proprietary articles, who are associate members, but have no voice or vote in the association.

To carry out the plans of the dealers it was proposed that the manufacturers should agree to sell their goods to the wholesalers at fixed prices, charging one dealer no more than another, and making no allowance to any of them, which would enable the one favored to obtain goods indirectly at less than the price fixed, but requiring of every dealer that he, upon his part, would not sell to retail dealers, or anyone else, at less than the proprietors' list prices, and upon the giving of such a contract the manufacturer would allow to the wholesaler a discount of 10 per cent. on the price charged him, which discount was to be the same to all buying the manufacturer's goods, and should be the sole profit to be made by the wholesale dealer from his dealing in those articles.

It is alleged in the complaint that two-thirds of the wholesale dealers in these goods in the United States, representing 90 per cent. of the whole business in such articles, acceded to this proposition, but that the plaintiff refuses so to do.

It is further alleged that the Wholesale Druggists' Association "compelled" the manufacturers to adopt this system, and that in consequence of such compulsion, the manufacturers agreed to make sales in the way prescribed by the plan, and to allow the discount only to those wholesale dealers who accepted the plan, and refused to sell to anyone who did not so agree. It is further alleged that for the purpose of injuring the plaintiff's business, and to compel it either to accede to this plan or to prevent it from obtaining goods wherewith to supply its customers, steps were taken to find out what dealers supplied the plaintiff, and such dealers when ascertained were placed upon the "cut-off" lists. These lists were sent to the various manufacturers so that they should not sell to the persons named in them, thereby making it impossible for the plaintiff to obtain the goods to carry on its business.

These general allegations of the complaint are repeated over many pages, but the foregoing states substantially the cause of action relied upon by the plaintiff, except that the allegations stating the injury done the plaintiff's business and the damage accruing to it thereby, are not here set out in detail.

The relief sought is that the contracts and agreements set out in the complaint may be declared illegal; that the Wholesale Druggists' Association and its members may be restrained from making any effort to induce manufacturers to adopt or use the scheme for the sale of their goods, or from making any effort to induce those who have adopted it to continue in use that plan, or to limit their sale of goods in accordance with it, or to do any act to carry it into effect, or from refusing to sell their goods to the plaintiff; and it also demands that the manufacturers be restrained from using or adopting the plan or taking any action under it.

The defendants, who have appeared, demur to the complaint, upon several grounds, going not only to the jurisdiction of the Court, but to the sufficiency of the cause of action. In the view we have taken of the case, however, we have only examined the complaint to discover whether it sets up a cause of action sufficient to enable the plaintiff to obtain equitable relief, and the question of the jurisdiction of the Court over the defendants, who are non-residents or foreign corporations, has not been considered.

The injury to the plaintiff arises from the fact that the manufacturers of patent medicines have agreed together to fix the prices of their goods and the conditions under which they are willing to sell them. Except for this agreement, it is quite clear that the plaintiff would have no reason to complain. It is not alleged that the manufacturers refuse to sell to the plaintiff if it will comply with the rules which they have established for dealing in their wares, but the gravamen of the complaint is that the manufacturers refuse to deal with the plaintiff, except upon such terms and conditions as they have established; and the question arises in the first place, therefore, whether the manufacturers of goods of this description have the right to fix the prices at which they will sell their goods and the terms which they require of the different buyers as a condition of permitting them to purchase the goods which they have for sale.

In the examination of this question it is not to be forgotten that the articles sold are not necessities of life, as to which public policy might restrain a combination to fix an exorbitant price, nor have the manufacturers combined to establish a price for any particular article, but each manufacturer fixes his own price for the goods which he makes, and the agreement is simply to require the dealers to whom he sells to supply their customers at the price which the manufacturer has fixed for his own goods. It is not a combination of manufacturers to fix and establish prices, but an agreement as to the terms upon which goods of the same general character, but of different kinds, shall be sold, and to insure their sale at the price which the manufacturer of each kind sees fit to put upon the goods which he makes.

It cannot be denied that each manufacturer has the right to refuse to sell to any one, if he sees fit, if he chooses to make his goods and sell them, he has a right to fix any price he chooses upon them. Not only so, but he has the right to select his own customers. He may agree to dispose of all his goods to one person, or he may be willing to supply the whole trade except one person, and whatever he chooses to do is a matter with which the law has no concern, because the goods are his, to be kept or sold as he pleases. So he may not only fix his own price, but he may impose such terms as he sees fit, or can exact from his customers.

These matters are absolutely within his own control. If each manufacturer is at liberty thus to control the sale of his goods undoubtedly all may, if they see fit, agree together to enforce conditions which each one seeks to impose upon the dealing with the article which he makes. The action of each manufacturer in fixing prices and imposing conditions of sale is undoubtedly legal. Having fixed the prices and the terms of sale they combine for the purpose of enforcing their contracts. As the end to be accomplished is legal, and they do not propose to take any step in carrying it into effect, which each might not properly take if he was working for himself, no right of action can arise to anyone as a result of their combination.

That the manufacturers have this right is a necessary deduction from cases, in support of which the following may be cited: (Walsh vs. Dwight, 40 App. Div., 513; Lough vs. Outerbridge, 143 N. Y., 271; Continental Fire Ins. Co. vs. Board of Underwriters, 67 Fed. Rep., 310; Anderson vs. United States, 171 U. S., 604; Mogul S. S. Co. vs. McGregor, 15 Q. B. D., 476, aff'd. H. L. Appeal Cases, 1892, 25.) Indeed, some of these cases go to the extent of holding that a combination to keep up prices, which has for its express object the destruction of the business of a competitor, is not unlawful at common law, but it is not necessary here to consider whether the law does benefit such a combination.

We do not understand that the right of the manufacturers, having fixed their prices, to agree together for the purpose of imposing terms and conditions upon which they shall sell their goods, is disputed by the appellant, and in what was said in that regard we concur with the opinion of the learned Justice at the Special Term. But it is said that such is not the cause of action presented by the complaint. The plaintiff claims that its real grievance arises not from the agreement of the manufacturers solely but because of the fact that the members of the Wholesale Druggists' Association, who are competitors of the plaintiff, have combined together for the purpose of compelling the manufacturers to adopt a particular agreement which, if enforced, will take away its business; and so while it is aggrieved by the acts of the manufacturers, yet the moving cause is the compulsion of the

members of the association, because of which the manufacturers have agreed to do a thing which they would not have done in the absence of that compulsion.

It is said that such was the cause of action recognized by this Court, when the case was here before on the appeal from the order, striking out certain provisions of the complaint as irrelevant and redundant. It is quite true that in the opinion then given by the Court it was recognized that such a cause of action was sought to be set up, but it was not said that the facts thus set up gave to the plaintiff a right to the relief demanded. No such question was presented. The only question the Court was then called upon to decide was whether certain allegations in the complaint were redundant or irrelevant to the cause of action, which the plaintiff sought to set out. To decide that question it was necessary to consider what the cause of action was in order to determine whether the allegations bore upon it or not. The Court therefore accepted at that time the plaintiff's statement as to what the cause of action was which it sought to prevent, and examined each allegation with reference to that claim of the plaintiff only; but in reaching a decision in that case the Court was not called upon to consider anything more than the pertinence of each allegation in view of the claim made by the plaintiff; and although the Court said that the cause of action set up in the complaint was substantially what the plaintiff now claims, yet it did not say, and could not have said, that the facts were sufficient to establish that cause of action. (Park & Sons Co. vs. National Wholesale Druggists' Association, 40 App. Div., 508.)

There is no suggestion in the complaint that the manufacturers, having been compelled to take these steps, are not willing to continue this mode of transacting business. They certainly have not complained of it as far as appears, and if they do not complain of it, and are doing only a thing which the law permits them to do, it is difficult to see why a third party, who has no real grievance, except that he is not willing to buy goods upon their terms, should be permitted to come in and interfere with them.

We have examined the cases cited by the appellant to establish its contention, and we do not see that any of them contravene the principles laid down above. The case of *Curran vs. Galen*, 2 Misc. 533, 77 Hun. 610, 152 N. Y. 33, does not sustain the plaintiff's contention. In that case it appeared that the plaintiff had a valid contract for work with the brewer, who discharged him at the demand of the defendant, and it is very clear that the plaintiff was thereby damaged, because, although he may not have had an enforceable contract with the brewer, yet the evidence showed that his employer was willing to keep him, and would have kept him but for the act of the defendant in insisting upon his discharge, but in this case the plaintiff has no contract with any of the manufacturers, nor are they willing to give it one except upon certain terms with which it refuses to comply. There is no sort of a parallel between the cases.

We cannot find from an examination of the complaint that any facts are alleged, warranting the charge that the defendants are engaged in watching the plaintiff's business, or have been guilty of anything like spying or picketing, which calls for the interference of the Court. Upon the whole case, we do not see that the plaintiff has established any right to an injunction because of any of the facts alleged in the complaint.

The judgment must therefore be affirmed, with costs to the respondents. All concur.

THE STAMP TAX LAW.

The Republican members of the Ways and Means Committee of the House of Representatives are in session at Washington, and before the meeting concludes a committee representing the proprietary, wholesale and retail drug interests will wait on the Congressmen for the purpose of urging the repeal of Schedule B of the War Revenue law. Among those who compose the drug trade delegation are: E. C. De Witt, chairman of the Committee on Legislation of the Proprietary Association, Prof. W. C. Anderson, president; Thomas V. Wooten, secretary, and J. C. Gallagher, chairman of the Committee on Legislation of the N. A. R. D.; V. Mott Pierce, president of the Proprietary Association; E. H. Hance, of Hance Brothers & White, Philadelphia; H. B. Harding, of Humphreys' Homeopathic Remedy Company, of this city; George L. Douglass, counsel for the committees of the Proprietary Association, and many others. Most of the party left the city Tuesday, and were joined by others in Washington. The purpose was to go before the committee yesterday or to-day.

In the report of the Commissioner of Internal Revenue last week reference is made to numerous decisions of the courts on important sections of the War Revenue Act and in a long list of recommendations for legislation

amendatory of the act, the following paragraph bearing on the drug trade, is included:

That the paragraph excepting un compounded medicinal drugs or chemicals from stamp taxes be amended so that those sold under a claim of patent, trade mark or proprietorship shall be subject to tax. Numerous preparations of that character are to be found upon the market which have been held by the courts as entitled to exemption, but which nevertheless are put up under a patent or trade mark, and for which proprietary rights are claimed. Some of these are imported from Europe and are sold in competition with domestic preparations. The commissioner believes Congress intended to tax all patent, proprietary or trade mark medicinal preparations alike, and the amendment is intended to effect that purpose.

The opinion is widespread that Section B will be repealed, if not the entire act.

WORKING TO REPEAL THE STAMP TAX.

At a meeting of the wholesale and retail druggists and manufacturers of proprietary articles in the city of Louisville, held this day in Exchange Hall of the Louisville Board of Trade, after full discussion, the following resolutions were adopted:

RESOLVED, That Congress is respectfully petitioned to repeal that portion of the war revenue tax which imposes the stamp tax upon medicinal preparations and proprietary medicines, and for the following reasons—

First.—Such taxation is vexatious and excessive—

Vexatious, because it involves a vast amount of labor upon a branch of business in which are engaged a very large number of citizens, with risk of severe penalties coupled with liability to unintentional violation of the law, by reason of the large number of employees, to whom compliance must necessarily be entrusted.

Excessive, because equal to about 4 per cent. upon manufacturers' selling prices, when alcohol and other important ingredients generally used have already paid a large revenue or import tax.

Second.—This tax is a specific direct tax upon one branch of business, imposed on no other branch of general mercantile business, and is therefore class legislation and class discrimination.

Third.—The revenue derived by the Government—about \$4,500,000 total per annum—is comparatively small, when the expense and labor to the Internal Revenue Department, the labor, inconvenience and daily annoyance to the large class of citizens throughout the entire country affected is considered, best illustrated by the fact that the act is as petty and far-reaching as to impose upon a very large number of articles a tax as small as one-eighth of one cent per package.

Fourth.—This unpopular, petty and vexatious tax is no longer needed by the Government, as report for last fiscal year shows a large surplus beyond requirements derived from internal revenue taxation.

RESOLVED, FURTHER, That the chairman and secretary of this meeting are directed to forward at once copy of the foregoing resolutions to the Hon. S. E. Payne, chairman Committee Ways and Means, with respectful request that he present same at the meeting of the committee to be held in Washington on November 20, and ask his influence in the repeal of the section of the act complained of.

That copies of the resolutions also be forwarded to the Senators and Representatives in Congress from Kentucky; to Mr. N. N. Kline, chairman Committee Legislation, N. W. D. A.; to Mr. E. C. De Witt, chairman Committee Legislation Proprietary Association, and to the editors of the *Pharmaceutical Era*, New York; the *Oil, Paint and Drug Reporter*, New York; the *Druggists' Circular*, New York; the *New York Commercial*, New York; the *Western Druggist*, Chicago, and the *American Druggist*, New York, with the request of the courtesy of publication of same.

(Signed) CHAS. H. PETTET, President.
SIMON N. JONES, Secretary.

Duroy Port Wine.

While there can be no doubt that it is the quality of Duroy Port that has made it so popular with the better class of druggists, the effective advertising of the producers has had much to do with it. The Duroy & Haines Co. are persistent and consistent advertisers. They have a good thing in their wines and they want every dealer to know it, for they are certain that the first order means many more. One of their plans for popularizing Duroy Port is to give with each twelve-gallon keg of the wine fifty bottles of port wine to be distributed among the druggist's best customers. This method of advertising, although expensive, has been very profitable, because a customer once having sampled a bottle of this wine is sure to want more of it and to patronize the druggist that introduced him to it. The advertisement of the Duroy & Haines Co., Sandusky, O., on another page of this issue tells the whole story.

New York and Vicinity.

KINGS CO. PHARMACEUTICAL SOCIETY.

At its last meeting, held Tuesday afternoon, November 13, the Kings County Pharmaceutical Society was called upon to mourn the loss of two of its members, one by death and the other by removal from the city, and to congratulate a third, all in one breath, so to speak. The member removed by death was Dr. Edward R. Squibb, in whose memory the following resolution was presented by William Muir:

Resolved, That in the death of Edward R. Squibb, M. D., the Kings County Pharmaceutical Society mourns the loss of an honored member, who, during his long and eminent career as a manufacturing pharmacist upheld the dignity, honor and reputation of the profession which he adorned.

Loyal and generous in his citizenship, benevolent, courteous and gentle in his private life, honorable and enterprising in his calling, his unblemished career and high scientific attainments offer an exemplary type of the character which has established the reputation of the pharmacists of America throughout the world, wherein his name was a synonym for purity and reliability in pharmaceutical preparations. Appreciating the value of his life and his services to the profession of pharmacy, the members of the Kings County Pharmaceutical Society record this tribute to the memory of Dr. Edward R. Squibb and extend to his family the assurance of our most profound sympathy.

This was unanimously adopted by a rising vote, ordered spread upon the minutes, and Secretary Tuthill instructed to forward a copy to the bereaved family.

The society also adopted a resolution conveying its sincere regards to F. N. Bliss, who is to remove to Rye, N. Y., and extending him its best wishes. All this in token of his faithful services as secretary of the organization, a position he occupied for a number of years.

Another to receive the best wishes of the members assembled was Dr. P. W. Ray, the veteran pharmacist who has rounded out fifty years of labor in one store. The society's token to Dr. Ray was a solid gold medal, on one side of which in raised letters was, "1850; Presented to Dr. P. W. Ray, by the Kings County Pharmaceutical Society, 1900," and on the other side: "In recognition of his fifty years' active service in the profession of pharmacy and for his valued services to the Kings County Pharmaceutical Society as its treasurer for many years." C. W. Klein made the presentation speech. He spoke of Dr. Ray's past life as being a model one in that it teemed with acts tending toward the uplifting of pharmacy. Dr. Ray was taken completely by surprise, but responded in a way that showed the appreciation he held for his profession and the welfare of his associates. He referred to some of the incidents of his life, noting some of the changes which had taken place; the druggist and drug store of former years had become the pharmacist and pharmacy, and noting material transformations that had occurred in the neighborhood of his store. He expressed a desire to continue his usefulness in the pharmaceutical world, and hoped to be able to assist in the establishment of a new building for the Brooklyn College of Pharmacy. He also wished he might survive his seventy-fifth anniversary as pharmacist in one store. His remarks were greeted with continuous applause.

The meeting was called to order shortly after 3 o'clock by President Kleine. Two applications for membership were received. They were from J. L. Mayer, No. 624 Fulton street and Frank L. Downs, No. 725 Nostrand avenue, and three persons were elected into the organization: A. R. Reed, No. 506 Seventh avenue; Dr. John Ketterle, No. 221 Troutman street, and V. M. Friedman, No. 30 Joroleman street. Treasurer Ray reported on hand, October 9, \$372.91; receipts, \$22, and no expenditure, making a total of \$394.91 in the treasury. He said by an error a mistake of \$50 had been made in the account between the society and the Brooklyn College of Pharmacy. The settlement of the matter was laid over until the next meeting.

William Muir reported on the Conference Committee meeting in reference to devising ways and means for the abolition of the cut rate evil, held in New York

recently. He said the jobbers had held a meeting last week, at which it was decided unanimously to uphold the N. A. R. D. plan when put in operation here. He also cited the visit to the city recently of two retail druggists from Indianapolis for the purpose of purchasing supplies here, having been cut off in their local territory because of being aggressive cutters. He said these men returned home without having secured any goods. He moved that his committee have power to act independently of the society, and that \$100 be placed at the committee's disposal to defray pro rata expenses with other organizations in employing canvassers to go among the drug trade to find those in favor of the Conference Committee's plan. The motion was adopted. Mr. Muir then announced he would answer any questions he could in relation to the new pharmacy law to take effect January 1, 1901. Several queries were put concerning registration of pharmacists and clerks, and Mr. Muir read and explained the parts of the law touching these points. He also referred to the power granted the board to regulate the practice of pharmacy and governing the sale of poisons.

Bills to the amount of \$140.55 were referred to the Finance Committee.

E. L. Young was granted the privilege of the floor and explained a project by which druggists may secure sundries at greatly reduced rates through the agencies of incorporated companies they are to organize among themselves. On motion, President Kleine appointed the following committee to take the matter under consideration: Adrian Paradis, Thomas G. France and Charles F. Schleussner. This committee met at the home of Mr. France on Tuesday, November 20, and will report at the next meeting of the society.

WHAT NEW YORK JOBBERS WILL DO.

The following circular is being mailed to their retail customers by the firms whose signatures are attached:

New York, Nov. 12, 1900

Undoubtedly you are aware of the resolutions passed and the results reached at recent meetings of manufacturers of proprietary medicines, wholesale druggists and retail pharmacists, and the purpose declared to maintain by joint action established prices, so that both retail and wholesale druggist may handle patent medicines with a semblance of profit.

The Tripartite Agreement arrived at, which has the Rebate Contract for its basis, provides that the manufacturer shall sell only to the recognized jobber, of whom in turn the retail dealer will make his purchases.

We, the undersigned, therefore beg to inform you that we have been appointed distributors for New York City and vicinity by the manufacturers of proprietary medicines sold in accordance with the terms of the Tripartite Agreement, and hereafter we shall sell such articles strictly on rebate-agreement terms, with no discount except in the intermediate quantities specified by the manufacturers.

We will also cordially support and carry out the N. A. R. D. plan.

Very truly yours,

BRUEN, RITCHEY & CO.,	McKESSON & ROBBINS
CHAS. N. CRITTENTON CO.,	PATTERSON & PURDY,
EMER & AMEND,	R. W. ROBINSON & SON
O. H. JADWIN,	SCHIEFFELIN & CO.,
HENRY KLEIN & CO.,	MAX ZELLER,
LEHN & FINK,	TOWNS & JAMES.

INTEREST IN N. A. R. D. GROWING.

President W. C. Anderson, of the National Association of Retail Druggists, in a recent interview stated that he is receiving letters from all over the country relative to the workings of the N. A. R. D., and that druggists are warming up to the plan in a very satisfactory way. Many of the letters contain requests for information as to the method of procedure in organizing under the association, and others commend the excellent work already accomplished.

President Anderson also stated the returns from the offer of H. L. Kramer were large, and that the present outlook for an increase was highly favorable. The offer closes December 20, and at that time it is expected that Mr. Kramer will be able to make out a check in favor of the treasurer of the N. A. R. D. for perhaps as much as \$10,000.

NEW YORK STATE BOARD OF PHARMACY.

The New York State Board of Pharmacy, which begins its official existence January 1 next under the provisions of the pharmacy law passed at the last session of the Legislature, held an informal meeting Thursday and Friday of last week at the New York College of Pharmacy. The members elect were all present, the various sections being represented as follows: Eastern Section—George C. Diekman, Clarence O. Bigelow, Sidney Faber, William Muir, A. H. Brundage; Middle Section—J. C. Smith, Warren L. Bradt, George H. Merritt, Charles P. Sears, Byron M. Hyde; Western Section—W. G. Gregory, R. K. Smither, George Reimann, E. M. Jewell, A. M. Palmer. J. C. Smith, of Plattsburg, was chosen chairman and Sidney Faber, of New York, secretary.

The deliberations of the board were very harmonious and steps were taken to put in motion the necessary official machinery for the regulation of pharmacy the moment the new law becomes operative. Much time was spent in discussing the various phases of the law, for the act provides that the board shall have power to do things not specifically enumerated for the regulation of the practice of pharmacy; the sale of poisons, the regulation and control of the character and standard of drugs and medicines dispensed in the State, hours of work, inspection of pharmacies, etc., etc.

The first thing the new board will do after organization is to send out an official circular to the proprietor of every pharmacy, store, or place where drugs are sold, asking him to fill out a blank prepared for the purpose,

giving the name of every pharmacist, assistant and apprentice employed in the store, when and how registered, length of experience, age, etc. Each proprietor will be asked whether he has the latest issue of the Pharmacopoeia and a dispensatory, and he will also be required to attach a poison label to the blank as indicating that he is cognizant of the regulations governing the sale of poisons, etc. As the board has no legal existence until after January 1, no standing committees were appointed but arrangements were made for the appointment of the following: A Committee on Regulations and Prosecutions, a Committee on Finance, a Committee on the Character and Standard of Drugs, to which will afterward be referred the sale of poisons, etc. This committee, under the law, will have power to add to the list of poisons from time to time as experience may require.

Under Paragraph F, Section 192, of the act, the board has power to regulate the number of hours constituting a day's work of employees in drug stores in New York City. This the board will cover by the enforcement of the following regulation: Daily labor not to exceed ten working hours a day, except Saturday, which must not exceed twelve hours, unless the distribution of hours may be otherwise agreed upon by employer and employee, but such distribution of working hours shall not exceed 136 working hours in two weeks, as is now provided for by law.

Inspectors of pharmacies are to be employed by the State Board under the regulations governing the appointment and work of State inspectors generally. These

officials will act under the immediate direction of the board's Committee on Regulations and Prosecutions.

The State Board of Pharmacy will hold its general meetings at Albany quarterly. The Eastern Section will hold meetings for the examination of applicants for registration on the third Wednesday of every month, July and August excepted, the meetings to be held alternately in the New York and Brooklyn Colleges of Pharmacy. The first meeting of this section will be held January 16 in the Brooklyn College of Pharmacy. The Western Section will hold all of its meetings in Buffalo on the third Wednesday of each month, except July and August. The Middle Section will hold five meetings annually for the examination of applicants, the examinations to be held simultaneously at Albany and Rochester in the months of February, April, June, October and December. The examinations which applicants will be required to take will be upon the following subjects: (1) *Materia Medica*, Botany and Pharmacognosy; (2) Theoretical and Practical Pharmacy, which will include practical work at the prescription counter and reading and interpreting prescriptions; (3) Toxicology and Posology; (4) Pharmaceutical Chemistry.

The questions for the various examinations will be prepared in turn by each section of the board, the Eastern Section preparing those for the first examination, the Middle Section for those of the second, and the Western for the third, etc. By this method it is believed the work of the board will be more representative and will insure a fairer test as to the fitness of applicants than that of having the questions prepared for each class by each section of the board.

Licensees of existing boards in the State may continue to practice pharmacy in their respective sections, just as they always have done. The board will decide that they do not need to be re-registered so long as they remain in the section to which their certificates refer, but they must display their old certificates. Should these licensees desire to practice in any other part of the State than that in which they were originally licensed they must secure a new license. If they were registered by examination all they need to do is to make an application, surrender their old licenses and pay a fee of \$1, when the State Board will grant them a license to practice as "licensed pharmacists" anywhere within the State. Licensees registered as graduates in pharmacy desiring to practice elsewhere in the State must stand an examination the same as new applicants.

For the registration of apprentices the board will adopt a regulation that the licensed pharmacist or licensed druggist who is the employer or preceptor of the apprentice must make application for his registration. The apprentice to become registered must not be less than fifteen years of age and he will be required to furnish with his application a certificate from the regents of the State, showing that he has completed a grammar school course of its equivalent. The certificate issued to the apprentice is, as defined by the law, to be proof of the time when practical experience began with the apprentice.

To be eligible to an examination as a licensed pharmacist the applicant must file an affidavit showing that he has had practical experience of four or more years. To be eligible to an examination as a licensed druggist the applicant will be required to state over his affidavit that he has had practical experience of three or more years where "drugs, medicines and poisons" were dispensed and retailed and prescriptions compounded. Candidates who fail to pass the first examination will be entitled to take a second examination within the six months following without the payment of an additional fee.

The board upon its organization will immediately take steps for carrying out the law requiring the registration of every place in which drugs, medicines or poisons are retailed or dispensed, or physicians' prescriptions compounded. This provision of the law the board will hold to cover not only pharmacies and drug stores, but hospitals, dispensaries, etc., as well. Many other subjects of importance were discussed and forms for the necessary blanks were drawn up to be adopted so soon as the board holds its first official meeting, which will be in Albany, January 7.

MANHATTAN PHARMACEUTICAL ASSOCIATION.

The meeting of the Manhattan Pharmaceutical Association Monday evening was largely attended and most interesting, but no business beyond matters of ordinary importance was transacted. After the usual opening duties had been completed Treasurer Hitchcock reported as follows: Balance on hand last meeting, \$422.69; receipts, \$52.50; disbursements, \$9.86; balance, \$465.33.

The first feature for argument developed when W. H. Porr, chairman of the Grievance Committee, reported on the telephone question. Mr. Porr said he had had a visit from Mr. Walker of the New York Telephone Co., but that he had held out no encouragement. The lowest rate to be secured was about 5 2-3 cents where contract message rate was agreed on. A number of the members took part in the discussion which followed, it appearing that some believed advantages were offered while others entertained contrary opinions. The report was finally received.

G. E. Schweinfurth gave a comprehensive report of the business transacted at the conference of committees with relation to the enforcement of the N. A. R. D. plan. This precipitated a discussion which lasted for some time and in which arguments were made by W. C. Alpers, William Muir, A. Bakst, Otto Boeddiker, Sidney Faber, President Smith, Dr. Goldwater and others. President Anderson of the N. A. R. D., who was present, was called on and he delivered an excellent address relative to the National Association and its work to aid the retailer. The report of Mr. Schweinfurth was finally accepted.

A. C. Searles, who was named a committee of one some time ago to look into the benefits of the New York Consolidated Drug Co., made a report in which he stated the advantages to be obtained from membership in the company, which was open to any retail druggist of good standing if he be acceptable to the Board of Directors. This report was supplemented by remarks regarding the society by its president, George Gregorius. The report was adopted, following which Mr. Searles moved that the substance of the report be included in the notices sent out of the next meeting. This was also carried.

The meeting concluded with an informal talk on the new pharmacy law by Prof. G. C. Diekman, a member of the new All-State Board of Pharmacy. Dr. Diekman took up the law by sections and after reading each gave his opinion of the interpretation intended. Some of the points illustrated were well defined and placed new meaning on parts of the law which at first reading seem obscure. The speaker illustrated by use of a map the division of the different sections in the State.

NOTES.

—Detectives from police headquarters arrested two men named Bush and Shea on Friday of last week on a charge of stealing opium belonging to Dodge & Olcott from one of the storage warehouses of Lawrence & Gerrish in August last. The robbery was regarded as mysterious at the time of its occurrence and the police were unable to secure any clue to the robbers. The warehouse, which was guarded by a watchman, was entered and 1,000 pounds of select commercial opium stored by Dodge & Olcott taken from the cases in which it was packed and beans substituted. The theft was discovered, but the thieves had left no traces behind. The watchman of the building was arrested, but nothing could be proven against him and he was discharged. Recently knowledge came to Dodge & Olcott that a broker named S. Bergfeld, whose office is at 338 Broadway, had opium to sell and it was arranged to purchase some of him. When the goods were delivered recently it was discovered that they tallied with the opium stolen in August and Bergfeld was questioned by detectives. He said Bush, one of the men arrested, had given him the stuff to sell. Bush, when arrested, implicated Shea. Dodge & Olcott expect to recover more of the stolen opium.

—A prominent downtown retailer said a few days ago that he was going to have for two weeks before Christmas the costliest and finest display of perfume in his large show window that has ever been on show in this or any other city. "We make a special study of putting

our goods in the window in an attractive way," he said, "and we watch carefully for results. It is surprising how many people buy goods thus shown when ordinarily they wouldn't think to ask for them. Of course, when we take the articles out of the window the sales fall off, but then this is offset by the disposal of the new goods. We find displays in our show windows are trade-getters, and we shall continue to make them as attractive as we can. Even if you have just a lot of ordinary goods to show, though they do not appeal to the eye when considered separately, just put them together in a "catchy" way in the window, and it's an easy matter to sell."

—The dead body of Frances H. Lengfeld, Jr., son of the drug broker by that name at 181 William street, was found lying near the tracks of the Long Island Railroad at Maspeth, on Tuesday, November 13. Young Lengfeld, who was twenty-three years of age, disappeared from his home in Brooklyn, Monday, and nothing was learned concerning him until the Friday following. His father then happened in a hat store in this city at the time a detective from Maspeth was, by means of young Lengfeld's hat, trying to establish an identification. The father heard the description of the body and immediately declared it to fit his son. It is said no bruises or marks of any kind were found on the body. Only 50 cents was in the trousers pockets, and it is said Lengfeld carried large sums of money with him. He was a familiar figure in the trade, looking after quotations and making sales in the market for his father.

—A number of members of the wholesale drug and chemical trade held an informal meeting in the rooms of the New York Board of Trade and Transportation, Wednesday afternoon, November 14, for the purpose of discussing the storage of explosives, the matter having been brought forward by the recent explosion of Tarrant & Co.'s building. John McKesson acted as chairman and named the following members of the trade as a committee to draft a bill to be presented to the Charter Revision Committee of Greater New York for incorporation as a law governing the storage of explosives in the amended charter of the greater city: Andrew B. Rogers, chairman; Albert Plaut, James Hartford, William S. Gray and John Anderson. It shall also be the duty of this committee to endeavor to secure legislation in this State for the improvement of the existing laws relating to combustibles.

—Charles Downer, one of the pioneers in the drug business in this city, whose business experience extended over nearly half a century, died suddenly while in the office of Leerburger Brothers, dealers in essential oils at 54 Beekman street, Tuesday afternoon, November 14. Mr. Downer was for a number of years associated with Cortland St. John under the firm name of Downer, St. John & Co., but latterly engaged as broker in essential oils for himself at 4 Cedar street. When Downer, St. John & Co. dissolved it was through no differences between the partners as Mr. Downer and Mr. St. John held the most cordial relations up to the former's death. Mr. Downer was seventy-eight years of age. It is thought his death was due to heart disease. He was well and favorably known to the trade and his death will be deplored.

—The Alumni Association of the New York College of Pharmacy met Wednesday evening, November 14, with President C. S. Erb in the chair. The resignation of Rudolph Gies as secretary was presented and accepted, and Bruno Dauscha was elected to fill the vacancy. A letter of sympathy was sent to Dr. Harry B. Ferguson, who had been ill during the last two weeks. Notices for the meetings during the year were ordered sent out, after which arrangements were completed for the annual dinner to be held next Wednesday evening. Three new members were elected. The association tendered a reception to the students of the New York College of Pharmacy last evening. A large number was present and the event passed off pleasantly.

—A meeting of the New York Section of the Society of Chemical Industry will be held at the Chemists' Club, 108 West Fifty-fifth street, to-morrow evening. Papers will be read as follows: E. Kremers, "The Assay of Carbone-containing Oils;" R. C. Schuppphaus, "Review of a Recent Article on Explosives;" R. Bolling, "On Manganese Determinations;" H. Schweitzer, "Resolutions of the last

International Congress for Patent Legislation, etc. and their Relations to the Patent System and the Industry of the United States;" M. Wallerstein, "On American Beer" (with demonstrations). The usual informal dinner will be held prior to the meeting at Hotel Grenoble, Seventh avenue and Fifty-sixth street, at 6.30 P. M.

—For some time certain members of the Alumni Association of the Brooklyn College of Pharmacy have been discussing the feasibility of arranging a bowling tournament in the organization, but it was said there were no bowlers to make up the teams. F. P. Tuthill, one of the active members, asserts that there is plenty of material in the organization to back the movement proposed and in support of his assertion offers his personal record. He is captain of a team in a tournament among the members of the Union League Club and recently rolled scores of 220 and 238 in one evening. He also won a fine umbrella in a bowling contest at the club. Mr. Tuthill is in favor of arranging a tournament in the Alumni Association.

—The drug store of A. M. Knowlson on Broadway, Troy, N. Y., which is known as one of the best stores in the Collar City, was broken into by burglars some time during Sunday night, November 11. About \$41 in cash was taken and manure sets and postage stamps to the value of \$10. Mr. Knowlson, who occupies apartments above the store, heard the thieves at work and probably scared them away by ringing an inside telephone bell. Police headquarters was notified of the robbery Monday morning and detectives arrested one of the men Monday afternoon as he was trying to dispose of a manure set to a pawnbroker.

—"The spell of breezy weather we've been having," said a retail druggist recently, "has livened up business a little bit. Why, one day last week I sold out all of my stock of chest protectors, and now I'm having a great run on chamomile vests. It's a funny thing, but people don't seem to take much to the ordinary lung protectors that used to sell so well years ago, and they are getting the idea that to cover one part of the chest and leave the other exposed is as bad as exposing the whole chest, so they buy the vest. Cough syrups, too, are having an inning, but then we must do business somewhere."

—A celebration somewhat out of the ordinary took place in the Brooklyn College of Pharmacy, Friday afternoon, November 9, as an outcome of the Presidential election, when President Schapiro of the senior class gave the members of the class a "pie lunch." Mr. Schapiro had so much faith in the success of W. J. Bryan that he wagered "pies for the senior class" on the result. He was generous in his selection of the baked food and did not choose all pumpkin and custard pies as was suggested to him by a classmate.

—P. B. Myers, of the Myers-Dillon Co., of Omaha, Neb., one of the prominent retail dealers of the section and well-known to the trade in this city, was married Wednesday, November 14, to Miss Anna Johnson, of Newark, N. J., the ceremony taking place at the bride's home. E. C. Fowell, Western representative for Schleffelin & Co., acted as best man. Mr. and Mrs. Myers spent Thursday at the Waldorf-Astoria in this city, after which they left for Old Point Comfort, Va., where they will remain during their honeymoon.

—No new features developed in the investigation before Fire Marshal Peter Seery last week of the Tarrant fire and explosion. Marshal Seery stated that he had been unable to determine the exact cause of the explosion, although it has been stated in the daily papers that it was thought to be due to chemical or heat action on chlorate of potassium. It is said the Coroner will take a hand in the investigation this week to inquire into the cause of death of those who perished in the fire.

—For some unexplainable reason, druggists report that business is unusually dull. A retailer said last week: "There appears to be the same number of people buying as earlier in the season, but they don't appear to be coming to us." A salesman for a local house recently made up his mind to take a straw vote on the conditions of business. He visited twenty-five stores, and not one of the proprietors gave a bit of encouragement to his idea that business was good.

—Five hundred invitations have been issued for the

dinner of the Alumni Association of the New York College of Pharmacy to be held in "College Hall" of the "Arena" Wednesday evening, November 28. It is expected that of this number at least 100 will be present. George E. Schweinfurth, chairman of the Committee of Arrangements, has tickets for the event for sale at his store, corner Forty-ninth street and Sixth avenue, \$2 each.

—The Heydn Chemical Works was incorporated under the laws of New Jersey last week to deal in chemicals, etc. The main office of the concern is located at Garfield, N. J., and the capital stock is given at \$150,000. The incorporators are: Dr. C. E. Kolbe and R. Vorlaender, of Radebeul, Saxony; Dr. C. L. Kleber, of Clifton, N. J., and G. Simon, of Passaic, N. J.

—"Tom" Fraser, the well known drug swindler, has evidently abandoned his fake business and intends to locate somewhere in the retail trade in this city, for quite recently he made application to the proprietor of a well known retail store for a position as clerk. This is the first that has been heard of Fraser in some time and once recently, rumor had it, he was dead.

—The games of the Wholesale Drug Trade Bowling Association on Saturday, November 17, resulted as follows: Lanman & Kemp 783, Merck & Co. 728; Parke, Davis & Co. 762, Merck & Co. 696; Lanman & Kemp 741, Parke, Davis & Co., 701; Colgate & Co. 735, Dodge & Olcott, 822; Colgate & Co. 783, National Lead Co. 739; Dodge & Olcott 727, National Lead Co. 740.

—H. A. Anibal, a well-known Brooklyn pharmacist who left last May for a tour of the world, has been heard from in Yokohama and is now on his way home. He is expected to reach San Francisco in a few weeks. It is proposed by some of Mr. Anibal's enthusiastic druggist friends in Brooklyn to give him a warm welcome on his arrival home.

—F. N. Bliss, who for many years has conducted a pharmacy at the corner of Henry and President streets, Brooklyn, will remove December 1 to Rye, N. Y., where he intends opening a new store. Mr. Bliss leaves many friends in Brooklyn who wish him well in his new venture. The Brooklyn store will be left in charge of Andrew Myhr.

—Among the druggists who called on the trade last week were: W. H. Hull, New Haven, Conn.; John Metzger, Providence, R. I.; John T. Harper, Great Barrington, Mass.; T. S. Armstrong, Plainfield, N. J.; Dr. R. L. Felter, Fall River, Mass., and Thaddeus Benjamin, of M. F. Benjamin & Sons, River Head, L. I.

—Otto Crouse has been appointed receiver of the Newark Chemical Co. by Vice-Chancellor Emory of New Jersey. The firm was adjudged insolvent in 1893, when Charles P. Thurston was named receiver. Mr. Thurston died last year and Hugo G. Hauser, a preferred creditor, brought suit for the appointment of a new receiver.

—The seventy-third annual dinner of the Paint, Oil and Varnish Club was held at the rooms of the Drug Trade Club, Thursday evening, November 15. There were fifty-five persons present, and the dinner was one of the best that has ever been served in the Drug Trade Club. An orchestra furnished music.

—A. E. Pickard, a well-known druggist of Roslyn, L. I., was married Wednesday, November 14, to Miss Louise Youngs, of Sag Harbor. Rev. C. H. Wilson, of the First Presbyterian Church of Sag Harbor performed the ceremony. Mr. and Mrs. Pickard went on a wedding journey in the South.

—A meeting of the Drug Trade Section of the Board of Trade and Transportation called for Thursday afternoon, November 15, was not held owing to the absence of a quorum. The same reason applied to the failure to hold the October meeting. The next meeting will be called for December 13.

—The Empire State Drug Co. has recently placed in 100 retail stores in this city an unique imitation bee-hive, which is used to illustrate one of the sources of supply of their preparation, Gray's Honey of White Pine. A "green grass effect" adds to the attractiveness of the show.

—Louis Elekwort has recently been engaged by W. S. Rockey in his store at Thirty-fourth street and Eighth avenue. He was formerly employed by Mr. Rockey but left to start a store on his own account in Brooklyn, the venture, however, not terminating satisfactorily.

—A large number of members of the German Apothecaries' Society enjoyed an outing at Piel's brewery, corner Liberty and Sheffield avenues, Brooklyn, Thursday, November 15. Bowling was engaged in during the afternoon and evening and a fine supper was served.

—The New York Times of last week states that James M. Gordon, a druggist at No. 1700 Third avenue, who was tried for attempting to burn down his store, was so overjoyed when he was acquitted on Wednesday, November 14, that he fainted.

—The Retail Druggists' Association will meet to-morrow evening, at which time the price list for proprietary medicines as informally adopted by the Conference Committee at the recent meeting in the College of Pharmacy will be brought up for action.

—The Apothecaries' Bicycle Club has selected Oakland, Staten Island, as its objective point for Thanksgiving Day, but this may not be the last run of the season as the members say they will continue their weekly rides until the snow flies.

—At a meeting of the Sphinx Club held in the Waldorf-Astoria, Wednesday evening, November 14, H. B. Harding, treasurer of the Humphreys' Homeopathic Remedy Co., was chosen president.

—L. P. Lawrence, a retail druggist of Orlando, Fla., was in the city visiting the wholesale trade during last week. Mr. Lawrence reports favorably of trade conditions in his locality.

—L. J. Nostrand, a retired cork manufacturer, formerly of the firm of Truslow & Nostrand, whose factory was on Pearl street, this city, died Tuesday, November 13, at his home in Brooklyn.

—Dr. John Ketterle has recently been added to the faculty of the Brooklyn College of Pharmacy to assist Prof. Anderson in the laboratory work in pharmacy.

—H. V. O'Donnell, who owns several drug stores in Providence, R. I., spent several days among his friends in the drug trade in this city last week.

—William Malone, formerly with the Empire State Drug Co., has accepted a position in the drug store of Charles H. Buck, at Kingsbridge.

—Max Zagat has discontinued his store at Ninety-first street and Madison avenue and opened another at 109th street and Madison avenue.

—Harry B. Ferguson, of the faculty of the New York College of Pharmacy, was confined to his home last week by an attack of pleurisy.

—A. U. Andrus, of A. U. Andrus & Co., drug importers of No. 7 Gold street, is confined to his home in Montclair, N. J., by illness.

—F. Zimmerman has recently accepted a position with Charles A. Proben, corner of Eighty-seventh street and Second avenue.

—A. Sannrock has succeeded F. H. Nowill as the proprietor of the pharmacy at Lafayette and Carleton avenues, Brooklyn.

—Carl Mittenzweig is to open a store at the corner of Central avenue and Palmetto avenue, Brooklyn, about November 24.

—J. S. Kearney, manufacturer of Stearn's Electric Paste, of Chicago, Ill., was in town during the early part of the week.

—F. W. Fletcher has severed his connection with the pharmacy of Thomas J. Barnaby, at No. 193 Eighth avenue.

—E. J. Bryson is no longer connected with the Sherman Square Pharmacy, at Seventieth street and Broadway.

—G. S. Mariager, cashier of the local branch of Parke, Davis & Co., was in Detroit last week on business.

—Mrs. E. G. Rave, wife of Dr. E. G. Rave, druggist at Hicksville, L. I., is confined to her home by illness.

—W. Goehling has recently resigned his position in James S. Boyd's pharmacy at Cold Spring, N. Y.

—J. Wells Thompson, retail druggist of Adams, Mass., called on the trade last week.

—J. H. Corry has joined the force of clerks in the Sherman Square Pharmacy.

—James Blaine has left the employ of Hegeman & Co., at No. 196 Broadway.

IN AND ABOUT BOSTON.

Funeral Services for Charles H. Pinkham.

Boston, Nov. 17.—On the afternoon of November 17 the funeral services for Charles H. Pinkham took place at Lynn from the First Universalist Church, of which he was a member. The Mayor of that city and members of the city government attended in a body. The church was crowded to the doors, special seats being reserved for employees of the company of which Mr. Pinkham was the moving spirit; directors of the Lynn Hospital, trustees of the Home for Aged Women, and delegations from the Park Club, Suffolk Club, Press Club and other organizations with which he was identified.

Rev. James M. Pullman, D. D., delivered the address. He spoke of the legacy of a good name which Mr. Pinkham had left to his children, unstained by any meanness, enriched by a thousand generous deeds, and honored wherever known as the synonym of uprightness and integrity. He praised his interest in the maintenance of the pillars of the social order, the home, the school and the church, and his broad and quiet philanthropic and benevolent spirit shown toward individuals in many ways, especially in the helping of young men to start in the world. The Franklin Quartet, of Boston, sang several selections. Olivet Commandery of Knights Templar held its service at the close of Dr. Pullman's address, with Thomas W. Rogers, commander, and George A. Fallen, prelate.

The honorary pallbearers were: Daniel W. Allen, Augustus B. Martin, Charles P. Tucker, Walter E. Symonds, John C. Hanley, Hon. Charles H. Baker, Hon. Charles E. Harwood, Luther S. Johnson, Frederick K. Peaver, all of Lynn; L. L. Pope, of Cleveland, Ohio; W. K. Pettengill and Thomas Doliber, of Boston. There were four body bearers from Post 5, G. A. R.—Commander Charles T. Jackson, Senior Vice-Commander Thomas M. Burckes, Quartermaster Clarence M. Sprague and Quartermaster-Sergeant Eben K. Storer. The burial was in Pine Grove Cemetery.

NOTES.

—The authorities of Fall River are pressing the druggists hard in the matter of illegal liquor selling. Following the recent arrest and conviction of A. F. Chamberlain, of that city, comes the arrest this week of Hugh Bovier on a like complaint. He conducts a drug store on Pleasant street, and his clerk was likewise summoned before the court to answer to charges of alleged unlawful keeping of liquors. They pleaded not guilty and secured continuance of their cases, as did Mr. Bovier. These arrests were all brought about by men arrested for drunkenness, telling the police that they secured their liquors at the stores of the druggists mentioned.

—A young woman named Bessie McQueen has been arrested in the South End district for the alleged fraudulent use of certain patent medicine labels. The police say that the woman was formerly in the employ of George E. Bayden, of Somerville, a manufacturer of patent medicines, and it is alleged that she and a man who is said to be her husband used Bayden's labels on medicines sold by them. In court the woman was held in \$200 for a further hearing.

—On the charge of selling liquor, Thomas Deslaurier, who conducted a drug store in Pountaine's Block at Spencer, has been fined \$50 and sentenced to three months in jail. He paid his fine and will serve out his time in Worcester, to which place he was taken. His store was visited Sunday morning by officers, who caught a man in the act of drinking. The officers seized the glass and found that it contained liquor.

—The West End Drug Store of H. F. & F. L. Miner, Summer street, Malden, has been sold to D. G. Brown, who for ten years or more has conducted a pharmacy in Charlestown. For several years he also has had another store situated in Cambridge. He proposes to refurbish and refit the Malden establishment. He has gone to Malden not only to do business in that city, but to reside.

—Samuel Irons, an East Boston druggist, has just met with a great loss in the accidental death of his eight-year-old son, who met with fatal injuries while attempting to board a moving freight car on the Boston & Albany tracks, between Saratoga and Curtis streets. He fell under the car, the wheels going over his legs. He was taken to the Massachusetts Hospital, where he died soon after.

—What once was the Broadway Pharmacy, in the Maplewood District of Malden, has lately been leased for a grocery and provision store. This pharmacy was closed up some time ago upon the discovery that there was no registered pharmacist on the premises. It was here that a motorman bought some supposed simple remedy for headache and died after taking the medicine.

—The Puffer Manufacturing Co. are removing to much larger and better quarters at 48 Portland street. Luther W. and Daniel J. Puffer, brothers, who recently severed their connection with the American Soda Fountain Co., have associated themselves with their sons in this concern, which will conduct business in the manufacture of soda water apparatus.

—The Walter M. Lowney Company, whose candies so many druggists everywhere carry in stock, has just sent from the factory in Boston a large shipment of its chocolate goods to the Stewart Holmes Drug Company at Seattle, by whom the candies will be distributed among dealers all along the Pacific coast.

—The police this week arrested a woman who gave the name of "Nellie White," who was known to be dangerous in the community. On her person was found a nice little bottle of "knock-out-drops," which some druggist had sold her. She also had concealed about her clothing a pair of lead knuckles!

—H. N. Conn, of Woburn, is president, and E. E. Stone, of Portland, treasurer, of the Red Cross Chemical Company, recently organized under the laws of Maine to make, buy, sell and generally deal in medicines and medicinal preparations. The capital stock is placed at \$25,000, with nothing paid in.

—The police of Roxbury Crossing station have arrested three young men on the charge of breaking into the store of Charles E. Jellison, on Gurney street, and the larceny therefrom of seventy-two bottles of tonic. Entrance was gained by breaking a glass in a side window.

—Hon. Gorham D. Gilman, of Gilman Bros., the wholesale druggists of this city, was a guest of honor and one of the speakers at the annual meeting, held this week, of the Newton Women's Suffrage League.

—This week's exports from the port of Boston show these shipments, among others: Drugs and chemicals, \$19,787; India rubber manufactures, \$488; tobacco, \$14,060; wax, \$292; spirits, \$95,448.

—On account of injuries to his knee, "Bert" Anderson is away from his duties in Chapman's drug store at Monson. The injury was caused by a fall while playing football.

—While making a purchase in Covell's drug store at Winchester, Julius Hovey had his bicycle stolen from in front of the store.

Tufts' Hot Soda Apparatus.

Where the Tufts apparatus has scored a great success is in its ability to maintain water at an equal temperature. It is easy enough to make water hot and to keep it hot, but it is not so easy to serve hot soda at the correct temperature. A cup of lukewarm water will disgust a customer; on the other hand, if the water is too hot it may cost you his further trade. For the Tufts apparatus is claimed the very best device that has been invented for heating the water and then automatically controlling the heat. It responds to the drawing off of a single cup of water, and whether the water be drawn at the rate of a cup a minute or a cup an hour, the temperature remains at a fixed point. The Tufts heat regulator works automatically; it needs no oversight. It reduces the cost of operation to a mere nothing, and recent tests have shown that the entire consumption of gas in one of the leading hot soda stands in Boston amounted to only 600 feet for one month. It will pay every druggist who contemplates purchasing a hot soda fountain to get Tufts' catalogue and prices before buying. A postal card will bring them.

BALTIMORE.

The Jamaica Ginger Habit.

Baltimore, Nov. 17.—Among the papers to be read at the semi-annual meeting of the Maryland Medical and Chirurgical Faculty, which is to take place next Tuesday at Towson, the county seat of Baltimore County, are two on "Blindness and Death from Drinking Jamaica Ginger, Etc., Adulterated with Wood Alcohol," by Dr. Herbert Harlan and H. A. Brown Dunning, Ph. G. The latter is connected with the pharmacy of Hynson, Westcott & Co. The two papers have been suggested by a number of cases of poisoning by wood alcohol which have come to the notice of the medical and druggists' profession during the past summer. These cases have occurred in local option counties, the victims having resorted to the decoction in question as a substitute for liquor, and in utter ignorance of its dangerous quality. That the ginger habit causes much mischief, even when the ingredients used therein are of good quality, has been long known, and the evil consequences of drinking the compound are greatly enhanced when the ginger is made up with wood alcohol. A number of fatalities have happened in the course of the summer, and in the papers mentioned the practice of putting up ginger with wood alcohol will be severely criticised.

Maryland Pharmaceutical Association.

Baltimore, Nov. 19.—The next semi-annual meeting of the Maryland Pharmaceutical Association will take place on December 12 at the Maryland College of Pharmacy, in this city, and efforts are being put forth to make the session exceptionally successful. Owen C. Smith, the chairman of the Executive Committee, has sent out a circular letter calling the attention of druggists all over the State to the event and inviting them to be present. There will be two sessions, one in the afternoon and the other in the evening. Special stress will be laid upon the consideration of the subject "The Advantages of Belonging to the Association from an Educational Point of View," and a number of other interesting topics will be discussed. One of the features is to be a dinner after the business on hand has been disposed of.

Certificates of Competency.

Baltimore, Nov. 16.—Mention has been made in these columns of the efforts of the Maryland Pharmaceutical Association to compensate in a measure for the absence of a State pharmacy law by issuing certificates of competency to all druggists in good standing. This plan is based upon the supposition that the public would patronize a pharmacist vouched for by a reputable organization rather than one whom no one can endorse. The idea has been found very serviceable in practice and has given competent druggists a measure of protection in the exercise of their profession which they did not command before. The Committee on Association Membership in particular is highly gratified over the result and entertains the belief that the system affords a means of greatly strengthening the association. With this purpose in view the following circular letter has been sent out to pharmacists throughout Maryland:

The result of belonging to the Association cannot be measured by a money value; many a druggist has obtained valuable information by coming in contact with other members and finding out from them how they make business profitable.

The brains of this country, as well as the wealth, favor organization. Hence it is safe to say that the future of the Maryland Pharmaceutical Association is a bright one.

The prosperous druggists of to-day are those who try to keep abreast of the times, and find out the best methods and ways to succeed. This is one reason why so many of them are members of the Maryland Pharmaceutical Association.

Maryland has no pharmacy law to prevent it from being the dumping ground for the other States, but our association gives you a certificate of competency, showing your customers that you are worthy of confidence.

Enclosed find a blank application to fill out and return to Owen C. Smith, chairman, Pennsylvania avenue and Hoffman street.

Whether you join or not let us hear from you. Let us become better acquainted.

With the Bowlers.

Baltimore, Nov. 17.—The Root and Herbs are making a strong fight for first place. Last Tuesday night they fattened their average by defeating Muth Bros. & Co. three times by 600, 788 and 661, against 604, 633 and 594. Last night McCormick & Co. met Parke, Davis & Co., taking two out of the three games by 730, 653 and 706 against 688, 631 and 717 points. The contests of the week place the several teams in the following positions:

Teams.	Games Games Per		
	Won.	Lost.	Cent.
Root and Herbs.....	11	1	.917
McCormick & Co.....	9	3	.750
James Bailly & Son.....	7	5	.583
Sharp & Dohme.....	6	6	.500
Muth Bros. & Co.....	4	8	.333
Winkelmann & Brown Drug Co.	3	9	.250
Parke, Davis & Co.....	2	10	.167

NOTES.

—The Hodson Drug Company, on West Lexington street, between Park avenue and Howard street, is selling out its stock and will go out of business. It was the successor of Moore & Copper, at one time doing business on the other side of Lexington street. Not long after removing to the new premises, which were fitted up in excellent style, Mr. Moore died and for a time the widow conducted the store, Mr. Copper having retired. Later the Hodson Drug Company was formed, the managing partner having been a clerk in the old pharmacy. The decline of the company's business may be attributed to excessive competition in the neighborhood.

—Owen C. Smith is the chairman of a committee appointed by the Maryland College of Pharmacy to get up a theatre party on Thanksgiving evening. The party is to be composed of members of the college faculty and of the college, and will also include all students who wish to go. Social features are receiving much attention this year.

—Harry Gilpin, of Gilpin, Langdon & Co., Light and Lombard streets, has just returned from a prolonged tour through the West and Southwest. He extended his travels as far as New Mexico, where he is interested in valuable mining properties, and also devoted some time to hunting big game, to which sport he is passionately devoted.

—Warren Vansant, a popular retail druggist of Greensboro', Md., was married on the 14th inst. to Miss Effa Comegus, of the same place, in the Methodist Episcopal Church there. A large number of friends witnessed the ceremony, after which the young couple left on a wedding tour North.

—S. L. Walker, R. H. Stoltz, M. C. Stoltz, M. H. Gathright and others have incorporated the Boston Chemical Company at Richmond, Va. The company will manufacture medicines, chemicals, etc., and has a capital stock of \$5,000.

—George G. Muth, of Muth Bros. & Co., wholesale druggists of this city, was out of town for several days last week combining business with recreation.

—Last week's visiting druggists included H. C. Wells, Elkton, Md.; R. S. McKinney, Taneytown, Md., and Dr. E. L. Smith, Man's Choice, Pa.

Special Terms on Castoria.

Castoria—"the kind you have always handled"—is made by The Centaur Co., 77 Murray street, New York, of which Charles H. Fletcher is president. Mr. Fletcher thinks that almost any druggist ought to be able to sell a dozen bottles of his specialty a month, or one gross a year, and to induce effort in that direction he authorizes jobbers to allow a special discount of 5 and 2½ per cent. on gross lots. Druggists are invited to send for counter wrappers, cartons and other advertising matter.

We advertised on page 11 of last week's issue Daggett's School of Pharmacy Lecture Course, being the second edition, revised and enlarged. The book is a concise and comprehensive series of lectures on pharmacy, chemistry and materia medica, particularly valuable to physicians and pharmacists as a reference book, but of the greatest use to students of pharmacy and medicine who wish to pass State Board of Pharmacy examinations. It is a book of 120 pages and will be sent, postpaid, for \$2. The publisher is C. H. Daggett, Ph. G., 67 Portland street, Providence, R. I.

DETROIT.

CUT RATES NOW IN THE PAST.

Detroit, Nov. 17.—The annual meeting of the Detroit and Wayne County Retail Druggists' Association was held last Wednesday, November 14, and the following officers elected, in some cases re-elected: President, J. W. Seely; vice-presidents, Grant Stevens and P. F. Nasmyth; secretary, C. F. Mann; treasurer, Wm. Dupont; Executive Committee, A. L. Walker, W. H. Burke, A. S. Parker, M. E. Keyes, W. W. Fiero, Grant Stevens, F. A. Cooke, W. P. Doty, D. S. Hallock and W. A. Hall.

It is expected that the bulk of the business of the association will be done by the Executive Committee. On the other hand, the association itself will not meet more than once in three months unless the committee has something of sufficient importance to warrant a special meeting. At these regular meetings lunch will be served and other social features introduced. The annual dues were raised from one to three dollars.

The association as a body feels very much pleased and encouraged at the working of the schedule adopted November 1. So far as it knows there have been no wilful violations of the adopted price list and the public are taking to it very kindly. Many of the members believe that the drug trade has seen its darkest hours and that good times are ahead. The increasing number of proprietors who will sell only to those who contract not to sell below a certain fixed price is a matter of congratulation to the druggists here. Many believe that the whole subject is up to the proprietors, and they are delighted at the number falling into line.

NOTES.

—The first bowling contest of this season between the teams of the wholesale drug houses, Detroit, will take place next Wednesday evening. W. R. Macadam, Frank Andres, William Campbell, William Moffat and M. Teagan will make up the personnel of the Farrand, Williams & Clark team; Henry Perry, Charles Carlisle, George Jones, William Hedges and William Anderson will play for the glory of the Michigan Drug Company. It is hoped that a league may be formed a little later which shall comprise teams from the manufacturing chemists of the city. So far, Nelson, Baker & Co. are the only firm among them which has signified an intention to come into the league. A series of games between the druggists and Nelson, Baker & Co.'s chemists is being planned and it is probable that a game will be played some time next week. General interest in the game of bowling has received quite an impetus in the city of late. The druggists did some excellent work at it last winter and expects to have a good many challenges to play from outside parties.

—F. E. Westervelt, representing Seabury & Johnson, and Eugene Ross, of Johnson & Johnson, visited Detroiters during the week. J. W. Davis, formerly in the drug business at Fenton, was also among the visitors.

—The Detroit Retail Drug Clerks' Association will give an informal hop at the Light Infantry Hall next Tuesday evening, November 20. It will be the first of the season and the boys are planning for a good time.

CHICAGO.

CHICAGO APOTHECARIES' SOCIETY MEETS.

Chicago, Nov. 17.—The Chicago Apothecaries' Society met at dinner yesterday at the Union Hotel. Some twenty members were present, President George R. Baker presiding. Matters of proposed pharmacy legislation were discussed with special reference to the most recent decision of the Supreme Court of the State, and a committee consisting of Thomas V. Wooten, James H. Wells and A. E. Ebert was appointed to consult with the committee on legislation of the Chicago Retail Druggists' Association and the Executive Committee of the Illinois Pharmaceutical Association with a view to united action for the purpose of bringing before the coming session of the General Assembly suitable amendments to the present law to meet the emergency created by the decision in the Noel case.

The consensus of opinion seemed to be that the power

by the present law sought to be given the Board of Pharmacy to license unqualified persons to sell patent and proprietary medicines should be stricken out inasmuch as the Supreme Court had declared such an enactment to be class legislation and therefore unconstitutional.

A committee consisting of Albert E. Ebert, Dr. Cornelius L. Clancy and Bruno Batt was appointed to draw up suitable resolutions on the death of Dr. Edward R. Squibb. The following are the resolutions:

"WHEREAS, It is with deep sorrow that we have learned of the death of Dr. Edward R. Squibb, at Brooklyn, N. Y., on the 25th of October, 1900. Therefore, be it

RESOLVED, That the Chicago Apothecaries' Society hereby testifies to the esteem in which it held Dr. Squibb, who by his lifelong and unselfish labors for the advancement of the sciences of medicine and pharmacy, has made for himself a place among the good and great characters of the nineteenth century.

RESOLVED, That we hereby offer our condolences to the bereaved family of the deceased, whose death has robbed the professions of medicine and pharmacy of one of their ablest, most conscientious and most useful members.

Mr. Prouty, organizer for the Chicago Retail Druggists' Association, was called upon and stated that he had organized the druggists of twenty-five out of the thirty-five wards of the city and will have the whole city covered and the work finished inside of three months. He said he had little trouble in getting druggists proper to agree to a resumption of prices. His chief difficulty has been to persuade department stores to come up to the advance as agreed upon by the organization.

Mr. Wooten then presented a set of resolutions asking Congress to repeal Schedule B of the Internal Revenue act. The resolutions were passed and the officers of the society were directed to bring them to the notice of the proper committee of Congress.

A special assessment of one dollar was levied on each member to meet the dues of the society to the N. A. R. D. for the coming year. George A. Graves, president of the Chicago Retail Druggists' Association, was elected a member of the society. This again completes the full quota of membership, which is forty members.

Bowling.

Chicago, Nov. 17.—The Chicago Drug Trade Bowling League has been organized. A meeting was held yesterday, at which officers were elected and committees were appointed. The following were present: L. B. Olson, of Morrison, Plummer & Company; A. Bauer, of Bauer & Black; E. L. Blanding, of E. H. Sargent & Company; W. W. Ray, of Truax, Green & Company, and F. W. Armstrong, of Peter Van Schaack & Sons. F. K. Lyon was elected president and F. W. Armstrong secretary and treasurer. Messrs. Bauer, Ray and Olson were appointed a committee to arrange for alleys, and Messrs. Bauer, Ray and Blanding were appointed a committee on constitution and medals. The next meeting will occur on November 19. The following is the score recorded last night by the Chicago Drug Trade Bowling Club at Mussey's:

Baacki	140	147	159
Matthos	104	94	140
Fechter	119	105	102
Olbort	132	146	128
Waldron	175	117	122
Storer	169	155	223
Thomas	139	222	149
Baker	174	162	167
Medbery	131	167	174
Bauer	155	149	170
Armstrong	144	213	159

Mr. Storer won the high average medal for the week. The improvement medal for the month of October is held by Mr. Olbort.

The Delta Bowling Club held its first meeting on Thursday evening, November 15. The following were the averages made:

George Ernst	3	game s.	198
Walter Baring	3	"	193
Chas. Davidson	5	"	185
Dr. F. Thurston	4	"	175
Oscar Leistner	4	"	173
J. Hugh Foster	5	"	160
A. J. Miller	5	"	147
C. A. Davidson	5	"	136
Ed. F. Mallory	4	"	135
Jas. A. Davidson	3	"	135
John Sponsel	1	"	128

The annual election of officers was held, resulting in

the election of George Ernst as captain, Oscar Leistner treasurer and J. Hugh Foster secretary.

NOTES.

—The following invitation sent out on the 13th inst. speaks for itself:

Chicago, Nov. 12, 1900.

Dear Sir—Your presence is earnestly desired as a guest at a dinner to be given by the gentlemen whose names appear below, Tuesday evening, November 20, at 6 o'clock sharp, at Nos. 75 and 77 Randolph street, third floor.

The dinner is to be given for the purpose of organizing a Drug Trade Club of members of firms and heads of departments of wholesale drug houses, manufacturers and branches allied to the drug business, at a moderate expense to its members, the object being to establish a club room convenient to all, where the members may meet every day for lunch. It is believed that the proposed organization would engender a spirit of good fellowship among those who are either directly or indirectly associated in the same line of trade, with happy results to all.

Please advise Mr. Charles E. Matthews by mail at once if you will honor us with your presence. Yours very respectfully,

H. A. Antram, E. H. Buehler, L. A. Becker, Henry Beck, C. M. Phelps, Samuel H. Gunder, Frank Hereth, Harry Holland, Chas. E. Matthews, John F. Matthes, Ed. F. Malloy, Romaine Pierson. Informal.

—It is currently reported that the store of the E. Von Hermann Pharmacy Company at Indiana avenue and Thirty-first street, has become one of a number of stores owned and controlled by a local syndicate. These stores comprise the following: The Lexington Pharmacy, at Michigan avenue and Twenty-second street; the Auditorium Pharmacy, at Congress street and Wabash avenue; Buck & Rayner, State and Madison streets; Buck & Rayner, at Madison and La Salle streets; the People's Drug Company, at Clark and Monroe streets; The Colbert Chemical Company, at Monroe and Dearborn streets; the Twentieth Century Drug Store, at 92 State street, near Washington street, and last the E. Von Hermann Pharmacy Company's store.

—W. C. Hasse, formerly with Bauer & Black and later with the Public Drug Company, has succeeded W. F. Rudolph as West Side salesman for Peter Van Schaack & Sons. Mr. Rudolph takes a position with the Liquid Carbonic Acid Manufacturing Company as city salesman and will be glad to meet his old friends at any time.

—Herman Luckritz has succeeded Walter F. Meyer at 2901 Wentworth avenue.

THE NORTHWEST.

Where Is the Druggist's Dog?

St. Paul, Minn., Nov. 16.—"Joe" Conger, who runs the drug store at Selby avenue and St. Albans street, this city, is having a perplexing experience with a dog, or, rather, the absence of a dog. Some days ago a relative in Iowa expressed a fine Irish setter, worth \$100, to Mr. Conger. The dog got away en route. Mr. Conger, telephoning the express agent, insisted that the dog must be delivered to him and the agent promised. In due time the dog—that is to say, a dog—was turned over to Mr. Conger by the express agent; but this specimen of the four-footed friend of man proved to be the property of a prominent brewer, who came, identified the dog and took him away. And now Mr. Conger is after the express company with a demand for \$25—all that the law requires the company to pay.

NOTES.

—W. W. Noble, the druggist at Fourth and St. Peter streets, has a novelty on exhibition in the shape of a Japanese mouse which he caught in his store a year ago, but has withheld from the public gaze till now. The mouse is a curious little creature in more ways than one. His head, neck and shoulders and one hip are black, his feet and tail pink and all the rest of his tiny anatomy white as snow. The mouse is tame and harmless, regards his wire cage as his permanent home and even when let out makes no attempt to escape. He is as restless and active as a flea and persistent as a collector and puts in hours at a stretch capering around so fast as to describe an indistinct blur.

—Successions: C. H. Wheeler, Blencoe, Ia., by W. G.

Backer; J. H. Cool, Owatonna, Minn., by Charles F. Curtis; H. E. Ayare, Lindsay, Neb., by D. G. Walker; J. A. Wray, DeSoto, Ia., by W. L. Sackett; F. Mikiska, Jr., New Prague, Minn., by K. S. Iltis; A. Kieffer & Co., Wales, N. D., by L. A. Kjos & Co.

—Dr. Morris P. Pomeroy, the well-known pharmacist and practitioner of Minneapolis, is so seriously ill with a nervous affliction that his life has been despaired of. The trouble began several months ago. The patient has been unconscious for several days.

—A. Clark, of Vermillion, S. D., has on exhibition in one of his drug store windows a live gray eagle. The bird was captured near the Missouri River and is quite a curiosity, as the species has become very rare during recent years.

—D. Wesley St. Clair, clerk for Joseph J. Conger, of St. Paul, has been paid \$24 by an accident insurance company. The Era has already told of the fire in which Mr. St. Clair's hair was singed, face blistered and hat ruined.

—Burglars at Thompson Falls, Mont., blew open a safe and caused a \$30,000 fire. Among the losers was J. W. Gates, whose drug store was burned, though his stock was saved.

—W. E. Burke, who has been at Milaca for some weeks, owing to the serious illness of his father, has now returned to work and was in the city on Wednesday.

—Harry F. Clark, of Hutchinson, was in the city on Friday on his way to Wisconsin, where he is called to take charge of a drug store.

—Dr. F. M. Carter, Elk City, Ore., is reported to have bought Dr. R. E. Darnell's drug store at Toledo, same State.

—A voluntary petition in bankruptcy has been filed by William Eugene Swift, Moulton, Ia.

—The San Pete Valley Soda Water Co. has incorporated at Mt. Pleasant, Utah, with \$2,500 capital.

—George W. Barry, of M. N. Barry & Co., Grey Eagle, Minn., is bankrupt.

—The Sandy, Utah, Drug Company's stock was damaged by fire this week.

—G. M. Larson has gone to work at Hector in Dr. D'Arms' drug store.

—John H. Beise, of Mapleton, was in the city on Friday on business.

—W. B. Strom, Hector, Minn., sustained a slight fire loss Tuesday.

—Harris & Morrison are reported starting at Wallowa, Oregon.

—Lee Z. Emmert, of Takio, Mo., is visiting friends here.

ST. LOUIS.

Drug Clerks Dance.

St. Louis, Nov. 17.—The St. Louis Drug Clerks' Society gave their annual ball at Pickwick Hall, Jefferson and Washington avenues, last Thursday night. The affair was largely attended and every one present had a very enjoyable time. Many thanks are due to the local wholesale drug firms and many local pharmaceutical manufacturers who so kindly contributed in the way of purchasing a large number of tickets. This is probably the last ball this organization will give for some time to come as the members feel that they can spend their money and energies to far better advantage, especially as their sister organization, the Alumni Association of the St. Louis College of Pharmacy, gives an entertainment and hop each year, and they feel that one ball per year is sufficient for the druggists.

NOTES.

—The game of cocked hat goes on among the pill rollers and as the season advances the enthusiasm increases. The special team which was entered in the Commercial League showed the penmen a trick or two and as a result their first match resulted in a shutout for the Cosmos, which was considered one of the crack teams of the Commercial League. The results of last Thursday's work of the Druggists' Cocked Hat League was as follows: Meyer Bros. Drug Co. 5, Eli Lilly & Co. 0; Moffit-West Drug Co. 3, The Searle & Hefreth Co. 2; Mound City Paint and Color Co. 3, J. S. Merrell Drug Co. 2.

—The Alumni Association of the St. Louis College of

Pharmacy will hold its second scientific meeting and smoker of the season at the College building on Tuesday evening, November 20. The lecture will be delivered by Dr. Emil Grebe, and his subject will be "Essential Oils and Their Manufacture." It is expected that there will be a large attendance, as these meetings are intended to promote good fellowship and acquaintance among the members.

—Luke B. Russell, a well-known local drug clerk, has been missing from his home for several days. He left a letter saying he intended committing suicide, but his seriousness is very much doubted by his many friends. Financial and other reverses are attributed as the cause of his action.

—Dr. O. F. Claus has purchased the drug store at Mississippi and Park avenue from G. H. J. Andreas. Mr. Andreas has another store at Vandeventer and Shenandoah avenues, and has long felt that it required all of his time and attention. Dr. Claus also has a store in North St. Louis.

—O. W. Heyer has sold his drug store at Jefferson avenue and Olive street to his former chief clerk, T. J. Huhn. Mr. Heyer has been in business in this city for over forty-six years and now feels that he is entitled to retire.

—Bert H. Rives, a young East St. Louis druggist, was married on November 7 to Miss Maud I. Boyles, of that city. It was a very quiet affair and the news has just reached his many friends on this side of the river.

—Max Hinrich has been placed in charge of the Owl Pharmacy at Fourteenth and Clark avenue. Alex. Crusius, the former manager, desires to purchase a store and is in quest of a desirable location.

—O. W. Kile, for the past two years prescription clerk at the City Hall drug store, has left for Kansas City, where he and his brother have purchased the J. J. Huber drug store at 1901 Vine street.

—A. C. Skinner, formerly with Judge & Dolph at Seventh and Locust streets, has purchased the drug store at Vandeventer and Easton avenues from Charles Schrier.

—Ed. Roberts, of East St. Louis, is moving his store from Collinsville and Pennsylvania avenues to St. Clair and Collinsville avenues.

—The Ilch Bros., at Leffingwell and Franklin avenues, have sold their drug store to their father, David Ilch, of Alton, Ill.

—C. C. Wright, of New Madrid, Mo., has been in the city for the past few days purchasing an extensive stock of drugs.

—Max Dehne, a local relief clerk, was recently married to Miss Minerva Frank, of the South Side.

—The Rocky Mountain Medicine Co. has just located in new quarters at 1707 Market street.

The Dr. Harter Medicine Co., of Dayton, O., has passed into the hands of a company of Springfield and Dayton capitalists. Mr. B. H. Winters, a prominent business man of Springfield, formerly in the newspaper business, will be the practical head of the new concern. Mr. Winters has already taken charge and is now hard at work reorganizing the business. He is also president of the Winters Art Lithographic Co., of Springfield, and will divide his time between his new duties and his Springfield business. Mr. Harry Yeazell, for several years secretary of the old Harter Company, will be the assistant manager. The Harter business was established in 1855, and has, until recently, been controlled by members of the Harter family. For many years the business was located in St. Louis, but about five years ago it moved to Dayton.

One of the best known menthol inhalers now on the market is Smith's, and in the advertisement on another page in this issue are given the reasons why every druggist should carry this inhaler in stock. The principal reasons are that it is filled with pure Japanese menthol, not half cotton or shavings like some of the cheaper inhalers. It is put up attractively and it retails for 25c. The customer gets more for his money in Smith's than in any other inhaler, and the druggist gets more profit than he would if he sold a ten-cent article. All jobbers keep it, or it can be bought directly of the manufacturers, the Smith Inhaler Company, Boston, Mass.

STATE OF TRADE.

A Rather Uneventful Week.

New York, Nov. 20.—It has been a rather uneventful week in the general drug and chemical market so far as important developments are concerned, and noteworthy fluctuations have been limited to a comparatively small number of articles, but as noted last week the consuming demand has continued to show gradual increase and the movement into the various channels has been satisfactory to dealers. The quinine situation has undergone very little variation and former prices are still current. Manufacturers report a very light run of orders and the bulk of their business has been in contract deliveries. The outside market, however, is somewhat steadier and it is claimed that about all the small scattering parcels have been bought up. Consequently holders are firmer in their views regarding values, and there is less disposition to shade manufacturers' quotations. At the monthly bark sale in London last week prices declined about 25 per cent., but the unit value was only slightly under that of the previous Amsterdam sale and speculative holders of quinine became more hopeful of an early improvement in market conditions.

Opium has continued decidedly strong under the influences referred to in this column last week, and importers have further advanced their quotations 5c. per pound, while the inside figure for powdered is fully 10c. higher. Morphine quotations have not yet been advanced by manufacturers, but consumers have been purchasing freely in anticipation of such a move, and the market has shown considerable activity. Menthol has scored a sharp advance, due to correspondingly firmer markets abroad. Cables from London reported stocks exceedingly small with values so much higher than the previous quotation that it was at first supposed there was some mistake, but when the advance was confirmed a buying movement set in and prices moved steadily upward with each succeeding sale. Spot supplies also are light and with the available stock more closely concentrated holders are inclined to offer cautiously, even at the advanced figures, as indications point to further improvement in the near future.

Lycopodium is in better supply and as the consuming demand has subsided holders have modified their views to the extent of reducing quotations fully 2@3c. per pound. Ergot is firmer in sympathy with foreign markets. Canada balsam fir is higher owing to scarcity both here and in producing markets. Cacao butter has declined slightly under the influence of lower prices at the London and Amsterdam auction sales last week. Among the roots, golden seal and senega are both firmer under light spot stocks and continued strong producing markets. The stock of whole althaea in first hands is practically exhausted and quotations for cut are materially higher. Cannabis indica is very scarce and prices of green tops show a substantial advance. Star anise seed is slow of sale and with supplies abundant the feeling among holders is easier and quotations for round lots have been reduced about 2c. per pound. Bayberry wax is lower under similar conditions. In the department of essential oils the only change in quotations is a slightly higher range for clove, due to an improvement in the position of the spice.

Owing to keen competition from outside holders, manufacturers of cream tartar and tartaric acid have reduced their quotations $\frac{1}{2}$ @ $\frac{1}{4}$ c. per pound and the market is somewhat unsettled. Permanganate of potash also is $\frac{1}{2}$ c. per pound lower from first hands.

A Good Week in Boston.

Boston, Nov. 17.—This week goes on record as one of pretty good business. The demand for drugs is reported satisfactory, sales for the most part being of a jobbing character. Opium and quinine are firm and are a bit better sought than last week. Nitrate of soda is a little stiffer in price, other than which no material changes in the list of chemicals are noted, general trade being fairly good. Much the same may be said of dye-stuffs, which show little change. Alcohols are livelier, and trade in them, especially wood, just at present, is excellent. Waxes are steady and without special feature.

Post Election Business Quiet.

Baltimore, Nov. 19.—Marked quiet has prevailed in the drug trade here ever since the election. Several days before the national contest a lull set in, and ever since then a marked reaction has manifested itself. This applies to the wholesale trade as well as to manufacturing operations. A strong feeling of confidence prevails, however, that the future will bring a decided improvement. The present quiet is generally regarded as something which was to have been expected, and as being of a temporary character. No new developments have occurred in the market for botanicals. Values are fairly steady, but a spirited demand for goods does not exist. Heavy chemicals are moving in moderate quantities. Among the retailers there is the usual volume of complaint about slack business and small margins. There appear to be too many stores for the volume of trade that can possibly be developed, and competition reduces profits.

Very Good Report from Detroit.

Detroit, Nov. 17.—There has been no change in the situation here since a week ago, except that some of the downtown druggists, who depend largely on the transient trade, report that they have been quite a bit busier. The weather is conducive to all kinds of rheumatism, and almost anything in the shape of a cold, but for some reason all Detroit is not limping and coughing. In the country it is better—for the druggist. A splendid holiday trade is reported at both wholesale houses.

Trade Active in Chicago.

Chicago, Nov. 17.—Business has been very active this week among all the branches of the wholesale and manufacturing drug trade. The demand on all staple goods and on sundries has been active, and collections are good. The season promises to be one of the heaviest the trade has ever known. Fancy and holiday goods are still in demand, though the call for this class of goods is easing off owing to the nearness of the holiday season. The week has shown few failures, and the outlook is of the best.

Downward Tendency in Linseed Oil.

St. Paul and Minneapolis, Minn., Nov. 16.—The most significant outcropping of this week has been the accumulating evidence that linseed oil, ground oil cake, etc., are on the point of dropping materially in price. No general drop has yet taken place, the decline of 5 cents on linseed oil in Chicago a week ago not having extended to these cities, but one is looked for ere long. The downward tendency has, however, reached the point of rate-cutting on ground oil cake, which one firm is offering at \$34.50, or \$1.50 under the market quotation. The jobbers are receiving orders from all over the Northwest at a lively rate, proving the acceleration of business by the passing of ante-election doubt. All kinds of reports are made by retailers. Most of them agree that improvement is manifesting itself. One St. Paul dealer—and he is not the only one in that boat—says trade this week has been "rocky." Yet the month thus far has averaged better than October. Collections remain unsatisfactory, as a rule.

The Royal Lather Brush.

We illustrate on another page a new lather brush which ought to find ready sale. While it is true that the retail price is a little higher than ordinary brushes, the profit on it is very much greater, which ought to commend it to druggists with an eye to the business side of their profession. The Royal Lather Brush is made of solid, fine, French bristles, with ebonized handles and aluminum ferrules. The ferrule is adjustable, so that the user may have a long brush or a short one, a soft one or a hard one at will. The upper ferrule also keeps the brush in shape so that it never twists. There is no twine binding to rot, nothing to split nor to crack, and the brush is a light, neat, durable and a thoroughly perfect toilet article. By adjusting the upper ferrule a short, hard brush may be made to rub in the lather, doing away entirely with the use of the fingers.

With the first purchase of one dozen Royal Lather Brushes a very handsome display stand is sent, one of the most effective ever furnished with any toilet article. It sells brushes wherever it is placed upon the show case. It is a fac simile of a perfect lather brush, securely mounted upright upon a small, white, triangular base. Some retailers put it upon the cigar case where it attracts the attention of every man who enters the store. A sample lather brush will be sent to any retail dealer who will send his business card or letter head to the manufacturers, The Thompson Manufacturing Company, Troy, N. Y.

—Frank Gorski, who owns a drug store at Milwaukee, Wis., but who was not registered, was fined \$50 and costs for conducting a pharmacy with no registered pharmacist in charge.

NEW ADVERTISEMENTS IN THIS WEEK'S ERA.

MARKET REPORT.

NEW YORK MARKET.

New York, Nov. 20.—A continued steady but gradual improvement in the general volume of business is noted and the market retains a fairly firm undertone with prevailing conditions satisfactory to dealers. Fluctuations in values, however, have been limited to a few articles and the changes for the week are mainly unimportant.

OPIMUM.—There is no abatement of the stronger feeling noted last week and jobbing quotations show a further advance to \$3.50@3.75 for 9 per cent. and \$3.60@3.85 for 11 per cent., according to size of order.

POWDERED OPIMUM.—Dealers report a continued moderately active movement into channels of consumption and jobbing quotations are steady at \$4.60@4.75 for 13 per cent. and \$5.10@5.25 for 16 per cent., as to quantity, the higher figures for single pounds.

MORPHINE.—The expected advance in manufacturers' prices has not yet materialized and jobbers are willing to sell at prices on the old basis of \$2.40@2.60 for eighths, according to brand and quantity.

QUININE.—A quiet condition of affairs has prevailed throughout the market and the limited wants of consumers are being supplied at prices on the basis of 34@35c. for bulk in 100-oz. tins.

ERGOT.—Foreign markets show further improvement, but jobbing parcels on the spot are yet obtainable to a moderate extent at the former range of 70@80c. for whole and 80@90c. for powdered.

LYCOPodium.—Stocks in importers' hands are somewhat larger and the tone of the market is a shade easier with jobbing quotations reduced to 68@73c., as to quantity.

BALSAM FIR.—Owing to scarcity both on the spot and in producing markets holders are decidedly firmer in their views and jobbers have advanced their quotations to \$3.10@3.35 per gallon in cans and 55@60c. per lb. in bottles, inclusive.

GOLDEN SEAL ROOT.—Values are firmer in sympathy with Western markets and quotations for jobbing quantities show a further advance to 75@85c. for whole, 80@90c. for ground and 85@95c. for powdered.

SENEGA ROOT.—A continued firm feeling is manifested on the part of holders and jobbing quotations have been marked up to 62@72c. for whole and 67@77c. for powdered.

ALTHAEA ROOT.—The available stock of cut is materially reduced and jobbers have advanced their quotations to 33@35c. Powdered is held at 36@41c.

CANNABIS INDICA.—Values are higher owing to scarcity and the revised jobbing range for prime green tops is 60@70c. and for powdered 70@80c.

ANISE SEED.—The star variety is in more liberal supply and the market is easier, with jobbing quotations reduced to 33@35c.

MENTHOL.—There has been a sharp advance in values both here and in foreign markets, due to extreme scarcity, and the revised jobbing quotations are \$4.50@4.75 by the pound and 35@40c. in ounces.

OIL CLOVES.—A firmer feeling in the spice has caused an advance in jobbing prices to 75@85c., according to quality and quantity.

OIL WINTERGREEN.—Producing markets for natural are higher owing to small yield and jobbers have advanced their quotations to \$2.20@2.50. Synthetic also is firmer and the revised prices are \$1.15@1.50.

PERMANGANATE OF POTASH.—Manufacturers' prices are slightly lower and jobbers are quoting 22@27c. for crystals, according to size of order.

Pepto-Mangan ("Gude.")

The trade has heard of the disastrous fire which destroyed the Tarrant building in this city and with it the entire plant of the M. J. Breitenbach Co., the American agents for Pepto-Mangan ("Gude"), but probably few have noticed the attempt of the manufacturer of a preparation claimed to be similar to Pepto-Mangan to make capital by sending broadcast to the medical profession a circular letter in which he says: "The day will come when physicians will realize the importance of ceasing to be instigators and propagators of the popularity of certain proprietaries" and will patronize ethical preparations, like his own, for instance. This circular was sent out when the manufacturers of Pepto-Mangan were bending all their energies to keeping their orders filled, and at a time when all their literature was destroyed so that they had no means of counteracting its effect. But the position of Gude's Pepto-Mangan is too firmly entrenched to be seriously affected by such attacks. In spite of the protests against its use by certain interested manufacturers as an unethical preparation, the sales increase simply because the physician knows that it is exactly what it is claimed to be and that there is nothing else which will so surely accomplish the desired results.

THE PHARMACEUTICAL ERA.

EVERY THURSDAY.

I am more than enthusiastic over the Era Course in Pharmacy, because I feel that the benefit I have already received has done me a world of good.

JAMES M. HALL.

Wilmington, N. C.

Read the new announcement on last advertising page, and send for prospectus.

New Class Formed Each Month.

IT WILL BE REPEALED.

The drug trade has good reason to feel gratified by the intelligence of the past week that the Committee on Ways and Means of Congress has formulated a bill, one of the principal features of which is the total repeal of the stamp tax on proprietary medicines. Of course, it cannot be said now with absolute surety that this will be passed when presented to Congress, but there is every reason for the belief that it will. From the President down through the various departments of the national government, there is a desire for a material reduction in the revenues, which are now much more than is needed. The plan is to cut off at least some thirty millions of dollars in this way, and included in this sum is that produced by the tax on medicines, some four or five millions.

The result so far achieved is strong evidence of the weight of influence which can be exerted by an organized body, and the retail druggists of the country may be truly said to have gained a recognition which never before has been accorded them, purely from the fact that they do now present an organized front. Memorials, appeals and resolutions submitted by the retail drug associations, and especially the N. A. R. D., have obviously convinced our law makers that the wishes of the trade are to be treated with their best consideration.

During the past week representatives of the proprietary, wholesale and retail interests visited Washington for the sole purpose of spying out the land and of doing what was possible to advance the project for the repeal of the stamp tax. This representation was small in numbers but weighty in influence. It included the chairmen of the Committees on Legislation of the N. A. R. D., the N. W. D. A., and the P. A. of A.; and, besides, influential members of these organizations, a representative of this paper and of a Western drug journal. The delegation was successful in interviewing in their individual capacity several members of the Committee on Ways and Means, each of whom expressed, of course, unofficially, his belief that the tax on medicines would be removed. A cabinet member, the Secretary of the Treasury, and the Commissioner of Internal Revenue, said the same. As a result of the several informal conferences and interviews, the delegation was impressed with the fact that the drug trade is to receive its dues in this matter, at least to the extent that the Committee on Ways and Means has power.

The bill to be presented in Congress has been ordered to be ready by December 1, and in a very short time now we ought to know what recognition it will receive. But the necessity for work

on the part of the drug trade is by no means at an end. Now is the time to exert all the influence each possesses to induce his congressman to vote for the passage of this bill when it comes up for action. It is not enough to introduce a bill. Unexpected opposition frequently develops, and of sufficient strength to defeat a measure. Every precaution should be taken that such a fate does not overtake this bill. While there is good reason to feel optimistic, let us not rest in false security, but do what we can, each and all of us, to help it along.

Druggists are requested to sign the petition which has been presented in this paper during some weeks past and a copy of which has been sent to every druggist, in order that the combined petition representing the interests of the drug trade as a whole may be presented at the proper time to the Congress of the United States.

THE N. A. R. D. AND ITS WORK.

The heaven is working, and working well. Notice comes from all parts of the country of the organization of local associations of druggists, all with the purpose of co-operating in the N. A. R. D. work. The aggressive cutters, even in localities where the retail trade has not yet endorsed the N. A. R. D., are finding it increasingly difficult to obtain supplies, because of the refusal of manufacturers and jobbers to supply them. A large cut-rate dealer, refused supplies in his home market, has visited without avail this city, Philadelphia and St. Louis, in each of which cities he found that the jobbing trade was loyal to its promise to co-operate with the retailers in their expressed desire that the N. A. R. D. tripartite agreement be made operative. Though the retail druggists of Greater New York are not yet organized in support of the plan, the jobbing trade is doing its part in their behalf. One co-operative buying concern has already gone out of existence, through its sale to a firm which proposes to establish a legitimate wholesale drug business and seek recognition on the list of accepted jobbers. Another evidence of the good work is that concerns in this locality claiming to be entitled to jobbing rates, but who for one or another reason, generally because of their demoralizing trade practices, have been refused recognition on the list of jobbers, are finding their orders almost invariably turned down by the manufacturers of proprietary preparations.

And so from evidence and testimony from all sections we learn that the manufacturers and wholesalers are doing their part; it is up to the retailers to perform their duty. If the retail trade does not want relief, they should continue, as seems to be the condition in some places, to show no interest in the N. A. R. D. and its work. But if druggists are in earnest to secure better trade conditions, better profits on patent medicines, and better times all around, it devolves upon them to immediately combine them-

selves into an organization which shall affiliate with the N. A. R. D., and by this means secure the protection afforded by the jobbers and manufacturers in carrying out the plan decided upon by the three national organizations.

Organize, organize, and you will get what you want. Without organization you neither deserve nor need expect relief.

THE SALE OF POISONS IN GEORGIA.

A few days ago a bill was introduced into the Senate in Georgia to make it a misdemeanor for persons to sell, give, or in any way furnish to any person, either morphine, opium or cocaine, except upon the prescription of a physician. Physicians will be allowed to procure these drugs whenever they wish. It is stated that this bill is the result of disclosures showing the enormous increase in the consumption of these drugs, as reported frequently in the newspapers and by druggists themselves. We cannot see anything to object to in this measure, if the statement above relative to its character is correct. There cannot be too stringent a law to confine the sale of narcotics, and in fact all poisonous drugs, to properly qualified druggists and by them only to those who have real need for them in a medicinal way. Anything beyond this is a menace and an injury to the people which should not be tolerated.

THE ERA BLUE BOOK.

The next edition of the Era Blue Book will be issued in January and will contain a number of additional and especially valuable features. The work of compilation is now nearly completed, but we wish to request every maker of a proprietary preparation, who has not yet sent us the correct names and retail and dozen prices of his preparations, to do so at once, in order that the list of these articles in the Blue Book may be complete. This is the last opportunity, so we urge every one interested to take immediate advantage of it.

Itachitol.—Trade name for a new kidney preparation (organo-therapeutics). It comes into trade in tablet form.

Ichthyodin.—Trade name for a purified ichthyol, said to be free from the sulphones and the volatile oils of the latter.

Bonducin.—The bitter principle of bonduca seed. It has been found efficient, in doses of 10 to 20 cgm., in intermittent fevers.

Helko.—Trade name for a new composite synthetic oil, used in perfumery, and consisting of a mixture of Jasmon and Indol. It is an exact reproduction of the odor of the freshly opened jasmine bloom.

Ichthargan.—Trade name for a combination of ichthyol and silver, containing 30 per cent. of silver bound up with ichthyolsulphonic acid containing 15 per cent. of sulphur. It appears as a brownish, odorless powder, completely and readily soluble in water.

Actineon.—A tincture-like liquid, said to contain sarsaparilla, portulacca, etc., and used in diseases of the bladder, it is claimed, with high satisfaction. It is also recommended in certain diseased conditions of the stomach and intestines.

THESE ASK REPEAL OF THE TAX.

Replying to your petition to Congress of United States allow me to say to "No. 1" that I, as a legitimate retailer and one who always keeps prices up, that in my estimation the manufacturer has left too much to us. "We have troubles of our own" and have no one's burden but our own. Let the manufacturer take a few steps in this way and give a little relief to the legitimate retailer; there will be a little more sense in it. Let this be plenty for "No. 1" for this time, but let the balance of the manufacturing people do as much for the cause as the retailer is the wish and expression of

WM. M. HAMFORD.

Plymouth, Neb.

We note in Era the petition to Congress for removal of Stamp Tax, Schedule B. It's a good move. Had the writer read the Era closely after receipt would have sent for a petition. If not too late you can send us one. However, we have already sent our petition in one other direction and have written to our Congressman, Hon. W. P. Brownlow, who has influence, and received his reply.

ANDREWS MFG. CO.

Bristol, Tenn.

Please send me a copy of your petition to Congress. I am the only druggist here, but will gladly add my name. We have a physician here who holds his own drugs, but he says he is not interested enough to add his name. I think the Era should have the support of all as you are always doing something to aid us in our work.

MRS. R. E. REMER.

Waconia, Wis.

Referring to your offer on page 475 of The Pharmaceutical Era for November 1, we write to ask you to kindly send us twenty-five copies of the petition to Congress. We will see that every druggist in this county has an opportunity to sign it.

MICAJAH & CO.

Warren, Pa.

We hand you our petition to Congress as wholesalers and manufacturers. It is the latter portion of our business that the Stamp Tax hurts the worst, as we put out quite a line of proprietary articles. Push the good work along.

Corry, Pa.

N. F. AMES & CO.

We enclose petition signed by our local druggists and ourselves. It is unnecessary for us to tell you that we are in full sympathy with this cause and we trust that you will be successful in your efforts to secure the repeal of this class legislation.

PEPSIN SYRUP CO.,

Per Allen F. Moore, Secy.

Monticello, Ill.

Herewith we hand you petition signed by the Toledo druggists. We hope Congress will take the matter up at an early date with a view of repealing the War Tax.

THE WALDING, KINNAN & MARVIN CO.

Toledo, O.

W. J. Wolding, Pres.

We enclose herewith another batch of signatures to the petition to Congress, which have been secured by one of our salesmen.

HANCE BROTHERS & WHITE.

Philadelphia, Pa.

Enclosed find petition endorsed by parties interested in this place. Wishing you success in this effort.

R. S. FREEMAN & SON.

River Falls, Wis.

We herewith enclose list of names to petition to Congress to repeal Stamp Law on patent medicines.

TROY CHEMICAL CO.,

Troy, N. Y.

F. O. V.

The Stamp tax must go. Send blank petitions and we will get them filled

A. D. TALHOTT & CO.

Grinnell, Ia.

WEST AMHOV, N. Y.—Stanton & Jocelyn.

The French Perfumery Section is certainly one of the most attractive courts of the 1900 Exhibition. In the perfume trade, France may be still said to be the leading nation of the world, and she has here shown her products with much taste and skill. In fact, this has been stated by competent authorities to be the finest display of the kind ever made, and, as the artificial perfume industry advances with giant strides, it may possibly remain on record as marking the apogee of the commerce of natural perfumes.

PIERRE-FRANÇOIS LUBIN.

Born, 1774; Died, 1853.

For some reason best known to the organizers of the Exhibition—possibly because it is an art that especially appeals to the fair sex—the French Perfumery Court is placed in the Dress and Textile Building, a very central

and advantageous site. No one could help being attracted by the elegant pale-yellow trellis work, surmounted by baskets and garlands of flowers, which frames the various exhibits. In the center is a fountain, surrounded by plants, with a tinted female statue bending over a pool of water, doubtless symbolical of the toilet in primitive ages. Around are grouped the leading firms. The dozen who occupy the central and most prominent positions are known all the world over, and it would be an invidious task to say which has shown the most exquisite taste in setting out its goods. The sign of the "Flower Basket" over one of the four big corner stands draws our attention to Pinaud's perfumery, where M. Victor Klotz has a dainty decoration in pale blue and gold, with a panel of Cupid's bearing flowers, and some very original show cases with the panels adorned with gilt bulrushes. His opposite neighbors, M. M. Javal and Parquet, exhibit Houbigant's perfumery in a stand where Mucha, the famous Hungarian artist decorator, shows us a masterpiece of mural art symbolizing the flowers from which perfume is obtained. Vibert, in a third corner site, has another emblematic composition in the New Art style, a female figure in an attitude of ecstasy as the fumes from a brazier of perfumes wreath around her form, while the front of the stand bears the inscription *SI DEAMBULANS STES SALVE GAUDEO SI INTRES*. Roger & Gallet's soaps, essences and perfumes ("Delicia," "Celtis," etc.) are put before the public in a most attractive manner. M. Gallet, by the way, has recently been named a Chevalier of the Legion of Honor for services rendered at the Exhibition. The Louis XVI style of Lubin's stand reminds us that this firm was founded over a century ago; the business is now conducted by M. Paul Prot. The other central stands are L. T. Piver's (New Art style), E. Coudray's extensive show, Guerlain's, with pretty views, the Oriza perfumery (Raynaud's), Violet, Ch. Fav, Gelle Freres (Lecaron and fils) Dorin and Chiris. Some twenty other firms occupy less conspicuous sites, but in many cases make excellent exhibits, we may merely cite the famous Eau de Botot, which, although badly placed, has a most elegant show furnished in the Empire style, while the "Dentifrice of the Benedictine Fathers" may be quoted as one of those monastic products so frequently met with in France. But although the taste with which this French perfumery is put up for retail may tempt one to linger in this part of the section, the most interesting feature, perhaps, is the

Raw Perfumery Exhibit.

The annual value of raw perfumery produced in the Alpes-Maritimes department is between three and four million dollars; some 2,000 tons of roses, 2,500 of orange blossoms, 200 each of violets, jasmine, etc., are yearly treated in the Grasse district. This little town has been

GRASSE.

a seat of the perfumery industry for centuries, and all the leading manufacturers are represented here. The biggest show is by Roure Bertrand; Bruno-Court's "Perfumery Factory of Our Lady of the Flowers," founded in 1812, intersperses its exhibit with interesting photos. Warrick Freres are well known in America and England, their Violet, Rose, Tuberose, Mignonette and other essential oils and pomades are put up in neat bottles and nicked cans, all with the gross and net weights elegantly inscribed in gilt letters. A pretty device adopted by some firms is to vary the array of bottles and jars by strewing artificial flowers (roses, violets, jonquils, etc.), over their goods. Pillet and Denfert exhibit each bottle in its wooden case; M. Pillet, we notice, is the joint author of a recent work on Essential Oils. A dozen or twenty other firms are here represented, and liquid, solid, concrete and other forms of raw perfumery may be studied so far as glass cases permit, for printed matter and attendants seem alike scarce in this wholesale portion of the perfumery exhibit.

There are some interesting exhibits of

Imported Raw Perfumery.

which deserve to be briefly noted. Chiris, for instance, shows "catties" or original boxes of Hangkow, Tonkin and Siankong musk, Mexican and Bourbon vanilla in glass jars, horns of civet and Bulgarian essence of roses in the original two-kilo flasks of flat form, covered with flannel and sealed with five seals as shown in our sketch. In Augier's exhibit we also noticed specimens of myrrh, castoreum, opoponax, sandalwood and Siamese benzoin, while Robertet has Florence orris root, tonka beans, etc., etc. The most varied exhibit is, perhaps, that of Bing Fils & Cie, who have Javan citronelle leaves and vetiver (lemongrass), a specimen of black amber found by a whaler of Provincetown (Mass); photographs of the ylang ylang distilleries at Manila, etc., etc.

Civet

is imported in horns, as shown by our sketch, and this firm shows two horn-shaped glasses which very clearly demonstrate the difference between the wild civet (almost black) and the light yellow-colored article produced by the domesticated animal (which is fed exclusively on "doure"—a sort of maize—and beef), preferred by perfumers as more powerful and aromatic. The flavor of honey which characterizes "wild" civet is supposed to be due to the animal's taste for this food, while the dark color may be due to the same cause, or to oxydization. Messrs. Bing & Co. have a couple of curious show cases in the Forestry Building alluded to in a preceding article, one showing the wild civet in the forest and the other

a Galla native extracting the perfume from one of his furry charges. For Abyssinia is the civet's home. Until recently all civet imported was of mixed quality, but since French firms have established agencies in the Emperor Menelik's domains (at Addis-Abba) the pure domesticated article is obtainable. During the recent war in Abyssinia, so disastrous to the Italian arms, the merchants were obliged to import from Zanzibar a civet of inferior quality, for there, it appears, wild and tame animals feed alike on vegetables. At that time the price of civet rose to \$190 per lb. (for an epidemic killed off hundreds of the animals at Choa); but nowadays wild civet is worth about \$35, and the product of the tame animal \$45 per lb.

Hunting the Musk Deer

is illustrated by another group in the next case, which we have sketched as a curious representation of what may soon be a thing of the past. The Chinese huntsman, it may be noticed, uses a bow and arrow and endeavors to lame rather than kill the animal. If the wounded deer

PERFUME BOTTLE

turns out to be a female, he simply binds its wounds and sets it at liberty; if a male, he stabs it and removes the musk pod as shown. (Here, as with the civet, the quality of the perfume appears to vary with the animal's food). In spite of all these precautions, the musk deer is becoming very rare; in Thibet alone is it now found in numerous herds. The expression "Tonkin Musk" used to designate the finest quality, dates from the time when all musk used in French perfumery was collected and shipped here by the Catholic missions in Tonkin. When Shanghai became an open port the trade centered there; the musk was all shipped to London and sold by auction. But since 1870 French firms have begun to import direct, via Marseilles, and Paris is now quite an important center for the finer qualities. It arrives in

"catties," little boxes of much the same size and shape as those used for cigars, and covered with Chinese inscriptions and decorations—several of those here shown represent the hunting of the musk deer as the Chinese artist pictures it.

The Perfumery Jury

consisted of MM. Paul Prot, L. Fiver, A. Darrasse, A. Bagot, Brach, Gallet, Victor Klotz, etc., for France, J. L. Leichner (Germany), J. Laurier (Great Britain), Rousanoff (Russia), and George R. Lorenz (United States). All the firms with which jurors were connected were, of course, not allowed to compete. Grand prizes were awarded to Colgate & Co. (U. S. A.), J. & E. Atkinson and Pears' Soap (England), J. M. Farina and J. G. Monson & Co. (Germany), Chiris, Lecaron, Vibert, Guerlain, Rebas, Raynaud, Chonet, Michaud, Beyer and Roure Bertrand (France), and Brocart & Co. and Ralbot & Co. (Russia), while thirty gold and thirty-one silver medals were also granted.

The Retrospective Section

is a feature of the Perfumery Court which should by no means be overlooked. Many private collections of great value are here represented; M. M. Chappey, Helft, G. de Yturri, Orisis, Dolstau, etc., show charming specimens of the ware of the XVIII. and early nineteenth century. M. Pierre Guerlain has several pomade pots of the Marie Antoinette epoch, and M. G. Pouchet shows us an original bottle and price list of Maille & Acloque, "vinegar makers and distillers to their Majesties the Emperors of Austria and Russia" in the days of Louis XV.

POMATUM POT

PERFUME BOOKS

time, a Dresden china perfume fountain and one or two other specimens shown date from this epoch. But the great mass of articles were made in the two succeeding reigns. Louis XV.'s period was a time of great luxury in this respect. Dozens of the little Dresden china scent bottles, then popular among the aristocracy, are shown; they mostly affect the form indicated in our sketch, the decoration varies, being sometimes in the Watteau style, in other cases Chinese in treatment, etc. The pestle and mortar illustrated date from the same time and the decoration is that of the old Rouen ware; this is the only specimen of this article exhibited.

Perfume-burners and cassolettes are numerous; there is a rouge box marked "Rouge de Coindot, Rue Basse Port St. Denis No. 13, Paris," while the pomatum pot shown in our illustration bears the name of "Gervais Chardon, perfumer to their Majesties, at the Silver Bell,

PATCH-BOX

table arsenal of the weapons of female coquetry of the last two centuries, which we think must be absolutely unique in its extent and variety. We can, of course, only quote a few of the most characteristic specimens in this and other collections.

Perfumery seems first to have come into general use here in Louis XIV.'s

two small scent bottles (Fig. 1). The ornaments and inscriptions are very curious and characteristic of the gallantry of the age. The turtle doves on No. 1 are self-evident, the rebus on No. 2 may be deciphered as "She is charming" (Elle sait charmer).

The perfume cases are very numerous and often elegant, though others appear to have been prepared for receiving samples. But perhaps the greatest novelty to the modern visitor will be the patch boxes, of which several specimens are shown. Our sketch will render any description unnecessary, the size is about that of a small match box and the material ebony or ivory mounted in brass, silver, etc. The form is oblong (rectangular or oval), the interior arrangement invariable, an open compartment for the brush occupies one-half of the space, the rest is closed by two inner lids.

Artificial Perfumes

are shown in the Chemical Section, but a few words on the subject of these comparatively new productions and their price in France may fitly terminate this notice. The first French factory, founded at Grenelle (Paris) in 1876 by de Laire & Co., holds several patents and seems to flourish in spite of German competition, while several other works have been established at Lyons and elsewhere, and the rapid lowering of prices indicates brisk competition and increased demand. Vanilline, which cost \$200 per lb. in 1880, is now \$10 a lb.; heliotropine, which has never been patented, has fallen from \$400 to \$3.50; terpineol (used for lilac and lily of the valley scents) costs about \$1.20 per lb. Artificial musk, first produced in 1889, is perhaps the best known of all artificial perfumes, but carnation, violet, hawthorn and hyacinth scents are also produced now-a-days by artificial means. Coumarine, used for "new-mown hay" scents and soap can hardly be called an artificial perfume, being produced from Tonka beans, deer tongue, etc.

MAKING A PERFUME-BURNER.

THE STUDY OF PHARMACOGNOSY AND ITS RELATION TO PHARMACY.*

By ERNEST T. JORDAN.

Pharmacognosy, or, in everyday English, the knowledge of drugs, is a branch of study that has been in recent years most seriously neglected by the average student in pharmacy. It seems, however, a self-evident fact that a knowledge of drugs should be the basic element in the mental equipment of the druggist. It should be, but it is not, at least among druggists as we usually find them. The druggist of a few generations ago was a druggist in fact. His office was collecting, preserving and compounding such drugs as his physician patron needed in relieving the ills of his patient. He was, if tradition does not inform us falsely, in truth the physician's helper, the source of his supply of medicines, an absolute necessity to the successful practice of his profession. All this has to a great extent been changed. In the gradual evolution of modern conditions, the physician and the druggist have gradually, but no less surely, and it seems inevitably, been drawn apart. Whose the fault, if fault there is, a wiser mind than mine must determine. The fact is there. The chasm between the doctor and the retail druggist is there, and more than all this, the chasm is being rapidly filled by that ever-widening wedge, the manufacturing pharmacist. And

AN ENGLISH COSMETIC EXHIBIT.

Rue St. Martin, Paris," the sign of the perfume shop is reproduced below, it will be noticed.

The "Perfume Books" illustrated date from a later period. Covered with red leather, they outwardly resemble a small volume when closed (Fig. 2) and contain

*Prize paper read before the Maine Pharmaceutical Association, 1900. Reprinted from N. E. Druggist.

It must be patent to the densest brain that this manufacturer, the barrier between the pharmacist and the profession that made his calling possible, is doing the very things that made our parent druggists useful. He is collecting, preserving and compounding drugs; is doing it well, and we are left on one side. This is the condition as it confronts us. The problem is here. A complete solution we have far to seek. It would be presumption for a mere tyro in the pharmaceutical cult to attempt to solve a problem that has puzzled so many great minds. I shall not attempt to give a complete answer, but along this line of drug knowledge and drug study hope to point out one contributory cause, and perhaps suggest a remedy.

I have already said that a knowledge of drugs should be the basic element in a druggist's mental equipment. How seldom do we find this condition to exist. We have many competent pharmacists, skilled in manipulations; many able chemists, but few, very few, can be found among us whose knowledge of drugs is such that it should entitle him to be a druggist, in the narrow, literal sense of the word. We know well how to handle drugs, but too often we do not know the drugs we handle. There is some reason for this condition. We usually receive our drug supplies in a comminuted form from the manufacturer. We accept his guarantee as final, and thereby come to lean for our authority upon the very one whose advancement at our expense we have viewed with so much jealousy. This view of the case will not, I know, be accepted generally. I simply ask, however, in support of my contention, permission to cite three instances that my short experience has brought to my notice.

First: In one store I found in the drawer marked catechu, gambir or pale catechu. This was in a store where a large amount of tincture of catechu was dispensed on prescriptions, and all this tincture was made from the spurious drug. The National Dispensatory states that gambir contains less tannic acid and less catechu than the official catechu, and is an inferior drug.

Second: In two stores I have found Maracaibo bark on sale as callsaya. This is an inferior bark deficient in alkaloids.

Third: The last case I shall cite must seem incredible, but it is none the less true. I saw a few years since in a retail store a wholesale package marked prickly ash bark, and being sold as such. Upon complaint of a purchaser the bark was examined and found to be cascarilla. It is only justice to state in this connection that this wholesale house is not a Maine concern.

I have mentioned three instances not to prove that the Maine pharmacists are more deficient than those of other States, for I believe that no State demands or receives more efficient service from their druggists than does our own. I do believe, however, and I believe most firmly, that a revival of the study of drugs is much needed; that it is a certain means of increasing our usefulness to the physician, the public and to ourselves, and that the gap that divides the two professions may be narrowed to the advantage of both, by such a proficiency in the science of pharmacognosy that we can state absolutely and of our own knowledge that every preparation we sell is made from a drug that conforms in every respect to the standards made by our United States Pharmacopœia.

THE COAL-TAR DERIVATIVE FUCHSINE is generally supposed to owe its name to fuchsia, as its tint certainly resembles the color of that flower, but this is not the case. The inventor of fuchsine, whose death was lately recorded, M. Francisque Renard, and his brother desired to identify their name with the new product; but, not liking to adopt the appellation of renardine, they translated their family name Renard (fox) into the German Fuchs and thus arrived at fuchsine, says the Engineer (Sci. Am.) The same journal seizes the opportunity of making known that the rare metal gallium owes its name to a similar circumstance. Its discovery is due to the French chemist Lecoq de Boisbaudran, who, by adopting the Latin form of gallium, identifies the name of Lecoq both with gallus, a cock, and Gallia, France.

THE PROPER RELATION WHICH SHOULD EXIST BETWEEN COMPETING DRUGGISTS.*

By J. W. GAYLE.

At the very outset of the consideration of the proper relation which should exist between business competitors, and particularly between competing druggists, all idea of antagonism or enmity should be eliminated. The very basis of proper relations must be a most cordial friendship. This fact becomes more apparent when it is remembered that under proper conditions a competitor is always a friend, and frequently, whether we so recognize it or not, our best friend. Many owe their success to active and vigorous competition. A spirit of friendly rivalry will frequently inspire business efforts which otherwise would never be made. It matters not with how much energy one's business may be conducted, competition will stimulate still greater efforts and insure closer and more constant application.

Progressive methods will be more quickly adopted; business houses will be made and kept more attractive; a more liberal and accommodating business policy will be pursued when it is known that a competitor is on the alert to take advantage of the influence which these things exercise as winners of public favor.

Having noted the broad basis—friendliness—upon which competition should rest in order to maintain the proper relation between competitors, let us briefly point out a few of the factors which produce, and at the same time constitute, this relationship.

First. Co-operation in Buying and Selling.—Too little attention is paid by the ordinary druggist to the matter of judicious quantity buying. An extra discount of 5 or 10 per cent. may frequently be had by purchasing many staple lines of goods in larger quantities than could be prudently handled by a single person; and a little friendly co-operation will enable competitors to unite in buying an astonishingly large number of articles. The burden of carrying the additional stock should, of course, be borne proportionately by each. When received, the entire quantity should be divided as agreed upon before purchasing, each promptly paying his part of the purchase price. Should the stock of any one become exhausted before all are ready for another lot he should supply himself from the stocks of others, getting, to a large extent at least, the advantage of the original purchase price.

The benefit of co-operation in selling may be obtained in the disposal of those remnants which, notwithstanding the greatest care, will accumulate upon the shelves. Lists of these should be carefully prepared by all competitors, to be kept by each in some convenient place, and from which purchases, either for stock or to supply a chance demand, should be made.

Second.—Concessions in price should be made by each when supplying others with those little deficiencies which, with the most careful system of stock keeping, will at times occur. A discount of 10 per cent. is suggested as an equitable basis in such transactions, thus allowing the greater profit to accrue to the most diligent stock keeper.

Third.—A private price mark should be adopted and carefully placed on all copies of prescriptions given, as well as upon prescriptions on which a price is made, and which are not at the time left for compounding. The advantage of this practice is in the upholding of prices and in preventing the hawking about of prescriptions to be filled by the lowest bidder, as well as the establishment in the mind of the public the idea that the prices in this department of our business are neither purely arbitrary nor fixed without due regard for the real value of the services rendered.

Fourth.—Local organization is another benefit to be derived from the friendly relations which should exist between competitors, being the means of perpetuating

*Read at the annual meeting of the Kentucky Pharmaceutical Association. Reprinted from the proceedings.

the very spirit by which it is created. The advantages of organization are so numerous and have been so frequently dwelt upon that it is perhaps sufficient to remark its inestimable value in resisting the discriminations which are constantly being attempted against us. The wholesale injustice imposed by the war revenue bill and other unjust measures directed against the entire trade by national legislation are not here alluded to, but attention is more particularly directed to those petty local annoyances which are constantly cropping out from local causes, and which it would be useless to combat single handed. Competing druggists should stand together for the betterment of the general conditions governing the profession; for the exclusion of incompetent and unqualified apprentices; in the advocacy of the use of the preparations of the National Formulary by the physicians; for the fuller recognition of the claims of higher pharmacy by the physician as well as by the public, and for the maintenance of the highest standard of business, moral and professional integrity.

Fifth.—Social intercourse, wherever possible, should be encouraged. A little time can perhaps be spent in no more effective way than by cultivating the social side of a competitor's disposition. In fact, this is the only way in which some can be reached. It is said that in no other way is one so truly known as by his home or social life. Under the influence of some simple social function many a prejudice or preconceived ill-feeling may be dispelled and easier and more cordial relations perpetuated.

Sixth. The Maintenance of Prices.—Perhaps the most important of all the features of the proper relation between competing druggists is a well maintained price agreement or understanding. Every article of well known retail value should bring its full price. A well defined standard of charges should be adopted upon prescriptions, and staple articles of a similar value should, as nearly as possible, bear a uniform profit. These will be firmly adhered to wherever the ideal relations exist. The necessity of posting forfeitures or preparing signed articles of agreement to maintain prices never exists under proper conditions. The word of a competitor should be taken at par. Where this can not be done, signed agreements will be of temporary value only, to be evaded and violated by a course of indirection and deceit, the results of which are in the greatest degree demoralizing. The importance of steadfast personal confidence among competitors can neither be over-estimated nor too strongly insisted upon.

The foregoing may be taken to represent the positive or active features of the proper relations between competitors. The negative side, or the things which should always be avoided, may be noted under the head of—

DON'TS.

Don't borrow goods of a competitor.

Aside from being very unbusinesslike, this practice reacts injuriously upon the borrower by encouraging a carelessness in stock keeping. It likewise leads to confusion and frequent misunderstandings. It can not be fairly argued that borrowing "is as fair for one as for the other." Injustice is invariably done the lender, and weighs the heavier because the one who loans most where such a custom prevails is always the best stock keeper.

Don't ask a competitor for a copy of a prescription.

From every standpoint this is a gross breach of business etiquette. If your customer has a prescription compounded by a competitor, and either by chance or deliberate purpose, sends to you for a refill, the original compounder should at once be asked to prepare it. To attempt to transfer the prescription to your file is never admissible. Where the proper relations exist a competitor will sometimes gracefully offer a copy, but the slightest indication of a desire to obtain it should be scrupulously avoided.

Don't, directly or indirectly, undersell to your competitor's regular patrons.

Follow the excellent advice of Robert Burns, and "gather gear by every wile that's justified by honor," but don't attempt to deceive the customer of your competitor by making such prices as will tend to convince him that he has been regularly overcharged. This prac-

tice is not only bad business policy, but it is of questionable honesty as well, and rarely or never eventually benefits the person who indulges in it.

Don't imitate the peculiar business methods of a competitor, or attempt to discount his particular window displays.

Aside from displaying a spirit of business jealousy not at all commendable, this is a very effective way to advertise and compliment him; and it clearly demonstrates not only a want of business capacity, but an unfortunate lack of originality.

Don't loaf or spend any unnecessary time about your competitor's place of business.

This is always in bad taste, and is frequently extremely irritating. Visit your competitor's store only on business or by special invitation. If on business, seek an audience at once, and depart promptly when through. If on invitation, your visit will probably be more highly appreciated if reasonably brief.

Don't attempt to job goods to your competitor.

It is unreasonable to expect a competitor to be at the same time a customer, and any attempt to bring this about will not only invariably fail, but will frequently result in some embarrassment to both parties, if not in some bad feeling.

Don't attempt to stock goods the sale of which your competitor legitimately controls in your territory.

As an evidence that this practice is based upon unjust and erroneous business principles, it invariably results disastrously to those who attempt it, and is never indulged in where the relations are to any extent proper or friendly. It is a sure sign of secret if not of open hostility, and displays a deplorable lack of the proper consideration for the rights of your competitor.

Don't believe the tales of exorbitant prices which a certain class of persons are eager to report your competitor has charged.

Likewise accept "with a grain of salt" the stories of low prices and unusual concessions which the same persons will say can be obtained from your neighbor. Business as well as society is infested with tale bearers, and wise persons will have a deaf ear for them in one sphere as well as in the other. When proper relations exist it is in spite of such common nuisances.

Don't allow physicians a percentage upon the prices charged for their prescriptions.

This custom will not only almost invariably bring ultimate dissatisfaction to both the pharmacist and the physician who practice it, but it will surely disturb the friendly relations of competitors by breeding suspicion and distrust. The impropriety of this practice from the standpoint of a physician as well as that of a druggist is universally acknowledged, and cannot be too strongly condemned as being both unbusinesslike and unprofessional.

[This paper was awarded the prize, and as it was afterward decided to print prize papers only, other papers were mentioned, but not printed.]

THE SELENIDES OF NICKEL.

M. Fonze-Diacon, who has lately made a number of interesting researches, has succeeded in forming a series of new compounds, namely, the selenides of nickel. The experimenter describes his method in a paper recently presented to the Académie des Sciences. (Sci. Am.). The only previous work in this direction is that of Little, who found that the vapor of selenium reacts, at a red heat, upon powdered nickel, giving a crystalline mass appearing to consist of crystals of the cubic system. The series of selenium compounds prepared by M. Fonze-Diacon is quite extensive, and is analogous to the corresponding sulphides; among others he has obtained the protoselenide of nickel in well marked cubical crystals. It is prepared by bringing the selenium vapor, very diluted in a current of nitrogen, upon plates of nickel brought to a red heat. The plates are seen to become covered with crystals having the appearance of moss or of long prisms. If the selenium vapor brought by the nitrogen arrives in greater proportion, the nickel plates become covered with crystals which are much more distinct, resulting from the fusion of the first

crystals formed. If the operation is stopped at this moment, to avoid the complete fusion of the crystalline layer, this is seen to be formed mainly of double tetrahedrons, right and left combined. The crystals are very distinct, having a gray color with bluish reflections and corresponding to the formula, Ni_2Se . The proto-selenide of nickel thus appears to belong to the cubic system.

To obtain the sesquiselenide, the anhydrous chloride of nickel is heated to redness in a current of hydrogen selenide; it gives rise to products corresponding, according to circumstances, to Ni_2Se_3 , or Ni_3Se_4 . A gray crystalline product was especially obtained, which presented forms derived from the cubic system, whose formula approaches Ni_3Se_4 , but is not quite free from a product less rich in selenium. The biselenide of nickel, corresponding to the formula NiSe_2 , is obtained by the reaction of hydrogen selenide upon anhydrous chloride of nickel, heated to a temperature of about 300°C . It has the appearance of a friable mass of a dull grayish black. The same result is obtained by using nickel oxide. The preceding compounds, heated to whiteness in a current of hydrogen, lose selenium by degrees, and there results a melted mass of a yellow bronze color with a metallic fracture. This product, powdered and submitted again at a high temperature to the action of hydrogen during six or eight hours, is transformed into a sub-selenide of nickel, Ni_2Se , having the appearance of melted masses of a golden yellow. The oxy-selenide of nickel has also been obtained. The experimenter wished to form the sub-selenide, analogous to the sub-sulphide which has been prepared by Arfoedson by reducing the sulphate in a current of hydrogen. The selenate of nickel previously dried was accordingly heated in a current of dry hydrogen; in the beginning water vapor is formed with sublimation of selenious anhydride, as the temperature rises, the hydrogen reacts upon the salt with incandescence. The operation is then stopped, and a dark green powder is found, which dissolves partly in dilute hydrochloric acid without disengagement of gas, and entirely in the concentrated acid, giving off hydrogen selenide. This body proves to be an oxy-selenide of nickel, or rather a mixture of oxide and selenide of nickel, whose proportions vary according to the rapidity with which the reducing temperature has been obtained. The properties of the selenides of nickel have been studied by the experimenter. Hydrochloric acid, even concentrated, attacks them but slightly; in the gaseous form it transforms them at a high temperature to nickel chloride. Nitric acid oxidizes them and forms selenites; chlorine displaces the selenium at a moderately high temperature. When heated in a current of oxygen, they give the green nickel oxide and selenious anhydride.

THE REASON WHY THE DRUGGIST SHOULD TAKE A DEEP INTEREST IN AND ATTEND THE ANNUAL MEETING OF THE STATE PHARMACEUTICAL ASSOCIATION.*

By C. S. PORTER.

1. Moral and social.
2. Educational.
3. Practical.

History gives us instances when men who have been confined to the narrow limits of prison walls for a long term of years when given their freedom have been discontented, restless, miserable, and have asked to be returned to prison. They have spent the best years of their life in close confinement, and their mental and moral development has been no larger than their prison walls—thrown upon the world they are incapacitated and unsuited for circumstances of freedom.

This aptly illustrates the influence of occupation and surroundings on our lives and their development. The druggist, being confined to the four walls of his store from 12 to 15 hours daily, with much of routine work, his mind confined largely to the same channels of thought each day, is in danger of growing, in mind and character, in but a few directions.

I know that the science of pharmacy opens up many

inviting fields of study which, followed faithfully, repay in intellectual exercise and development, but how many retail druggists, owing to the daily demands of business upon them, have the time to pursue these studies, to take advantage of these opportunities? Our business, closely followed, like many others, has the tendency to narrow our lives into grooves, and we grow along, or grow to fit, those grooves. It shuts us out from improving the social side of life, in its larger spheres, occupying, as it does, our evenings as well as our mornings.

The Pharmaceutical Association is an open gate, giving us an escape from our surroundings and ourselves for a few days, giving us a breathing spell, in a larger atmosphere, with mental and social influences that quicken our sensibilities and enlarge our views. We return to our work refreshed and renewed by these stimuli. It is well worth the time and cost in money to every druggist to take a deep interest and attend the meeting of his State association for its moral and social benefits.

2. This annual meeting with our fellow druggist is a stimulus along educational lines. If at all ambitious we will find ourselves encouraged to study up along certain lines and to fit ourselves for the company we are to keep. The discussion of subjects in open meeting, or with our friends in the social chat when we come together, affords us information, and we learn new facts which we can appropriate and add to our store of pharmaceutical knowledge. Some things I've learned at these meetings and put into practice when I returned home, much to our advantage.

3. This brings us to our third class of reasons—the practical.

By rubbing against our brother pharmacist in these meetings and finding how he does things at home we gather new points as to the practical conduct of a drug store, as to buying, selling, management of clerks, treatment of customers, method of advertising, etc.

Selecting from such points those that are adapted to our business and surroundings, and putting them into operation, we find ourselves advantaged thereby. We have entered fully into a new business era, with new conditions surrounding us and new methods.

We are met on every hand with the conditions and laws of combinations or trusts; you are offered their goods and told just how you are to buy them, and just how much you are to get for them, both the wholesale and retail prices are kindly arranged for you. This is so in many of the popular brands of chewing and smoking tobaccos and cigarettes. It is the same in patent medicines, school books, writing tablets, and so on. Oh, you can sell them for less than the fixed retail price if you like—say at a profit of 5 or 10 per cent., while it costs you from 8 to 15 per cent. to do business—yes, you can give them away if you want to.

The conditions of business are changing rapidly, there is a tendency in some lines to give our old and substantial friends, the jobber, "knock-out drops."

The day of independent action upon the part of the retailer is closing rapidly, the conditions are becoming such that for him co-operation is becoming a necessity.

If a manufacturing concern whose goods you are handling, who by judicious advertising create a demand, can, because of that demand, advance the cost of their goods to you 20 per cent., why can they not name the retail price and give you 10 per cent. off just as well? One concern can do this, why not all by concerted agreement do the same? Are they too good, too liberal, too large hearted, too sweet, to do this? I am not a pessimist, but rather look and hope for the best things, but I am convinced by the tendency of commercial life that conditions are fast approaching—nay, verily, are upon us—when co-operation, full and free, of the retail druggists is a necessity. Then you must become deeply interested in your State association and use it for the rallying place where we can be effectually organized into a solid phalanx for self protection, for self preservation.

I trust it will not be considered presumptuous if I close this paper by saying much of it comes from the experience of twenty-three years' membership in the State Pharmaceutical Association. I have in that time missed but a few of its meetings; at some of these meetings barely enough have attended to form a quorum, but I have never attended a meeting, at whatever cost of time or money, that I have not been helped thereby.

EXAMINATION QUESTIONS.

NEW YORK CITY BOARD OF PHARMACY.

CHEMISTRY.

- 1.—Define the following terms:
(a) Tetrads. (c) Basic Salt.
(b) Adhesion. (d) Hydrocarbon.
- 2.—Name the elements of the "Halogens" group, giving their symbols and their atomic weights.
- 3.—Give the chemical name of each of the following:
(a) AgCN . (c) NaH_2PO_4 .
(b) NaNO_2 . (d) FeS .
- 4.—Show by equation what compounds are formed when Bromine is added to a solution of Potassium Hydrate.
- 5.—What is an acid salt? Name two official ones.
- 6.—What is meant by the term "molecular weight?" Give the molecular weight of each of the following:
(a) H_2SO_4 . (b) O_2 . (c) NH_3 .
- 7.—What difference is there between the hydroxides of the alkalis and those of the alkali earths, as far as their solubility in water is concerned?
- 8.—Name three official salts which contain water of crystallization. State whether such water constitutes an integral part of the molecule?
- 9.—What is the difference between a disinfectant and an antiseptic? Name an example of each.
- 10.—What gas is evolved when chalk is treated with an acid? How would you demonstrate the presence of this gas?
- 11.—How would you distinguish between mercurous and mercuric chlorides by chemical means?
- 12.—From what sources, and how, is glycerin obtained? Write its chemical formula.
- 13.—Name an impurity liable to be found in phosphoric acid. How can it be removed?
- 14.—How is red phosphorus obtained? How does it differ from common phosphorus?
- 15.—Complete the following equations:
(a) $\text{Hg}_2\text{Cl}_2 + \text{NH}_4\text{OH} =$ (c) $\text{P}_2\text{O}_5 + 3\text{H}_2\text{O} =$
(b) $\text{K}_2\text{S} + 2\text{AgNO}_3 =$ (d) $\text{Na}_2\text{O} + 2\text{HCl} =$

PHARMACY.

- 1.—State: (a) How many grains 1 fluid ounce of glycerin will weigh; (b) How many decigrammes there are in 3002.637 grammes.
- 2.—How many grammes of diluted sulphuric acid can be prepared from 100 grammes of official sulphuric acid?
- 3.—Give an outline of a process for the manufacture of effervescent salts. Name two official ones.
- 4.—Potassium chlorate: (a) What is its solubility in water at 59°F ? (b) Name three inorganic bodies which when triturated with it are liable to cause an explosion.
- 5.—The solubility of potassium bromide in water at 59°F is 1 part in 1.6 parts. How many grains of the salt can be dissolved in 1 fluid ounce of water at the given temperature? How many grains will the resulting solution weigh?
- 6.—How is Ether, U. S. P., obtained? Name its official preparations.
- 7.—What is the natural source of salicylic acid? State how it is obtained from this source.
- 8.—How is Tinctura Aconiti, U. S. P., prepared? How does it differ from Fleming's Tincture?
- 9.—In what respects does Monse's solution differ from solution of ferric sulphate? Give a test to distinguish them.
- 10.—Adeps Lanæ Hydrosus: (a) What is its common name? (b) What per cent. of water does it contain? (c) For what purpose is it chiefly employed?
- 11.—Spiritus Myricæ: (a) What is its common name? (b) What are its constituents?
- 12.—State what precautions must be observed in the preparation of the official oleates.
- 13.—State how Colloidum Stypticum is prepared. Why should it be kept remote from lights and fire?
- 14.—What are the constituents of Compound Tincture of Benzoin? Give its common names.
- 15.—Critique the following prescriptions:
(a) $\text{R. Olei tiglii} \dots f 3i$ Chloralis .. gr. xxx
Glycerini f 3iil Sodii salicylati. gr. xl
M. S. Misce.
5i every two hours. Fiant pulv. numero. xv.

TOXICOLOGY AND POSOLOGY.

- N. B.—In giving doses, write the name of the drug and give the minimum and maximum doses.
- 1.—Define minimum dose, maximum dose and overdose. What would you do if the dose of a poison in a prescription desired at once exceeded the maximum dose of that poison, and the physician could not be reached?
 - 2.—State with illustration, the difference between a chemical antidote and a physiological antidote.
 - 3.—In what poisoning should the use of the stomach pump be avoided? Why? When may oil be advantageously administered in poisoning?
 - 4.—Where and how should most poisons be kept in the drug store? How may using unclean utensils affect chemicals in compounding?
 - 5.—What precautions should be observed in retailing poisons? Why is four years experience required before permitting a person to practice pharmacy?
 - 6.—What emergency treatment should be employed for poisoning by Carbolic Acid? By Sugar of Lead?

- 7.—State the emergency treatment which should be employed for poisoning by Iodine? By Paris Green?
- 8.—What emergency treatment should be employed for poisoning by Oil of Turpentine? By Oil of Vitriol?
- 9.—What is the dose of Atropine, Digitalin, Pilocarpine Hydrochlorate, Sulphonal, Veratrine?
- 10.—What is the dose of Acetanilid, Croton Oil, Donovan's Solution, Ingluvin, Naphthalin?
- 11.—What is the dose of Extract of Belladonna, Extract of Nux Vomica, Potassium Chlorate, Potassium Iodide, Sodium Salicylate?
- 12.—What is the dose of Acid Benzoic, Ammonium Carbonate, Potassium Bromide, Quinine Sulphate, Sodium Phosphate?
- 13.—What is the dose of Aromatic Spirit of Ammonia, Compound Spirit of Ether, Oleoresin of Aspidium, Spirit of Chloroform, Tincture of Aconite?
- 14.—What is the dose of Tincture of Hyoscyamus, Tincture of Indian Cannabis, Tincture of Kino, Compound Tincture of Lavender, Tincture of Strophanthus?
- 15.—What is the dose of Ferrous Sulphate, Ichthyol, Wine of Colchicum Root, Wine of Ipecac, Wine of Opium?

MATERIA MEDICA.

- 1.—Give the botanical names and habitat of the following: (a) Ipecac; (b) Valerian; (c) May Apple; (d) Male Fern.
- 2.—Name three official drugs that belong to the Natural Order Leguminosæ.
- 3.—From what are the following obtained: (a) Aniline; (b) Sparteine; (c) Naphthalin; (d) Cetaceum.
- 4.—Define the following terms: (a) Foliaceous; (b) Ramose; (c) Radical; (d) Perennial.
- 5.—From what is Ether obtained? Outline process. What is Chloric Ether?
- 6.—Name five drugs that are obtained from Coal Tar.
- 7.—To what Natural Orders do the following drugs belong: (a) Aconite; (b) Opium; (c) Henbane?
- 8.—Give the official titles of five vegetable drugs, five mineral and three animal drugs.
- 9.—Jaborandi: (a) Give official name; (b) Where does it grow? (c) What part is official?
- 10.—What is Camphor? Give the botanical name of the plant from which it is obtained. In what country does it grow?
- 11.—Give the official titles of two drugs that belong to each of the following classes: (a) Expectorants; (b) Antiseptics; (c) Diaphoretics; (d) Styptics; (e) Antipyretics.
- 12.—From what source and by what process are the following obtained: (a) Oil of Tar; (b) Oil of Cade, and tell the difference, if any.
- 13.—Is oil of cubeb a fixed or a volatile oil. From what part of the plant is it obtained?
- 14.—From what is Oleic Acid obtained? Describe its appearance.
- 15.—Give the official names of the following drugs: Poke Root, Buckthorn, Wild Cherry, Prickly Ash, Soap Bark, White Oak Bark.

EXAMINATION QUESTIONS.

VIRGINIA BOARD OF PHARMACY.

REGISTERED PHARMACISTS.

- 1.—(a) What is Labarraque's Solution and what are its principal uses? (b) What is the most important of the allotropic forms of phosphorus? (c) What are its properties? What is the Sp. Gr. of— (d) Hydrochloric Acid? (e) Sulphuric Acid?
- 2.—(a) Are the official inorganic acids and dilute acids of uniform strength? (b) How is HCl made on a commercial scale? (c) What impurity causes the yellow color sometimes present in HCl? (d) What is the color test for Potassium Salts? (e) What is the color test for Sodium Salts?
- 3.—(a) How are granulated effervescent salts prepared? (b) What is Magnesia and how prepared? (c) How may Ferri Oxidum Hydratum be prepared quickly for use? (d) What is the official name for Basham's Mixture? (e) What is Monse's Solution?
- 4.—(a) What is Dialysis? (b) What is Diachylon plaster and how is it made? (c) Mention one or more tests for Argemum. (d) What is the common name for Argenti Nitras Dilutus and how much AgNO_3 does it contain? (e) What element is used more largely than any other in the metallic state?
- 5.—(a) How is citrine ointment prepared? (b) What is produced when cellulose is treated with nitric acid? (c) Name the official colloidons? (d) How is flexible colloidum made? (e) How does No. 8 acetic acid compare with the official acid in strength and Sp. Gr.
- 6.—(a) What is Amylum and how is it obtained? (b) What is Glucose? (c) What is Grape Sugar? (d) What effect do Alkalies exert on Glycyrrhizin? (e) What is the theory of fermentation?
- 7.—(a) How is alcohol deodorized? (b) How is Absolute Alcohol obtained? (c) What is Trichloraldehyde? (d) What is Trichlormethane? (e) What fluid extracts contain Acetic Acid?
- 8.—(a) Name a volatile oil containing Sulphur. (b) Name a volatile oil containing Nitrogen. (c) What is Glycerine and how much absolute Glycerine should it

contain? (d) What two classes of soaps are recognized by the Pharmacopœia? (e) Describe the composition of each.

9.—(a) Name the classes from which official animal products are derived. (b) Give one example for each class. (c) How is Pepsin prepared? (d) How is Cod Liver Oil prepared? (e) Of what three principles do fats usually consist and what are their physical properties?

10.—(a) What are Alkaloids chemically? (b) Where are they found? (c) Name the ingredients in Emulsion Chloroform and state how it should be prepared? (d) What is the weight and shape directed in the Pharmacopœia for rectal, urethral and vaginal Suppositories? (e) Name the source and uses of acetone.

11.—(a) State the plants yielding Thymol. (b) Give its medical properties and dose. (c) Give the common name of Krameria. (d) State what part of the plant is used. (e) Its principal preparations and their doses.

12.—State the official portion of (a) Cassia Fistula? (b) Fœniculum. (c) Ipecacuanha. (d) Hydrastis. (e) Hyoscyamus.

13.—(a) From what is Salicylate of Eserine derived? (b) Give its official Latin name. (c) State its dose. (d) Give the official name and habitat of Irish Moss. (e) Give the official name and habitat of Iceland Moss.

14.—(a) What is Stillingia? (b) Give the habitat. (c) State under what common name it is known. (d) What is a Rhizome? (e) What are Stamens?

15.—What part of the plant do the following drugs represent? And give their official Latin names: (a) Calabar Bean. (b) Lupulin. (c) Kino. (d) Golden Seal. (e) Lacucarium.

16.—Define the following terms: (a) Qualitative Analysis. (b) Quantitative Analysis. (c) Gravimetric Analysis. (d) Volumetric Analysis. (e) Normal Solution.

17.—(a) Give method for the preparation of Sulphuric Acid. (b) Give a test for its identification. (c) How is Sulphurous Acid prepared? (d) Name the elements known as Halogens. (e) Mention their chief characteristics.

18.—Show by an equation the reaction which takes place when Sulphuric Acid acts upon Carbonate of Potash, and how much Sulphate Potash is obtained from 50 per cent. of acid, using the following atomic weights: S—32, O—16, K—40, C—12.

(a) What is Sweet Spirits Nitre chemically? (b) How is it prepared? (c) How is it tested quantitatively? (d) What is its official strength? (e) What are its medical properties?

20.—Give the official name and method of preparation of the following: (a) Salol. (b) Carbolic Acid. (d) Salicylic Acid. (d) Ether. (e) Iodoform.

REGISTERED ASSISTANT PHARMACISTS.

1.—What is the metric standard for (a) Weight? (b) Length? (c) Capacity? (d) Express one inch in Metric System. (e) What is the rule for converting fluid ounces into cubic centimetres?

2.—(a) What is the specific gravity of a substance soluble in water, if 400 grains of the substance loses in oil 236 grains, the specific gravity of the oil being .920? (b) Give the method of finding the specific gravity of solids insoluble in, but lighter than, water. (c) Convert 40° C. into its equivalent in Fahr. (d) Convert 86° Fahr. into its equivalent in C. (e) What is meant by the terms fine powders and coarse powders?

3.—Define the following: (a) Ignition. (b) Fusion. (c) Calcination. (d) Deflagration. (e) Carbonization.

4.—What is the difference between evaporation and distillation? (b) What is fractional distillation? (c) What is torrefaction? (d) What is incineration? (e) What is sublimation?

5.—(a) What is the difference between simple solution and chemical solution? (b) Mention six ways in which clarification may be effected. (c) What is percolation? (d) Name the process by which prepared chalk is obtained. (e) Describe the official process for making Lime Water.

6.—Mention the process of solution in making the following aqueous solutions: (a) Aq. Creosote. (b) Aq. Chloroform. (c) Aq. Hydrogen Dioxide. (d) Aq. Anisi. (e) Aq. Aurantii Flor.

7.—(a) Name the two classes into which liquors are divided. To which do the following belong? (b) Liq. Arsen. et Hydrargyri Iodidi? (c) Liq. Ammonii Acet.? (d) Mention the five official methods of making syrups. (e) Name one example under each.

8.—(a) How many glycerites are official. (b) Name them. (c) What are Spirits? (d) Name the five ways in which they are prepared. (e) By what four ways are Infusions usually made?

9.—What wine is used in making the official wines? (b) What per cent. of alcohol should it contain? (c) What are Oleoresins? (d) How are they prepared? (e) By what four ways are Infusions usually made?

10.—(a) Should the ingredients in Dilute Nitro-Hydrochloric Acid be mixed together at once? (b) Why? (c) What is turpeth mineral, and what is its dose? (d) Name the most important products resulting from the destructive distillation of cellulose and lignin. (e) What is the difference between fermentation and putrefaction?

11.—Give official Latin names and parts employed of the following: (a) American Hellebore. (b) Lobelia. (c) Virginia Snakeroot. (d) Burdock. (e) Foxglove.

12.—(a) Give a description of Ammoniac and its official Latin name. (b) State whether it is a gum, gum resin or resin. (c) What is the dose of Codeine? (d) From what is it derived? (e) What is the official Latin name of the drug?

13.—Prunus Virginiana. (a) Give habitat. (b) State the effect produced upon the bark by maceration with water. (c) Give the official preparations. (d) What is the official portion of Hops? (e) What is Manna.

14.—(a) Define Materia Medica and Toxicology. (b) Give the name of the science which treats of crude drugs. (c) Ichthyocolla. Give common name. (d) From what obtained? (e) Name its uses.

15.—(a) What is Gum Arabic? (b) Name two of the most common varieties. (c) Its official preparation. (d) Give the habitat of Jaborandi. (e) Name its active principle and dose.

16.—(a) What is matter? (b) In what three states does it exist? (c) What is an element? (d) Define Cohesion. (e) Define Adhesion.

17.—What is (a) an atom? (b) a molecule? (c) a symbol? (d) a chemical formula? (e) a chemical equation?

18.—Define each of the following terms: (a) Synthesis. (b) Analysis. (c) Molecular weight. (d) Chemical Affinity. (e) Quantivalence.

19.—What is (a) an acid? (b) an alkali? (c) a metal? (d) a base? (e) a salt?

20.—Give chemical formula for each of the following: (a) Sulphuric Acid. (b) Epsom Salts. (c) Carbonate Soda. (d) Salts of Tartar. (e) Sugar of Lead.

PRACTICAL PHARMACY.

1.—Make six powders.

2.—Make six pills.

3.—Make two Rectal and two Vaginal Suppositories.

4.—Make half pint Tinct. Gentian Comp.

5.—Make Plaster, 3 x 4.

6.—Make 4 ozs. 50 per cent. Emulsion Cod Liver Oil.

7.—Make 1 oz. Ointment.

8.—Make 4 ozs. Emulsion Amygdalæ.

9.—Identify ten specimens.

10.—Critique five prescriptions.

PHARMACY.

EGYPTIAN GOLD.—Berthelot, Comptes Rend.; (Jour. Soc. Chem. Ind.): In earliest times the only gold worked was that found in alluvial deposits and generally contained silver. When this latter amounts to more than a few hundredths, the gold appears whitish, and was termed Electrum or Asem by the Egyptians. The art of separating gold from silver was discovered much later. In Lydia, where the earliest coinage was struck, the date can possibly be fixed by analyses of the coins preserved in museums. Previous to the time of Croesus the coinage contained silver. The method of preparation is described by Pliny and consisted in cementation in the dry way by arranging alternate layers of the metal and a mixture of sodium chloride and ferrous sulphate. The silver dissolves as a double chloride, the gold remaining. This process was employed from early times up to the beginning of the sixteenth century, when the present wet method came into use, having already been described in the middle of the fourteenth century. From a knowledge of these facts, and the presence or absence of silver in the analysis of a sample of gold, it is possible to obtain an approximate idea of its age. The oldest samples contain silver, whilst more modern ones generally do not.

With the object of testing these views, the author, in collaboration with M. Maspero, has analyzed samples of gold from Egyptian tombs of known age. The samples were taken from gold leaf enveloping certain mummies, but are insufficient in number to determine with accuracy the date at which the gold began to be completely freed from silver.

Date.	Gold.	Silver.	Organic Matter, Etc.
Sixth dynasty.....	92.3 92.2	3.2 3.9	4.5 3.9
Twelfth dynasty.....	90.5 90.0	4.5 ..	5.0 .. †
Persian era.....	99.8 ..		

*No tin, lead or copper. Very slight trace of iron.
†No other metal present.

Hence only pure gold is that of the Persian era, that is, at a time when the art of separating silver from gold was known in the East. However, the interval between the last two analyses represents ten centuries, and determination at some intermediate stages will be of value.

NEW SYSTEM OF TANNING WITH FORMALDEHYDE AND ACIDS.—R. Combret, Paris. Ger. Pat. 112,183. *Leather Trades Rev.; Jour. Soc. Chem. Ind.*: The process consists in the treatment of the pelt with weak solutions of formaldehyde, together with a certain quantity of acid, preferably acetic acid, which is miscible with formaldehyde in any proportion; sulphuric, oxalic or lactic acid may, however, be employed.

The tanning operation may be performed at the ordinary temperature of the air, but it is advantageous to have the solutions slightly warm, and to tan in a revolving drum.

In tanning sole leather, the goods are first placed in a solution containing 10–15 litres of acid and 1–1.5 litres of formaldehyde in every 1,000 litres of water; as the tannage proceeds, the quantity of formaldehyde is gradually increased until the ratio of the formaldehyde to the acid is reversed, i. e., the resulting liquor contains 10–15 litres of formaldehyde to 1–1.5 litres of acid.

If sulphuric acid be used in preference to acetic, the amount should be reduced to one-fourth the quantity given; if oxalic acid, the quantity must be doubled.

For soft leathers the tannage is commenced with a solution containing 2.5 litres of formaldehyde and 10 litres of acid per 1,000 litres of water, the liquors being gradually strengthened with formaldehyde until the proportions of acid and formaldehyde are in the ratio of 10 to 10, and if necessary 15 to 10.

Light leathers are tanned in two or three liquors, according to the degree of suppleness required, commencing with a solution containing 5–15 litres of acid and 2.5–5 litres of formaldehyde per 1,000 litres of water; towards the end of the tannage, the formaldehyde should be increased to 10–15 litres.

Light-weighting skins may be tanned by this method in a few hours, but heavy hides will take from two to three days.

If desired, the leather may be colored by treatment with a decoction of any vegetable tanning material, either prior to, during, or subsequent to the tannage.

The leather may be dyed any desirable shade, and may be curried in the usual manner.

EXAMINATION OF MYRRH.—R. Hauke, Pharm. Zeit. after Oesterr. Zeits. fur Pharm.; Jour. Soc. Chem. Ind.—The following method of examination will distinguish true myrrh from its substitutes: (1) Two grams of the coarsely powdered drug is shaken with 10 C.c. of strong alcohol, heated and filtered. A few drops of the alcoholic extract are evaporated on a watch-glass, and the residue treated with concentrated HNO_3 . Herabol and bisabol myrrh give a red violet color; bdellium gives no color. One C.c. of the same extract is treated with an equal volume of alcoholic lead acetate solution; immediate turbidity occurs with bisabol myrrh, or African bdellium; turbidity after several minutes indicates herabol myrrh, and no turbidity for some hours Indian bdellium. (2) An aqueous extract is obtained by digesting for several minutes one part of the drug with 10 parts of tepid water and filtering. Equal volumes of the extract and of aqueous lead acetate solution give a precipitate with herabol or bisabol myrrh, but none with bdellium. (3) A petroleum spirit extract of the drug is obtained by macerating 10 grams of the dry oleoresin with 20 grams of light petroleum spirit in the cold for thirty minutes. After filtration, the extract is colorless with herabol or bisabol myrrh, and yellow with bdellium. One C.c. of the petroleum spirit extract, shaken with an equal volume of concentrated hydrochloric acid gives with herabol myrrh a purplish red color to the acid layer, which is yellow or colorless with bisabol myrrh and bdellium. If about 0.5 C.c. of the extract be further diluted with 4 to 5 C.c. more of the solvent, and a few drops of the diluted solution be treated with glacial acetic acid and concentrated sulphuric acid, no coloration indicates bdellium; while herabol and bisabol myrrh give distinctive colors.

A good herabol myrrh gives distinctive color reactions with hydrochloric and nitric acids, a colorless petroleum spirit extract, which is not rendered turbid by the addi-

tion of alcohol, an immediate precipitate in aqueous solutions with lead acetate, and also, after several minutes, in alcoholic solutions.

ABSORPTION OF ALKALOIDS BY ANIMAL CHARCOAL.—H. Laval. Bull. Pharm. du Sud-Est. Pharm. Jour.; Jour. Soc. Chem. Ind.: The author gives the results of a series of experiments on the absorption of alkaloids and their salts from aqueous and alcoholic solutions by ordinary animal charcoal, "pure" animal charcoal containing 90 per cent. of carbon, tricalcium phosphate, obtained by the complete incineration of bone ash, and precipitated tricalcium phosphate. Both the latter absorb notable quantities of alkaloids from alcoholic or aqueous solutions, the precipitated form being slightly more active; ordinary animal charcoal is yet more active, whilst "pure" animal charcoal (90 per cent.) has decidedly the greatest absorbent action of all. The amount of alkaloid removed from solution is influenced by the quantity of charcoal employed, the concentration of the solution and the nature of the solvent, but not by the length of time of contact nor by temperatures between 15° and 100° C. It is stated that with the same proportion of charcoal to the alkaloid, the amount absorbed is greater, the weaker the solution, but with the same weight of charcoal, the absorption increases rapidly with the concentration of the solution. The absorption is greater with aqueous than with alcoholic solutions. Boiling alcohol will remove from charcoal the alkaloids it has extracted from aqueous solutions. The nature of the acid combined with the alkaloid is without material influence on the result, different salts of the same alkaloid having practically the same co-efficients of absorption. With the same proportion of charcoal and concentration of solution, the amount of absorption varies with the different alkaloids. Thus, with 10 grams of "pure" animal charcoal, and 100 C.c. of 1 per cent. aqueous alkaloidal solution, 95 per cent. of the strychnine is removed, 75 per cent. of the quinine, 75 per cent. of morphine and 68 to 69 per cent. of atropine, cinchonine and cocaine.

ATOMIC WEIGHT OF RADIUM.—In a communication recently made to the Académie des Sciences, M. Curie states (Sci. Am.) that he has succeeded in making an approximation toward the atomic weight of the new element radium. Since the commencement of his researches for isolating the new element, the progress of its concentration in the chloride of barium has been constantly observed by the study of the spectrum and determinations of atomic weight. Each time that the treatment of the mineral gave a new quantity of the chloride, this was submitted to a systematic series of crystallizations in order to give a small quantity of a product as concentrated in radium as possible. A part of this was treated with hydrochloric acid to give a very pure product, which M. Demarcay has found by the last series of spectrum analyses to contain only traces of barium, and may be considered as an almost pure chloride of radium. The quantity of pure salt isolated in this way is insufficient, however, to obtain the atomic weight of radium, and M. Curie, in his last determinations, used the product containing a larger proportion of barium, of which he had six grains. A determination was made at the same time upon pure chloride of barium as a check. After indicating the process used for finding the atomic weight of each product, M. Curie states that the weight found for barium gives the number 138, and that of the product containing radium, 174.1 and 173.6 in two cases. There is no means of finding the relative amount of radium and barium in the latter product, but M. Demarcay concludes from the spectrum that there is a greater proportion of radium. It is, therefore, certain that the atomic weight of radium is much greater than 174. The quantity of pure chloride of radium isolated is not sufficient to allow the study of the properties of this element in a pure state, but its existence is no longer a matter of doubt.

Glycosine.—A synonym for saccharin.

Kineurin.—Trade name for quinine glycerophosphate.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Book on Perfumery.—(Salol.) Snively's Treatise on the Manufacture of Perfumes and Kindred Toilet Articles may be obtained through this office. Price \$2 (paper covers).

Use of Glycerine in Vanilla Extract.—(J. G. C.) In farther reply to your query, this journal, November 15, 1900, page 539, F. C. Godbold, New Orleans, La., writes: "The comments on the use of glycerine in making extract of vanilla from the bean attracted my attention, and I will give my experience for the benefit of any druggist who has found trouble in percolating or filtering an extract made from a low-priced bean which contains an albuminous substance. I have found the official process and quantities, with the modification of the menstruum by the addition of one fluid ounce of glycerine to sixteen fluid ounces of the menstruum, to answer perfectly in my hands in getting rid of the gummy substance which so much retards percolation. I would be pleased to hear from any one who may try this method."

Syrup Ferrous Iodide and Solution of Potassium Arsenite.—(J. H. McD.) asks criticism upon the following prescription:

Syrup of ferrous iodide..... 3 drams
Solution of potassium arsenite..... 2 drams.
Water, enough to make..... 4 ounces.

Upon compounding this mixture both the syrup of ferrous iodide and Fowler's solution are decomposed, the alkali carbonate in the latter precipitating a portion of the iron first as ferrous carbonate, which soon loses its CO₂ and eventually changes to the reddish brown ferric hydroxide. The iodine liberated unites with the potassium and probably some of the arsenic is also precipitated. The prescriber should be informed of the incompatibility. As it now reads the prescription should not be dispensed.

Photographic Toning and Developing Solutions. (Subscriber.) The usual method of preparing the formulas you submit is as follows:

Combined Toning and Fixing Bath.

Sodium hyposulphite.....16 ounces
Ammonium sulphocyanide..... 2 ounces
Lead acetate,
Lead nitrate,
Citric acid, of each..... ½ ounce
Chloride of gold..... 4 grains
Water.....66 ounces

Dissolve the sodium hyposulphite and ammonium sulphocyanide in about 32 ounces of the water, then add the lead salts dissolved in 5 ounces of water. Boil for a few minutes, allow to cool and filter, then add the citric acid dissolved in the remainder of the water, previously boiled and filtered. Lastly add the chloride of gold. A modification of this formula appeared in this journal June 8, 1899, page 770.

Developer.

Metol..... 2 drams
Hydroquinone..... 2 drams
Sodium sulphite..... 4 ounces
Sodium carbonate..... 2½ ounces
Water.....80 ounces

Dissolve the sodium sulphite in the water, previously boiled and filtered, then dissolve in the solution the metol, hydroquinone and sodium carbonate in the order named. Thus made, it is claimed the solution will keep a long time. We do not publish formulas for the treatment of diseases of the character you name.

Registration Under the New York State Pharmacy Law.—(W. H. S.) at present residing in Massachusetts, writes: "I am registered in New York State under the law of '82, having been in business there at the time. I am now out of the State. What action should I take and to whom should I apply to re-register under the new law?"

The new law does not become operative until after January 1, and the Board of Pharmacy, to whom applications for re-registration should be made, does not hold its first official meeting until after that date. We are informed that your former registration will hold good under the new law and it will allow you to practice pharmacy the same as you formerly did in that part of the State for which your license was originally granted. Within these limits no re-registration is necessary. You cannot, however, practice in another part of the State. Unless you were originally registered by examination you are not eligible for re-registration. To obtain a license good in any part of the State you must stand an examination the same as new applicants. See last week's Era, pages 575 and 576.

Removal of Stains from Garments.—(C. H. Z.)

(1) Blood stains may be entirely obliterated from almost any substance by laying a thick coating of common starch over the place. The starch is to be mixed as for the laundry and laid on quite wet. (2) The free and early application of a weak solution of soda and potash and the subsequent application of a solution of alum, is recommended. (3) Soak in cold water, wash with soap and rinse. (4) Blood and albumenoid matters.—Soften the spots with lukewarm water and apply pepsin; after a time wash with water.

Wine, Beer, Fruit and Vegetable Stains.—Oxalic acid or salt of lemon (potassium binoxalate) may be employed for destroying the stains of fruit and of astringent juices, and also the stains of urine which have become old upon tissue. However, this treatment is best confined to undyed goods, as the acid attacks not merely fugitive colors, but certain of the lighter fast colors. The best method of applying the acid or salt is in solution, a little of the latter being allowed to remain upon the spot before rubbing it with the hands. Many hints on the chemistry of cleansing have been published from time to time in the Era and you will do well to consult the indexes of previous volumes. The Era Formulary also contains a large number of formulas and a comprehensive table which gives at a glance the best means of cleansing all kinds of fabrics from any stain whatever. The Schoellkopf, Hartford & Hanna Co., A. Klipstein & Co., and Kutiroff, Pickhardt & Co., of this city, are manufacturers of dyestuffs, chemicals, etc., used by dyers.

Artificial Stone for Side-walks.—(S. P. H.) The Cyclopedia of Receipts gives this information: English Portland cement is generally preferred. Procure a sharp, light-colored sand, and wash it free from all particles of soft earth or soil; also some stone chips, gravel and large stone. Excavate the sidewalk about 18 inches deep and fill in the large stone to within 6 inches of the surface; prepare a concrete made of the cement, 1 part; stone chips and gravel, about 6 parts, and bed it upon the stone bottom to within 2 inches of the surface; then prepare a concrete of the cement, 1 part, and fine sand, 2 parts, and lay it in up to the surface, floating the surface with the cement at pleasure. Finish by lining off into regular blocks. A more economical sidewalk can be made by omitting the stone bed, but it will require a good hard soil to lay it on and then it will not be so sure of being permanent.

A great many processes for the manufacture of artificial stone for various purposes have been patented and you may be able to gain considerable information about the methods employed by consulting the Journal of the Society of Chemical Industry and other technical journals. From one of these periodicals we take the following for the manufacture of artificial stone: Calcined gypsum and cement are mixed with sifted ashes and potash or other alkaline carbonate. The mixture is made into a plastic mass with water containing a little sulphuric acid and this pressed into forms under strong

pressure. The blocks so obtained are immersed in an acidulated saturated solution of alum and are, after drying, ready for use.

Furniture Polish.—(J. F. B.) We cannot tell what caused your furniture polish to "gum," unless it was because you used a linseed oil which contained a large amount of albuminous substance not soluble in the alcohol, acetic acid and other substances added to the mixture. We give below several formulas, the last of which closely resembles that submitted by you, the quantities of the various ingredients used being employed in different proportions.

- | | |
|---------------------------------|------------|
| (1) Linseed oil | ¼ pint. |
| Tincture of benzoin..... | 4 ounces. |
| Archil | 2 ounces. |
| Vinegar | 16 ounces. |
| Solution antimony chloride..... | 6 ounces. |
| Spirit | 10 ounces. |

Mix.

- | | |
|------------------------------------|------------|
| (2) Linseed oil..... | 20 ounces. |
| Spirit of turpentine..... | 12 ounces. |
| Solution of antimony chloride..... | 1 ounce. |
| Vinegar | 8 ounces. |
| Methylated spirit..... | 3 ounces. |
| Camphor | 2 drams. |
| Sal ammoniac..... | 3 drams. |

Dissolve the camphor in the spirit and the sal ammoniac in the vinegar. Mix the ingredients in the order of the recipe.

- | | |
|-------------------------|------------|
| (3) Dragon's blood..... | ½ ounce. |
| Oil of turpentine..... | 6 ounces. |
| Linseed oil..... | 1 pint. |
| Hydrochloric acid..... | 1½ ounces. |

Powder the dragon's blood and shake well with the turpentine. After a day strain into the linseed oil and add the acid.

- | | |
|---------------------------|-----------|
| (4) Linseed oil..... | 2 pints. |
| Vinegar | 6 ounces. |
| Spirit of turpentine..... | 3 ounces. |
| Hydrochloric acid..... | 1 ounce. |
| Spirit | 2 ounces. |

Mix in the above order.

Strength of Solution of Hydrogen Dioxide.—(S. W.) asks "how one volume of aqua hydrogenii dioxidi of the U. S. P., which is a 3 per cent. solution of H_2O_2 , will yield 10 volumes of free oxygen."

This statement means that a given volume of a solution of hydrogen dioxide will yield ten times its own volume of available oxygen, or, in other words, that 1 Cc. of the solution will yield 10 Cc. of available oxygen, when the latter is measured at 0° C. and 760 Mm. pressure. The Pharmacopœia gives very full details for finding the valuations of solutions of hydrogen dioxide. The assay is made with potassium permanganate, in the presence of sulphuric acid, according to the reaction $5H_2O_2 + 3H_2SO_4 + 2KMnO_4 = K_2SO_4 + 2MnSO_4 + 8H_2O + 5O_2$. Only one-half of the oxygen indicated in the equation is derived from the hydrogen dioxide, the other half being furnished by the potassium permanganate, which fact must be considered if the gas is collected and measured in a gas-tube over mercury. The term available oxygen refers, therefore, to the volume of nascent oxygen obtained directly from the dioxide and not to the total volume liberated in the reaction. From the above equation it is seen that two molecules (315.34 parts) of potassium permanganate correspond to five molecules (169.60 parts) of hydrogen dioxide; hence each Cc. of a decinormal solution of the former containing 0.0031534 Gm. of $KMnO_4$ must be equivalent to 0.001696 Gm. of H_2O_2 , or 0.000798 Gm. of oxygen available therefrom. Thus the volume strength of any solution of hydrogen dioxide can be conveniently calculated, simultaneously with the percentage strength, without the necessity of collecting and measuring the actual gas volume, by reckoning the weight of one cubic centimeter of oxygen at 0° C. and 760 Mm. atmospheric pressure as equivalent to 0.00143 Gm.; then,

dividing the weight of oxygen equivalent to 1 Cc. of —
 $\frac{N}{10}$
 $KMnO_4$ solution by 0.00143, we shall obtain 0.56 Cc. as the volume of oxygen represented by each cubic centimeter,

and multiplying the number of Cc. —
 $\frac{N}{10}$
 $KMnO_4$ solution decolorized by 1 Cc. of H_2O_2 solution by 0.56, the volumes

of available oxygen are indicated by the product. Multiplying, at the same time, the number of Cc. —
 $\frac{N}{10}$
 $KMnO_4$ solution so decolorized by 0.17 (actually 0.1696 = $\frac{0.001696}{10} \times 100$) will yield the percentage by weight of absolute H_2O_2 . You should read carefully what the Pharmacopœia has to say about these solutions.

COCOANUT PALM PRODUCTS.

The cocoanut palm (*Cocos nucifera*) is found nearly everywhere within the tropics and in many tropical countries is the principal food of the inhabitants. There are many varieties of this palm, thirty species having been discovered and classified, and with each variety the fruit varies in size, in weight, in shape, and in percentage of fiber, flesh, etc. Several varieties are distinguished for producing but small numbers of nuts, but these are very large and heavy; others produce large nuts and many of them, and some species are noted for producing large quantities of small nuts. It is estimated that over 3,000,000 acres of land are under cultivation in cocoanut palms, of which 1,000,000 acres are located in South America, 250,000 acres in Central America, and 35,000 acres in the West Indies. Probably about 300,000,000 trees, bearing from 5,000,000,000 to 6,000,000,000 nuts per year are in existence. Of late years the cultivation of the cocoanut palm has been largely extended and its products are becoming of ever-increasing importance in the markets of the world.

It may be interesting to know that the kernels of 500 nuts give an average production of one hundredweight of oil, and the kernels of 240 nuts produce about one hundredweight of copra. The kernels of three average-sized nuts produce 1 pound of desiccated kernel. From copra, or dried cocoanut, immense quantities of oil are extracted, which is extensively used in many trades. The refuse is used for feeding cattle and poultry and for fertilizing purposes. A large proportion of the kernels are desiccated and sliced, to be used in the manufacture of confectionery. It is said that for the latter purpose about 40,000,000 nuts are used annually.

The foregoing items do not exhaust the list of the products of the cocoanut palm which enter into the commerce of the world. There is a trade in mats made of the leaf, in coir mats and rugs made of the fiber, in laths and rafters made of the wood, and in a variety of articles useful and ornamental manufactured from the shells. The husks of the cocoanut contain valuable fiber, known as coir, a corruption of a word meaning rope. The refuse, or broken coir, is turned to account for stuffing mattresses, and is used in horticulture, as insects will not touch it.

The husk, which contains the fiber enveloping the nut, is divided into two classes; the first is the ordinary fiber used for spinning and for the manufacture of mats, the second is the brush fiber which lies just underneath the skin of the husk. The brush fiber is much thicker, stronger, and straighter than the spinning fiber, and is very largely used in brush making. The coir industry has become so great that special machinery has been manufactured for crushing the husk, extracting the fiber, and spinning it into yarn. When this fiber is brought to the United States, having been packed with great pressure, it has to be put through an opening machine in order to prepare it for use in manufacture. Other machinery is necessary in order to cause the fibers to be as free and parallel as possible. That which is to be spun requires a special spinning machine which produces a perfectly cabled yarn. When spun into yarn and woven by means of powerful looms, coir fiber produces an article of very extensive and daily increasing use—that is, floor matting. This fiber is also very largely used in the manufacture of door mats, for which purpose it has especial qualities, being able to stand a great deal of wear and tear and much dampness. This industry is of growing importance in the United States.

In 1900 the United States imported 3,901,384 pounds of coir yarn, valued at \$141,850, against 2,530,914 pounds, worth \$95,968 in 1899. The value of the cocoanuts imported was \$702,947 in 1900, against \$625,789 in 1899.

NEWS AND TRADE DEPARTMENT.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

The demands of the powers upon China, as outlined in this department last week, are so sweeping and severe that it is not believed that China will accede to them, and for the present the negotiations are at a standstill. Secretary Hay, however, has sent a note to the other powers asking, it is said, that the demands be modified, and it is hoped that this will result in harmony in the negotiations and a speedy end to the present strained situation.

The Radical newspapers in Rome are making a campaign in favor of the withdrawal of the Italian troops from Peking, declaring that in the rescue of the members of the foreign legations in Peking they accomplished their sole task.

The German soldiers have been writing home so many letters describing barbarous and atrocious treatment of the Chinese by the troops that Count von Waldersee has forbidden them to include such descriptions in their correspondence.

Minister Conger, it is said, strongly favors severe measures in China, and our government finds it hard to advocate moderate measures when it has to make the proposals through him. If Mr. Conger had not gone through the siege in Peking, it is said, he would be recalled, and some one else, more favorable to the administration's attitude, sent to replace him.

There is a strong feeling at Washington that Peking and the foreign ministers there are too fresh from the exciting scenes of the siege to consider the Chinese problem calmly and coolly, and it has been suggested that the negotiations be transferred to Washington or some European city where distance will lend calmness to the deliberations.

The foreign troops in China have seized the tombs near Peking, and in a "small engagement" 300 Chinese were slain.

South Africa.

The British Cabinet has recommended the promotion of Lord Kitchener to be a lieutenant-general to enable him to take supreme command in South Africa after the departure of Lord Roberts.

Lord Roberts was painfully injured last week by the fall of his horse.

Gen. Buller, in a speech in London last week, denied that the British soldiers in South Africa had been guilty of the outrages alleged against them.

The Boers under Commandant Brand were defeated with heavy loss on November 18.

A British outpost was overwhelmed by the Boers on November 15, six being killed, five wounded and thirty-one captured.

The Philippines.

Lieut. Alstaetter, who has been a prisoner in the hands of the Filipinos three months, was set free last week. Gen. Macabulos, a former insurgent leader, is to start in pursuit of Aguinaldo with a party of natives.

Other Foreign News.

President Kruger's trip through France has been more like a triumphal tour than like the flight of a ruler without a country. Every town along his way has given him an enthusiastic ovation.

Sir Arthur Sullivan, the composer, died in England last week.

A company for manufacturing automobiles has been organized in Moscow, Russia.

The Czar of Russia is still seriously ill with typhoid fever. His death might precipitate a serious crisis in European affairs.

A typhus epidemic in Copenhagen is assuming serious proportions.

DOMESTIC. Politics.

The House Committee on Rivers and Harbors is meeting in Washington this week preparing a river and harbor appropriation bill.

M. S. Quay claims that he will be elected to the Senate by the next Pennsylvania Legislature, but the Pennsylvania newspapers consider his chances more than doubtful.

It is believed that President McKinley is opposed to a reduction of the representation of the Southern States in the next reapportionment, a measure that has been

suggested on account of the disfranchisement of the negroes in the South, and it is likely that the suggestion will not prevail.

The Republican members of the Ways and Means Committee, it is reported, have decided to frame a bill that will effect a reduction of \$30,000,000 in the revenues, the amount suggested by Secretary Gage.

Other Domestic News.

The United States battleship Kentucky has gone to Smyrna. It is believed that the visit may have some connection with the delay of the Sultan of Turkey in paying an indemnity that is long overdue for the destruction of mission schools by mobs about five years ago. The Sultan has also recently refused to grant an exequatur to our Consul to Harpoot, and the visit of the Kentucky may also have some relation to that incident.

Gov. Roosevelt has declined to remove Mayor Van Wyck of New York City, from office on the ground that there is no evidence that he violated the law wilfully. The charge against the Mayor was that he was interested in a company that sold supplies to the city by the fact of his owning stock in the ice trust.

The management of the exposition to be held in Charleston, S. C., next year will try to remove the Dewey arch from New York to Charleston, and have it form part of the exposition. The New York authorities were on the point of tearing the arch down when the message from Charleston reached them.

Capt. R. P. Leary, formerly Governor of Guam, is to be appointed captain of the League Island Navy Yard at Philadelphia.

President Mitchell has given 2,000 miners of Hopkins County, Ky., permission to strike for higher pay.

The entire street railway system of Key West is tied up by a strike.

An Indianapolis councilman named Higgins was found guilty last week of soliciting a bribe from D. M. Parry, a local manufacturer, and was sent to the penitentiary.

Hundreds of Indians on the Mesa Grand reservation in California are reported to be on the verge of starvation because the drought has killed their supply of berries and acorns.

Captain Daly, of the Harvard football team, will enter West Point next year.

A tornado swept over Delaware and Knox counties in Ohio on Thursday night of last week, doing considerable damage to property.

Another tornado swept over portions of Tennessee, Mississippi and Louisiana, killing sixty-four persons and injuring many more. A windstorm in Colorado last week caused damage estimated at \$100,000, and another in New York State wrecked several small buildings, caused the death of one man in New York City and injured several others.

The fire and casualty companies, in asking last week for a reduction of taxes, made the curious plea that the country's prosperity has increased their losses. They say that factories and mills are running overtime, with the result of increasing the number of fires and casualties.

The receipts from the war revenue act from July 1 to November 1 were nearly \$10,000,000.

The Legislature of the prohibition State of Vermont defeated a high license local option bill last week.

A number of highway robberies have thrown the people of Rochester, N. Y., into a state of alarm. The police seem to be unable to locate the highwaymen.

Gold is coming from the Klondike in a steadily increasing flow. In the four and one-half months ending November 15, the gold deposits at the Seattle Assay Office amounted to \$19,827,000, while for the entire year ending July 1 the deposits were only \$13,630,326 and for the fiscal year previous only \$6,504,952.

Negotiations for a reciprocity treaty between the United States and Russia are in progress at Washington.

The office of chief of the Government Bureau of Engraving and Printing was offered a short time ago to Frank Sargent, chief of the Brotherhood of Locomotive Firemen. He decided last week to decline the offer.

The city of Chicago wishes to present to the Federal Government the Chicago drainage canal, completed a short time ago at a cost of \$33,000,000. If the government accepts the canal, it is believed that Chicago will then strongly urge a proposition that the government deepen the canal and the Illinois River so that steamers can run from Lake Michigan to the Gulf by the Illinois and Mississippi rivers.

The Government has called for bids for the removal of the wreck of the Maine from Havana harbor. The contractor must remove the wreck before April 1, and must use no explosives in the work. The removal is expected to show conclusively whether the battleship was blown up from the inside or the outside.

Large numbers of Spaniards are emigrating to Cuba. Last month 4,017 of the 5,272 passengers who landed at Havana came from Spain. The customs receipts at Havana last month were over \$1,000,000.

Dr. Gilman will resign the presidency of Johns Hopkins University the coming year. Dr. Albert Shaw is talked of as his successor.

THE DRUG NEWS.

New York and Vicinity.

THE MILITARY PHARMACIST.

The Association of Military and Naval Apothecaries of New York State held a meeting recently in the Everett House, Fourth avenue and Eighteenth street, this city, for the purpose of discussing a practical method of securing aid to firmly establish the law which went into effect last May in this State, making the pharmacist in the National Guard a second lieutenant. While the law is actually in force now, there is an apprehension that an effort may be made to secure its repeal, and for this reason every exertion is being made to block such a movement should the occasion arise.

It was decided at the meeting to request the aid of all pharmaceutical associations in the State should an attempt be made to introduce any legislation at the next session directed against the law and all pharmacists are to be requested to be on the alert. At present there are but two military pharmacists under the law. They are: W. G. Tuttle, of the Twenty-third Regiment National Guard New York State, who was commissioned early in June, and C. O. Douden, of the Forty-seventh Regiment N. G. N. Y. S., whose commission dates from October 1.

The association is in receipt of queries from States all over the Union for information concerning the means to be adopted in introducing bills similar to the one presented to the New York State Legislature, and word has been received that such bills will be introduced in the State Legislative bodies in New Jersey, Maryland, Pennsylvania and Ohio during the next sessions. In this way the pharmacists expect to create a national movement so that a law may be passed by Congress creating the office of military pharmacist in the United States service as well as that of the several States.

A NEW WHOLESALE HOUSE.

M. & A. Bakst, formerly engaged in the retail drug business in this city, have bought out the Associated Drug Company of New York, 146 East Broadway, which was conducted on a co-operative basis, and have set up in the wholesale business, handling proprietary articles, pharmaceuticals and drugs and chemicals. The new firm is under the name of Bakst Bros. It will assume the debts and liabilities of the Associated Drug Company and will carry on the business on a broader policy than the former owners. One of the partners of the new firm said it was the purpose of the new concern to uphold the tripartite agreement of the N. A. R. D. and that as soon as possible application would be made to the proper authorities for recognition on the jobbing list. The company proposes to secure larger quarters as soon as possible, which will not be, however, much before May 1. A. Bakst stated that the firm intends to make a bid for trade in Greater New York and will enter the field with the same advantages as other jobbing houses. Both the members of the concern are well known to the trade.

A COSTLY DISPLAY OF MEDICINES.

Perhaps the most expensive collection of medicines in the world is in possession of Sidney Faber, secretary of the New York City Board of Pharmacy. It consists of a large number of prescriptions the uniform price of filling which has been \$50 each. This collection represents the work of the board in upholding the pharmacy law, as every one of the prescriptions has been mixed by an unlicensed clerk, and the fines have been realized after the arrest and conviction of the proprietors of the stores where the prescriptions were filled. Mr. Faber thinks the array may be interesting enough to be placed on exhibition, and he contemplates giving the public a chance to see it during the latter part of December.

BAYONNE DRUGGISTS' ASSOCIATION.

The members of the Bayonne Druggists' Association, established recently in Bayonne, N. J., held a meeting in Hendrickson's Hall, corner Thirty-first street and Avenue D., Bayonne, Tuesday evening, November 20, and adopted a uniform price list which is to go into effect early in January. John N. Peterson presided, and seven of the thirteen druggists in the place were present. C. Mitzenius thought the organization should be made permanent to hurry matters in adopting the price list, but it was deemed advisable to defer such action until the annual meeting in January. C. D. Ayers, who was named chairman of a committee to prepare a price list, reported the following schedule which was adopted as the association's list:

All 5c., 10c. and 15c. articles, full price.
 All 25c. articles not less than 20c.
 All 35c. articles not less than 30c.
 All 50c. articles not less than 45c.
 All 75c. articles not less than 65c.
 All \$1.00 articles not less than 85c.
 All \$1.25 articles not less than \$1.15.
 All \$1.50 articles not less than \$1.25.
 All 25c. articles over \$2.00 a dozen, full price.
 All 50c. articles over \$4.00 a dozen, full price.
 All \$1.00 articles over \$8.00 a dozen, full price.
 All \$1.50 articles over \$12.00 a dozen, full price.
 Imperial Granum and Mellin's Food not less than 60c.
 Sedlitz powders not less than 5c. each, 3 for 10c., and 25c. the box.
 Citrate of magnesia, not less than 15c.

The secretary was instructed to get signatures of all the druggists in the section, as each one is in favor of the raised prices. The meeting was adjourned subject to the call of the chair.

ESSEX COUNTY (N. J.) DRUGGISTS.

The second meeting of the newly formed retail druggists association of Essex County, N. J., was held in the New Jersey College of Pharmacy, Newark, Wednesday afternoon, November 21 and showed that a strong interest has developed since the meeting two weeks ago. The various committees reported the results of the work performed in the several sections to which they were assigned. A substantial increase of members was reported. President Staehle and Secretary Wuensch had made a special canvass among some of the "cutters" in town but were not successful in securing them as members, although some stated they were in sympathy with the plan and if other members of the trade would join they would. The reports of the committees were accepted and the work will be continued, as there are many other towns in the county where the druggists have not been officially informed of the association's work. It was stated there were about 150 druggists in the whole county and there were eighty already in the association.

The N. A. R. D. plan was informally discussed. A motion prevailed to join the N. A. R. D. as soon as it was assured that 75 per cent. of the druggists in Essex County became members. A motion was made to adopt a price list, but this was afterwards withdrawn and the matter referred to the Executive Committee for report to the next meeting. It was intimated that the association was in favor of requesting wholesale dealers to refrain from establishing retail counters. Another meeting of the association was held yesterday.

GARDEN CITY SUPPLY CO.

Will the Garden City Supply Company, J. W. Gregg, proprietor, of 164 La Salle street, Chicago, kindly come out with a definite statement regarding its manner of doing business and its financial reliability? This paper is receiving many inquiries about this concern, and has thus far been able to secure no definite information. It is up to Mr. Gregg to explain.

GRADUATING CLASS, 1870, NEW YORK COLLEGE OF PHARMACY.

John M. Domas. Wm. F. Stohlmann. S. Ribas. Thos D. Leon. Wm. Muir. Chas. B. Plum. Fred J. Brettman. E. Rafael.

A. B. Rains. W. De F. Day. E. R. Squibb. C. F. Chandler. John W. Ballard.

The above is a copy of an old photograph which, besides its general, has somewhat of a special interest. It contains, so far as we know, the only photograph of Dr. E. R. Squibb, lately deceased. Many of the old-timers will be interested in thus renewing their acquaintance with former class-mates and college associates. In some cases it is a little difficult to trace in their present features the lineaments of their countenances as they were thirty years ago.

RECEIVER FOR THE MOUNT VERNON CHEMICAL COMPANY.

The Mount Vernon Chemical Company, of Mount Vernon, N. Y., with which members of the trade here have had dealings in the last few months, has gone into the hands of a receiver, and an order has been granted by Supreme Court Justice Wilmot M. Smith to show cause why the corporation should not be dissolved and that testimony be taken before John F. Coffin, as referee, on the subject. Thomas E. Fitzgerald has been appointed receiver.

Plans for the N. Y. C. P. Alumni Ball.

The committee in charge of the annual ball of the Alumni Association of the New York College of Pharmacy is already planning for the event, which is to be held in Lenox Lyceum on the night of January 30, 1901, and from arrangements made, it is presumed the entertainment will eclipse any previously held. This season's ball will mark the thirtieth year in the life of the association, which it is the purpose of the members to fittingly commemorate. Among the features of the affair, a "promenade band," is promised to give a concert from 9 to 10 o'clock, following which the "festivities proper will begin." The programme is in charge of a competent committee, of which Fred Borggreve is chairman.

NOTES.

—The games of the Wholesale Druggists' Bowling Association were continued last Saturday afternoon with the following results: Lanman & Kemp, 672; National Lead Co., 684. Lanman & Kemp, 668; Johnson & Johnson, 681. National Lead Co., 691; Johnson & Johnson, 692. Colgate & Co., 751; Church, Dwight & Co., 655. Seabury & Johnson, 812; Church, Dwight & Co., 612. Colgate & Co., 756; Seabury & Johnson, 662. The association has been bowling about four weeks, and the following are the scores up to date:

Teams.	Games Played.	Won.	Lost.
Colgate & Co.....	4	3	1
Parke, Davis & Co.....	4	3	1
Dodge & Olcott.....	8	6	2
Johnson & Johnson.....	6	4	2
National Lead Co.....	6	4	2
Seabury & Johnson.....	6	4	2
Lanman & Kemp.....	6	3	3
Merck & Co.....	6	2	4
General Chemical Co.....	6	1	5
Church, Dwight & Co.....	8	0	8

—A well known salesman for a well known drug house in this city thinks he has found the limit of gall in the drug trade, and he is giving his friends the benefit of an experience he had last week with the new manager of a certain drug store. The place has recently changed hands, with the result that manager, clerks and the whole working force gave way to new people, and to make the transformation complete, the new manager inaugurated a policy of, as he said, "scaling the stock down to a skeleton." When the salesman went into the

store to get an order, the manager said he wanted an order sent by express to his store, and the salesman prepared to book a fair sized transaction. This was the order he received: "3/4 lb. lactate of iron, 1 oz. of bromide of ammonia, 1 dr. strychnine." The salesman was stumped, and informed the manager he did not ordinarily express such small orders, but "bein' it's you, I'll send it and pay the charges myself." "Thank you," said the manager, in acceptance of the offer.

—Among the druggists who visited the trade during the last week were: F. B. Palmer, Spring Valley, N. Y.; C. K. Brown, Deposit, N. Y.; George M. Howell, Paterson, N. J.; H. C. Bingham, Oradell, N. J.; C. B. Porter, Towanda, Pa.; W. Schaelles, Sea Cliff, N. Y.; Robert Currier, Chicago; Frederick C. Jewell, Pottstown, Pa.; A. C. Meyers, Welcome, Tenn.; O. B. Grant, Stamford, N. Y.; Dr. W. J. Parker, New Orleans, La.; I. M. Sweezy, Port Jefferson, N. Y.; E. A. Carrell, Morristown, N. J.; John H. Barr, Irvington, N. Y.; George F. Brown, Rahway, N. J.; Frederick A. Hubbard, Newton, Mass.; Mr. Lawrie, of Russell & Lawrie, and T. S. Armstrong, Plainfield, N. J.

—Receiver Arthur H. Cameron is closing up the affairs of the old botanical drug firm of Walter A. Adams & Co., formerly at No. 46 Cliff street, but latterly on Pearl street. The firm has been managed since the death of Walter Adams in 1895 by George Elwood, the surviving partner, but business has not been up to standard, and the end finally came a few weeks ago, when a judgment for \$3,664 was secured against Mr. Elwood by Mary Ann Adams, widow of Walter Adams. At the time of Mr. Adams' death, Referee H. S. Moore found Adams' share in the business amounted to \$7,927.08. Of this some had been paid, the judgment secured being for the remaining sum.

—A complimentary dinner to Gen. Edward L. Molineux, the veteran member of the drug trade, was held at the Drug Trade Club, Tuesday evening, November 27, at 6.30 o'clock. The dinner was given by the members of Gen. Molineux's staff in the Sound Money Parade of November 3, this year, in recognition of the General's heroic record as commandant of the drug trade forces in sound money parades and Presidential campaigns since 1888. Beside the members of the staff, many others who took part in the parade had a hand in doing honor to the veteran. Many speeches were made during the evening, and the event will be pleasantly remembered.

—The first of the usual series of "Students' Receptions" tendered by the Alumni Association of the New York College of Pharmacy was held Wednesday evening, November 21, in the library of the college. There was a goodly number present, including members of the faculty of the college, of the Alumni Association and in the retail trade and a pleasant evening was passed. Excellent music for dancing was furnished by W. R. Mandlebaum, musical director of the Alumni Association, at the piano. The receptions will be held the third Wednesday evening of each month during the year.

—The retail druggists of Troy, N. Y., held a meeting Thursday evening, November 22, for the purpose of forming an association for scientific purposes and the consideration of matters of mutual benefit. Robert Glass acted as chairman and Frederick Schneider secretary. The following committee was named on constitution and by-laws: Charles E. Shacklady, Ward H. Wilkinson, Charles H. Mansheffer, Frederick W. Schneider and Walter D. Magill. Another meeting of the association was held in the Chamber of Commerce, Troy, yesterday afternoon.

—A druggist who takes particular care of his trade in "hot soda" provides salted wafers for lunch with the drinks. He relates an amusing incident that happened a few days since. An aged woman was testing the virtues of hot chocolate, and between sips eyed the dish of crackers with a suspicion born of more than a mere curiosity. The druggist, noticing this, politely inquired of the lady if there was anything she wished. He received this reply: "Well, yes; I was just wondering if you had a bit of cheese to go with those crackers."

—At a meeting of the Retail Druggists' Association held Friday evening, November 23, the report of the committee which attended the meeting of committees to de-

vise plans for abolishing the cut-rate evil, was adopted and the committee was continued. The price list as presented at the Conference Committee meeting above referred to, was also adopted with a recommendation that 75 cent articles be included in the list. One applicant for membership was elected and the receipts of the meeting were \$25.

—The Pharmaceutical Clerks' Association of this city has abandoned its regular monthly meetings, and hereafter will only meet when business of importance is to be transacted. Members of the organization who, at any time, may have matter which they consider of vital import for the society's opinion, should address such communication to C. W. Dietz, president, Seventy-second street and Third avenue, or N. Cohn, secretary, No. 1102 Second avenue, and a special meeting will be called.

—The Hoboken Druggists' Association failed to meet Thursday afternoon, November 22, owing to the absence of a quorum, but a call was issued for a special session Monday evening last to take action on a price list. The organization numbers a majority of the twenty-nine druggists of Hoboken and enough others have now signified an intention of joining the association to give it a membership of nearly 90 per cent. of the whole number.

—Testimony is to be taken before Senator Van Cleef, a master in chancery, in New Brunswick, N. J., during next week in the case of Johnson & Johnson against Seabury & Johnson for alleged infringement of copyright in using a red cross. The suit was begun in chancery by Johnson & Johnson in the early spring, and was then put over to this fall. It is said that it will require fully a year to complete the case.

—J. D. Sipp, for the last three years with the local force of the A. R. Bremer Company, of Chicago, has recently opened an office at 1 and 3 Park Row for I. S. Johnson & Co., manufacturers of Johnson's Anodyne Liniment, of Boston, Mass. Mr. Sipp will be in charge of Johnson & Co.'s business in this State.

—G. S. Mariager, cashier for the local branch of Parke, Davis & Co., returned Friday last from a vacation of ten days in Detroit. S. H. Carragan and W. J. Carr, also of the local branch, attended the football contest between the Yale and Harvard teams at New Haven last Saturday.

—The annual dinner of the Alumni Association of the Brooklyn College of Pharmacy will be held Wednesday evening, December 12, at Hotel Argyle, Brooklyn, and is being looked forward to with much interest. F. P. Tut-hill is chairman of the Committee of Arrangements.

—William Hauenstein, who owns drug stores at Seventy-eighth street and Amsterdam avenue and Eighty-ninth street and Columbus avenue, has recently purchased another store at Eighty-fourth street and Broadway, formerly known as Kantor's pharmacy.

—It is said that an effort is being made by the half dozen retail druggists in Montclair, N. J., to form a local organization. As Montclair is in Essex County, the proposed association will be requested to affiliate with the Essex County Druggists' Association.

—The members of the Retail Druggists' Bowling Association are talking up a "ladies' night." This has been a yearly custom with the organization, and has proven a pleasant feature. It is proposed to hold the affair this season early in January.

—The case of Joseph Bush and Maurice Shea, the men accused of robbing the store house of Laurenceson & Gerrish of several cases of opium belonging to Dodge & Olcott, last August, was in the police court last week and was continued this week.

—The new bacteriological incubator recently presented to the New York College of Pharmacy, will be initiated by the laboratory class during the first of next month. A number of cultures are being prepared for "hatching" in the machine.

—Arthur Woodcock, 371 Third avenue, and Henry Slemborn, 313 Tenth avenue, were fined \$50 each in the Court of Special Sessions on November 19 for permitting unlicensed persons to compound prescriptions.

—Frank Perilli, of Perilli Brothers, 65 Sullivan street, has recently returned from a five months' trip abroad.

—E. O. Stafford, of the Stafford Drug Company, Marquette, Mich., visited the trade last week.

—A. Schleimer, druggist corner Thirty-first street and Avenue D, Bayonne, N. J., has on exhibition in his window a mortar and pestle which survived the Tarrant fire. The relics are interesting to say the least.

—F. Schroeder, Jr., with the Bolton Drug Co., Brooklyn, and for some time at the Flatbush avenue branch store, has been transferred to the Putnam and Sumner avenues store, where he is manager.

—At the last meeting of the Board of Pharmacy of this section, held in the Brooklyn College of Pharmacy, one hundred students were examined. The next meeting of the board will be the final one.

—Nothing new has developed in the investigation before the Fire Marshal into the causes of the fire and explosions at Tarrant & Co.'s. The firm has located permanently at No. 21 Jay street.

—Ward & Lindemann have recently purchased of J. F. Comerford the store at Fifty-ninth street and Ninth avenue. Mr. Comerford retains his store at 108th street and Columbus avenue.

—Elj W. Marquise, a young business man of Syracuse, will shortly establish the Marquise Chemical Company, in that city, to manufacture high-grade chemicals which are now imported.

—"The Harlem Drug House" has been incorporated in this city with a capital of \$20,000. The incorporators are: O. Gordon, Nicholas Kruskal and Samuel Herson, all of this city.

—John J. Benson, who conducted a pharmacy at Ninety-third street and Lexington avenue, has "shut up shop" and gone to Brooklyn, where it is said he will open another store.

—The annual dinner of the Alumni Association of the New York College of Pharmacy was held last evening in "College Hall" in the Arena, corner Thirty-first street and Broadway.

—H. A. Reynolds, formerly at Caswell, Massey & Co.'s store at Newport, R. I., has been transferred to the store in this city at Seventy-seventh street and Columbus avenue.

—Cocaine is in active demand in the market, while the supply is decidedly short. This is said to be due to the uncertainty of the market for raw material.

—A. Major, of the Major Cement Company, No. 461 Pearl street, in his schedule in bankruptcy says he owes \$4,901 and has cash, \$18, and a bicycle worth \$7.

—George Merck, of Merck & Co., arrived home on Friday on the delayed Kaiser Wilhelm der Grosse, after a trip of several months in Europe.

—Charles A. Lotz, N. Y. C. of P., 1900, has accepted a position with the R. Lucke Pharmacy, at Eighty-first street and Amsterdam avenue.

—Manager Sipperly, of Atwood's Pharmacy, No. 846 Broadway, has recently returned from a vacation of three weeks up the State.

—Dr. E. A. De Schweinitz, a well known chemist in the employ of the Government at Washington, was in the city during last week.

—J. S. Kinnan, secretary of the Walding, Kinnan & Marvin Company, of Toledo, Ohio, was in the city for a few days last week.

—E. J. Bryson, formerly employed in the Sherman Pharmacy, is now with C. H. White at Fifty-third street and Madison avenue.

—Henry H. Eliel, of the Lyman-Eliel Wrug Company, Minneapolis, Minn., called on old friends in the city last week.

—Charles F. Grubbe, druggist in Toledo, Ohio, for the last five years, is in this city and will probably locate here.

—Charles Sheftall has lately severed his connection with the pharmacy of C. P. Kinsella, at Paterson, N. J.

—Bakst Brothers have sold their store at the corner of Montgomery and Henry streets to Arthur Bryanson.

—Charles Alker, representing Magnus & Lauer, essential oils, is on a business trip through New York State.

—H. T. Young, of Ontario, Canada, a graduate of the Ontario College of Pharmacy, is in the city.

—George B. Bower, with the J. C. Ayer Co., of Lowell, Mass., was in the city during last week.

—C. E. Marsh has resigned his position with F. W. Kinsman at 125th street and Eighth avenue.

—"Offman's Pharmacy" will open shortly at the corner of Madison and Montgomery streets.

IN AND ABOUT BOSTON.

Former President of the Massachusetts Board of Pharmacy a Candidate for a Mayoralty.

Boston, Nov. 24.—Melrose, one of the youngest cities in Massachusetts, is now agitated by a large political campaign in which the principal contest is that for Mayor. There are two candidates, John Larrabee and Sidney H. Buttrick, both of whom are very well known. Both have been honored many times by being elected to numerous public offices. They have many friends who are putting in effective work, and the contest promises to be closer than last year, when Levi S. Gould, the present Mayor, was elected by 151 votes. The Larrabee supporters appear to be very confident of winning, because they have the support of Mayor Gould and the citizens who elected him last fall. Mr. Larrabee was a candidate for Mayor at that time, and his friends believe that he would have won had he not withdrawn before the caucuses in favor of Mayor Gould. The chairman and secretary of the Republican City Committee are openly working for Mr. Larrabee. John Larrabee is well known to many Era readers. He was born in Melrose in 1850, and was educated in the public schools. He has been in the drug business since he was 17 years old. He was elected town clerk in 1878, and served twenty-one years. He was clerk of the Selectmen for six years, and was a member of the board of registrars of voters. He served on many of the important town committees, and represented the town in the House of Representatives in 1886 and 1887. He was a cashier of the Melrose Savings Bank for fifteen years. He was a member of the Massachusetts Board of Pharmacy for fourteen years, having served as clerk for seven years, and he was president of the board for one year. He is connected with the Masons, Odd Fellows, Middlesex Club, Massachusetts Republican Club, and is a member of the Sons of the American Revolution.

New England Chemistry Teachers Meet.

Boston, Nov. 24.—About fifty members of the New England Association of Chemistry Teachers were present at the first meeting this season, held at the Walker building, Massachusetts Institute of Technology. The president, Rufus P. Williams, presided, and introduced William F. Boos, Ph. D., of the Harvard Medical School, as the speaker of the occasion. His subject was, "The Chemistry of Digestion," which he treated exhaustively, illustrating by means of practical experiments the points which he wished to emphasize. He gave an excellent insight into this subject, in which his hearers naturally were very much interested. Following this address, the topic for discussion was "Laboratory Notes," and their value to the student and the teacher, and how they should be taken and how best used. A dozen or more members took part in the discussion. Herbert G. Shaw, secretary of the association, reported the names of two active and sixteen associate candidates for membership. These represented teachers of chemistry in Boston and in other parts of Massachusetts, as well as in Maine, New Hampshire, Connecticut, Rhode Island, Pennsylvania, Illinois and Chicago. They were then elected members. Prof. Boos was given a vote of thanks and was elected an honorary member of the association.

Celebration at the Massachusetts College of Pharmacy.

Boston, Nov. 24.—To celebrate the first anniversary of the Women's Club of the Massachusetts College of Pharmacy, a lecture was given by Prof. Joseph P. Remington, of the Philadelphia College of Pharmacy, on the subject of "Prescriptions and Dispensing Difficulties." There were many present who were not pharmacists, therefore Prof. Remington made his talk not too technical. He showed by means of lantern slides many puzzling and funny prescriptions. Some of these would puzzle the most astute pharmacist to unravel or translate. Prof. Remington owns perhaps 3,000 of these queer, curious and misleading prescriptions, and said to his audience that they relieve the tedium of a druggist's life! His lecture proved wholly enjoyable and also was most instructive.

NOTES.

—At a recent meeting of the Drug Clerks' Union of Springfield, the question of working seventy-five hours a week was again discussed. Not long ago the union sent out circulars to thirty-five druggists in Springfield asking their opinions regarding the matter of seventy-five hours a week that the clerks have been working for. They enclosed a postal card for reply, but only twelve druggists responded. The union is anxious to obtain replies from all the druggists, if possible, so that the sentiment of the proprietors may be known. The clerks feel that their movement for shorter hours is fair, even if they obtain what they are striving for they will still work twelve hours a day and therefore do not think their demands unreasonable. The union voted to have a banquet, which is to be held in the near future, in order to bring the drug clerks together and give them an opportunity for getting better acquainted.

—At an early hour one day this week a man was caught in M. Beauregard & Co.'s drug store at the corner of Appleton and Main streets, in Holyoke. He had broken a pane of glass in the rear window and the breaking glass aroused the officer on the beat. He investigated and with two others who joined him surrounded the building. The burglar was then easily captured and taken to the police station.

—Among returns recently filed with the Massachusetts Commissioner of Corporations is the report of the Newton Chemical Company of Boston, of which F. H. Lincoln is treasurer. The report shows real estate and buildings, \$7,100; cash and debts receivable, \$3,226; a total of \$10,326. Against this is the profit and loss account of \$10,326.

—T. E. Masters, who has conducted a pharmacy on North Main street, Springfield, has sold his business to E. F. Leonard, who has had another store here for some time, and will conduct this one as a branch. Mr. Masters is now clerking at Westfield.

—Rupert E. Olive, one of the victims of the City of Monticello disaster, was well known in Boston and Cambridge. After his school days he first went to work for E. L. Patch Company, manufacturing chemists, this city.

—J. Snowdon Smith, a druggist in City Square in the Charlestown District, is a voluntary petitioner in bankruptcy. He owes \$4,848, most of which is unsecured. His assets are not much more than \$1,000.

—J. A. Loomis & Son are to make some important changes in their store at Easthampton in the way of improvements, including a new soda fountain, which cost \$1,000.

—The drug store of Jacob Appell at Dalton has been bought by Albert Silvernail, of West Stockbridge, where for the past twelve years he has been clerk for James Moore.

—The postoffice at West Springfield has been removed from the old quarters in Chandler's drug store to the new building at the corner of Main street and Colton avenue.

—The week's exports from the Port of Boston include drugs and chemicals, \$13,253; india rubber manufactures, \$31,679; tobacco, \$15,522; wax, \$102; spirits, \$5,894.

—George Bradshaw, who is popular in Lawrence as the proprietor of the post office drug store, is happy over the arrival of the ten-pound girl at his home.

—Albert May is a new clerk who has entered the employ of Currier & Frost, Lawrence.

ELSEWHERE IN NEW ENGLAND.

—J. J. Hogan has recently enlarged and completely remodeled his store at the corner of Water and Meadow streets, New Haven, Ct. He has added a new laboratory to the rear of the store building, has put in two new plate glass windows and increased the window space very considerably. The entrance is now directly in the corner instead of on the side street, as formerly. The interior of the store has also been very much changed and improved. Mr. Hogan anticipates corresponding improvement in business.

—An unusual point has been raised regarding some claims held by the receiver of the bankrupt firm of A. E. Lemerise & Co., druggists at Burlington, Vt. One of the claims in the contest is that of John E. Danaher &

Co., of New York, for \$351, which the receiver refuses to pay on the ground that it represents liquor which was sold in violation of the Vermont law. There is also a note now held by other parties for \$489, upon which there is a similar contention.

—A part interest in the drug store at the corner of West Main and North Willow streets, at Waterbury, Conn., has been purchased by John B. Jones, who for the past five years has been prescription clerk for the Apothecaries' Hall Company. The store was formerly conducted by H. D. Cannon & Co., and the new firm will be known as Cannon & Jones and will be under the management of Mr. Jones.

—Identification of a body found near Farmington, Conn., has been made through a small bottle of camphor with "Groton Pharmacy" blown on the glass and found in the clothing. The body was that of an inmate of the Odd Fellows' Home at Groton, who had been missing and unaccounted for since the fall of 1898. It was a peculiarity of the missing man to always carry camphor and he habitually bought it at the drug store named.

—Dr. F. G. Kinsman, manager of the Capital Drug Company at Augusta, Me., recently entertained a number of New York advertising men at his summer cottage at Lake Cobbossee. In addition to the New York guests two of three Augusta friends were included in the party.

—Carney's drug store at Waterville, Conn., was one of several places which burglars chose for a visit and they secured cigars, tobacco and some small articles. Officers overtook them some hours later and arrested them—four men in all—with the booty on their persons.

—In a recent runaway accident in Portland, Me., the horse, harnessed to an express wagon, dashed headlong into the show window of Horgan & Abbott's drug store, breaking the large glass into thousands of pieces.

—Although burglars succeeded in gaining an entrance to the drug store of F. Henry Parker, at Burlington, Vt., they made no effort to carry away goods, confining their work to rifling the cash register.

—An interesting display at C. L. Mason's drug store at Enosburg Falls, Vt., includes several articles which were captured in the Philippines from a band of outlaws known as the "Red Twelve."

—Extensive alterations have been completed in T. Anderson & Co.'s pharmacy at Cromwell, Conn. More counter room and a better prescription desk are among the improvements.

—At a recent meeting of the county commissioners at Middletown, Conn., a druggist's license was granted to Frederick E. Minor, of Clinton, and William Welch, of Portland.

—Burglars tried to enter the Forestville, Conn., drug store of William Reynolds recently by breaking a window glass, but they failed to gain an entrance.

—John Thurlough, a clerk at the drug store at Norfolk, Conn., has returned from the Adirondacks, where he went on a hunting trip.

—The son of Percy Babcock, the Lisbon street druggist, at Lewiston, Me., is recovering from an attack of diphtheria.

The Danbury Pharmacal Co., Danbury, Conn., has been re-organized recently. It has been capitalized at a sufficiently large figure to enable the new company to push its goods very vigorously. A number of prominent and wealthy Danbury citizens are interested, and Charles Kerr is treasurer and business manager. Mr. Kerr, by the way, is very popular with the Danbury public, and at present is mayor of the city. He is a pharmacist of long experience and is the originator of the preparations which this company is placing on the market. An Era reporter called at the concern's factory last week and found them busily attending to their present good business and paving the way for a much larger trade in the near future. About nineteen employees were engaged in the work of mailing to physicians in all parts of the country literature regarding their Linoline and other preparations, circularizing about 15,000 doctors daily. It will be to the interest of druggists to be prepared to fill orders for these goods by placing a reasonable amount in stock. We call attention to their announcement on another page.

PHILADELPHIA.

Clash Between College Students and Police.

Philadelphia, Nov. 22.—In what almost amounted to a pitched battle, several hundred students of the Philadelphia College of Pharmacy a few days ago defied the police from the Sixth District for half an hour or more and were only subdued by the combination of professors and threatened clubbing. The row started from the attempt of a policeman to reach Dean Remington to report that he had been hit in the fact by a banana peel thrown from the college, the officer being almost mobbed in his progress upstairs by a crowd of young men whom he had angered by his words and actions. What was intended by the students for good-natured "jollyng" became serious resistance when the furious officer drew a revolver and blackjack and threatened to use them on his tormentors, and in a few moments the stairs and corridors were filled with an angry crowd which proceeded to hustle their victim around pretty roughly until the appearance of Professors LaWall and Cook, who came to the rescue and managed to get the officer into the actuary's room. Meanwhile an excited teamster had gone to the station house and reported that the college students were murdering a policeman, so a squad of bluecoats were sent to the rescue. These were halted by the closed gates of the building, behind which was massed a crowd of students and a contest began to see which was the strongest. The officers finally managed to push through into the hallway, where they were met by a rally of students and things began to look rather serious, but, drawing their revolvers, the policemen advanced to where their comrade was in the midst of a crowd and bore him off in triumph. By this time the ardor of the students had cooled considerably and they began to scatter through the corridors, so when the members of the faculty succeeded in reaching the scene of trouble it was an easy task to bring order out of the disturbance. The bluecoats retired in good order, each carrying off with him a student whom he had succeeded in laying hands on. The six young men were arraigned before Magistrate Cunningham on the charge of mobbing a police officer and after being given a sharp lecture were released on promises of future good behavior and given over to the tender mercies of the dean for suitable punishment. In speaking of the affair, Dean Remington is quoted as saying: "The trouble was caused by the hot-headedness of the police; if one of them had a complaint to make of the students he should have gone into the actuary's office near the door and not tried to climb three flights of stairs. When the young men saw the officer on the third floor they thought that their rights were being invaded and resented the intrusion; as I understand it, they did not surge around him until he had drawn his blackjack and threatened to use it and his revolver. Then they attacked him to protect their fellow students. The young men are all respectable and unluckily for them happened to be pushed by the crowd nearest to the policemen; they were arrested as being the most easily reached."

The most regrettable part of the affair is the undue prominence given it by the newspapers that will tend to injure the good name of both college and students.

P. C. P. Notes.

Philadelphia, Pa., Nov. 24.—The pharmaceutical meeting of last Tuesday was very well attended, quite a number of druggists and students being present. The proceedings were full of interest and value, the discussions of the papers presented being unusually full and general.

F. T. Gordon, pharmacist, League Island Navy Yard, read a paper on an "Improved Process for the Preparation of Tinct. Opii Deodorata," in which the author suggested the use of paraffin, U. S. P. for removing the objectionable substances from the finished tincture and gave a formula for the preparation of Tr. Opii Deod. based on the use of this substance. Results of tests and assays were given as showing that paraffin will remove narcotine, etc., from a watery solution of opium, but will not take up morphine, hence its value for such a use. Attention was also called to the desirability of supplanting the "Laudanum" of the U. S. P. by a

"deodorized" preparation of opium, thus doing away with two representatives of the drug of the same strength.

J. L. Wilbert, apothecary of the German Hospital, read a very valuable paper on the new German Pharmacopœia, illustrating the difference between this and that of the United States by means of tabulated data from each. Considerable difference was noted between the two in the number and character of certain preparations, also in the wide variance in strength of many potent drug preparations. A word of caution was given to druggists that they should exercise great care in dispensing fluid preparations wherever there was any reason to suspect that the prescriber had the Pharm. Ger. in mind when ordering dosage.

The reception given by the Alumni Association to the students and their friends last Tuesday night was one of the most enjoyable of such functions yet held. The Museum Hall was packed to its utmost limits by a crowd of students and druggists with their fair attendants, who seemed bent on enjoying to the utmost the delightful programme furnished by the Entertainment Committee. After several recitations by a well-known local amateur and a number of doubly encoored songs by Mrs. McCormick, the guests were invited downstairs, where ice cream, cake, lemonade and other light refreshments were being served. Dancing then began, and dozens of couples enjoyed themselves thus until a late hour, when reluctantly they sought their wraps and said "good-bye." Quite a number of prominent local druggists and their wives were present, a party of whom, led by J. W. England, made a tour of inspection of the new gymnasium in the basement of the college. This, by the way, is a new feature of P. C. P. life, and is proving to be very popular with the students.

Camden Forms a Retail Druggists' Association.

Philadelphia, Nov. 24.—Acting by appointment of the president of the New Jersey State Association, George Beringer called a meeting of the Camden druggists on Thursday night to take steps towards the formation of a Retail Druggists' Association in that city. A number of local retailers answered the call, and by 8 o'clock a majority of Camden druggists were in the assembly hall. Mr. Beringer then explained the purposes of the meeting, and suggested that the meeting be formally organized as a first step. A motion to this effect was then carried, and Mr. Burton was elected temporary chairman; Mr. Barrett as temporary secretary.

After a few remarks from the chairman, Mr. Beringer was called on for an outline of the purposes of this organization, which he explained fully and concisely. Mr. Holliday, chairman of the National Executive Committee, then addressed the meeting along the lines of the work to be done by retail druggists' associations in furthering the aims of the N. A. R. D., which were of so much importance to every retailer. He was followed by J. C. Perry, chairman of the Executive Committee, P. A. R. D., who gave the Camden druggists an object lesson of the good to be achieved by such an association by referring to the good work done by his association in Philadelphia. H. L. Stiles, of the P. A. R. D., also spoke along these lines.

A Nominating Committee was then appointed by the chair to present names for the various offices of the association. This committee soon reported, and an election of officers was held, after which the association was formally organized by the enrolment of members and the payment by these of their annual dues. The following officers were elected: President, George Burton; first vice-president, Mr. Collins; second vice-president, W. M. Hilberger; secretary, George Barrett; treasurer, G. Peachen. The Executive Committee and other committees are to be announced at the next meeting of the association, December 7, at 3 p. m.

A committee composed of Messrs. Moon, Haines and Collins were appointed to draw up a constitution and by-laws. The following committee to solicit membership was also announced: Messrs. Breannon, Healy, McLaughlin, Becket and McPherson.

The Camden association starts off in its work for the betterment of local conditions under the most favorable

auspices, a vast amount of enthusiasm has been aroused among Camden druggists by the successful work of the sister association across the river, and the two bodies will work together in harmony for mutual benefit and advantage. The association is affiliated with the N. A. R. D., and a notice has been sent to the national secretary of its formation and membership.

P. A. R. D. Notes.

Philadelphia, Nov. 24.—A most notable increase in membership in the local association is a gratifying result of the interest Philadelphia druggists are taking in the carrying out of the N. A. R. D. plan; nearly forty members have been secured in the past two months. The tactful manner in which an agreement was reached with the State Board in the recent suits brought by it for non-compliance with the Pharmacy law has received the warmest commendation from all quarters and has served to infuse a wholesome respect for the P. A. R. D. into the minds of druggists generally.

A general advance of prices of patents along the lines favored by the majority of retailers is to be brought for settlement at the forthcoming December meeting. While the proposed advance is to be small at the beginning, it is the first step towards the realization of paying prices for the retailer; its general details follow closely the plans now working out so successfully in other cities.

The celebrated "Dickinson-Maurer Phenacetin" case came up before Judge McPherson in the United States Circuit Court last week, the opening arguments being made by both sides. This case is so widely known throughout drug circles that its final settlement will be awaited with much interest, especially the contention of the defense that they fully expect to set aside the patent under which such a monopoly has been given the phenacetin people. The defense attacks the validity of the patent on the ground that the substance as a chemical body was well-known before the plaintiff found it to possess therapeutic value, and that he has simply discovered this, which is only an attribute and is non-patentable under United States statutes. Other arguments were also advanced. A decision is looked for at an early date.

Eben C. Jayne.

Philadelphia, Nov. 20.—Eben C. Jayne, manager of the patent medicine firm of Dr. David Jayne & Son, died at his home, 1302 North Broad street, November 15, from double pneumonia, at the advanced age of seventy-three years. About a month ago Mr. Jayne contracted a severe cold which was at first taken to be pleurisy; soon after a congestive chill followed and pneumonia set in, involving both lungs. The interment was in the family lot in Woodland Cemetery. Eben C. Jayne was born in 1827 and was taken into the patent medicine firm in 1854. He gradually mastered the details of the business and had become so conversant with its management that on the death of Dr. Jayne in 1866 he was made practically the head of the firm. An excellent chemist, he was thoroughly conversant with every process in use by the firm and has made many improvements in working details. Mr. Jayne was widely known as a philanthropist, being instrumental in the building of the Memorial Baptist Church and a liberal contributor to the Baptist Home at Seventeenth and Norris streets. He was a director of the Northern Liberties Bank at Third and Vine streets, and was also interested in other enterprises.

NOTES.

—A slight fire occurred in the liquid room of the laboratory of Powers & Weightman Thursday afternoon, November 15, caused by the ignition of some carbon bisulphide which was being poured from a large carboy into small bottles for the trade. The blazing chemical dropped on the floor of the room and set fire to it and an alarm of fire was turned in, but before the arrival of the firemen the blaze was extinguished by the firm's workmen. One of the men was slightly burned about the arms.

—Thieves broke into the drug store of T. A. Sheehan, Eleventh and Wolf streets, early one morning recently and managed to escape with the contents of the cash drawer in spite of the efforts of the night watchman, who grappled with one of the men. Mr. Sheehan was

aroused by the noise of the struggle and fired his revolver out of a window to attract the police, but by the time six of the bluecoats reached the scene the robbers had decamped, taking with them about \$15.

—An echo of the excitement of the early part of the month over the wholesale summoning of druggists for violations of the State pharmacy law came in the shape of two convictions of druggists. Louis Genois, of Twelfth and Chestnut streets, and A. H. Boyer, of 2635 Bridge street, appeared before Magistrate Cunningham and were by him fined \$10 and costs for violation of the law in neglecting to display their certificates of registration.

—A call has been issued to the Nominating Committee of the P. A. R. D. to meet Tuesday, November 27, for the purpose of deciding on a list of nominees for the various offices of the association to be voted for at the annual meeting in January. Considerable interest is felt in local circles as to the "slate" to be presented and candidates are already "in the hands of their friends."

—The druggists of Wilmington, Del., met last Monday and formed a retail druggists' association, its membership including over half of the local retailers already. The recent Detroit convention has stirred up considerable enthusiasm among druggists of this section, and the number of local associations is increasing almost weekly.

—James King, P. C. P. '98, after a year's service as manager of J. L. Crother's Eighth street and Girard avenue store, has accepted a position with H. K. Wampole & Co., having charge of their elixir and specialty department.

—Mr. Hagenbach has sold his store at Thirty-second street and Powelton avenue, the new owners intending to renovate and enlarge it and conduct it under the name of "The Powelton Avenue Pharmacy." A. S. Holloper is to be manager.

—James Buckman, president of the Philadelphia Wholesale Drug Company, has sailed from Portland, Oregon, for a trip through Alaska, during which he hopes to make a thorough study of that frozen country.

—Mr. Holland, of 601 Gray's Ferry avenue, is making extensive alterations and additions to his store to accommodate the rapidly increasing trade of that section.

—Trenchard & O'Reilly, of 2502 Richmond street, have disposed of their drug stock and propose to convert their erstwhile pharmacy into a grocery store.

BALTIMORE.

The Winkelmann & Brown Drug Company.

Baltimore, Nov. 26.—Owing to the illness of James G. Stanley there was some delay in the reorganization of the Winkelmann & Brown Drug Company, but the postponed meeting took place last Saturday, when the officers named were duly elected. Mr. Winkelmann having previously relinquished his desk, the duties until then discharged by him were taken up by his successor and business went on as usual. Some time will be required, of course, for the inauguration of contemplated changes and for the general adjustment of the working force to the new routine. Besides the officers already mentioned, the corporation includes F. F. Drexel and F. A. Ohrenschall, the latter having been a stockholder in the old company, while Mr. Drexel is a new member. A few shares held in the old company by different persons have been acquired on mutually satisfactory terms by those who will guide the future destinies of the concern. Special attention will be paid to the manufacture of perfumery, the products of the company in this line enjoying a wide reputation. Whether any change is to be made in the name has not yet been decided. Mr. Winkelmann, as stated in the first report, intends to engage in the manufacture of a number of specialties and is now looking around for a suitable location.

The Drug Trade Howlers.

Baltimore, Nov. 24.—The bowling of the Baltimore Drug Trade Club this week was decidedly spirited. On last Tuesday night the Sharp & Dohme men met the Winkelmann & Brown Drug Company quintette and took all three games. The totals were: Sharp & Dohme, 748,

772 and 725; Winkelmann & Brown Drug Company, 704, 652 and 714. Dohme made high score (190) and high individual average for his team, while Tribble was high man with 188 and Muller high average man for the Winkelmann & Brown Drug Company. Last night James Bailly & Son met the Root and Herbs and took two out of the three contests with 696, 733 and 657 against 664, 749 and 655. The third game furnished a hair-raising finish. The several teams are now in the following position:

	Games Won.	Games Lost.	Per Cent.
Root and Herbs.....	12	3	.800
McCormick & Co.....	9	3	.750
James Bailly & Son.....	9	3	.750
Sharp & Dohme.....	9	6	.667
Muth Bros. & Co.....	4	8	.500
Winkelmann & Brown Drug Co.	3	12	.250
Parke, Davis & Co.....	2	10	.200

NOTES.

—Morrison & Turlington, Linden avenue and Dolphin street, have leased the building in the rear of their store, on Linden avenue, and taken in the lower floor as an addition to their establishment. The change gives them much needed room besides admitting of a far better display of goods. The improvements are a gratifying evidence of the success attained by this enterprising firm.

—The Wedgwood Club held its regular monthly sitting at the Hotel Rennert last Tuesday evening, the date having been changed from Thursday on account of Thanksgiving Day, when the members, or the majority of them, have engagements to dine elsewhere. The occasion proved to be a very enjoyable one and was productive of numerous flashes of wit.

—The improvements in Theodorick Smith's pharmacy at the corner of Pennsylvania and Lafayette avenues, are making rapid headway and will be completed in a few days. They consist of a new diagonal front and new fixtures of pleasing and graceful design.

—J. J. King, formerly in the retail drug business at the corner of Columbia avenue and Scott street, has accepted a position as assistant to Mr. Lyttle, the manager of the pharmacy owned by the widow of C. W. Bailey, Pratt and Paca streets.

—R. T. Lilley, a retail druggist at St. Paul and Twenty-first streets, is improving his store in various ways. He is putting in a corner front, with the entrance diagonally between the two large windows, and the interior is undergoing a thorough renovation.

—Charles T. Gallagher, clerk in the drug store of the Robertson & Duck Drug Company, under the St. James Hotel, Charles and Centre streets, was away for several days last week, spending a brief vacation at home with his parents in Washington.

—W. L. Campbell & Co., who purchased the late Dr. Denton's old pharmacy at the corner of North and Park avenues, are putting in new shop fixtures, bottles with especially attractive and artistic labels being a conspicuous feature.

—L. E. Fuld & Bro., Park avenue and McMeichen street, are having their pharmacy artistically decorated. Ceiling and frieze in particular are of handsome and elaborate design and give the interior of the establishment a rich appearance.

—Mr. Eyles, formerly manager of Symes' pharmacy at the corner of Fulton and Edmondson avenues, has accepted a position with C. W. DeFrehn, under the Altamont Hotel, Eutaw Place and Dolphin street.

—Druggist J. C. Baughmann has removed from the corner of Edmondson avenue and Brune street to Edmondson avenue, opposite Fremont avenue, a more commodious and eligible location.

—At the last meeting of the Indiana Board of Pharmacy held at New Albany the following applicants passed the examination: Registered pharmacists—William B. Hopkins, New Albany, Ind.; Leslie E. Gillam, Owensboro, Ky.; Registered assistant pharmacists—L. L. Raber, Goodland, Ind.; Miss Grace Clouse, Hope, Ind.; P. M. Bennett, Detroit, Mich. The next meeting of the board will be at Indianapolis, Thursday, January 10, 1901.—Charles B. Woodworth, Secretary.

DETROIT.

DETROIT DRUGGISTS HOLDING TOGETHER.

Detroit, Nov. 24.—As announced in the Era, the druggists of Detroit at last got together and agreed, one and all, to adopt a new schedule of prices on 150 articles which had been cut more or less for a long term of years. The new schedule provided for an advance of an average of from 10 to 20 per cent. on prevailing prices. It was not intended to advertise the rise with brass bands and trumpets and spectacular procession. Rather it was tacitly agreed to let the public find it out for themselves gradually. However, during the last week one of the leading papers of the city came out with a long article calling attention to the new prices and announcing that cut-rate drugs were a thing of the past in Detroit. Then the telephones began to ring and there was a nice row on between the old cut-rate stores and their patrons. The impression was abroad that every article in the druggists' catalogue had been raised to its full price. This was not true and the next day's papers contained statements that Grunow & Patterson, The Central Drug store, and Hurd & Gray had not agreed to any such advance and that they would continue to cut prices on drugs. Thus the impression was made that these three firms had not entered into the agreement made by the new schedule. This, too, is an error. All three firms are in the agreement and intend to keep in it. Grunow & Patterson are among the prime movers and supporters of the scheme. What was intended was that the public would not be led into thinking that all prices on all drugs had been put at the full price. On the contrary many of the 150 articles agreed upon are still a long way short of the full price, that is, they are still sold at cut-rate prices, and will probably continue to be so sold. But not one druggist in Detroit shows, up to date, any disposition to go back on the agreement made on the 150 articles. The public are taking kindly to the little advance.

How much influence the N. A. R. D. had upon the new state of affairs in Detroit is a question which provokes much discussion. Said Mr. Patterson, of Grunow & Patterson, when asked for his views on the subject: "Yes, I believe that the N. A. R. D. is the moral power back of this progress in the right direction. I do not think that that agreement could have been signed without that moral backing."

Bay City Druggists Organize.

Bay City, Mich., Nov. 24.—A local association has just been formed by the druggists of this city, the papers having been signed Thursday, the 22d. Cutting has been going on for years, every druggist in town indulging in it to greater or less extent. Saginaw is only fourteen miles from Bay City and all cutting was stopped immediately and effectually in that city some time ago upon the organization of an association. That association still flourishes. Its members meet once a month for a review of business affairs and a general love feast, and all has gone well. But of late Saginaw people have been too much interested in the cutting going on in their neighborhood to suit the druggists at home and so they have made it their business to interest the Bay City trade in an effort to stop cutting. The Bay City men were only too willing, and the result is an association on the N. A. R. D. plan. Now the druggists are going ahead to see how soon they can stop all cutting and they think it will be a matter of but a few days. While the condition has not been so bad as in Detroit, still there has been no standard of prices, each druggist taking what he could get for his wares.

At Battle Creek, too, there has been considerable indiscriminate cutting. The druggists there have waked up and are whipping into shape a constitution under which they can form an association. They expect to be able to organize during the coming week.

Central Drug Store Changes Hands.

Detroit, Nov. 21.—The Central Drug Store, formerly owned by Fred. Stevens and Fred. J. Todd, latterly by

Fred. J. Todd, D. W. H. Moreland and Frank C. Andrews, has again changed hands, Messrs. Moreland & Andrews having sold out their interests. The buyer is W. H. Burke, of this city, who is already the owner of two very successful drug stores here. W. R. Todd, of Jackson, a brother of Fred. J. Todd, retains his interest in the firm and Fred. J. Todd keeps his one-third. The consideration was \$21,000, which fixes the value at upwards of \$30,000 for the entire stock. W. H. Burke is president and treasurer of the new company and Fred. J. Todd is vice-president and general manager. The store is the handsomest in the city.

NOTES.

—Owing to sickness in the ranks, the proposed bowling contest between The Michigan Drug Company team and the Farrand, Williams & Clark team did not take place. One man on each side was incapacitated. In order to get the series started they will play four men on a side some night this week. Farrand, Williams & Clark played the Nelson, Baker & Co. team on Monday night, with results disastrous to the former, all three games going the same way. These teams will bowl again during the coming week. A revival of interest in bowling has taken place in Detroit and the druggists are anxious to make a name for themselves, even though they are a little late in beginning.

—A. A. Geissler, of Algonac, was among the druggists visiting Detroit during the week. He was a sufferer to some extent in the fire which swept the business portion of his town a few days ago. He was not burned out but his windows were broken by the heat and things generally scorched. John J. Campbell, of Pigeon, was another visitor. He came in to see some of his friends "cross the burning sands of the desert" and incidentally to purchase holiday goods and call on friends.

—Stanley Parkill, druggist at Owosso, Mich., was married a few days ago to Miss Buckingham, of Flint. Mr. Parkill was one of the comparatively few Bryan druggists in the State, Mr. Bryan being a personal friend of his. It is said that Druggist Parkill was booked for the cabinet of the United States in case of the election of Mr. Bryan.

—Henry Cleland, for some time at the head of the prescription department, Hurd & Gray, Detroit, has taken a similar position with the Central Drug Store.

—Charles Frantz, of the drug firm of Frantz & Richardson, Bay City, will marry Miss Lizzie Eleanor Du Mont, of Marion, Iowa, on Thanksgiving Day.

—Harry Sparks, formerly manager of Knill's drug store, Port Huron, has taken a position with D. E. Prall, Saginaw.

—A. P. Breitenbach has bought the drug store of Bird Bros., corner Warren avenue and Fourteenth street, Detroit.

—Walter Rosser has purchased the stand owned by Henry C. Reinhold, St. Aubin avenue, Detroit.

Decorations for the Holidays.

As the holiday season approaches, dealers must spend some thought on their decorations for this merry season, when we expect our profits to carry us over the dull days following.

A store decorated in a unique and seasonable style is sure to bring trade. Can you do better than talk to a man who has made this business an art and a study, and who can furnish decorations at a ridiculously low figure? If so, then don't write to Frank Netschert, for he is just such a man. His indoor decorations of naturally prepared plants are better than Nature's product, because they do not fade, they do not dry up and fall apart, and still they contain all the charms of Nature's own. A trial will convince you. You have just time to consult Mr. Netschert, who will gladly send you his special 52-page catalogue. His advertisement on another page gives a fair idea of what to expect, and his prices are subject to 50 and 10 per cent. discount, allowing dealers who care to sell his plants a profit of 300 per cent. Write now, to be in time for the holiday trade.

CHICAGO.

DRUG CLUB ORGANIZES.

Chicago, Nov. 24.—The meeting of the Chicago Drug Club, the initial meeting and dinner, took place Tuesday evening, November 20, at 75 and 77 Randolph street. Socially it was the drug event of the season, so far as Chicago drug men are concerned. It was feared that the proposition would not meet with unanimous approval, but results showed those present to be to a man in favor of the organization proposed.

Seventy-one persons were present and all signed slips agreeing to become charter members of the proposed organization and seventeen more sent in their acceptances by mail. Since that time thirty-seven more gentlemen have signified their desire to become members, making an initial membership to date of 125. The dinner was a distinct success. The room was tastefully decorated and the viands were of the best. No liquors were served, but cigars, cigarettes and coffee served to wind up the menu. Charles M. Phelps, Western manager of the Londonderry Lithia Water Company, contributed the Lithia Water for the occasion.

The account of the dinner would not be complete without mention of the very excellent band of negro singers and players who entertained the company with the popular melodies of the day.

H. A. Antram occupied the chair and in a few felicitous words announced the object and purposes of the gathering. After the eatables were disposed of Mr. Antram set the ball rolling by announcing that we had with us a man whom we all loved—a reference which was at once understood and applauded—and the calls for Mr. Scofield, of the Fuller and Fuller Company, became so insistent that he was obliged to respond, which he did in a witty and logical way that did much to direct the thoughts of those present along right and practical channels. He commended the course outlined by Mr. Antram and declared himself in hearty sympathy with the movement. He said that not only he but the members of his firm would do everything in their power to make the club a success and would become members and lend their moral and material aid unreservedly to the movement.

Among the other gentlemen who spoke were Messrs. C. C. Van Schaack, I. Giles Lewis, Porter B. Fitzgerald, Mather, Ballard, Maynard, of Eli Lilly & Co., and others. All favored the movement and promised their unqualified support. Charles E. Matthews, as secretary, read letters from a number of local wholesalers and others promising their membership and support. On motion of Mr. Fitzgerald the gentlemen who gave the dinner and put in motion the organization of the club were constituted a Board of Directors, empowered to select a member or members from each wholesale drug house to act with them as members of said board to draw up a constitution and by-laws.

After some further discussion participated in by Messrs. Hereth, Fitzgerald, Scofield and others the company adjourned. The yearly dues of the club will be fifteen dollars and the room in which the dinner was given will be the first headquarters of the club where members may come and bring their friends, take luncheon, etc. The club will be a nucleus for larger things, undoubtedly, and is the beginning of an organization which will be a credit to Chicago and the West. The trade is very grateful to the gentlemen who have taken the initiative in the matter and feels disposed to give them all the honor which is their due.

NOTES.

—The "Report of the Proceedings of the Illinois Pharmaceutical Association" has just been issued. The report is a good one, very full and accurate. It contains 126 pages of matter and the whole has been well edited. It compares favorably with any of its predecessors. It seems to be more condensed than the reports of other associations which have just come to hand. This seems to suggest the idea that the employment of an editor in such reports to weed out redundancies of matter and of language is not only a matter of economy but one of

good sense in other directions. Few ordinary speakers can bear with credit the strain of having their extempore remarks appear in cold type, and the work of a competent editor in all such reports would add dignity and coherency to them.

—It is with regret that your correspondent announces the death of C. B. Jacob, who recently bought Captain Borchardt's drug store at 735 West Madison street. Mr. Jacob died this week in the South. His wife had died three weeks previously and Mr. Jacob's health, already in a precarious condition, was unable to bear the shock of additional sorrow.

—The proceedings of the last meeting of the Indiana Pharmaceutical Association have just been issued. The book is a neat publication of 177 pages, well printed and well arranged.

—Harry Grundling, manager of the Colbert Chemical Company at Dearborn and Monroe streets, will leave next week on a trip to England.

—Horatio N. Fraser, of Fraser & Company, of New York, was here this week for the purpose of establishing a Chicago branch.

THE NORTHWEST.

ST. PAUL DRUGGISTS AND DEPARTMENT STORES.

St. Paul, Minn., Nov. 23.—So far as the general public can judge—and the general public includes the Era correspondent—the efforts of the retail druggists of this city to effect an understanding with the department store managers whereby patent medicines may be sold at uniform rates, are what the late Samuel Tilden used to call "a futile dalliance." An arrangement of this kind has existed many months in Minneapolis, and is said to operate satisfactorily, but it seems to be "no go" in this city, and all because one prominent department store refuses to enter the deal. The adjourned meeting of the Retailers' Association was held Wednesday afternoon, and the subject was all gone over again, with the usual resultant announcement given the public through the daily papers—nothing decided upon. But now and then the druggists have a chance to make things uncomfortable for the department stores through the rigid State laws requiring such stores to employ registered pharmacists if they carry on a drug business. Infractions of the law are sometimes "smelled out" by the State Board of Pharmacy, and the violators are compelled forthwith to observe the law or quit drug selling.

Another matter engaged the attention of the druggists at the Wednesday meeting—the question of bonding their clerks. This will probably be the main thing to come up at the next meeting. It is not likely, however, that anything like concerted action in favor of the proposition can be secured. The members will act individually, and not a few are strongly opposed to the idea. Those who favor it argue that they are compelled to place great confidence in their clerks and feel that they should be protected. The moral effect of the bond, they believe, would be good. It is proposed to compel both the registered pharmacists and the assistant registered pharmacists to give bonds. The clerks are naturally opposed to the idea, and consider that it is a reflection on their honesty to compel them to put up \$1,000 or more as a guarantee that they will not steal their employers' money. They insist, also, that they are not getting such high salaries that they can afford to furnish bonds. The clerks have not taken the matter very seriously yet. It is hinted that the enterprising local representative of a certain surety company started this matter going.

At the same meeting an Executive Committee was elected in accordance with the amendment to the constitution of the association, increasing the number of members from three to five. The committee now consists of R. A. Becker, A. J. Schumacher, A. Stierle, F. M. Parker and L. M. Rosenquist.

Because Not Registered.

St. Paul, Minn., Nov. 23.—A suit was tried at St. Cloud, this State, this week, which, if one of the allegations is true, demonstrates anew the peril of drug vending by incompetent persons. The case was that of Margaret Carson, of Holding, vs. Senator Valentine Batz, of the

same place, and it was tried before Judge D. B. Searle, of the District Court. It was an action brought for \$10,000 damages. The plaintiff alleged that a clerk in Batz's store, a young woman, sold her sulphate of zinc, or white vitriol, by mistake, for epsom salts, early last summer, and that she took a heaping tablespoonful believing it to be salts. That as a result she was almost immediately taken very ill, and that her life was only saved through promptness of the best medical skill. She further alleged that she had never been well since, and and as a result of the vitriol the lining of her stomach was destroyed, and she still suffers much pain and annoyance. It was alleged that neither the defendant nor his clerk was a registered pharmacist, and that the paper sack containing the supposed salts bore no markings whatever. The burden of proof of course fell upon the plaintiff, to show that she was permanently injured, and on cross-examination it developed that she attended a dance in the village within three weeks from the time of the poisoning. Both sides put up a strong fight, and had numerous specialists and medical men present to prove the effects of the drug. The jury awarded the plaintiff \$168.50.

NOTES.

—Successions: A. G. Roof, Norwalk, Wis., by H. V. Douglas; A. Orner & Co., Washita, Iowa, by Orner & Cronin; White & Richardson, Goldendale, Wash., by W. J. White; the McCullough Drug Company, Adel, Iowa, by the Krabel Drug Company; H. W. Potts & Co., Garden Grove, Iowa, by H. W. Potts; E. L. Henderson, West Liberty, Iowa, by C. A. Burt & Co.

—G. S. Shimmie, of Buffalo, Minn., who went to Los Angeles two years ago in search of health and engaged in business there, is now home on a visit. He still owns the drug store at Buffalo, which is conducted by his brother.

—For the second time within a month the Minnesota Pharmaceutical Manufacturing Company, of this city, has had a fire visitation. Chemical combustion caused the latest blaze, but the damage was trifling.

—P. H. Adams has returned home from Hinckley, and will work in the city this winter. W. E. Burke, of Milaca, succeeds him at Hinckley.

—New stores: L. A. Kjos & Co., Wales, N. D.; Jarvis & Jarvis, Orient, S. D.; Canfield & Harkens, Staples, Minn.

—Paul Hargentheimer has withdrawn from G. Hargentheimer & Sons, Rochester, Minn.

—E. A. Sommerville, Sisseton, S. D., has been chattel mortgaged out of business.

—A judgment has been found against C. J. Musser, Hansell, Iowa.

—G. F. Peterson, East Grand Forks, Minn., is negotiating to sell.

—P. W. & E. W. Clancy, Beatrice, Neb., are invoicing to sell out.

—F. W. Krueger, of Dassel, is in the city on business this week.

—Preston & Le Quattl, Big Timber, Mont., have dissolved.

—The Goldendale, Wash., Pharmacy has incorporated.

—Fred. S. Wright, Lynden, Wash., is moving to Tacoma.

—W. E. Halliday, Buffalo, N. D., has been burned out.

—J. B. Burns, Republic, Wash., has sold his building.

—D. C. Brown, Thayer, Neb., has given a bill of sale.

—A. W. Deane & Co., Sherburn, Minn., have sold.

—E. W. Arvidson has gone to Cannon Falls.

The J. C. Ayer Company's Almanac.

The J. C. Ayer Company, of Lowell, Mass., has decided upon a different policy with regard to the publication of the "yellow-backed" almanac which long ago passed its fiftieth birthday. Under a previous management this almanac was converted into the "Twentieth Century" almanac, price five cents, and not distributed free to the drug trade. Under the new management the almanac will be printed in its former well known style and be supplied to druggists free of charge. At the beginning of the year druggists will receive the usual cards requesting them to fill out the blanks for the number of the almanacs they may desire.

—Under the auspices of the Alumni Association of the Chicago College of Pharmacy, the School of Pharmacy of the University of Illinois, A. D. Thorburn, Ph. G., '94, delivered an address to the students and alumni at the school on Thursday evening, November 8, his subject being, "Bookkeeping as Adapted to the Needs of the Retail Druggist." The lecture embodied many practical points, and was well received. This was the first of a series of meetings which the association has planned for the present session. The second of the series was held November 22, the subject being "Banking Forms, etc.," and the third is announced for December 6, and the subject, "Business Agreements, Contracts, Leases, Etc." Lectures upon the construction and arrangement of store fixtures, upon window dressing and similar subjects of practical importance to the retail druggist, will be features of the course.

—The Torrey Botanical Club met Wednesday evening, October 31. The scientific program consisted of a paper by Dr. P. A. Rydberg on "The Melanthaceae of the Rocky Mountains." Numerous herbarium specimens were exhibited, including the types of seven new species described by Dr. Rydberg in the Torrey Bulletin for October. To these descriptions he now added particulars regarding habit, distribution and critical characters, presenting also a series of comparative drawings of their petals and sepals. One of these new species of especial interest is *Veratrum speciosum*, to which most of the specimens previously ascribed in herbaria to *V. Californicum* prove to belong. The presence of conspicuous petioles at the lower leaves of typical *V. Californicum* was demonstrated from the type specimen and also by explicit accompanying statements by Dr. Asa Gray, whose manuscript description was produced.—Edward S. Burgess, secretary.

—The following were the successful candidates at the October meeting of the New Jersey Board of Pharmacy: Registered pharmacists—Julius Almour, Montvale, N. J.; Ellsworth Q. Anwalt, Phillipburg, N. J.; George Walton Abrams, Orange, N. J.; Harry Clinton Anness, Brooklyn, N. Y.; John Wyckoff Bayles, Mount Holly, N. J.; George J. Holtzhauser, Philadelphia, Pa.; John Joseph Hubel, New York, N. Y.; William Howard Kneivitt, Rutherford, N. J.; Alexander Kunstlich, Passaic, N. J.; Achille V. Megare, Newark, N. J.; Kurt Reiter, Passaic, N. J.; Frank Leonard Seaman, Ithaca, N. Y.; Arthur Du Mont Wyckoff, Newark, N. J.; Edwin Henry Young, Jersey City, N. J. Registered assistants—Theophilus H. Boysen, Jr., Egg Harbor City, N. J.; Edgar H. Patterson, Elizabeth, N. J. The next meeting of the Board for the examination of applicants for registration will be held Jan. 17 and 18.

—The Arkansas State Board of Pharmacy held a meeting in Little Rock on November 14, 1900, at which were present all the members except Mr. Thomas, of Arkadelphia. The following persons passed satisfactory examinations and were admitted to registration, viz.: Ira A. McNichols, Centralia, Ill.; R. G. Morriss, Hot Springs, Ark.; C. B. Lyle, Fordyce; A. W. Wolf, Bingen; Harry Woolford, Little Rock; R. F. Hyatt, Little Rock; J. S. Shibley, M. D., Paris; Percy Chamberlain, Malvern, and C. C. Townsend, M. D., Black Rock. In addition to these, John J. Brown and Walter Burnett, both of Hot Springs, were registered on their diplomas, the former from Kansas City and the latter from St. Louis College of Pharmacy. After transacting its routine business the board adjourned to meet in Little Rock on the first day of the meeting of the State Association, May 21, 1901.—W. W. Kerr, secretary.

BOARD OF PHARMACY PHOTOGRAPHERS.

By an unfortunate oversight the names of the photographers were omitted from the portrait group of the New York State Board of Pharmacy which appeared in our issue of last week. The photograph was taken by the well-known Brooklyn photographers, Messrs. Russell & Wylie, to whom due credit should be given.

OBITUARY.

BENJAMIN WEBB, of Salem, Mass., one of the oldest druggists in that city, died Nov. 12, in his seventy-second year. The deceased was well known throughout Essex County for his superior knowledge of chemistry, and was often consulted as an expert. He was born in Salem in 1829; was educated in the public schools of that city, and studied chemistry at Harvard University. In 1867 he entered the employ of his father, the late William Webb, at 52 Essex street, and became the proprietor of the pharmacy after the death of his father, in 1870. He continued the business uninterruptedly up to the present time. He was twice married. Both of the wives were natives of Maine. He leaves a widow, but no children.

ELISHA D. BUFFINGTON, a member of the Buffington Pharmacy Company at Worcester, Mass., died November 19. He was born in Swansea in 1836 and in 1854, when eighteen years old, he made the journey to California overland. He later taught school in Lansing, Mich. Coming back to Massachusetts he learned the drug business at Fall River. He went to Worcester thirty-five years ago and bought a drug store. In addition to his retail store he built up a large business in the manufacture of supplies for homeopathic physicians and of late years the business has been conducted under the style of The Buffington Pharmacy Company. He was an enthusiastic huntsman and annually made a trip to the Rangeleys. He was appointed in 1893 a member of the Massachusetts Fish and Game Commission and had since been twice reappointed on the commission. He was a member of the Worcester Art Museum Corporation, the Worcester Society of Antiquity, the Commonwealth and Worcester clubs and the Home Market Club of Boston. He married a daughter of the late Benjamin Walker, who survives him.

A Testimonial for Ammonol.

Columbia, Tenn.

The Ammonol Chemical Co., New York.

Gentlemen: I received the sample of Ammonol you sent me and am much pleased with the result I have had with it in the treatment of Aveolar Abscess. I have also tried it in a very bad case of malarial fever accompanied with the most severe pains and it gave relief in thirty minutes time and lowered the temperature from 104 to 100. I enclose \$1.00 for which please send me by return mail one ounce of it.

Yours respectfully,

S. A. HAYS, D. D. S.,
18 North Garden street.

The New York Quinine and Chemical Works point with pride to the general excellence of their products and are very earnest in their request to druggists to insist upon N. Y. Q. being furnished on their orders for fine medicinal chemicals. They say: "Our products are pure, our prices are right, our methods are modern, our dealings are fair, and our appreciation of business is very keen. We wish every mind to feel the impact of these facts, hence we make the statement many a time and often."

Nine years ago St. Andrew's Cold Tea for the Liver and St. Andrew's Wine of Life Root was manufactured in a place of only 700 square feet. To-day the Andrews Manufacturing Co. occupies a building of 7,000 square feet at Bristol, Tenn., and on January 1, 1901, will move into new quarters which will have a floor space of 12,000 square feet. The heavy increase of sales of the above goods demands more room.

STRINGTOWN ON THE PIKE.—By John Uri Lloyd. Cloth, 414 pages; \$1.50. New York. Dodd, Mead & Co.

Of the great number of books which see type—greater, perhaps, than ever before—but few attain to deserving fame. Conspicuous among the novels of the now closing year stands "Stringtown on the Pike," which for the past ten months has been running serially through the pages of *The Bookman*. It is a tale of romantic Kentucky, the Bloody Ground, so-called, the scenes of which lie in a little village, Stringtown—otherwise and really Florence—not many miles from Covington. The story opens during the War of the Secession, when Sammy Drew, the narrator, is a boy barely capable of gathering impressions, and covers a period of many years until it closes upon Prof. Drew, the young professor of chemistry of the University on the Hill.

This novel is a study of human passions and feelings, drawn with a power that foretells great things of the author. John Uri Lloyd is a chemist of wide fame, and has written several books of a technical character; but, while it is to be hoped he never will desert his gallipots, it would be a greater loss did he fail to stand boldly forth as a man of literature, to fulfill thereby the prophecy of this book. He has established himself beyond peradventure as one of the men with the ability of literary creation, the knowledge of human nature and a discerning dramatic instinct sufficient to reach permanence. Indeed, regarding the latter quality, it would not be surprising to see at no distant future "Stringtown" staged successfully. His style is simple, lucid and forceful, and rises and falls in intensity in the true proportion of art.

No one could ever have written this faithful portrayal of Kentucky life of thirty-five years ago, other than one who had breathed its atmosphere and knew its people as one knows his neighbors. Indeed, the introduction at the outset leads us to believe that the persons, though perhaps not the scenes, of the drama are mainly reminiscent. Moreover, the American Israelite of Cincinnati tells us with authority that "Old Mose" the Jew was a real personage, Felix Moses by name, as in the book, and it is reasonable to expect somewhat like of the others. It is refreshing to read of retiring, kindly Mose, for we have had too many Shylocks in literature. The Colonel typifies one class of Southerner as surely as Judge Elford does the other. What a grand nature is embosomed in the Judge, the tender-hearted upright Judge, a figure that alone would make the story deserving of perusal! But it is Cupe, "Ole Nigger Cupe," who "memberlee's" far beyond the time of most people then living, and knew the "gran'paw" of his present master, the Corn Bug, who is the clearest and most impressive character of them all. His signs and omens add to the story an enhancing interest, and his quaint figure—as 'also that of his old wife Dinah—is a true picture of the faithful, single-hearted "fam'ly nigger" of the ante-bellum days. Susie, his ward, a wild elusive character which the reader can never quite understand, but is nevertheless for that very reason fascinating, is the heroine. She is Susie Nobody until she is a woman grown, when the secret of her name is disclosed to her Red Head, who, as he grows into manhood learns to love Susie with a dogged tenacity, in the hatred he nurtured as one of the participants of the feud of which he of the Nordmans and "Ole Holcomb" of the Holcombs were all that was left, exemplifies in his nature of extremes the passions of the "Kaintuck moun'n" folk. Then there is the mystery of the destiny foretold by Cupe's omens and his magic mirror, of Susie, Red Head and Sammy Drew closely bound into the story, never permitting the reader an easy breath until he has closed the book at the word *fnis*.

"Stringtown on the Pike" is very taste-fully illustrated by Mrs. John Uri Lloyd with photographs taken of the scenes in which the story is laid. Altogether the book is one which, after being read, will grace the shelves of any lover of literature and life.

Prof. Lloyd made an essay into fiction four years ago with much success, so that he is not entirely new in this field. His former book, "Eldoropa," which, by the way, is Aphrodite spelled backwards—has gone into several editions and has been translated into German and French. It is to be hoped it will receive renewed

STATE OF TRADE.

A Satisfactory Volume of Business.

New York, Nov. 27.—Business in a wholesale way has continued of satisfactory volume and during the past week the market has developed several new features of more than ordinary importance. Interest in quinine revived under the influence of cables from London reporting a depressed condition of affairs in the speculative market, and the result was increased activity and liberal sales by outside holders, but at material concessions from previous quotations. Subsequently the tone of the market became firmer and prices were restored to their former basis, although the market continued more or less unsettled and sensitive. There was no important change so far as manufacturers were concerned and both domestic and foreign makers reported a continued light run of orders. The depression abroad was attributed to lack of interest on the part of speculators, many of whom are said to have turned their attention to stocks and other speculative commodities which seem to offer a wider field for operations.

The opium situation has continued strong with the advance in prices noted last week fully maintained and indications point to a still higher range in values in the near future. The chief stimulating feature is the strong position of the article in primary markets, due to continued unfavorable weather in growing districts. Cable reports of extreme drought are confirmed and some venture an opinion that the autumn sowings will be an entire failure. In consequence of these conditions, local holders are firm in their views and offer only sparingly at current prices. Morphine continues active and firm but keen competition prevents any tendency to advance quotations. One of the more important developments of the past week was a sharp upward turn in prices of *santonin*, due to confirmation of reports from abroad to the effect that the stock of crude material in primary markets is under very close control. Early in the week foreign manufacturers cabled their local representatives to advance quotations 50c. per pound and a few days later 10c. more was added, making an advance of 60c. for the week. A decidedly strong feeling prevails and extreme prices are predicted.

Another important feature was a material advance in importers' quotations for *asafetida*, the stock of which is being steadily reduced under a fair consuming demand. Advances from abroad are to the effect that there is none in European markets that is of suitable quality for shipment to this country, owing to the strict rules of the Government appraisers. It is expected that prices will reach extreme figures in the event of dealers being unable to replenish their depleted stocks. *Guarana* is in larger supply and holders have modified their views to the extent of reducing quotations about 1c. per pound. Gum *chicle* is scarce and higher with only limited quantities obtainable at the advanced price.

In the department of essential oils the only change in values is a lower range of quotations for *anise*. *Cassia* is dull and more or less nominal in the absence of business. *Peppermint* is firmer in producing markets, but spot values remain unchanged. *Ergot* is somewhat irregular with some holders shading quotations, while others maintain firm views. Prickly ash berries are very scarce and wanted by consumers with prices decidedly higher. *Jalap* is firmer under reduced stocks and quotations show an advance of 1c. per pound. *Canary seed* is fractionally higher, in sympathy with primary markets. Small flake *manna* is a shade easier, but there is no change in large flake or sorts. *Carbolic acid* is 1c. per pound lower. Manufacturers of tin crystals have reduced their quotations 2½c. per pound and nickel salts are 1c. higher.

Nothing of Special Interest.

Boston, Nov. 24.—There seems to be nothing of special interest to note regarding this week's drug trade, which inquiry shows to be good. In the drug and chemical market no changes of importance are found calling for special record. The demand for goods is fairly good, and seems to be more of a jobbing character than any other kind. Prices do not change materially on the amount of business being done, which is no more nor less than the ordinary trade. A bit more activity in dyestuffs and tanning materials is noted, although things are not especially lively. Alcohols are in fairly good demand. Hops are gaining in firmness. Waxes do not vary much on steady business.

Rather Quiet the Past Week.

Philadelphia, Nov. 24.—Business has been rather quiet the past week, but will average up very well as compared with that of this time last year. Prescription business continues to be fairly good, as is the demand for seasonable remedies. The warm days of the early part of the week caused a boom in soda business, especially in the shopping district, and a good demand for remedies for bowel and stomach complaints.

Nothing special is doing in wholesale circles; trade is fairly brisk and orders good. Crude drugs and dyestuffs

ories are reported as having been filled by two leading firms. Manufacturing pharmacists report a very satisfactory condition of affairs, and there is rejoicing on the good outlook for the removal of the war tax on the class of goods they put out in such large quantities.

Still Quiet in Baltimore.

Baltimore, Nov. 26.—Comparative quiet still prevails in the various branches of the drug trade. Now that the effect of the election is no longer felt, the close of the year has approached so closely that anything like a spurt in the movement of goods is not to be looked for. It is the practice of some houses to call in their salesmen about the middle of December, and not send them out again until after the first of the year, so that no unusual activity may be expected for several weeks to come. The year as a whole, however, has been considerably ahead of 1899, and not a few firms report the largest business in their existence. No developments of note have taken place in the drug market, while the movement of heavy chemicals is about up to the average for this time of the year. The retailers make the customary complaints, but it does not appear that they are worse off than for weeks and months during the weeks and months that have elapsed.

Nothing New in Detroit.

Detroit, Nov. 24.—Absolutely nothing new in the drug trade in this city. The country departments at the wholesalers continue to be busy, the city departments a little less so. Retailers complain that things are very quiet. Weather is against trade of any kind. Sundries for holiday goods are selling well, but would go better if one could tell three days running whether the month is May or November.

Chicago Trade Active.

Chicago, Nov. 24.—Business in all drug lines has been very active this week. Jobbers and manufacturers of pharmaceuticals are very busy, and the like is true of dealers in sundries and in collateral branches of the drug and chemical trades. The winter without doubt will show a period of marked activity. The week has shown few failures, and collections are reported to have been good.

Another Drop in Linseed Oil.

St. Paul and Minneapolis, Minn., Nov. 23.—Linseed oil has dropped again, this time two cents. The prices now are 66 and 68 cents for raw and boiled respectively. This is a decline of eight cents from the record price which existed three weeks ago. Dealers here are a bit curious to know how quotations will be affected, if at all, by the announced intention of the American Linseed Company to remove from Chicago to New York. Jobbers are receiving orders in satisfactory volume, a condition that began immediately after the election. Retailers are, as a rule, "flourishing," being extremely busy, most of them; this in spite of unfavorable weather much of the week now closing. But the fly of poor collections has not yet been eliminated from the ointment of their complete serenity. Some encouragement, however, may be gleaned from the fact that they are no longer unanimous in unfavorable reports respecting this phase of trade, for here and there one is to be found who represents collections as "fair," if not first class.

Dentomyrh Tooth Paste, which the Charles Wright Chemical Company, of Detroit, Mich., are so widely advertising in the leading magazines, is rapidly taking its place as one of the foremost standard dentifrices. The preparation is one which any pharmacist will take pride in recommending, having received the indorsements of such high dental authorities as Prof. Taft, dean of the Cincinnati College, and author of Taft's "Operative Dentistry"; Dr. John A. Watlin, professor of Clinical and Operative Dentistry at Ann Arbor Dental College, and others equally well known.

The goods are very attractively put up, and the Wright Chemical Company are issuing some very up-to-date advertising matter in the line of booklets, lithographs, etc. Their special offer of counter show cases is being taken up very readily by the trade.

Dentomyrh Tooth Paste pays a splendid profit to the dealer, and justifies the makers' claim that "it never lingers."

MARKET REPORT.

NEW YORK MARKET.

New York, Nov. 27.—General business in a jobbing way has continued of satisfactory volume and while the fluctuations in prices have been limited to a small number of articles, some of the changes are of more than ordinary importance and indicate that considerable interest is manifested in prevailing conditions.

OPIUM.—Small lots are finding a fair consuming outlet and values continue firm at the recent advance to \$3.50@3.75 for 9 per cent. and \$3.60@3.85 for 11 per cent., according to size of order.

POWDERED OPIUM.—The movement into consuming channels continues satisfactory to dealers and jobbing quotations are steadily maintained at \$4.60@4.75 for 13 per cent. and \$5.10@5.25 for 16 per cent., as to quantity, the outside figures for single pounds.

MORPHINE.—There is an active inquiry and the market is firm in sympathy with opium, but jobbers still quote on the basis of \$2.40@2.60 for eighths, according to brand and quantity.

QUININE.—The jobbing demand continues light but holders are a shade firmer in their views and quotations show an advance to the basis of 35@35½c. for bulk in 100-oz. tins.

SANTONIN.—Manufacturers' quotations have scored a sharp advance and jobbing prices are correspondingly higher, the revised range being \$5.25@5.50 per pound and 43@46c. per oz. for crystals and 10c. per lb. higher for powdered.

ASA FETIDA.—Steadily diminishing stocks and scarcity of desirable grades abroad have influenced a stronger feeling among holders, and quotations for jobbing quantities have been advanced to 40@45c. for prime and 35@45c. for good.

ERGOT.—Values are slightly easier and the revised quotations for jobbing parcels are 65@75c. for whole and 75@85c. for powdered.

GUM CHICLE.—Stocks are light with only small parcels offered and quotations have been advanced to 48@53c., as to quantity.

GUARANA.—The market is better supplied and values are lower, jobbers having reduced quotations to 65@75c. for whole and 75@85c. for powdered.

JALAP.—A firmer feeling has developed owing to reduced supplies and jobbing quotations show an advance to 28@38c. for whole and 33@38c. for powdered.

OIL ANISE.—Primary markets are easier and spot quotations for jobbing quantities have been reduced to \$1.80@1.85.

CANARY SEED.—The market is stronger in sympathy with a higher import cost and jobbers now quote 3@3¼c. for Smyrna by the bag, and 4¼@6c. for less, 3¼@3¾c. for Sicily by the bag, and 5@7c. for less.

GREEN SOAP.—Jobbers have advanced quotations to 8¼@9c. by the keg and 12@15c. for less.

SENEGAL ROOT.—There has been a slight reaction in jobbing prices and moderate quantities are obtainable at 60@70c. for whole and 65@75c. for powdered.

KOLA NUTS.—Holders offer more freely and the market is easier with jobbing quotations reduced to 30@40c. for whole and 40@50c. for powdered.

CANNABIS INDICA.—Owing to scarcity a stronger feeling has developed and prices show an advance to 50@60c. for prime green tops.

TARTARIC ACID.—In sympathy with the recent decline in manufacturers' prices, jobbers have reduced their quotations for powdered to 31@31½c. by the barrel, 32@32½c. in 50-lb. cases and 36@40c. for broken lots, according to size of order.

A Salable Article.

A certain New York retailer bought a gross of Marvel Syringes not long ago and made a window display of them. They are put up very attractively, and a handsome showy display was the result. No other advertising was done, but the window sold the whole lot in less than a month, and a second lot in still less time. The solid whirling spray is a new principle in female syringes, the advantage of which a glance at the illustration will show, and its salability is shown in the druggist's experience, related here. Full information, prices, terms, etc., may be obtained of the Marvel Company, Room 10, Times Building, New York.

New Class Formed Each Month.

THE NEW YORK STATE PHARMACY LAW.

As the time approaches for putting into effect the new pharmacy law for New York State, which is to become operative January 1 next, druggists are evincing a great deal of interest therein and inquiring what they must do in order to become registered under the law.

There is nothing for druggists to do before January 1, and they need not take the initiative at all. Just as soon as the new board comes into legal existence instructions to druggists will be issued and sent to every present store in the State. These instructions will tell each recipient just what he must do and how to do it; so any tribulation for a month yet is entirely unnecessary.

It is well, however, that pharmacists in this State should thoroughly understand the law in advance, so that when it comes into effect it may do so with as little confusion and friction as possible.

Without going into an exhaustive analysis of the law we may profitably consider here its leading features.

It makes provision for the issuance of two grades of licenses ("licensed druggist" and "licensed pharmacist"), and for one grade of certificate ("registered apprentice").

Licenses for "licensed pharmacist" will be issued to apply anywhere in the State, but those for "licensed druggists" will not be operative in cities of more than one million inhabitants. This practically means that New York City alone is thus exempted. The most important feature of the act is that it requires the annual registration of every pharmacy, store, dispensary or place where drugs, medicines or poisons are compounded, dispensed or retailed.

What the new law will require from druggists now in business may be briefly set forth under three headings:

- 1.—Registration of the place of business.
- 2.—Registration of pharmacists and druggists.
- 3.—Registration of apprentices.

To explain each of these somewhat in detail.

1.—The owner of a pharmacy will be required to furnish evidence satisfactory to the board that his store is conducted in full compliance with the law. Each proprietor must give the name of every pharmacist, assistant and apprentice employed in the store, and when and how each was registered. If this information is satisfactory the store will then be registered upon payment of a fee of \$2.00. This registration must be done each year in January, and the law requires that

the proprietor's name must appear upon the sign, and the certificates of all employed must be conspicuously displayed in the store.

2.—The registration of pharmacists and druggists. The licensee of any of the present existing boards (Greater New York, Erie County and the State Boards) may continue to practice in his present place of business, or anywhere within that section of the State for which his license was originally granted, and without further registration, but in no other part of the State. The law, however, provides that anyone who holds a license or certificate of registration as a pharmacist, granted upon examination, may make application to the board for a license to practice as a licensed pharmacist outside of the territory to which his license originally applied, and he must surrender his old license and pay a fee of one dollar. In other words, the druggist must be able to prove that he was originally licensed by examination if he wishes to go outside of his present territory, or he must undergo examination by the new board to secure such privilege.

All applicants for registration must hereafter be twenty-one years of age. Under the new law there are no "assistant pharmacists." Any person holding such certificate which was granted upon examination may, upon application to the new board and the payment of a fee of one dollar and furnishing evidence that he has had three years' practical experience, be granted a license as a "licensed druggist." Such licensed druggist is entitled to practice and have full charge of the store in towns of five hundred or less anywhere in the State; but in towns of greater population he must serve under a licensed pharmacist, and can only have temporary charge during the absence of the licensed pharmacist. Nor can he serve in New York City.

3.—Registration of apprentices. The licensed pharmacist or druggist must make application to the board for the registration of his apprentice, and the law provides that the board shall designate the necessary requirements to be demanded of the apprentice. We believe that the board has practically decided that in order to be registered as an apprentice the applicant must be fifteen years of age, and present to the board evidence that he has completed a grammar school course or its equivalent.

The above in a rough way presents the principal features of the new law. Druggists will be thoroughly advised of its provisions and their duties and privileges under the new act. It is not to be expected that everything will work smoothly at once, but each can do his share, which in the aggregate will do much to keep the wheels greased.

Paul druggists (see Era, last issue) that drug clerks be placed under bonds, as bank cashiers are. For years druggists have been loudly crying that they are slowly starving to death, that the business has gone to the "demnition bow-wows," and now they want to take action that will make every one believe, as they used to, that "there's millions in it." We can't reconcile these attitudes. Put the clerk under bond? Why, the poor fellow in a whole year could not save enough out of his "8 per" to pay interest on even a fifty dollar bond. If you are afraid he will steal an ounce of cocaine or juggle with the cash register, pay him enough to remove such a sordid temptation or get a clerk you can trust. There are honest men among drug clerks, nearly all of them are, and it is possible and, unfortunately, easy, to get one for the munificent salary customary. We must continue to hold the opinion so industriously hammered into us for years past that the retail drug business is not wildly lucrative. The sudden change necessary to advocacy of the bonded clerk idea would be destructive to mental equilibrium. Go to, the proposition is but frivolous jest.

WORK OF THE UNITED STATES DEPARTMENT OF AGRICULTURE.

The annual report of the Secretary of Agriculture has just been made public. The work carried on by this department of the government service is of a nature to commend it to every class of citizen, to every industry, for its direct practicality and adaptation to the needs of the people. For instance, the Division of Chemistry has continued, during the past year, its elaborate work in the investigation of the extent and character of food adulteration and the composition of foods. The principal study has been of the composition and adulteration of preserved meats, a subject in which the whole country has lately taken particular interest. In all, 513 samples have been purchased in the open market, consisting of preserved meats of all kinds, including soups and potted meats. An examination of the meat of the horse has also been carried out, with the object of determining a method whereby horse meat could be easily detected if sold under any other name. In so far as can be discovered, this meat is not offered for sale in any part of the United States under its own name, and it is believed that very little of it is sold under any other name. The division has also been engaged in active co-operation with other organized bodies, notably the Pure Food Congress of the United States, to promote the effort to secure State and National legislation on the subject of food adulteration. In quite a number of the States the laws which have been passed have been modeled upon the Brosius pure food bill, which is now pending before Congress, and which, by its passage, the Secretary thinks, would secure a perfect control of inter-State traffic in adulterated foods. The studies of soil bacteria have been continued, with results which

THE LEAN AND HUNGRY APOTHECARY. HA! HA!

There is something rather amusing in the proposition made at a recent meeting of St.

are of the most encouraging nature in regard to practical agriculture. The chemical work attending the sugar beet investigations has been pursued with vigor, and comparative data have been collected from all parts of the United States relating to the influence of soil and climate on the character of the beet produced. These investigations have already led to a tentative mapping out of the areas of the United States suited to beet culture, and their continuance will enable intending investors to locate definitely in those areas most favorable to the production of the highest quality of beets. It is only by careful attention to these scientific details that the beet sugar industry in this country can hope to compete with the carefully controlled industry in Europe.

Tests have been made of the chemical and physical properties of the cloth intended for the manufacture of uniforms for soldiers in the tropics, and on the results of these analyses the contracts for the cloth were concluded. Numerous analyses of food materials have also been made for the guidance of the ration board in selecting materials for an appropriate emergency ration for the Army. Collaboration with the Treasury Department in connection with the methods of collecting duties on imported sugars has been continued. The principal of the method of correcting polariscopic readings for the effect of temperature, which has been adopted by the Treasury Department for fixing duties on sugar, and which the investigations of the Division of Chemistry have shown to be rigidly correct, has been approved by the international committee appointed to determine uniform methods of sugar analysis. This committee, at its meeting in Paris in July, 1900, recommended that in all countries polariscopes employed should be graduated for the temperature at which they are to be used.

The investigations on the food and nutrition of man have been continued the past year on the same lines as heretofore, including studies on the nutritive value and cost of different food materials in various parts of the United States, special investigations in the relative digestibility of different foods, and the transformation of the energy of food materials in the body and the use which the body makes of the energy so transformed. These investigations have been largely carried on as hitherto in co-operation with agricultural experiment stations and agricultural colleges and other educational institutions in different parts of the country.

Six bulletins on these investigations have been published during the past year. The subject of these investigations is one that touches every household, as well as numerous public institutions and the Army and Navy, and the results obtained in them may be made of direct practical value.

A demand for the extension of these investigations has arisen from several sources. The results of this work affect both the producers and the consumers of our agricultural products. There is a wide demand on the part of the pro-

ducers for accurate information which will enable them to improve their products in accordance with the real needs of the users. Consumers, on the other hand, are seeking information which will enable them to secure such products as will give them best nourishment at a reasonable cost. The movement for the application of scientific knowledge to the conduct of public institutions and homes is gathering strength each year. Household economics is rapidly taking its place among the required studies of our institutions of learning, and the demand for reliable information and for popular and technical literature on such topics is rapidly increasing.

IT WILL BENEFIT THE RETAIL DRUGGIST.

In the Era's endeavor to assist the drug trade to secure the removal of the stamp tax on medicines we have been greatly surprised by the attitude of some, happily but a few, retail druggists. These druggists will not vote for the repeal unless they are positively assured that manufacturers will at once reduce their prices if the tax be removed. This is a puerile and foolish wail. Perhaps the manufacturers will, perhaps will not, reduce prices. It matters little. The main point for the retailer to keep in sight is that he himself, the retail druggist, will make more money if the tax be rescinded. There isn't a druggist in the whole land who does not put up some proprietary article or a line of them, on which he has for two years been paying the stamp tax. If he saves this ten, or fifty, or one hundred dollars a year is he not profiting? Will he let the public have his goods cheaper? Nay, verily. Think it over, druggists, the few of you who are so terribly afraid that some one else is going to make a little more money, see if there isn't a good chance for you, too.

It is with particular pleasure that we print in this connection the following letter from a druggist friend who is broad-minded and sensible in the way he looks at the question:

"We have been reading with much interest the different views with regard to your petition to Congress relative to war tax revision taken by your many correspondents. We note that quite a few of the retail druggists are urging that a repeal of the tax will benefit only the manufacturers, and for that reason refuse to endorse your petition. To the writer that view seems a sort of the "dog in the manger" racket. What the manufacturers will do as to reduction in price should this law be repealed, we do not know. By endorsing this petition we most certainly do not add any burdens to ourselves, but we do run a big chance of putting money in our own pockets. The writer does not believe that the manufacturers are quite as big "hogs" as many would have us believe, and we firmly believe that if this tax were repealed many of the manufacturers would reduce their prices to the "ante-bellum" prices. Every druggist puts up more or less of his own remedies, and he would effect a saving in this way, even if not a single proprietor were to come down. Keep the good work going. The large majority of the retail druggists are with you."

DISINFECTION OF TYPHOID DISCHARGES.—To disinfect the discharges from typhoid patients at Bloemfontein, a large iron kettle was employed. This was one-third filled with a 1 in 20 carbolic acid solution and kept at boiling temperature. The excreta was emptied directly from the bed pans into this kettle, which, when full, was partially emptied, a sufficient quantity of fresh carbolic solution added to the boiling mixture. Very little odor was noticed, and the method gave complete success. It is well adapted for use in field hospitals.—N. Y. Med. Jour.

UNANIMOUS FOR REPEAL.

A copy of the petition to Congress to repeal the stamp tax has been sent to every druggist in the United States. These are coming back to us by the hundreds and thousands, in such numbers as to make it impossible to print all the signatures here. The following list, the returns in a single day, represents 1,140 retail drug firms and it was a light mail at that.

Do druggists believe the tax should be removed? Well, rather.

ALABAMA.—Birmingham, 7; Brewton, 1; Decatur, 1; Eufaula, 1; Oneonta, 1; Thorsby, 1; Tuskegee, 1; Montgomery, 1; Lincoln, 1.

VIEWS ON THE SUBJECT.

I cannot see the consistency in asking the United States Congress to kill a tax that is for the support of a policy for which the majority of the American people have voted. We must have a revenue to carry out the plans mapped out by our Government, and the druggist should not seek to throw off that part of the burden imposed upon him. The war tax confronted the druggist when he voted. I for one cannot give my vote in support of an administration and its policies and then sign petitions to Congress for relief from the taxes these policies make necessary. You will have many McKinley voters sign these petitions, no doubt, but not me.

LUTHER E. MOORE.

Marietta, Ga.

We appreciate your effort to reduce the tax upon medicinal preparations. But are you sure of your ground; do you know for a certainty that if the tax was taken off, the manufacturers would reduce the price of their products? When the law went into effect they increased the price of their stuff more than the tax amounted to, thereby profiting by their country's misfortune. The retail druggist will not take much of an interest in this effort to reduce the tax unless the manufacturers promise to reduce the price of the product.

Kokomo, Ind.

KERLIN & SCOTT.

Some time since we received from you three or four copies of a petition to Congress for the repeal of the stamp tax. We at once signed one of these petitions personally and had it filled by different members of the trade calling at our office, and distributed fifty like petitions among the trade, which we requested them to fill and mail to you. We send you enclosed a copy which we had signed at Stoneham.

Boston, Mass.

THE E. L. PATCH CO.

Last spring before the adjournment of Congress, I wrote lengthy letters explaining the injustice of the revenue tax levied on druggists and manufacturing chemists. I addressed my letters to Congressman Jesse Overstreet, of this district, also to Senators Fairbanks and Beveridge. I also had a personal talk on the subject with Mr. Overstreet, who said that he would do what he could to have the law changed.

Indianapolis, Ind.

JULIUS H. HAAG.

We herewith return to you the document you sent us asking us to obtain signatures in favor of repeal of the stamp tax. We have secured quite a number for you and can say we are heartily in sympathy with your efforts in this matter and hope you will meet with unqualified success.

THE BEECHWOOD CHEMICAL CO.,

T. W. Stemmler & Co., Agents.

New York.

The blank which you sent us to be filled out petitioning Congress to repeal the law taxing proprietary medicines received. We return you same signed by all leading druggists of this city. We hope you will do all you can, as you are doing, to have this law repealed, for it is a great burden and very unjust.

CHAS. COONLEY & CO.

South Bend, Ind.

We enclose you the petition signed as fully as possible for us in the short space of time. We hope that you will be able to do some good work in the matter, as it is no more than just. Our newly elected Congressman is in favor of repeal of the war tax, and has promised to vote for same.

WEBER CHEMICAL CO.

St. Louis, Mo.

W. S. B. Weber.

I have secured the names of all of our druggists to the petition enclosed, and have also written a personal letter to our Congressman asking his support for this measure. You certainly deserve the good will of the trade for your efforts in this matter.

South Haven, Mich.

S. VAN OSTRAND.

We believe in the enforcement of this tax. So far, in the majority of cases, see Hood's and Pierce and others, the retailer has borne not only the tax but a large increase in the costs. As we as retail druggists have borne our part so far we are willing to continue to do so. Let the tax stay.

WHALING & MEAD'S DRUG STORE.

Cedar Vale, Kan.

Thanking you for the active part you are taking in behalf of the retail druggists of the United States for the repeal of the Stamp Tax I herewith enclose my petition. Will say that I have the promise of the support of our Congressman, Hon. W. T. Zenor, in behalf of the R. T. D. of the U. S.

J. F. GRAY.

Ireland, Ind.

We take pleasure in attaching our signature to the petition sent us and commend you for your effort in behalf of the overloaded tax payers, viz., the drug trade. We trust success may crown your efforts and even if you fail we hope you will have accomplished some end by which may finally come relief. To you be all the praise.

S. J. HURNS & SON.

Springfield, Ark.

I enclose herewith one of the petitions to Congress lately received from you, and on which I have secured the names of six pharmacists in four towns of this county. You deserve the thanks of the drug trade for your work in the matter, and it is to be hoped that the effort will meet with success.

Elkins, Pa.

M. M. OSBORNE.

I think you sent one of these to every druggist in town, but I took it upon myself to see each and every one of them so we all could go in on one slip. I trust with our combined efforts we may have the law repealed.

O. C. HORNE.

Valdosta, Ga.

Enclosed find petition signed as requested. I am particularly interested in the repeal of this law, as I am the manufacturer of several remedies. Hope you may be successful in obtaining this repeal.

Richmond, Va.

GEO. F. SWANK.

I enclose herein the petition to Congress signed by myself and a few druggists of this city. Will send more signatures this week and wish you success in this undertaking.

JOS. T. HAUTAR.

New Orleans, La.

I enclose the petition with five signatures. Several to whom I sent blanks in nearby towns have sent the signed petition to their Congressman. Hoping to see the law repealed.

Manheim, Pa.

H. F. RUTH.

Enclosed find list of signatures of druggists in my immediate neighborhood. We appreciate the work you are doing in behalf of the druggists.

Chicago, Ill.

R. W. ALLEN.

We enclose herewith an additional list of signatures to the petition to Congress favoring the repeal of the stamp tax act.

HANCE BROTHERS & WHITE.

Philadelphia, Pa.

C. B.

Enclosed please find petition to the Congress of the United States signed by myself and local physicians.

CLAUDE E. CORV.

Tangier, Ind.

Enclosed find petition signed by the druggists of our city. Sincerely,

Barnesville, Ga.

JOHN H. BLACKBURN.

(For the Era.)

THE MANNA SUGARS.By **GEORGE M. HEATH, Ph. C., B. S.**

The manna sugars form a class which are distinguished from the grape and cane sugars by three principal characters. First, by their chemical composition; second, by their inferior sweetness, and third, by their not fermenting when mingled with yeast. Of this class, also, there are several varieties.

Manna of the Ash.—The two species of ash, *Fraxinus ornus*, and the *F. rotundifolia*, yield this kind of sugar. The European supply is chiefly derived from Sicily and Calabria. The *F. ornus*, a small tree of 20 to 25 feet high, is there cultivated in plantations for the purpose. In the months of July and August, when the production of leaves has ceased, the sap is drawn from the tree. For this purpose cross cuts, about two inches long, are made in the stem, beginning at the lower part near the soil. These are repeated every day in warm weather, extending them perpendicularly upwards along one side of the tree, leaving the other to be cut in the following year. The sap flows from these incisions, and is sometimes collected in vessels, and sometimes allowed to harden on the outside of the tree. It is very rich in sugar and speedily concretes in fine weather into the manna of commerce. The quality of the manna varies with the age of the tree, with the part of the stem from which it flows and with the period of the season in which it is extracted. The medicinal quality does not reside in the mannite or true sugar of manna, but in the other matters with which it is contaminated. By itself, in the pure or refined state, this sugar has no appreciable medicinal action, and, were it abundant and cheap, might be employed for ordinary sweetening purposes. It is less sweet than cane sugar, and may be crystallized from hot spirit. It is a singular fact that this peculiar manna sugar exists in many familiar seaweeds. It gives their sweet taste to those which are collected for eating along various parts of our coasts, and is found in smaller quantity in many which are not perceptibly sweet to the taste.

Another important variety is the *Eucalyptus* sugar, or gum tree manna. The genus *Eucalyptus*, or gum tree of the colonists, form a distinguishing feature in the landscape and forest scenery of Australia and Van Diemen's Land. At certain seasons of the year, a sweet substance exudes from the leaves of these trees, and dries in the sun. When the wind blows so as to shake the trees, this Australian manna is sometimes seen to fall like a shower of snow. Like the true manna, this sweet substance contains a peculiar crystallizable sugar (Melitose), different, however, in composition and in some of its properties from the mannite of *F. ornus* and *F. rotundifolia*.

Other sweet substances also are obtained from plants to which the name of manna has been given; but these products contain a variety of different sugars, some closely related to true manna sugar and some to grape sugar. Thus a peculiar sugar, called quercite, has been extracted from acorns, and from a palm, the *chamoerops humilis*; another kind known as pinito, from the leaves of *Pinus Lambertiana*. A kind of oak manna exudes from the leaves of a species of oak common in Kurdistan, and known to botanists as the *quercus mannifera*, or manna-bearing oak. Larch manna is a sweet substance which in some countries is found upon the European larch (*Larix Europæa*) about the month of June. Cedar manna occurs in small globules on the branches of the cedar of Libani. It is brought from Mount Lebanon, where it sells as high as 20s. or 30s. an ounce. It is much esteemed in Syria as a remedy for affections of the chest. Persia manna or Gen, called also alhagi manna, and by the Arabs Tereng Jabrin, is obtained from the camel's thorn (*Hedysarum alkagol*), a plant which is indigenous over a large portion of the East. It yields manna, however, only in Persia, Bokhara, Arabia and Palestine. Extensive plains are in these countries covered with alhagi, and it is of great importance as food for the camels, as well as for sheep.

and goats. From the wounds produced by the browsing of these animals the manna chiefly exudes. It is collected by the Arabs and caravans which cross the desert, and is used as food. Tamarisk manna is obtained from the *Tamarix mannifera*, a tree which grows abundantly in the neighborhood of Mount Sinai. The manna of the Old Testament is supposed by some to have been that of the camel's thorn and by others that of the tamarisk. Both trees grow in the wilderness of Sin, along certain parts of the route of the ancient Israelites. The miracle by which they were so long fed with it consisted, first, in the wonderful multiplication of the product, so as to sustain millions where probably not a score of persons could be sustained on the quantity naturally produced; and, secondly, in causing it to follow and fall daily around them in parts of the wilderness where none of the trees grow and in equal abundance all the year around. That is to say, the sustenance of the wandering people was the result of a constant miracle, whether the manna was of a kind which might or might not have been derived from either of these natural sources.

In the Wady Feiran, the valley which leads from the Gulf of Suez towards Mount Sinai, the traveler passes through thick avenues of Tarfa trees (*Tamarix mannifera*), bending over his head like the alleys of a garden. This tree resembles the weeping birch, but is still more delicate in appearance, and the so-called manna flows in drops from the extremities of its slender pensive boughs. A small quantity is collected and carried to the Convent of Sinai, where it is prepared by boiling and put into small tin cases, which are disposed of to pilgrims and other visitors. In this state it resembles melted gum with small rounded grains in it and has a somewhat similar taste only sweeter and rather aromatic. The manna is supposed to flow in consequence of the puncture of the coccus manniparus, an insect which infests the tamarisk trees. It exudes as a thick syrup which, during the heat of the day, falls in drops, but during the night congeals and is gathered in the cool of the morning. It is eaten in Palestine and about Sinai as a delicacy, and, like the cedar manna, is esteemed as a remedy in diseases of the chest. The total quantity of this manna now collected in the desert of Sinai appears to be comparatively trifling.

Dr. Milman and Dr. Lepsius both regard this sweet substance as the manna of Scriptures, and consider its properties to be generally the same as those ascribed by Moses to that collected by the children of Israel. I deny that their properties at all correspond. In doing so, however, I do not lay so much stress on alleged differences in taste, in general appearance, etc., as on the very remarkable property mentioned in the following passage:

"And Moses said let no man leave of it till the morning. Notwithstanding they harkened not unto Moses; but some of them left of it till the morning and it bred worms and stank; and Moses was wroth with them." (Exodus XVI., 19, 20.) The rapid putrefaction, the smell and the breeding of worms are properties which belong to no known variety of sweet vegetable exudation. It implies something of an animal nature, or the presence in considerable quantity of a substance analogous to the gluten of plants or the fibrin of animals. And the presence of such a substance, again, accounts for the very nutritious quality ascribed to this manna and which is so superior to that of any other vegetable sweet with which we are acquainted. The manna of Scriptures, therefore, I believe to be still unknown, as well as the immediate or natural source from which it might have been derived.

A CHEAP AND EFFICIENT SEPARATOR.

At the November "Pharmaceutical Meeting" at the Philadelphia College of Pharmacy, T. A. Wiegand called attention to a cheap and efficient "separator" for the washing of Tinct. Opii Deodorata with ether in its preparation, for drug assay by immiscible solvents, etc. This "separator" is made from a wine bottle of the sort that has a long tapering neck without rounded "shoulders," or smaller sizes may be made from similar bottles so that they are of similar shape. A cork with two perforations is fitted into the bottle and two glass

tubes passed through; one of the tubes just passes through the cork, the other goes almost to the bottom of the bottle. The arrangement is precisely that of the ordinary wash-bottle except that the short tube must end at the inner surface of the cork stopper.

To use, pour the liquid to be washed into the bottle, add a sufficient quantity of the solvent and shake thoroughly in the usual manner. Insert the cork, with its tubes, and invert the bottle, keeping the outer end of the long tube closed with the finger; when the liquids have separated completely into two layers, allow air to pass into the bottle through the long tube, when the lower layer will drain off through the short tube. By controlling the influx of air through the long tube, the heavier layer can be drawn out until the lighter one is just at the surface of the cork, effecting a complete separation. More of the solvent can then be drawn into the bottle and the two liquids separated in similar manner.

The advances of this device are its cheapness and easy manufacture, efficient separation of the two layers of fluid and prevention of loss from evaporation of a volatile solvent, as ether. With a heavier solvent, as chloroform, the layers are of course reversed.

IT IS A TOUGH PROPOSITION.

There is no escaping the fact that the ways of commercialism are experiencing a crucial transition. The whole tendency is toward combination and concentration. Trusts are striking at the life of competition and competition is recklessly departing from the live-and-let-live policy that so long had shelter under its unwritten law of honor among rivals. Perhaps the greatest innovation is made by the big department store, which aims a domination that will permit the average family to find about everything it wants under one roof, but there is the tendency to the go-as-you-please system all along the line.

The grocer will make a run on perfumery, liquors and fine cigars. The clothing merchant handles jewelry, the dry goods retailer puts shoes and "gent's" supplies into his stock, the druggist tries to give the notion store a black eye, you can buy your piano and your bicycle of the same dealer, and there are establishments that will send you home a pair of shoe strings wrapped up in a thrashing machine.

The ox of the retail druggist is gored under this cut-throat system, and they are out for satisfaction. They do not want the legitimate articles of their trade hawked at less than a living profit, or less than cost, by the department stores that are willing to lose money on the bait in order to insure a bigger catch. It is objected that they trade on the advertising of the druggists, and at the same time give them the hot end of the poker. Very naturally, they want this violation of their preserves stopped.

Their preferred alternative is to have manufacturers and wholesalers sell exclusively to druggists what legitimately belongs to the drug business. This would at least make the interlopers pay retail prices if they wanted to make a leader of a proprietary medicine, and we strongly incline to the belief that this necessity would stop them. There is also a strong argument upon the ground of ordinary good faith, that watches should not be sold through the village carpenter or that the egg industry should not find an outlet through the coal and wood yards. In other words, the trade upon which the producer chiefly relies should be protected.

If this fail it only remains to fight the devil with fire. Give an overcoat, a necktie in three colors, a suit of pajamas or a plug hat with each box of pills, each bottle of patent medicine or each prescription filled and paid for. Give these rivals better than they send, and give with both hands. Make them sit out on the curb stone and talk universal calamity. That would sicken them, and there would be nothing but approval from the public, for they could get clothes for less than the price of washing sheep or picking cotton and the department stores, as long as they could fight such a fight, would make proprietary medicines cheaper than the labels. (Detroit Free Press.)

(For the Era.)

THE CULTURE OF AMERICAN GINSENG.

Some Accurate Information Regarding This Valuable Plant.

By HARLAN P. KELSEY.

The subject of growing ginseng has recently received so much attention from the agricultural press of the country and from circulars and pamphlets sent broadcast throughout the country by dealers, that hundreds of people are being induced to try its culture.

Many of the articles are written by people who have no personal knowledge of the best way to grow it or of the profits to be derived thereby. Others are written by dealers who have seeds and plants to sell, and in both instances as a rule the information is second-hand and unreliable. The most extravagant figures are given showing enormous yields produced on a given acreage, and Monte Cristo fortunes to be made out of a paltry investment while one loafs in the back yard watching the gold dollars sprouting.

Certain dealers have sent out figures informing the public that \$5 invested in their seeds and plants, will show a value of \$44,340 in the fifteenth year.

A million dollar bed in twelve years from a \$1,000 investment is advertised on another page. A value which cannot be obtained, except perhaps in small quantities, is placed on the seeds and young plants, and the ratio of increase and loss is given very accurately and more extravagantly on paper. Can any of these versatile writers please inform us how many parsnips can be grown on a five-dollar investment in twelve years, the price the roots and seeds will bring each year and how rich a man will be at the end of that period? Certainly not, and information pretending to figure it out would be absolute nonsense.

An article on ginseng entitled "Valuable Farm Land" appeared in the St. Louis Republic a short time ago, and was extensively copied by other papers in the South and Southwest. Among other wild statements, the writer said that seeds bring 5 cents each (another writer says there is unlimited demand at 25 cents each) and yearling roots 20 cents each; that the eighth year an acre should produce 3,120,000 seeds, which sell at 5 cents each, giving an annual income to the fortunate grower of \$156,000 from the seeds alone. He further states: "Say that a full crop of seed from one acre is available for planting. That will be 3,120,000 seeds. Allow for the loss and failure to germinate of 1,120,000 seed. This will leave 2,000,000 seed that are practically sure to germinate and create 2,000 roots. In eighteen months these roots will be ready for market, and can be sold directly to consumers, the present price being 20 cents each, or a total of \$400,000 from the ginseng crop in eighteen months. This crop of 2,000,000 roots would require a space of approximately forty acres. One acre should produce 52,000 roots, which at the market price of 20 cents each, should, after eighteen months, bring a return of \$10,400."

Could anything be more baldly ridiculous? Let us suppose that only 1,000 gardeners had the above success as to yield. This would mean over three billion seeds put on the market each year, which at five cents would require \$150,000,000 annually to pay for them, not to mention the value of the roots.

Suppose, further, that the ratio of increase both in yield of crops and number of growers continued the same for twenty-five years, there would not be money enough in the world to buy a single year's crop. China, the source of demand for ginseng, would have used all its wealth in its purchase long before the period of twenty-five years had elapsed. Notwithstanding these air castles, there is an enormous profit in growing the plant, but it depends on the individual grower, as in any other crop. The right conditions for its culture must be supplied, either naturally or artificially, and intelligent cultivation given. There will probably always be a good demand for the root at high prices, and it is an article commanding cash at all times.

These conditions for growing are readily found in nearly all the States of the Union, or can be produced at reasonable cost of labor and material. They may be stated in a few words. A rich, deep, well-drained and moist soil, containing abundant decayed vegetable matter and not too heavy or clayey. Humus or vegetable mould, obtained by using decayed forest leaves, is extremely beneficial, as is also thoroughly rotted compost. Shade sufficient to keep off the direct rays of the sun is almost necessary, particularly in sections where the heat is excessive. Add to this careful cultivation and you have the secret, if there really be any, of growing ginseng successfully. Lath covers are perhaps the best artificial shade, and apple trees have been found good to keep the ground protected from the sun. At maturity the roots must be carefully and properly prepared for market, and the extra care taken to produce a fine article, clean, well graded and perfectly dry, is more than repaid by the much higher price such roots will bring.

The writer, who has had many years of experience growing this root, will be glad to give fuller information as to the best modes to be used in its cultivation, but would warn the reader against the wildly extravagant articles that appear from time to time, and which will damage rather than help an industry that really does promise most unusual returns for the labor and expense necessary to cultivate it successfully.

Tremont Building, Boston.

EXTRACTION OF CAMPHOR IN FORMOSA.*

Camphor is extracted by distillation from the king of the forests of Formosa, the lofty, fairly rapidly growing camphor-laurel, a tree with laurel-like leaves, whose circumference frequently surpasses 20 feet, and whose trunk, where ready means of transport are available, supplies a valuable timber. Spare, dried-up trees are not suitable for camphor distillation; only the succulent wood, preferably the roots.

On a loam-built oven, some four feet high, for which wood is used as fuel, one or more iron vessels are placed, which are filled with water. On each of these vessels is placed a tubular wooden cylinder, about 5 feet high, the bottom of which is perforated so as to admit the water vapor. These cylinders are filled with pieces of camphor wood, about 1½ inches long by ¾ inches thick, fed in from the top; they are then covered over and plastered all round with loam to render them air-tight. The camphor-laden fumes are then drawn through a bamboo tube, about 11 feet long, which is fixed on the upper part of the cylinder, into a box-shaped, air-tight receiver, some 6 feet high, placed in running water, in which the fumes are condensed in crystal form. Another tube, slightly inclined downward, and placed at a somewhat higher elevation, admits water drop by drop into the vessel, to replace the evaporating liquid. This is essential, for the operation of distilling the pieces of wood is continued for twenty-four hours. It takes about a month to fill the receiver.

It is doubtful whether another example can be found in the history of the world, where the product of a plant has had such a far-reaching influence on the destinies of the country as in the case of the camphor on Formosa. For centuries the greed of men has been attracted to the virgin forests situated in the interior of the island, for the sake of their lofty, royal trees, constantly meeting with tenacious opposition from the exasperated savages. As long ago as the beginning of the eighteenth century the Chinese government, which at that time only troubled about the western and northern part of the island, but not about the eastern, endeavored, in order to cover at least part of the expenses of their administration, to turn the camphor forests to account by introducing a camphor monopoly, the evasion of which was punished with brutal severity. Whoever at that time cut down a camphor tree without permission, paid for it with his life, if detected. In the year 1720, no less than 200 persons were executed for this offence. This exceeding severity brought about serious insurrec-

*From Adolf Fiescher's "Rambles Through Formosa." Schimmel's Report.

tions, and, as a consequence, the production of camphor was declared free, but, on the other hand, the trade in the article turned into a monopoly. From that time every Chinese was allowed to enter the forests at his own risk and on his own account, and left free to attain his object either by force or cunning. The barbarous behavior of the Chinese Hakkas towards the aborigines, all their sanguinary feuds, were not noticed by the Chinese government, or rather were tacitly approved.

These conditions lasted for a century and a half. They were only partly brought to an end by the revocation of the monopoly in 1868. As everybody knows, four of the Formosa posts were opened to Europeans in the year 1860. The mandarins, who had appropriated the camphor trade as a very remunerative business, sold the picul at 16 yen, whilst they only paid the producers at the rate of 6 yen per picul. The Europeans, however, in order not to let the whole profit go into the pockets of the mandarins, evaded the monopoly (which was not revoked until 1868), and bought direct from the producers, maintaining that, in view of the commercial treaties made at Peking, they were in no way bound by the monopoly of the mandarins. These proceedings all at once changed the position of the Europeans. So long as the latter gave the mandarins an opportunity to make a handsome profit, they were exceedingly welcome, and were encouraged in every way. But now the tables were turned; hatred of and hostility to the Europeans were openly preached, and all sorts of difficulties placed in their way. These hostile proceedings induced the British Consul, Mr. Gibson, in 1868, to summon to Tainanfu a squadron which was then maneuvering in Chinese waters. This alarmed the Chinese governor so much, that he immediately promised to prohibit with the utmost severity every display of hostility towards the foreigners, and to abolish the camphor monopoly. The Taitos (district superintendents), who had chiefly opposed the Europeans, were removed, and peace smiled once more on the latter.

The transportation of the camphor from the stills to the nearest port of shipment is thus described: Hosts of male and female camphor-scented coolies (there is very little difference in their appearance, for both men and women are dressed almost exactly alike), wearing hats of bamboo bark, trotted along in single file, the first indication that we were approaching the camphor districts. The coolies came from a camphor still; they carried the camphor or camphor oil partly on poles, partly in tin cans, boxes or bags, to the nearest port or river for shipment. This groaning, perspiring mass of humanity, trotting along in a steady jog trot, the bamboo poles, deflected under the load, beating time, diffused once more a stupefying odor. The carriers always remain anxiously together, forming caravans, in order to be secure against sudden attacks. They remind one of the fact that those parts of the country are near, where fights between the aborigines and the greedy Chinese colonists, though only on a small scale, are matters of daily occurrence.

MENTAL EQUIPMENT OF THE COMMERCIAL TRAVELER.

Mentally, the commercial traveler must be above the average of intelligent beings. He must not only thoroughly know the field in which he is working, but he must also be well posted in the new events of the day, as a discussion of them is often of valuable assistance in leading up to the subject in which the traveler is naturally most interested. No intelligent business man cares to waste his time on a dummy. If the salesman has brains and a pleasing manner he can secure an audience where another would fail utterly; and having once established a connection he will always be welcome for his own sake as much as for the goods he has to show.

The work of a traveler tends to sharpen his wits; he comes into contact with all kinds of characters, his knowledge of human nature grows, his horizon is broadened, and he is enabled to take larger business views than one who is tied down by routine work. Being

obliged to depend very largely upon his own resources he naturally acquires the habit of making up his mind quickly, and so is enabled to give an opinion without much apparent preliminary thought. Experience will bear us out in asserting that snap opinions are oftener right than wrong, and are backed up by the maturer deliberations of the home office.

Next to self-reliance comes moral courage, a quality of prime importance. Temptations without number beset the salesman even under favorable circumstances. It frequently happens that a sale hinges on the answer made to a direct question. How hard it is then to be strictly truthful and to state the facts as they really are—not that it is the salesman's duty to call attention to the defects of his goods—he should always make out the best case for them that is possible. But he is frequently in a position where he has to say yes or no on a special point; and he must give answer truthfully, on the ground of moral honesty as well as on the score of policy. Truthfulness in a salesman is a virtue which will soon begin to tell in a pecuniary as well as in a moral way, for people will invariably prefer to deal with the man upon whose word they know they can depend respecting the value they are getting for their money. The most hopeless and contemptible of bankrupts is the man who has lost his reputation of honesty; the most useless to all employers—the most expensive while least worthy his salary, the most to be avoided by customers and abhorred by merchants—is the shift or dishonest salesman.

The abnormal development of moral courage is "cheek," which, if carried to extreme, will rebound upon its owner and bring with it loss of patronage. The quality of nerve, in its good sense, on the other hand, is a most indispensable one, and the traveler is called upon to exercise it almost every day.

The traveler's duties are also favorable to the cultivation of patience and its companion, perseverance. Without patience a commercial traveler might as well quit at once, for he will be called upon to practice patience hourly. He must wait upon his customers' convenience and humors, time and again, as the sailor must wait for wind to fill the sails of his craft. To keep one's temper under such circumstances may often be a sore trial; nevertheless the trial must be endured without loss of temper.

While the traveler must put up, with such equanimity as he is able to command, with the dilatoriness of customers, he must himself be a pattern of punctuality. At all risks and inconveniences he must keep his engagements—anticipate them if possible. Time is money with most busy people, and while some may at times thoughtlessly waste the time of others, they resent having their own time squandered, especially by those who, in a certain sense, expect favors.

Not only must a traveler possess these qualities, or cultivate them if he has them not, in order to be successful, but he must keep a clear head—be sober in dress and habits. Twenty-five years ago the idea of a traveler implied a man dressed in flashy clothes, of loud demeanor, who demanded and got the best of everything wherever he went, and regarded morals as only of secondary importance. A drummer in those days, it was thought, could not be successful unless he got on an occasional "spree." The drummer now is expected to be a gentleman in all that the word means. He must be a gentleman in conduct as well as in appearance. Dissipation or tearing around is countenanced by neither the house who employs nor the reputable customer who deals with travelers; nor will the better class of men on the road associate with the drummer who thinks it his duty to get drunk or act "smart" wherever he goes. It is true that freedom from restraints of home and neighbors, the very character of the business, the "treating" in which many indulge, all constitute powerful temptations that require firm moral courage to withstand, and a young man bent on going on the road cannot be too earnestly or emphatically warned about these dangers. On the other hand, we are glad to believe that a better practice now prevails, and that the average commercial traveler in the respect of sobriety is of a distinctly higher grade than formerly. (Publishers' Weekly.)

THE BUSINESS SIDE OF INSECTICIDES.

It would be a mistaken policy and a course of action not warranted by the history of the development of his business if the druggist were in present circumstances quietly to accept that strict confinement of his sphere to the dispensing of medicines which some people would impose upon him. The history of his calling in the past and the opportunities of to-day show that that part of the system of public business in which he is concerned has never provided and does not now provide sufficient occupation for the druggist in the dispensing of prescriptions only. Consequently, he must maintain his hold on the branches of trade with which he is at present associated, and must be ever on the lookout for further developments which may conveniently be assimilated in his business. Thus it is that we oppose any suggestion that it is foreign to the nature of a druggist's business to sell poisonous preparations for technical or agricultural purposes. Whilst taking this view, however, we must not forget that it is almost as much his duty to take care that the public suffers no unnecessary inconvenience through handling over the sale of poisons to his charge as it is to see that its safety is fully protected by his intelligent carrying out of the pharmacy laws. He should always make it his business to be acquainted with the uses to which these poisons may legitimately be put, and with the combinations which are daily being devised for their employment.

It is obviously an opportune moment to apply what has just been said to the class of preparations known as insecticides, and we take as illustration of our remarks some suggestions on these preparations that have appeared in a bulletin issued by the United States Agricultural Department. The Americans are, of course, extensive agriculturists, and have thoroughly gone into this subject. For the purpose of dealing with insects which are noxious, the Agricultural Department divides these into the following six classes: (1) External feeders, (a) biting insects, (b) sucking insects; (2) internal feeders; (3) subterranean feeders; (4) insects affecting stored products; (5) household insects; (6) animal parasites. It is only necessary in the present aspect of our subject to consider the first three of these classes. Taking external biting insects first, it is to be noticed that arsenical compounds have practically superseded all others for dealing with these pests. The four chief compounds of arsenic which are used are Paris green, Scheele's green, London purple and arsenite of lead. The nature of the first and second is learnt from any text-book of chemistry. What is sometimes forgotten is that Scheele's green is much cheaper than Paris green. London purple is a by-product in the manufacture of aniline dye, contains a number of substances and is very variable in the amount of arsenic it contains, so that it is not considered so reliable as Paris green. Arsenite of lead may be roughly prepared by combining three parts of arsenite of sodium with seven parts of acetate of lead. When mixed these salts act readily and form a white precipitate, which is easily suspended in water. It is sometimes necessary, whilst cautioning consumers regarding the care to be exercised in storing and using these substances, to reassure them as to the safety with which vegetables that have been properly treated with the insecticides may be eaten.

Paris green, Scheele's green and London purple are used in the wet or dry method. If by the former 1 pound of the substance is mixed with 100 gallons of water, this being a suitable strength for general purposes, and particularly adapted to vigorous foliage plants. The poison is made into a thick paste with water, and an equal quantity of powdered quicklime added. This takes up any free arsenic and removes the danger of scalding. The requisite quantity of water is then added and the mixture is strained through a fine mesh. It is not necessary to mix any lime with the arsenite of lead. The dry method is more particularly used for lowly kinds of vegetation. The substances are in this method diluted with lime, flour, etc., in the proportion of 1 to 10, unless intended for foodstuff, when an ounce of the poison is mixed with 6 pounds of flour or 10 pounds of lime. With this mixture the plant should be very evenly dusted. The

Americans have, of course, very elaborate apparatus for distributing these insecticides, but for general purposes the only advice that can be given is that the solution should be applied in a very fine vapor and that the mixture should be constantly agitated. Of course, for the dry distribution a suitable pair of bellows is necessary. For the sucking insects the following are recommended: Soap insecticides, pyrethrum powder, sulphur, bisulphide of lime, kerosene compound, resin wash, and gaseous treatment with hydrocyanic acid gas or bisulphide of carbon vapor. The soap insecticides are easily made; the Americans appreciate fish oil soaps, which they mix in the proportion of 2 pounds to a gallon of water, and which they apply with a spray pump. Pyrethrum powder is generally puffed on in the dry condition; it is said to act on insects through their breathing pores. As a spray, it is used in the proportion of 1 ounce to 2 gallons of water. Bisulphide of lime is readily made by boiling together in a small quantity of water equal parts of sulphur and lime and diluting so that a gallon of water represents a pound of the mixed substances.

The kerosene compounds are extensively used in America. The common formula consists in dissolving half a pound of whale oil soap in a gallon of water and adding 2 gallons of kerosene, after which the mixture is worked up by a pump into a cream. It is diluted with 15 to 20 parts of water for use against the red spider. Another plan is to mix 2 gallons of kerosene with 1 gallon of sour milk, which upon agitation is converted into a thin paste. Only sufficient of this to wet the foliage is to be used. The resin wash is made with 20 pounds of resin, 5 pounds crude caustic soda, 2½ pints of fish oil and water to make 100 gallons. All the water is not added at once, the ingredients being boiled first with a little water for two or three hours and then diluted to three times their bulk, when they form a stock mixture for dilution as required. When sprayed it should be perfectly clear; it should be re-heated if not so. This combination is particularly recommended for the San Jose scale in California. It is thought to be especially effective against all kinds of scale insect pests. Another combination recommended for these is obtained by slaking 10 pounds of lime and boiling it with 20 pounds of sulphur and 20 gallons of water for two or three hours. Subsequently another 30 pounds of lime are added and the whole boiled for another half hour.

In using the hydrocyanic acid gas more precautions are, of course, needed. The Americans enclose the trees in tents and use for every 150 cubic feet of space enclosed 1 ounce of potassium cyanide, 1 ounce of commercial sulphuric acid and 3 ounces of water. Trees up to 20 feet high are treated in this way, operations being always conducted in cloudy weather or at night; never in sunshine. The bisulphide of carbon vapor can be applied to small plants by covering such with a tight-fitting box and introducing into this, in a saucer, one or two drachms of the bisulphide to each plant, which should be left in contact for three-quarters of an hour. The French are said to use the bisulphide for destroying the vine louse (*Phylloxera*). It is injected into the soil and it is much believed in by some agriculturists as a destroyer of underground insects. It is also largely used for destroying insects in grain. One must, of course, warn purchasers of this substance of its combustible and explosive nature. The resin and kerosene compounds are also used for subterranean insects. (Br. and Col. Dr.)

DETERMINATION OF FUNCTIONAL ACTIVITY OF KIDNEYS BY OBSERVATION OF FREEZING POINT OF BLOOD AND URINE.—It is often necessary to determine the functional activity of the kidneys before attempting an operation for extirpation of either one. This can be done by drawing off urine from each kidney by a catheter and observing (1) the amount of urea; (2) the freezing point, and (3) examination of its constituents. To confirm these tests, an observation should be taken of the freezing point of the blood, blood normally freezing at -0.55° to -0.57° C. This is based on the fact that the freezing point of a liquid is lowered proportionally by the amount of solids it contains. Where these tests indicate incomplete performance by either kidney, it is unsafe to operate.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

College of Chiropody.—(H. C. H.) wants the address of a college teaching or having a special course in chiropody.

Dr. Tucker's Spray.—(C. J. C.) wants information regarding source of supply or a formula for "Dr. Tucker's Spray."

Legear's Veterinary Remedies.—(T. and F.) S. L. Keown, of Waco, Tex., informs us that Legear's veterinary remedies are manufactured by Legear Bros., Austin, Texas.

Assistant Pharmacists in New Jersey.—(J. I. M.) You can get full particulars of the requirements of the New Jersey pharmacy law by addressing the secretary, Henry A. Jorden, Bridgeton, N. J. An average of 75 per cent. is required for passing the examinations. Examinations are held in Trenton every third Thursday in January, April, July and October. Four hours are given in which to answer the questions.

Carbonic Acid Gas Not a Disinfectant.—(O. M. S.) asks: "Does charging common water with carbonic acid gas disinfect it? If so, to what extent?"

The act of charging water with carbonic acid gas does not disinfect it. A disinfectant is generally held to be any agent which destroys the infectious properties of septic matter. This property carbonic acid does not possess, although liquids highly charged with the gas are generally preserved for a long time, the exclusion of air more than anything else, perhaps, favoring preservation. Water charged with carbonic acid dissolves the carbonates of some of the metals, as calcium, magnesium, etc., giving rise to what is known as "hard" water. This hardness is deposited again on boiling the solution, or even on free exposure to the air. Filtered, or better, distilled water should be used for carbonating purposes.

New York State Pharmacy Law.—(J. I. M.) An apprentice must be reported to the Board of Pharmacy for registration by the licensed pharmacist or druggist in whose employ he is within three months of the beginning of his employment. Probably no examination will be required of the apprentice, but the employer (licensed pharmacist) must show that the apprentice's "character and qualifications are satisfactory" to the board, which will require that he must be not less than fifteen years of age and furnish with the application for registration a certificate from the regents of the State showing that he has completed a grammar school course or its equivalent. There will probably be examinations given by the Eastern Section of the Board of Pharmacy for "licensed druggists," but persons so licensed cannot practice in New York City. They may practice in all other cities in State under the supervision of a licensed pharmacist, but only in towns of less than 500 inhabitants can they assume full charge of a store. Under the new law there will be no registered assistants.

Clam Bouillon.—(W. H. R.) Clam juice is usually preserved by concentrating the "liquor" and bottling while hot in sterilized bottles. Here is what the "Manual of Beverages" says about clam juice and clam bouillon:

Clam juice may be served in the proportion of $\frac{1}{2}$ to 1 fluid ounce of an 8-ounce mug, filling the latter with hot water, and serving with a spoon, also giving the

patron the celery salt, salt and pepper cellars, that he may season to suit himself, and some soda crackers. Clam juice is served more acceptably by adding a fluid ounce of milk to the juice; better yet by using half water and half milk, and best yet by using all milk (hot). A small quantity of butter causes a marked improvement. Clam juice, like beef tea, must always be served hot. It spoils very readily and must be preserved carefully, on ice if possible. If a distinction is desired between clam bouillon and clam broth the latter may be served with a spoonful of butter, and the former without it. Or hot clam juice may be clam juice with water, clam bouillon the same with a dash of lemon juice added, and clam broth, clam juice mixed with milk or cream (and water).

Red Coloring for Solutions.—(E. D. L.) Liquids which have more or less alcohol in them may as a rule be pretty satisfactorily colored by the use of such a formula as this:

Cochineal	1 ounce
Alum	$1\frac{1}{4}$ drams
Cream tartar	$1\frac{1}{2}$ drams
Water, a sufficient quantity.	
Alcohol	1 ounce

Pulverize the cochineal, add the alum and cream tartar, gradually add 11 ounces of water, percolate through cotton, add the alcohol and enough water to make the whole measure one pint.

A preparation particularly recommended for coloring acid solutions is tincture of cudbear of the National Formulary. There are also various aniline dyes which may be used. The following formula has been published for

Ruby Cherry Fruit Coloring.

Ruby S. aniline.....	$\frac{1}{2}$ ounce
Alcohol	2 fl. ounces
Water	14 fl. ounces

Shake the aniline with the alcohol, then add the water. This preparation is said to produce a brilliant color not impaired by acids.

WINTERGREEN OIL FROM SWEET BIRCH.

Schimmel & Co. (Semi-Annual Report, October, 1900), publish the following particulars concerning the commercial quality of wintergreen oil obtained from the bark of *Betula lenta*, or sweet birch: This oil is distilled in large quantities in the counties Ashe, Watanga and Mitchel in the northwest, and on small scale in the southeast of Tennessee. The oil is shipped from Wilkesboro (North Carolina), Lenoir, Elk Park and Marion (Virginia); considerable quantities also from Abingdon (Virginia) and Johnson City in Tennessee. The bark used exclusively is that of the tree commonly called in these places "Black Birch." Trees of 12 to 24 inches diameter are felled when they are in sap, and the bark is stripped off. Small branches are also used occasionally. Some wintergreen herb, called there "Mountain tea," is frequently added to the pulverized bark. The still is of the most primitive kind. It consists of wooden boards, is about $2\frac{1}{2}$ feet wide, 3 feet deep and 7 to 8 feet long. The bottom is of galvanized iron, and is nailed on with suitable packing. The whole stands on a foundation of masonry, which at the same time serves the purpose of fire chamber. The bark is laid on laths placed about 4 inches above the bottom. Iron pipes of 1 inch diameter connect the still with the condenser, which is fed by a brook. The oily water separated from the oil is led back to the still by a special pipe. There are generally 10 to 20 trees on an acre of land, and the distiller buys them frequently at 10 cents each. The still always remains on the same spot. The bark is often fetched from a considerable distance. A tin can (which has been used for preserved fruit) serves the purpose of a nozzle; this is placed in a large container, and is used as an overflow. The overflowing water is returned to the still. The distiller sells his oil as soon as he has produced from 2 to 10 lbs., generally to the nearest country merchant. Sometimes he may go farther away to obtain a better price. The buyer either forwards the oil direct to New York, or resells it to a herbalist. The principal season for production is from May to the end of September. The oil is mostly offered in parcels of 200 to 400 lbs.

PHARMACY.

BACTERIAL LIGHT.—We are indebted for a good many things to the wondrous synthetic and analytical powers of micro-organisms. Bacteria are being utilized in the arts and manufactures and they promise soon to be the effectual scavengers of the offensive products incidental to the existence of human life (says *Lancet*; *Sci. Am.*) Indeed, it would seem that the great species of bacteria around us present a variety of functions which doubtless could be turned to many a good account. Bad microbes we know there are, whose subtle operations set up the specific poison of disease, but it would indeed be a very odd circumstance if time should prove that the microbe can be so manipulated as to afford us artificial light. Yet there exists a microbe which when properly fed will grow and multiply enormously, emitting during its development a strange phosphorescent light. In the past we have been wont to look upon phosphorescence as a phenomenon due essentially to the presence of phosphorus somewhere. We now know that this is a mistake, for phosphorescence occurs in a very great number of instances in the entire absence of phosphorus. Phosphorescence is undoubtedly a manifestation of chemical or physical change, but the change of course may not always be due to the working of countless microscopic organisms. It certainly is in the case of the phosphorescence of the sea. In this case the phosphorescence is best when the sea is disturbed and the maximum of light is emitted from the crest of a short, rapid wave or in the foam produced by some disturbance. This is due to the fact that the phosphorescent bacteria or photo-bacteria are much more active in the presence of an excess of oxygen. Indeed, the respiratory exchange or oxidation of the bacteria is the cause of sea phosphorescence, since if the micro-organisms be killed or oxygen be excluded the light is quenched at once, while on adding an abundant supply of combustible foodstuff such as sugar, the light is intensified. The glow of ordinary yellow phosphorus is, of course, due to direct oxidation without the agency of micro-organisms. The peculiar greenish glow seen upon stale haddocks and other sea fishes is produced by this remarkable photo-bacterium, and is in no way connected with the presence of phosphorus. It is possible to cultivate the phosphorescent bacteria so as to obtain a fluid which is very strongly phosphorescent. Thus by placing the flesh of fresh haddocks or herrings in a two or three per cent. solution of common salt and keeping at a low temperature—about seven degrees above freezing—it will be found that after a few days not merely the fishes, but also the whole of the liquid in which they are immersed, give off a pale greenish light which becomes much more brilliant if a little sugar be added. Pure cultures may thus be obtained exhibiting such a strongly phosphorescent light that by protracted exposure they may be photographed by their own light. It is not possible to say whether the culture will ever be carried to such a pitch that the vessel containing it may be used with advantage as a street lamp or a lamp upon our tables or a Chinese lantern at our garden parties. But the wonderful functions of bacteria are many, and the possibilities of using their powers multifarious.

VALERIAN OIL.—It is fairly well known that the fresh root of valerian, when the herb is in full growth, has scarcely any odor, whilst in the dried state it possesses the well known powerful and characteristic aroma. If the well washed fresh root, or preferably its extract, is incinerated, a residue is obtained, which is rich in manganese. This fact, in conjunction with the peculiarity mentioned above, has led to the supposition that in the development of the aroma of valerian root, an oxidase plays an important part. A freshly cut root of valerian turns blue on the surface formed by the section, if tincture of guaiacum is applied. If the same root is crushed into a pulpy mass with a little water, the filtered juice gives a similar characteristic reaction; this also occurs, but much more slowly, with

guaiacol and hydroquinone. If about 2½ parts of strong alcohol are added to the filtered juice of the root, white flakes are soon separated which in the liquid rapidly turn darker. If valerian root, previous to the extraction of the juice, is kept for about ten minutes at the temperature of the water bath, the extract then obtained will also gradually develop a slight odor, which, however, will become incomparably stronger, if to the juice is added a small quantity of the previously separated ferment. From this it would appear that fresh valerian root contains a considerable quantity of an oxidase, which plays an important part in the production of the odoriferous principle. As the oxidase of valerian root passes over into the aqueous extract, and as it is moreover known, that oxidating ferments are also present in an active condition in the animal body, Carles assumes that the therapeutic effect of an infusion or extract of valerian, which cannot be obtained to the same extent with either valerates or oil of valerian, must, at least in part, be attributed to the presence of the oxidase.—(*Schlimmel*).

BACTERIA A VITAL NECESSITY.—According to Kijanzin (*Archiv. d. Biolog., Pharm. Jour.*) the presence of certain bacteria in the air is as necessary as oxygen for the continuance of vital processes in animals. He has found that when animals were confined for some days in a chamber of sterilized air, some died, others, although taken out alive, expired shortly afterwards, and all the rest which survived showed symptoms of extreme lassitude and weakness. These results were proved to be due neither to starvation nor to toxic exhalations, nor to the presence of CO₂ in the sterilized air. The urine excreted by the subjects was found to be abnormally rich in leucomaines, while the amount of urea present was very low, showing that the processes of oxidation, which normally go on in the tissues were materially retarded. He concludes that the oxidizing ferments which have been shown to be normally present in the tissues, are supplied by bacteria, which gain access to the blood and, probably, to the leucocytes in the lungs. The actual cause of the debility and death in the animals experimented on is considered to be the enormous accumulation of insufficiently oxidized products which exercise a toxic influence. Bacteria are therefore considered to be essential for the maintenance of animal life.

THEINE IN TEA.—J. Kochs publishes the results of analyses of various kinds of Chinese tea sent to Berlin by the German Consul at Shanghai, all of them pure, with an exquisite aroma due to the packages being hermetically sealed. The yield of theine is remarkably high; the percentages found are: Souchong, 2.83; Flower Pekoe, 4.36; Scented Tea, 3.08; Pouchong, 3.41; Congou, 3.83; Oolong, 3.66. A Brazilian tea, Cha Morumby, contained 3.11 per cent. of theine. The author states that though an assay may detect adulterations, yet it is not a complete guide to the quality of a sample of tea as to its suitability for use and its market value. Just as with coffee, the appearance, aroma, and taste of both leaf and infusion are points which guide the tea expert and the dealer. A further comparative examination of different samples shows that tea from Assam, Ceylon and Java is better packed and consequently has more aroma than that from China and Japan. Tea is artificially flavored in China only. According to the late W. Krohn, formerly consul at Futschau, only the scented Orange Pekoe undergoes this treatment. The author has analyzed a sample from Shanghai and recognizes that the tea is of excellent quality and that the flavoring is in no wise an attempt to adulterate the article. (*Revue Cult. Colon.; Pharm. Jour.*)

FORMALIN IN MILK.—The results of some observations of Dr. Park, of New York, would tend to show that the danger of using milk to which formalin has been added to preserve it is exaggerated. Kittens and mice were fed on milk containing definite amounts of formalin, and these, contrary to presupposed ideas, gained in weight! Formalin in the strength of 1 part to 10,000 of milk has a slight retarding action on the digestion of that fluid, but does not interrupt its final digestion unaccompanied by disordered symptoms. It was stated as the opinion of many prominent physicians present that it would be far better for the poor who cannot

afford ice to keep milk fresh and sweet to be supplied with milk to which the proper amount of formalin has been added. At any rate, they say, the danger is far less from this than it is from disease germs and the still more to be dreaded toxins formed by germs.—Minutes of N. Y. Pediatric Society.

EMBALMING FLUID.—Sodium arsenate, 2,000 gm.; boiling water, 7,550 C.c. Boil until solution of the salt is effected; add glycerin, 2,000 C.c.; formaldehyde (40 per cent.), 100–150 C.c.—Philadelphia Med. Jour.

BRITISH PHARMACEUTICAL NEWS.

London, Nov. 15, 1900.

Pharmaceutical Mayors.

Mr. George Claridge Druce, M. A., F. L. S., president of the British Pharmaceutical Conference, has been elected Mayor of Oxford for the ensuing year. Mr. Druce has already served the office of sheriff of that city. Mr. Wm. Albert Wrenn, chemist and druggist, has been re-elected Mayor of Taunton, England. Mr. Wrenn this year visited America and was officially received and entertained by the municipal authorities of Taunton, Mass. Other pharmaceutical mayors include Mr. E. P. Wynne, for Aberystwith; Mr. J. P. Oliver, for Maidstone, and Alderman Allwood Simpson re-elected for Stalybridge, Mr. J. A. Steward for Worcester, Mr. Samuel J. Hulbert for Glastonbury, Mr. E. Horne for Barnsley, Mr. J. R. Lawson for South Shields and Mr. D. L. Sprake for Accrington. Mr. Sprake is not now in the trade, having deserted pharmacy for the law; he practices as a solicitor in Accrington.

The Royal Society.

Sir Wm. Huggins has been elected president of the Royal Society in succession to Lord Lister. The society's medals have this year been adjudicated as follows: The Copley Medal to Professor Marcellin Berthelot, foreign member of the Royal Society, for his brilliant researches in chemistry; the Rumford Medal to Professor Antoine Henri Becquerel, for his discoveries in regard to radiation proceeding from Uranium; a Royal Medal to Major Percy Alexander MacMahon, F. R. S., for his contributions to mathematical knowledge; a Royal Medal to Professor Alfred Newton, F. R. S., for his valuable work in ornithology and in the geographical distribution of animals; the Davy Medal to Professor Guglielmo Koerner, for his determination of the position theory of aromatic compounds; and the Darwin Medal to Professor Ernst Haeckel, for his long continued and highly important investigations in zoology, more especially in regard to the work of Charles Darwin.

NOTES.

On October 16 the Oxford Drug Company was fined at Oxford Police Court 1s. and 11 costs for selling phosphate of soda containing the equivalent of 5 grains of arsenous oxide per pound. It will be remembered that in two cases heard in London about three months ago in which the effervescent phosphate was involved, the fines and costs amounted to fifteen guineas in each case.

On October 16 the second winter scientific session of the Wellcome Club and Institute at Dartford was opened with a lecture by Dr. F. B. Power, of U. S. P. fame on "The Principles of Chemistry in Relation to Familiar Things." The Wellcome Club was about two years ago presented to his employes by Mr. H. S. Wellcome, head of Burroughs, Wellcome & Co. It is a magnificent institution with extensive grounds. Previous to the lecture Mr. Wellcome entertained a number of friends to dinner at the club house.

Mr. William Frederick Wells, of Dublin, who has been justly described as the father of the Irish drug trade, died on November 4, aged 84. Mr. Wells' son (also Wm. Frederick) is an ex-president and present councillor of the Pharmaceutical Society of Ireland.

Mr. Wm. Robert Chaston, a chemist of Chelsea, who had just returned from the South African War, where he had been serving with the Wiltshire Yeomanry, was thrown from his horse in Battersea Park on November 11 and died in St. George's Hospital on the following day.

A MISCONCEPTION RECTIFIED.

New York, Nov. 28, 1900.

To the Editor: In the November 22 issue of the Era appeared a reading notice under the heading of "Pepto-Mangan 'Gude'," which makes reference to an expression used in a letter sent out and signed by us. Many thousands who received our letter would no doubt, on reading your notice, recognize the very original expressions contained therein as ours, and are apt to form a very unfavorable opinion of our concern, which we claim would hurt us commercially. Undoubtedly this reading notice escaped your vigilance, or you have committed the error of accepting as true, false statements, which only could be dictated by malicious competitors, for we do not doubt a moment that had you known the real facts this veiled slur would not have appeared. We consider it our duty to ask from a respectable public journal a retraction.

In September we contemplated sending out a circular letter as we have done from time to time during the last ten years; this letter was finished on October 1 and sent out on October 10, which we can prove by post office receipt. On October 29 the misfortune befell the Breitenbach Company and aroused general and genuine sympathy and certainly not the least ours. To have taken advantage of competitors in distress and under existing circumstances would have been the most dastardly offence against propriety imaginable, and we should have been criticised with that scorn and contempt which it richly deserved. As a fact, both members of this firm, moved by sincere sympathy, went to the temporary office of the Breitenbach Company immediately after the disaster for the purpose of not only offering their sympathy but also to supply the firm with goods long enough to bridge them over; not meeting the principals of the Breitenbach Company to make this offer, they left a message to this effect and their cards with the book-keeper of the company.

This will sufficiently show up the silly accusation and false statement, for we could not know on the 10th of October, when we sent out our letters, what would happen on the 29th of October. But how about the parties who caused that notice to appear? Our letter bears date October 10. Did they overlook that, or did they try to foist dishonorable motives on innocent parties to further their own ends? We leave this to the judgment of our brother druggists.

Respectfully yours,

THE REINSCHILD CHEMICAL CO.,

Per C. Reinschild, Pres.

60 Maiden Lane, New York.

AT CARVER'S PHARMACY, PLYMOUTH, MASS.

NEWS AND TRADE DEPARTMENT.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

It is reported from St. Petersburg that the Powers are inclined to the more moderate views on capital punishment and indemnity advanced by the United States. The Fifteenth United States Infantry has left Tien-Tsin for Tong-Ku, where the regiment will embark this week for Manila. Instructions have been sent to Minister Conger at Peking, not to sign any agreement of the envoys that is not in line with the American policy. Li Hung Chang is reported to be seriously ill.

South Africa.

The London Statist, a financial journal of considerable influence in England, urges that the war in South Africa be brought to an end by conciliating the Boers. It declares that British prestige and trade are being jeopardized by a prolongation of the contest. Cable dispatches tell of continued fighting and report heavy Boer losses. Lord Roberts has turned over the command of the British forces in South Africa to Lord Kitchener and will soon return to England. Kitchener has been promoted to be Lieutenant-General with the rank of General while serving in South Africa. Mr. Kruger's tour of France has been a series of enthusiastic ovations. The French Senate and Chamber of Deputies last week unanimously adopted a resolution of sympathy with him. He left Paris Saturday for Cologne. Mr. Kruger has announced his intention of visiting the United States early in next year. General DeWet captured a garrison of 400 British soldiers and two guns at De Wetsdorp, southwest of Bloemfontein, last week. Kitchener's new policy of burning Boer farmhouses and exiling the Boer women and children to Cape Town or other places far from their homes is causing tremendous indignation among the Dutch in Cape Colony, and it is reported that an armed revolt in that colony is more imminent than it has been at any time since the war began. A plot to kill Lord Roberts by blowing up a church where he was to attend service was discovered in Johannesburg last week, and the conspirators were arrested. The news caused widespread indignation in England, and may lead to still more severe measures against the Boers.

The Philippines.

Gen. MacArthur has confirmed the sentence of four natives convicted of murder, and they will be executed on the 21st. The auxiliary cruiser Yosemite was lost November 15 in a severe typhoon that swept the island and harbor of Guam. Six of the crew went down with the ship. Director-General of Posts Vaillie, who organized the postal system in the Philippines, has been ordered home at his own request. The system that he organized is on a good paying basis.

Other Foreign News.

The improvement in the Czar's condition continues, and is said to promise certain recovery. The death of Oscar Wilde in Paris is reported. The Thuringian states of the German Empire have forbidden the holding of religious services in the Polish and Bohemian languages. The object of this interdiction is to weaken the race feeling of the Polish and Bohemian settlers, and cause them to amalgamate with the rest of the population. Such laws are common in southern Germany, Austria, Hungary and Russia. A blizzard raged in Newfoundland last week, and it is feared that many vessels have been lost along the coast. The Italian Chamber of Deputies last week adopted a Socialist motion to abolish trials by court martial. The Minister of War opposed the motion, but without success. The Standard Oil Company has obtained valuable concessions for developing oil territories in Roumania.

DOMESTIC. Congress.

It is expected that the President will submit to the Senate for confirmation about sixty nominations for Presidential post offices this week or next.

By the provisions of the new army bill that will be considered by Congress, the increase and reorganization of the army and the enlistment of Filipinos and Porto Ricans will be contemplated. John T. Morgan was elected United States Senator by the Alabama Legislature last week, receiving every ballot cast.

Other Domestic News.

The gold in the United States Treasury has reached the enormous total of \$174,108,366, the largest in the history of the government. It is estimated that there is probably \$1,100,000,000 in gold in the country. The Cuban customs for the first ten months of this year show an increase of over \$1,000,000 over the same period of last year. Miss Eugenia Washington, great-grandniece of George Washington, and one of the founders of the Society of Daughters of the American Revolution and president of the Society of Founders and Patriots, died in Washington last week. Oscar L. Booz, a West Point cadet, is reported to be dying at his home in Bristol, Pa., as a result of hazing at the military academy. The natives of Guam are reported to be starving, and Secretary Long has ordered food sent to them. Seventeen men and boys were killed in San Francisco on Thanksgiving day by the collapse of a roof from which they were viewing a football game. They fell upon red hot furnaces and into kettles of melted glass and burned to death. The anti-vice crusade in New York has resulted in the appointment of a committee of fifteen prominent citizens to direct the campaign of city purification. Secretary Hay and the Nicaraguan Minister in Washington on Saturday signed a treaty whereby Nicaragua conceded to the United States the necessary rights and privileges within her bestowal for the construction of the Nicaraguan Canal. Rear-Admiral McNair, the senior rear-admiral of the navy, died last week. He was in command of the Asiatic squadron until succeeded by Admiral Dewey, and if he had retained that post he might have won the battle of Manila Bay and become admiral. The expert marksmanship and splendid drill of the men in that battle are said to have been largely due to his excellent discipline. Since the arrival of the battleship Kentucky at Smyrna, the Sultan of Turkey has shown a disposition more favorable to paying the long-due indemnity he owes the United States, but he has done nothing definite about it yet. Senator Cushman K. Davis, of Minnesota, died last week. Senator Davis was a Republican. Gov. Lind, of Minnesota, is a Populist, and will probably appoint a Populist to fill out the unexpired term in the Senate. Twenty-four cases of smallpox were discovered in and near one block in New York City last week. The health authorities are adopting vigorous measures to stop the spread of the epidemic. It is reported from Indianapolis that by the end of this week the employes of the Big Four Railway Company will have formed one of the strongest labor organizations ever known in the Middle West. The intention of the employes is to organize a federation making the grievance of one department the grievance of all the others. Among the measures passed by the Vermont Legislature which adjourned last week was a law prohibiting the sale of cigarettes in the State. George Phillips, a Chicago broker, made about \$300,000 in the last few days of last month by operating a "corner" in corn for delivery in November. Secretary Long, in his annual report, recommends the building of two battleships, two armored cruisers and several smaller vessels, and says the navy urgently needs at least 5,000 more enlisted men.

Thos. F. Condon & Co., American agents for the famous Parfumerie Maubert, Paris, are advertising their "Cendrillon Soap" very extensively through the leading high-class magazines, saying in the ad. that this soap is to be obtained from all the leading druggists. In addition to this they have issued a beautiful booklet, entitled "The Story of Cinderella (Cendrillon) Applied," which is gotten up very tastefully in colors and intended, they say, for distribution to your best trade and which will contain your name highly embellished in gold on the cover. These booklets accompany every order for "Cendrillon Soap," and in addition to advertising the soap itself will give you one of the most unique and readable advertisements that you have ever seen. They are offering special holiday discount and will be pleased to furnish you sample booklet and full information if you will write.

THE DRUG NEWS.

New York and Vicinity.

ESSEX COUNTY (N. J.) DRUGGISTS' ASSOCIATION.

A new schedule of prices on proprietary articles to go into effect January 1 was adopted at the meeting of the Essex County Retail Druggists' Association, held in the New Jersey College of Pharmacy, Newark, Wednesday afternoon, November 28. The association also made application for membership in the N. A. R. D. and decided to canvass Essex County immediately to bring to light "the aggressive cutters" and prepare to fight them. The meeting was called to order shortly after 3 o'clock by President Staehle. The minutes of the previous meeting were read and approved, as were also the minutes of the Executive Board which met Monday, November 26, and prepared a price list. The price list included slight advances on twelve of the best known preparations. Frank Crissy, chairman of the Executive Committee, in referring to the report, said the price list had been made up with a view to be lenient with the aggressive cutter, permitting him to educate his trade to gradual elevation rather than a sudden advance in prices. This policy did not meet with favor with some of those present and Prof. W. C. Anderson, president of the N. A. R. D., who was in attendance, was called on for advice. Prof. Anderson went into the history of the N. A. R. D. organization, explaining in full the benefits to be obtained and rehearsing in detail the N. A. R. D. plan, also suggesting that a general rather than a specified price schedule be adopted. Acting on this suggestion and after some argument, the following price schedule was unanimously adopted:

- All 5c., 10c. and 15c. articles full price.
- All 25c. articles not less than 20c.
- All 35c. articles not less than 30c.
- All 50c. articles not less than 45c.
- All 60c. articles not less than 55c.
- All 75c. articles not less than 65c.
- All \$1.00 articles not less than 85c.
- All \$1.25 articles not less than \$1.10.
- All \$1.50 articles not less than \$1.25.
- All \$2.00 articles not less than \$1.75.
- All new preparations to be sold at full price.

A vote of thanks was tendered to Prof. Anderson. It was decided to have the price list printed and copies sent to each druggist in the county and to begin at once to make a canvass of the county to ascertain how many druggists were in favor of the reform movement. There are about 140 pharmacists in the county and the Essex County Association now claims about 125 of these as members. To aid the canvass Charles Miller and P. Van Ness, of Newark, and Mr. Wensch, of Wensch Bros., Montclair, were added to the committee of five already appointed. The next meeting will be held Wednesday afternoon, December 12.

AMERICAN SODA FOUNTAIN COMPANY.

The annual meeting of the stockholders of the American Soda Fountain Company was held last week at the New Jersey office of the Company, Nos. 243-245 Washington street, Jersey City. The following board of directors was elected: James W. Tufts, Boston; Alfred H. Lippincott, Philadelphia; John H. Matthews, New York; William T. Jenney, Boston; Charles N. King, Jersey City; Isaac F. North, New York, and Leonard Tufts, Boston. The directors re-elected the old officers for another year. They are: President, James W. Tufts; first vice-president, Alfred H. Lippincott; second vice-president, John H. Matthews; secretary, Isaac F. North; treasurer, James N. North; assistant treasurer, William T. Jenney.

The treasurer's report shows the company's assets to be \$4,189,624.53, and the liabilities, \$355,947.60, leaving an excess of assets over liabilities of \$3,833,676.93. The report also shows that on August 31, 1899, the company had a deficit of \$95,329.64, and that on August 31, 1900,

it had a surplus of \$83,676.93, leaving a net profit for the current year of \$179,006.57.

This is the best showing the company has made in three years. It was incorporated in 1891 with a capital of \$3,750,000. Its principal stockholders were the largest manufacturers of soda fountains and apparatus for the manufacture of soda in the United States, as the list of officers indicates.

At that time, A. D. Puffer, A. D. Puffer, Jr.; Daniel J. Puffer and Luther W. Puffer, with other incorporators, agreed to refrain from competing business for a period of ten years, for which period Daniel J. and Luther W. Puffer were retained by the American Soda Fountain Company to manage the Puffer business. It being the intention of the Messrs. Puffer to retire and again start in business for themselves at the termination of their engagement, said engagement was concluded September 29, 1900, by mutual arrangement between the American Soda Fountain Company and the Messrs. Puffer.

The business of the Puffer Manufacturing Company was established about three years ago by two grandsons of A. D. Puffer (the founder of the Puffer business in 1842), and to this firm both Daniel J. and Luther W. Puffer have attached themselves.

COPIES OF THE NEW PHARMACY LAW.

About 10,000 copies of the new pharmacy law, which becomes operative in this State January 1, 1901, are in the hands of Sidney Faber for distribution. Anyone may get one by addressing Mr. Faber at No. 1102 Second avenue, and enclosing a two-cent postage stamp to cover cost of mailing. Mr. Faber has been receiving letters at the rate of about twenty daily lately, calling for explanation and information touching certain portions of the law, and other members of the new board report a like experience. A member who is well posted on the law said recently that some points in the statute would require court opinions to determine the correct interpretation. "The main point is registration," he said. "This does not seem clear to some. A man wrote me recently, asking if he could register on his diploma which bore date of 187—. I wrote him yes, but his field of operations would be limited to Greater New York, and as soon after as the mails would allow I received a lengthy letter from him dilating on the law and pointing out in particular the flaw, he called it, in the point of registration I had explained to him. He also complained of the registering of physicians. He evidently did not know the new law eliminated this feature. Pharmacy laws have been aiming to strike out the clause allowing physicians to register for some time, but the new law is the first successful effort made. On the whole, the new law is a good one, but, like all others, it is in the rough, and it may cause some grating until the sharp edges wear off; then it will be one of the best things that ever happened."

ITALIAN PHARMACISTS TO REORGANIZE.

There is a reviving interest manifest in the Italian Pharmaceutical Association of this city which, though over a year old, has remained passive in pharmaceutical circles for over half that time. It now proposes to become alive once more by an effort at reorganization promoted by Joseph Aquaro, who was the founder of the society. Mr. Aquaro believes that the Italian pharmacists should take as much interest as other societies in the reform movement against price cutting which is sweeping over the city, and he is going to further that idea by bringing the Italian pharmacists together. A meeting for re-establishing the society was held last night at 149 Bleecker street.

N. Y. C. P. ALUMNI ASSOCIATION DINNER.

The annual dinner of the Alumni Association of the New York College of Pharmacy was held Thanksgiving eve in College Hall, in the Arena on Thirty-first street, near Broadway, and proved of equal success with the former dinners of the organization. Nearly 100 guests were present, including many who had not been in attendance at previous dinners. President Charles S. Erb presided as toastmaster. The dinner was an excellent one. Immediately following it the speech-making was begun. Those who responded included: Prof. Rusby, F. P. Tuthill, Brooklyn College Alumni Association; William Weiss, a Philadelphia College of Pharmacy alumnus; G. H. Hitchcock, M. R. Mandelbaum, Mr. Davies, F. N. Pond, Mr. Pfaff, James Rogers, Prof. G. A. Ferguson, William De Zeller, Fred. Wichelns, N. S. Kirk, Eugene Lohr, Joseph Aquaro, Mr. Ruesswig, Dr. Booth, Dr. Perillo, Mr. Herold, Mr. Meinecke, G. E. Schweinfurth and Harry B. Ferguson. Letters of regret were read from Dr. Coblenz and W. H. Ebbitt. During the speechmaking the Alumni cup presented by the William S. Merrell Chemical Company, was filled by Mr. Mandelbaum, the company's representative, and passed among the diners. Toasts were drunk to the late Dr. E. R. Squibb and to John B. Russell, a deceased member of the association.

HOBOKEN DRUGGISTS' ASSOCIATION MEETING.

The Hoboken Retail Druggists' Association met Monday evening, November 26, after several futile attempts to get together during the last month. The meeting was on special call of the secretary, who sent each druggist in Hoboken a notice urging immediate action to sustain a movement for the abolition of cut prices. F. W. Traeger called the meeting to order and was chosen temporary chairman with J. Hostmann secretary. The roll call showed twelve members present. A constitution and by-laws were adopted and the following Committee on Nomination of Officers was appointed: Hugo Mueller, Charles Sunkel and Mr. Raubenheimer. A meeting of the organization was held Monday evening, December 3, at which officers for the year were elected and duly installed.

NOTES.

—George F. Van Slyck has been designated by Justice Andrews, of Brooklyn, receiver for J. F. Smith & Co., Incorporated, manufacturers of proprietary medicines at 1925 Fulton street, that borough. The receiver was named on application of Miles R. Bracewell, a judgment creditor for \$669. Mr. Bracewell is also interested in claims of other concerns against Smith & Co. aggregating over \$7,000, while there are other creditors who claim indebtedness of \$5,000. The company formerly did business in Texarkana, Texas, over twenty years ago and at one time, about five years ago, was located in this city. It created a lively trade with "Smith's Bile Beans." Jesse W. Smith is president of the company. At one time Mr. Smith was associated with A. F. Boney in the A. W. Stewart & Co.'s pharmacy at Broadway and Thirty-eighth street. It is said the only assets of the present concern are trade marks for proprietary medicines.

—Anthony Gref, as attorney for the Farbenfabriken of Elberfeld Co., No. 40 Stone street, has filed a bill of complaint in equity in the United States Circuit Court against the Orienta Chemical Co., of Mamaroneck, Westchester County and the officers of the same, President George C. Frolich, Secretary Charles Brookes and Treasurer August G. Beyer. The plaintiffs claim a violation of the patent law on the patent for Aristol, owned by them and which they allege defendants are using and selling. An accounting and a permanent injunction are asked. A temporary injunction is in force at present.

—The suit of Ephraim S. Wells, proprietor of "Rough on Rats," against the Ceylon Perfume Company, was dismissed by Judge Wheeler in the United States Circuit Court last week. The plaintiff sought to restrain the defendant from marketing the perfume company's preparation "Rough on Skeeters," on the ground that it was an infringement on the complainant's trade-mark "Rough on." Judge Wheeler decided that inasmuch as the plaintiff made no preparation, "Rough on Mosquitoes" or "Rough on Skeeters," the defendant was not usurping the trade mark right or injuring the business of the plaintiff.

—The Retail Druggists' Bowling Association, at its last meeting, Monday evening, November 26, decided to celebrate the customary "ladies' night" some evening during this month. The committee named to arrange for the event include G. E. Schweinfurth, G. H. Hitchcock, C. H. White and R. H. Timmerman. The bowling pin, which is awarded to the person scoring the highest number of points each night, was given to Otto Borddiker. A balance of over \$43 was reported in the treasury.

—The second meeting of the committees representing the various pharmaceutical associations in Greater New York will be held in the New York College of Pharmacy, Thursday afternoon, December 13, at 2:30 o'clock. It is expected that a price-list will be adopted at this meeting and plans formulated for a canvass of the city to obtain the sentiment of the retail trade regarding the proposed reform in prices.

—A runaway horse attached to a delivery wagon made an unexpected call on Druggist L. P. Rupp, at Twenty-second street and Seventh avenue, Wednesday afternoon, November 28, entering Mr. Rupp's store by way of the window. The animal's flesh was badly cut by the broken glass and a whole lot of Mr. Rupp's stock was ruined, not to speak of the disastrous effect the episode had on the usual peaceful community.

—The bowling tournament of the Wholesale Druggists' Bowling Association was continued Saturday afternoon, December 1, with the following results: General Chemical Co. 678, Johnson & Johnson 734; General Chemical Co. 634, Colgate & Co. 788; Johnson & Johnson 790, Colgate & Co. 776; Seabury & Johnson 779, National Lead Co. 663; National Lead Co. 656, Parke, Davis & Co. 690; Seabury & Johnson 785, Parke, Davis & Co. 676.

—The trial of the men Bush and Shea, accused of robbing the warehouse of Lawrenceces and Gerrish of 1,000 pounds of opium belonging to Dodge & Olcott, was continued last week. Witnesses were examined for the prosecution, the evidence being strongly against the prisoners. The defense asked for adjournment for one week, and this was granted. It is thought the men will be found guilty.

—S. C. Bradt, senior member of the firm of S. C. Bradt & Son, druggists, Albany, and father of Warren L. Bradt, one of the members of the Middle Section of the New York State Board of Pharmacy, called on the trade in this city last week. Mr. Bradt, notwithstanding his age, looks hale and hearty and bids fair to practice pharmacy for a long time to come.

—A special meeting of the Retail Druggists' Association was held Tuesday evening, Nov. 27, at which it was decided to have an entertainment and ball. A committee of ten, of which A. Bakst was named chairman, was appointed to complete arrangements. The event will occur at Terrace Garden on Fifty-eighth street, near Third avenue, some time during March.

—McKelvey's pharmacy at New Dorp, Staten Island, which has been considered one of the land-marks of the place, has changed its name to Ulrich W. Becker & Co. Mr. Becker owned the store and has formed a partnership with his clerks, Harry A. Leonard and A. W. N. Brandenburg, who has been associated with him for the last three years.

—Among those who visited the trade last week were the following druggists: A. H. Elliott, Philadelphia; L. W. Randolph, Plainfield, N. J.; H. N. Clark, Corning, N. J.; G. W. Frutcher, Boonton, N. J.; I. Voorhees, White House Station, N. Y., and A. A. Cavagan, San Francisco, Cal.

—At a meeting of the "Hundred Year Club for the Study of Longevity," at Hotel Majestic, Seventy-second street and Central Park West, Anne L. Langworthy, M. D., read a paper on "Confidence; the Essential Factor of a Century Life." A five minutes' discussion followed. H. W. Wiley, of Washington, is president of the club.

—Sumner W. White, brother of Fred. W. White, of William R. Peters & Co., drug importers at 540 Broadway, has been admitted into partnership and after January 1 the firm name will be changed to Peters, White & Co. The business is well known to the trade, having been organized in 1874.

—The German Apothecaries' Society will hold its monthly meeting this evening, at which time the question

of appointing a committee to sit with other committees from the pharmaceutical societies in the city in joint conference relative to the cut-rate evil, will come up for action.

—Arthur S. Evans, of the N. Y. C. P., class of '97, of Utica, N. Y., was in town last week. Mr. Evans owns the oldest drug store in Utica, and it is said to be the oldest in the central section of the State. Local historians say that Gen. Washington favored the store with his trade.

—Julius Jungmann, who owns a store at 1028 Third avenue, has recently completed a new six-story building on Columbus avenue, between Eightieth and Eighty-first streets, where he expects shortly to open one of the most elaborately-appointed retail drug stores in the city.

—The members of the Kappa Psi fraternity of the New York College of Pharmacy have recently adopted a new design in a class pin. The organization holds weekly meetings Friday evenings at the "frat" rooms on Amsterdam avenue, and is in a flourishing condition.

—A fund was started at the dinner of the N. Y. C. P. Alumni Association last week for the purpose of purchasing microscopes for use of students taking the post graduate course at the College of Pharmacy. Over \$200 was collected and as much more pledged.

—The Only Sour Gum Company, of Buffalo, has recently incorporated in this State to manufacture chewing gum. The capital stock of the company is \$5,000, and the incorporators are T. Nevin and O. G. Rich, of Buffalo, and T. J. Farrar, of Cattaraugus.

—Arthur D. Miles, formerly apothecary on the U. S. S. Dorothea, is relieving at Nauheim's Pharmacy, at Lexington avenue and Fifty-ninth street. Mr. Miles is also taking preparatory work for entrance to the Sheffield School of Technology at Yale College.

—Mrs. Mary E. Lease, the noted agitator, is suing her husband, a Kansas druggist, for absolute divorce on the ground of desertion. Mrs. Lease claims a residence in this city at 436 St. Nicholas avenue, but the people there did not know her.

—The new building of Lehn & Fink on William street is about completed. The work of installing the lighting system and interior decorating is yet to be done, so that the firm does not expect to occupy the place until the spring.

—Imports of drugs, paints, etc., to this port for the week ending November 24 reached \$649,059. Among the heavier importations were the following: Aniline colors, \$72,773; glycerine, \$32,384; oil rose, \$42,318; quinine, \$38,286.

—The Home Insurance Co. has paid Schoellkopf, Hartford & Hanna \$1,279.97, this being the full amount of the policy carried by the firm on its stock destroyed in the Tarrant & Co. fire and explosion, Oct. 29.

—The Day Drug Co., of Binghamton, has incorporated in this State to do a general drug business. The capital stock is \$8,000, and the incorporators are Samuel, Willard and Elizabeth G. Day, all of Binghamton.

—E. H. Merritt, druggist at Halsey street and Broadway, Brooklyn, has recently given the interior of his store a thorough overhauling, repainting it and adding much to its appearance.

—The Ceres Chemical Co., of Jersey City, has recently incorporated with a capital of \$15,000. The incorporators are K. K. McLaren, A. Smedburg, Jr., and J. J. Billings.

—Charles E. Daniels, manufacturer of pharmaceuticals at 479 Gates avenue, Brooklyn, has sold his establishment to Charles F. Risley & Co., 46 Cortlandt street, this city.

—The annual ball and supper of the German Apothecaries' Society will be held in Terrace Garden, Fifty-eighth street, near Third avenue, January 25, 1901.

—H. H. Hoyt, druggist at No. 73 Fulton street, Brooklyn, has greatly improved the appearance of his store by remodeling and refitting it throughout.

—L. C. Averre, who owned the drug store at 235 Gold street, Brooklyn, has recently sold it to a contracting builder named Atwood from Tenafly, N. J.

—At the next meeting of the Drug Trade Club, which will be held next week, a number of persons on the waiting list will be elected to membership.

—W. A. Dickson and F. L. Robbins, New England representatives of Parke, Davis & Co., spent Thanksgiving with friends in town.

—J. A. E. Rayner, J. Gamble and Max Musspratt, of the

THE ACORN. H. K. MILLER, LACONA, N. Y.

United Alkali Company, of Liverpool, England, are in the city for a short time.

—The Drug Clerks' Circle will hold its second annual ball at Webster Hall, Eleventh street and Third avenue, Friday evening, Feb. 1.

—Joseph Voigt, of Voigt Brothers, well-known retail druggists of Chattanooga, Tenn., is in the city spending his honeymoon.

—Dr. J. B. Smith, of Pilot Mountain, N. C., the only retail druggist in the place, was in the city during the last week.

—Druggists continue their complaints of the dullness of trade which has prevailed for the last two weeks.

—A. E. C. Roy has recently severed his connection with John P. Scherff, druggist, at Bloomfield, N. J.

—J. F. Smith has resigned his position in the store of L. Koempe, Park and Bedford avenues, Brooklyn.

—Edward Mallinckrodt, of the Mallinckrodt Chemical Works, St. Louis, is in the city for a short stay.

—George Hoffmann has purchased the store of Louis Fickler at 103 Grand street, Brooklyn.

—George A. Brown has sold his store at 1387 Broadway, Brooklyn, to Arthur Bragg.

—Mr. Greenspoon will shortly open a drug store at Jackson and Water streets.

—D. Boyer has accepted a position with the Dix Pharmacy Co., 993 Sixth avenue.

Pure Gin and Rye.

If you have a demand for gin or whiskey for medicinal purposes you should order a supply of Clarke's Pure Old Juniper Gin and Clarke's Pure Rye. They are the best for use in sickness and are guaranteed pure. These goods are six years old and are bottled by the Government. Send your order to the distillers, Clarke Bros. & Co., Peoria, Ill.

A "5 Drops" Specific.

A valuable specific for rheumatism, neuralgia, asthma, and catarrh is the preparation known as "5 Drops." Each bottle contains an unusually large number of doses—three hundred for one dollar—and the article pays the druggist a good profit. All jobbers carry it in stock. It is manufactured by the Swanson Rheumatic Cure Co., 160 East Lake street, Chicago, Ill.

IN AND ABOUT BOSTON.

Druggists Assailed and Defended.

Boston, Dec. 1.—A mild sensation was created at this week's meeting of the State Board of Trade, held at the Parker House, with Hon. Gorham D. Gilman, of Gilman Bros., the wholesale druggists, as the presiding officer. Edward Atkinson, the sociologist, was called to account by Mr. Gilman, during the after-dinner speaking, and the incident stirred up considerable feeling. Mr. Atkinson was talking of patent medicines, sarsaparillas and Jamaica gingers, and intimating that the druggists were trying to secure the State Board of Trade's influence toward having the stamp tax removed from such concoctions. "But," Mr. Atkinson averred, "it is our duty not to have this stamp tax taken off, but to compel the manufacturers to put on a label telling just what is contained in the packages, with the percentage of alcohol." He said the preparations for the most part were intended for use in no-license towns, and that they were forcing the people to become inebriates.

This brought Mr. Gilman to his feet with protests. "Permit me to say a word in behalf of the Boston Druggists' Association which I represent," said he. "This is no place to engage in a controversy of this sort, but at proper time and place I should be pleased to meet Mr. Atkinson in debate. His statements can be refuted with ease." Mr. Gilman then stated that the druggists are a law-abiding class of citizens. "If there are a few unscrupulous ones," he said, "you can in the same way find that some clothing manufacturers put arsenic and other harmful substances in clothing." Later, Mr. Gilman was chosen one of the vice-presidents of the organization to represent the Boston Druggists' Association.

NOTES.

—In the court at Fall River, Hugh Bouvier recently appeared in a continued case for the alleged unlawful sales of intoxicating liquors at the Bouvier Bros.' drug store on Pleasant street in the Globe Village district, as far back as September. The chief witness called several witnesses to testify in the Government's behalf, but they one and all denied seeing a certain man buy four drinks of whiskey and a bottle of gin, as alleged, of the defendant. Little testimony proved anything at all against him, and in defense it was shown that Bouvier was driving in Warren on the date of the alleged sale and that he never saw either the complainant or chief witnesses until the case was filed. Wilfred Bouvier and Alfred Bouvier were the only men at work in the store at the time of the alleged sale, and neither of them saw the plaintiff or witnesses. The court found that there was a sale of liquor at the store on the date of alleged complaint, but that defendant did not make the sale, and that he was not responsible for it. Bouvier was therefore adjudged not guilty.

—The long talked-of banquet and social time of the Drug Clerks' Union of Springfield has at last taken place, although these overworked men were obliged to place the hour late, after the close of the store at 10 o'clock, in fact, when more than fifty clerks gathered at the Haynes Hotel, where dinner was served at half-past ten. President J. T. Doyle acted as toastmaster and led in the speechmaking. The speaking was informal in character, and was participated in by W. K. Rice, A. L. Tucker and George Cooley. There also was an entertainment, including selections on the zither and harmonica, popular songs, humorous songs and stories. The banquet served to emphasize the good feeling among the members, who were so pleased by the new and pleasant associations that the event is likely to be repeated in the future, from time to time. Cigars were contributed by druggists Wheeler, Saddler and Green.

—A United States Marshal has arrested Lewis Stacey, employed by W. C. Draper, a druggist in Sullivan Square, Charlestown district, whose store is also a sub-station of the Boston post office. He was arrested on a charge of stealing property of the United States Government. The post office inspectors claim that Stacey took five money order blanks and went to New York, where he filled out one of them for \$87, and had it cashed. On his return he was arrested in the Quincy House. He has

been drinking heavily of late, so it is said, and this may have led to the act. Before the United States Commissioner Stacey pleaded guilty, and he was held in \$1,500 for further examination. Stacey lives in Somerville.

—Members of the Boston Druggists' Association had a meeting and dinner at Young's Hotel this week, when Dr. Julius Garst and Frank Harris, Ph. G., both of Worcester, were guests of honor and speakers. Existing conditions in the Worcester drug trade led them to choose for topics "A Practical Plan for the Prevention of Price Cutting," on which Dr. Garst spoke, and "The Protection of the Retailer," about which Dr. Harris talked, their addresses bearing upon the important case recently before the Supreme Court regarding price cutting. The speeches were afterward discussed at length by the members.

—A Chinaman, Sam Wah, has been arrested for violation of the law regarding the sale of poisons. About one month ago he was arrested for selling opium, but his experience in court made very little difference with him, and he still continued to sell the drug to any person in search of it. An officer who went to his place to buy had little difficulty in purchasing the drug, and after doing so placed Wah under arrest. The law sets forth that all sales of opium must be made on prescription only, and then registered in a book. Wah does not read or write English or Latin, and of course kept no register.

—In an electric car accident at Hyde Park this week, wherein a car from Mattapan for Hyde Park jumped the rail and struck a tree near the sidewalk, slightly injuring several of those on board, Thomas F. Fallon, a Hyde Park druggist, was the most seriously hurt, having a bad cut on the back caused by glass from the broken windows. The front end of the car was smashed in, but the motorman was fortunate enough to escape with only slight bruises. There were about twenty-five passengers on the car, and all were thrown in a heap at the front end.

—Considerable mystery surrounds the recent burglary of the drug store of W. W. Hall, at West Springfield, from whom 1,200 cigars, fancy goods, toilet articles, etc., and almost \$20 in cash were stolen. The store is one of the best guarded in the city, night policemen passing it frequently, and its central position is such that there is much general passing of people and teams.

—One of the vaudeville theatres has a novel attraction this week which is called the "Pharmaceutical Girls." Six young women wear a novel costume designed to represent the outfit of a drug store. The girls are all exceptionally pretty, and this act has drawn to the theatre a number of people in the drug trade.

—Among the recent corporation returns filed in Massachusetts is that of the Abbott Menthol Plaster Company, the treasurer of which, D. L. Bradt, reports cash and debts receivable, \$1,024; profit and loss, \$37,940, a total of \$38,964. Against this is capital stock \$35,000, and debts \$3,964, a total of \$38,964.

—J. A. Magloire, a clerk at Richards's drug store in the Flint district of Fall River, proved equal to the emergency when a workman recently struck his thumb with a hammer and crushed the member badly. The injury was carefully dressed by Mr. Magloire.

—A. S. Hoyt, a clerk in Blake's pharmacy in the Forest Hills district of this city, is to take a European trip in company with his uncle. While abroad Mr. Hoyt will enter for a course in a London pharmaceutical college.

—George M. Miller, druggist of Bethel, Vt., was married on November 8 to Miss Eliza Flavel Thomas, of Hanson, Mass. the ceremony being performed at the residence of the bride's mother by Rev. Roland D. Sawyer.

—From the drug store of F. W. Colby, in the Bradford District of Haverhill, the stock and fixtures have been moved to Salisbury Beach and have been placed in position in the Hotel Cushing.

—Among the week's exports from the port of Boston are the following named articles: Drugs and chemicals, \$12,357; india rubber manufactures, \$8,355; tobacco, \$315; wax, \$457; spirits, \$4,911.

—Friends of William Bell, a clerk at Fish's pharmacy on Centre street, Jamaica Plain, are congratulating him on the announcement of his engagement to Miss Edith Rand of Sunnyside street.

—After being confined to his home on Paul Gore street,

Jamalca Plain, for some weeks, on account of pneumonia, A. B. Toward, a druggist of that district, is now out and about again.

—Alfred W. Lowe has become associated in partnership with George H. Parker, a druggist at Andover, the firm beginning its career Dec. 1.

PHILADELPHIA.

Movement for the Repeal of Schedule B.

Philadelphia, Pa., Dec. 1.—Considerable interest has been taken in this city in the movement inaugurated by the Era for the repeal of that part of the war revenue act that particularly burdens the retail druggist, Schedule B, and the printed petitions furnished by the Era have been widely circulated and signed. The Philadelphia Association of Retail Druggists through its officers has forwarded signed copies of this petition to each of the Philadelphia Representatives in Congress, thus far with a very favorable reception from these gentlemen. From a statement made by a prominent Philadelphia Congressman to one of our leading wholesalers, much encouragement has been derived, this party giving the positive assurance that the leaders of the Republicans have agreed to a repeal of this part of the stamp tax.

Prof. Hoff's "Consumption Cure."

Philadelphia, Dec. 1.—The recent publication of a "new and absolutely reliable" cure for consumption, attributed to Prof. Hoff, of Vienna, has stirred up a lot of amusing comment from the medical and pharmaceutical professions here (which, unfortunately, does not get in the papers). Already several druggists have been asked to fill this prescription, but not caring to risk the giving of a grain and a half of arsenic to a good customer, have declined. The best comment on this "cure" comes from one of the University's leading specialists. He says: "For several years past I have noticed similar dispatches in our newspapers, and in a short time afterwards have also noticed an advertisement of the celebrated cure given so much free advertising by editors and others. I am reasonably sure that the present instance is but a clever working of the press for free advertising, and look for the usual developments soon. This latest 'discovery' would fit a man for the graveyard; no respectable druggist would think of filling it."

P. A. R. D. Notes.

The Executive Committee of the P. A. R. D. desire to call the attention of Philadelphia druggists to the short time now remaining in which they may take advantage of the Sterling Remedy Company's offer, and thereby help along the N. A. R. D. treasury. While the response from druggists here has been very good, still it does not quite come up to the hopes of the Executive Committee that Philadelphia would be the "banner city" in the number of orders sent in. The committee would like to urge upon every one who has not yet sent in his order to do so as soon as possible, for by so doing they can contribute to their national association in a manner that will bring them a direct profit, too.

A meeting of the Nominating Committee was held at the College of Pharmacy Tuesday for the purpose of agreeing on a list of nominees for the various offices of the association, to be voted on at the annual meeting, January 4, 1901. This committee is composed of the officers of the P. A. R. D. and the ward chairmen, and is required by the by-laws of the association to report nominees at the December meeting. The list of nominees is at present a secret, but it is understood that a number of the old officers will be continued in their duties.

NOTES.

—H. L. Stiles, Thirty-third street and Haverford avenue, is now quite busily engaged in selecting competent and interested druggists in each county of the State to take up the work of county organization. Mr. Stiles was made chairman of the Committee on Trade Interests at the last meeting of the Pennsylvania State Pharmaceutical Association, which committee was specially instructed to take up the work of forming asso-

W. A. RUMSEY, PHILADELPHIA.

ciations of retail druggists in every county to be affiliated with the N. A. R. D., and hopes to be able to make a good report at the next State meeting. He would be glad to hear from druggists throughout the State in counties which are at present unorganized on this matter, and assures all that his committee will devote its best efforts to helping any county that desires to form a retail druggists' association.

—There is a merry war going on between certain of our uptown druggists, which, were it not for its demoralizing effects, would be quite ludicrous. The latest development is in sunflower seed. One party filled his window with this and marked it "Sc. a pound"; a neighbor, not to be outdone, filled his window and marked his "7c. a pound," and the third now follows suit with his seed at "6c. a pound!" It is really astonishing that such foolish throwing away of good money should appear to be good business to the average druggist, but it does, all the same.

—The many friends of Miss May Reynolds will be pained to learn that she is now quite ill with typhoid fever. Miss Reynolds lately resigned her position as apothecary to the Women's Hospital to become manager for Miss Carrie Howard, one of the pioneers in the field of pharmacy for women.

—F. W. E. Stedem, of Broad street and Fairmount avenue, and Mrs. Stedem spent their Thanksgiving holiday with Dr. Thomas, at Scranton, and it is reported that these two pharmaceutical lights personally superintended the "fixins" of the turkey to see that they were strictly U. S. P.

—Mr. Harris, now at Twenty-first and Pine streets, has purchased the store on the opposite corner, which has much the better location and light, and will move into it as soon as the necessary repairs and alterations have been completed.

Seasonable and Profitable Goods.

This is the most opportune time in which to get in a line of chamois vests and lung protectors. An insert in this issue of the Era calls your attention to a standard line of these goods. The names given to the vests and protectors suggest comfort to the wearer, and the prices quoted insure a ready sale with a good profit to the druggist. With a \$25 order for the Frost King and Frost Queen Chamois Vests you will be furnished with an attractive window display.

In handling Rex Porous Plasters you are protected against cutters, as the manufacturers sell only to retail druggists who sign an agreement to maintain the full advertised price, twenty-five cents. Your name is printed on the back of every Rex Porous Plaster you sell, and you are given all the advertising matter you can use under your own name. You pay no more for these plasters than you do for those you are compelled to sell for ten or fifteen cents, and thus you make a profit of 166 per cent. These goods may be ordered through your jobber and are manufactured by Bauer & Black, Chicago, U. S. A.

BALTIMORE.

Among the Bowlers.

Baltimore, Dec. 1.—McCormick & Co. took all three games from the Winkelmann & Brown Drug Company last Tuesday by scores of 831, 722 and 818, against 633, 649 and 694. Last night Muth Bros. & Co. defeated Parke, Davis & Co. by 689, 689 and 678 against 624, 585 and 605 points respectively. Including this week's games the standing of the several teams is as follows:

Teams.	Games Games.		
	Won.	Lost.	Cent.
Root and Herbs.....	12	3	.800
McCormick & Co.....	12	3	.800
James Bally & Son.....	9	6	.600
Sharp & Dohme.....	9	6	.600
Muth Bros. & Co.....	7	8	.466
Winkelmann & Brown Drug Co	3	15	.167
Parke, Davis & Co.....	2	13	.133

Closing Out the Drug Department.

Baltimore, Dec. 3.—A piece of news hardly less important and interesting to the drug trade than the change in the Winkelmann & Brown Drug Company, is the closing out of the wholesale drug department of the Boykin & Carmer Company, on North Liberty street. The disposal of the stock has been in progress for some time past, and the goods which remained have now been sold en bloc to Carr, Owens & Heineman, Liberty and German streets. The decision to close out the drug department was arrived at some time ago and since then the stock on hand has been gradually reduced. It is the intention of the company to devote itself exclusively to the agricultural chemical business, in which the junior partner has a thorough experience. The retirement of the company from the wholesale drug trade eliminates from this branch of mercantile activity a concern which has been prominently identified with it for a number of years.

NOTES.

—Numerous responses have been received in answer to the circular letter sent out urging a large attendance at the semi-annual meeting of the Maryland Pharmaceutical Association, and there is every indication that the liveliest interest will be manifested in the gathering. A number of instructive papers will be submitted and much other business of importance will be discussed.

—The visiting druggists last week included J. E. Seitz, Glen Rock, Pa.; G. W. Meyers, Dallastown, Pa.; A. H. Melhorn, Hanover, Pa.; W. R. Rudy, Mount Airy, Md.; Mr. Roberts, of Roberts & Co., Racoon Ford, Va.; P. J. Fahrney, Frederick, Md.; E. H. Shearer, York, Pa.; Dr. C. T. Sawyer, Elizabeth City, N. C.; and J. H. McKinnon, Lynn, Mass.

—The Wedgwood Club will omit its monthly meeting and dinner this month because the date set for these events would conflict with the holiday preparations. The omission, however, will be compensated for by a gala occasion in January, when the accumulation of wit during two months will be uncorked.

—C. H. Beetem has sold his pharmacy on the corner of Barclay and Twenty-second streets to George A. Fox, who has another store at the corner of North and Greenmount avenues.

Thermotaxine.

Thermotaxine is a new antipyretic, analgesic and anodyne remedy. It is said to be prompt in the relief of nervous headache, neuralgia, rheumatism, etc., etc., as well as in the reduction of all febrile temperatures. It does not produce heart weakness nor any of the other objectionable after symptoms which are the result of many other remedies of this class. The trade is supplied by John C. Otis & Co., Cincinnati, O., who succeed the Thermotaxine Chemical Co., of New York.

The attention of druggist readers is called to the advertisement of J. H. Day & Co., Cincinnati, Ohio, which appears in another column. This is an opportunity to get these indispensable machines for retail druggists at low cost. It will pay you to write them.

LOUISVILLE.

B. F. SCRIBNER DEAD.

Louisville, Ky., Nov. 30.—General B. F. Scribner, one of the most prominent druggists of Kentucky and Indiana, died of heart trouble at the home of his son, Charles Scribner, Sixth and Jefferson streets, on Thursday night. General Scribner was seventy-five years of age, and the infirmities of old age were largely responsible for his death. General Scribner was one of the most celebrated generals of the Civil War. His was a most varied career. He comes from a family of fighters and druggists. His father was one of three brothers who founded and settled the city of New Albany, Ind. Their father was a druggist and opened the first store in the Indiana city. When a boy General Scribner gave up his business and enlisted as a soldier in the Mexican War. At the battle of Buena Vista he distinguished himself and his promotion was rapid. He returned to Indiana a hero. At the breaking out of the Civil War he was instrumental in organizing the Thirty-eighth Indiana Regiment and was chosen as its colonel. At the battle of Perryville he again distinguished himself and was made a brigadier-General. He fought in every battle of the Army of the Cumberland from Stone River to Atlanta. At Chickamauga he commanded the rear guard when General Thomas fell back to Rossville and during the engagement one-third of his command was killed. After the war he returned to New Albany and again became identified with the drug trade. He was eminently successful in business and was recognized as one of the best druggists in the southern part of Indiana and Kentucky. He again gave up his business to accept the position of Collector of Internal Revenue at New Albany and for several years filled the position. He again returned to his chosen profession, but in 1877 was made the agent of the United States at St. George, Seal Island, in the Behring Sea, and lived in that far away country for two years. Returning he took charge of his business and never again gave it up until his final retirement, a few years ago. General Scribner was also an author, his first book containing his experiences in the Mexican War. His most pretentious work was published shortly after the Civil War. Its title, "How Soldiers were Made," is self explanatory. The book had a large sale in this part of the country and prominently brought the general before the people. General Scribner was intimately acquainted with all of the celebrated men of his time. He and Abraham Lincoln were close personal friends and his appointment as Collector of Revenue at New Albany was the result of their friendship. The general was also intimately acquainted with Governor Morton, the war Governor of Indiana. The two men were chums and the Governor was often the guest of General Scribner.

NOTES.

—Walter Dugan, a Cincinnati pharmacist, was struck by a bicyclist at Third and Walnut streets on Tuesday afternoon and badly bruised. Dugan, who was accompanied by two women, was crossing the street apparently unconscious of the approaching wheelman. One of the women was also so much engrossed in the talk of her companions that she failed to note the bicycle. When almost upon them the rider rang his bell. The woman was badly frightened and the druggist sprang to her rescue. He succeeded in getting her out of harm's way but was himself struck by the wheel and thrown to the ground. He alighted on his right arm and side. His arm was broken and his side badly bruised. He was able, however, to return home.

—Thieves entered the drug store conducted by Walter Van der Espt, at Floyd and Preston streets, on Wednesday night and stole about \$100 worth of cocaine. The residents of that neighborhood evidently prefer the drug to money as no attempt was made to open the safe or cash register.

—The Louisville druggists have won their fight with the local telephone company and are now back at the old system. The pay stations have been removed and all is harmony.

—Wilson Ebbitt, of Hopkinsville, was a visitor in Louisville the first half of the week.

PITTSBURG AND VICINITY.

Monthly Meeting of the Western Pennsylvania Retail Druggists' Association, Inc.

Pittsburg, Pa., Nov. 30.—The urgent appeal of Financial Secretary B. E. Pritchard sent out on November 13 to every member of the association had its effect most apparent in the extremely large attendance at the monthly meeting on Thursday, November 15. About one hundred members were present and considerable interest was shown in what proved to be a business meeting of much importance. Owing to resignations from office some changes were made in the personnel of officials. The present corps of officers is as follows: President, W. G. Markell; vice-president, E. A. Scheafer; secretary, E. E. Heck; treasurer, Louis Emanuel; financial secretary and business manager, B. E. Pritchard. After the election of officers the Board of Directors recommended the expulsion of Frederick W. Eggers on account of his offensive attitude towards the association and its objects. This was put to vote and carried.

Mr. Eggers intends taking legal action against the association not on account of his expulsion but in retaliation for expected moves on the part of the association to cut off his supplies in a certain proprietary medicine. In the event of this he intends appealing to the court for an injunction.

At this same meeting a committee was appointed to arrange for a number of social entertainments to be given during the winter. Secretary Pritchard has been requested to go to Ellwood City to see the druggists of that place who are anxious to become members of the organization, which was never on a stronger footing than now.

Bowling.

Pittsburg, Dec. 1.—The Greater Pittsburg Bowling Drug League ended its first round in the championship games on Friday evening, Nov. 30, with the Pharmaceutical Club in the lead, closely followed by the Gilmores. The Pharmaceuticals have lost but three games, two to the Gilmores and one to the Alleghenies. The record of the clubs is now as follows:

Teams.	Played.	Won.	Lost.
Pharmaceutical	15	12	3
W. J. Gilmore & Co.	15	11	4
Pittsburg Druggists.	15	8	7
Allegheny Druggists.	15	5	10
Walther-Robertson.	15	5	10
George A. Kelly.	15	4	11

Suicide of a Drug Clerk.

Pittsburg, Dec. 1.—The shocking suicide of Irwin B. Jacobs, a young clerk in the McDonald pharmacy at McDonald, Pa., was the topic of the hour last week. He hung himself shortly before 5 o'clock on the morning of Nov. 29 to a bedpost by a satchel strap in his room at the Cameron Hotel. He was 28 years old, and as far as is known, of exemplary habits. He went to McDonald on Nov. 25 from Hollidaysburg. He left an unsealed note on his dresser which read as follows:

John P. Jacobs, Hollidaysburg, Pa.:
Dear Brother—I feel that my time has come. I cannot write what has resulted within the last few hours on earth, but I see greater dangers staring me in the face which would cause me never to be buried at home with the rest of your dear ones. You will never know, as I cannot write. With forgiveness, I am yours all for ever. I remain your brother.
I. B. JACOBS.

On the back of the note was written "The gun route." In his Bible, which lay on his dresser, was a slip of paper at Ezra, viii., 9-10. At the top of the page was written with pencil: "Some one else killed him." On the opposite page, "I had to do it or —."

Guy Steele, the owner of the McDonald Pharmacy, was at the time of the suicide in Sharon, Pa., in company with his father, where he had just purchased the store of W. A. McKnight.

NOTES.

—I. B. Nordhem, Eastern representative of the Chicago Label and Box Co., has opened an office in Pittsburg in Room 5, Jackson building, and has engaged Arthur Broughton as assistant. This company prepares and furnishes to the members of the W. P. R. D. A. the cartons, labels, circulars and bottles for the Nard

blood purifier and ointment which the Pittsburg druggists are pushing in opposition to the Cuticura preparations. The goods are carried in the regular way by the jobbing trade.

—The Paisley Pharmacy Company, at New Castle, Pa., was granted a charter under West Virginia laws last week, for the purpose of doing a general drug business. The capital subscribed is \$10,000; paid in \$10,000, with the privilege of increasing it to \$250,000. The shares are \$30 each, and are held by E. W. Moore, of Allegheny; Scott Paisley, of New Castle; M. W. Ray, of Allegheny; J. M. Woods, of Leetsdale, and O. Kepff, of Pittsburg.

—The Pure Food Commission has been notified of a peculiar case in this locality. A drug firm of Homestead, East Pittsburg and Turtle Creek, is doing an immense business in the sale of alleged candy which costs the firm four and a-half cents per pound. The sale is contrary to the ethics of the Western Pennsylvania Retail Druggists' Association, which body intends pushing the prosecution.

—Robert Houck, a drug clerk of Cumberland, Md., aged seventeen years, was shot and killed on November 9. While in the drug store of W. E. Turner he called to a clerk to hand him a gun as he heard a rat in the store. In passing the weapon to Houck it was discharged, the ball striking Houck in the forehead, piercing the brain. He died in an hour.

—O. M. Waterhouse, proprietor of two stores in this city, recently complained of declining business and started to cut prices. Franks Brothers, owners of a new store in the Homestead district, have been doing considerable cutting. Both these establishments are being watched by the association pending action.

—Two Washington, Pa., druggists, Robert Holbert and David W. Smith, have been arrested for selling liquor without a license and on Sunday. Their cases will go before the Grand Jury. County Detective William McCleary is the prosecutor.

—Harry Geissenhainer, formerly of W. J. Gilmore & Co., is now doing the city trade for Parke, Davis & Co., whose headquarters here are in the Park building.

—Andrew W. Zeigler, the South Side druggist, purchased the property, 2434 Fifth avenue, on which is to be erected a brick and frame dwelling for \$6,000.

—E. A. Schaefer, of 1436 Fifth avenue, is arranging to remodel his store. He will put in an entirely new set of golden oak fixtures and other innovations.

—Mr. Jacobus, one of Parke, Davis & Co.'s local representatives, has taken the drug business of the late D. H. Morris, of Woods Run, Allegheny.

—A. Beck, lately of the South Side, has started a pharmacy in the borough of Knoxville, at the corner of Seventh and Beltzhoover avenues.

—George Eckhart, of W. J. Gilmore & Co., is receiving hearty congratulations on the arrival of an only son, George Eckhart, Jr.

—William P. Turner, a former clerk with A. C. Walther, of Sewickley, Pa., has purchased the Shields pharmacy at Homestead, Pa.

—G. B. Sunderland, a graduate of the Pittsburg College of Pharmacy, has opened a new store on Oakland avenue.

—Samuel Kelly, of Geo. A. Kelly & Co. is recovering from a slight attack of typhoid fever.

—The Louisiana State Board of Pharmacy held an examination for registration on Saturday, Nov. 3. There were nineteen applicants, of which number twelve passed. Those obtaining certificates as registered pharmacists were: Dr. L. C. Tebo, R. F. Carmouche, C. A. Groves, P. Arnold Froxler, Jno. Paquette, E. J. Troups, Mrs. H. J. Kelly, J. E. Laudry. Those passing as qualified assistants were: T. O. Darby, Jno. Pierson, Fulton Royors, Louis Gonaux. The board held a regular meeting on Saturday, Nov. 10; at this meeting William M. Levy, who had been appointed on the Board by the Governor, was admitted as the successor of A. C. de Monsabert, resigned. Best meeting ever held in New Orleans. F. C. Godbold, secretary.

TRAVIS & BAKER, ST. JOHN, MICH.

DETROIT.

Detroit, Dec. 1.

—Farrand, Williams & Clark's bowling teams lost two out of three of the games of the second series played with Nelson, Baker & Co.'s team, November 26. The scores were 628, 714 and 613 for the winners, as against 587, 643 and 743 for the losers. A. C. Ludwig, M. Kean, A. Hillman, E. D. Benjamin and C. Chase played for Nelson, Baker & Co.; W. R. Macadam, M. Teagan, William Campbell, John Smith and William Moffatt for Farrand, Williams & Clark. Owing to the extra work at the holiday season, the boys will probably not have any more games until after New Year's.

—Druggist C. F. Miller, of Wolcottville, Ind., visited Detroit friends on his way to the North Woods for a deer hunt.

—Druggist F. A. Francis, of Kingston, Mich., spent Thanksgiving week with Detroit friends.

THE NORTHWEST.

St. Paul, Minn., Nov. 30.

The men of occupation druggish
Were happy yesterday, but sluggish.
They helped to swell the mighty ranks
That rendered gastronomic thanks,
But were unfit for aught like work,
Being too deuced full of turk.

—Noyes Bros. & Cutler, of St. Paul, observed their usual Thanksgiving day custom by distributing turkeys among their numerous employees.

—Two druggists of Hedrick, Iowa, suffered fire losses this week—Peter Engeldinger and Frank L. Connelly, the former being entirely burned out.

—George W. Wells, it is reported, has sold his interest in the Conser & Warren Drug Company, Heppner, Ore., to A. L. Ayers.

—Wood & Light, Doland, S. D., have been succeeded by J. A. Light, and A. T. Cretney, Barneveld, Wis., by William Pryer.

—The community property of George E. and Lulu Woodruff in the Everett, Wash., Drug Company has been divided.

—M. F. Canfield, Long Prairie, Minn., has moved to Staples, being succeeded in the former town by Canfield & Harkens.

—R. J. Hoagland, Beatrice, Neb., sustained a \$5,000 loss by fire a few days ago; fully insured.

—A meeting of the creditors of J. A. Fuller & Co., Omaha, Neb., is to be called.

The Dr. E. L. Graves Tooth Powder, Co., Chicago, have just placed an order with the Western Bank Note Co., of that city, for one million Graves Tooth Powder labels, to be delivered January 5, 1901. These labels are for their 25 cent size bottles. This will give the trade some idea of the extent of the sale of this popular powder.

CHICAGO.

INITIAL MEETING OF THE DRUG TRADE CLUB.

Chicago, Dec. 1.—The initial meeting of the Chicago Drug Trade Club was held to-day at the club rooms, 75-77 Randolph street, where luncheon was served from 11 A. M. until 4 P. M. About 150 members of the club were present and took luncheon. This meeting has demonstrated the fact that the club is going to be—indeed, it already is—a great success. All the leading wholesale druggists, manufacturers and people in the allied lines are members. Every man is of good character and standing and many are more than usually well endowed with this world's goods, so that the club starts with a momentum that will need but little effort on the part of its members to keep it going. The membership is already in round numbers 150, while the original supposition of the promoters was that it would not exceed sixty. Before the finish of the year it will have easily increased to 200 and the directors are casting about for larger quarters. In the same building it is possible to secure the whole top floor, consisting of a large room suitable for a dining room, a number of ante-rooms and a commodious front room for a lounging and smoking room. The directors may make arrangements to secure these quarters at an early date, though they have not yet reached a final decision. It is certain, however, that the quarters finally decided upon, in view of the large membership already enrolled and the necessity for finding a more commodious habitation, will be in every way worthy of the club and its personnel. The keynote of the whole matter was struck to-day in a conversation between two prominent jobbers. Said one: "We can buy carpets and furniture, and money will get as good quarters as we need, but what we have and never could have bought is a good class of members. That is the first consideration in a social body and it is the indispensable requisite of success." One of the features of the day was the sight of old competitors eating dinner together and talking business over their coffee and cigars. Men supposed to be stiff and cold proved to be the best of dinner companions; the sheep and the goats mingled freely, and it would have puzzled a seer to distinguish the one from the other. The spirit of Philistinism is dying in the Chicago wholesale drug trade. None of the gentlemen on close inspection have been found to possess horns and those having halos check them in the cloak room along with their hats and overcoats.

NOTES.

—Attorneys Kit Gould and Gabriel J. Norden, on behalf of the People, have filed a very able brief and argument in their petition for a rehearing in the Noel case. Their examination of authorities has been exhaustive and the results of their labors seem to be very much to the point against the several propositions advanced by the Supreme Court. The petition shows that courts have decided that legislatures in a number of cases have gone too far in exercising the police power, but never before have declared a law invalid because in attempting to exercise that power it did not go far enough. "Too far" may contravene some constitutional provision; "not far enough" of itself never can do so. The petition compares the discretion vested by the law in the board with that clause giving city councils and village trustees authority to license druggists to sell liquors for certain purposes. The Board of Health, the Canal Commissioners and other bodies have been granted large discretionary powers by the Legislature and these grants, similar to that by which the Board of Pharmacy may grant permits to sell patent medicines, have all been upheld by the court. The authorities are gone into exhaustively, and in a way sure to command the attention and consideration of the court.

—A new Drug League Bowling Club has been started. It is composed of members of firms and employees of the Fuller & Fuller Company, James A. Davidson, Sharp & Smith, Robert Stevenson & Company, Gerts, Lombard & Company and Johnson & Johnson. For some reason bowling as a means of recreation has lately received a tremendous impetus in the drug trade here and the present prospect is for lively times this winter.

—The Illinois Board of Pharmacy has again stirred up the opium joints. About 200 cases have been docketed against proprietors of these establishments, and the board, backed by the community at large, will fight it out on this line if it takes all winter.

—It is reported that Horst Von Koeckritz, 2300 Fifth avenue, Rock Island, Ill., has left suddenly for Cuba, and that a number of people are waiting anxiously for his return.

—John A. Mell, who owned a drug store at Sixty-third street and Wentworth avenue, has sold it to Frank J. Hanus, formerly with the Swanson Medicine Company.

—C. A. Storer, the well-known North Side druggist, is dangerously ill with an attack of appendicitis.

—The Englewood Retail Druggists' Association, E. G. Binz, president, held a meeting this week.

—The Lion Pharmacy in Ravenwood has been sold to a Mr. Abrahams.

—Paul Zits has opened a new drug store at 1952 Archer avenue.

ST. LOUIS.

St. Louis, Dec. 1.

—Julius E. Koch, druggist at Jefferson and Shenandoah avenues, has been in a private hospital for the past week, where he was operated upon for cancer of the stomach. His physicians report that he is doing well and that an ultimate recovery is almost certain. Mr. Koch has served on the board of trustees of the St. Louis College of Pharmacy, from which institution he graduated with the class of 1875. He is one of the leading druggists of the South Side.

—The scientific meeting of the Alumni Association of the St. Louis College of Pharmacy, held on the 19th inst., was a very successful affair. Dr. Emile Grebe, chief chemist for the Meyer Brothers' Drug Company, delivered a lecture on essential oils and their manufacture. He showed and explained the apparatus used in this work, and gave a great deal of information which was both valuable and instructive to all present.

—Luke B. Russell, the drug clerk who disappeared from his home in this city several days ago, has returned to his wife and family. It will be remembered that he left a letter saying that he contemplated committing suicide. He claims this was written in a moment of despair. Mr. Russell is a graduate of the St. Louis College of Pharmacy, and is well recommended by all of his former employers.

—The following is the result of the meeting of the Druggists' Cocked Hat League last Thursday evening: The Searle & Hereth Company, 3; The J. S. Merrell Drug Company, 2; Meyer Brothers' Drug Company, 4; Mound City Paint Company, 1; Moffitt-West Drug Company, 4; Eli Lilly & Co., 1.

—William Carter, a drug clerk at the Garrison Pharmacy, No. 1016 N. Garrison avenue, attempted suicide by taking poison a few days ago. It was the same old story of a disappointment in a love affair. A prompt and liberal use of the stomach pump saved his life.

—E. J. Habbetter and Miss Florence Matthews were married on Thanksgiving eve. They had both been employes of the Meyer Brothers' Drug Company for several years. He is assistant cashier; she was stenographer in the city sales department.

—Isaac Reinholdt has sold his drug store at Vandeventer and Washington avenues to J. J. Evans. It is reported that the stand will be moved to a new location within a very few days. Mr. Evans is also proprietor of the Belt Avenue Pharmacy.

—Miss Nellie E. Foster has resigned her position with Raboteau & Co., on North Broadway, and gone to North Dakota to look after her homestead. This leaves our city without a registered female druggist.

—J. H. Ewing, a well known local manufacturers' agent, who makes a specialty of boxes and labels, has opened a new office at No. 311 Locust street.

—At a recent meeting of the Board of trustees of the St. Louis College of Pharmacy two \$500 bonds were taken up and cancelled, thus decreasing the indebtedness of the institution \$1,000.

—The wholesale drug houses of this city were all closed on Thanksgiving day. None of the retail drug stores was closed, but in most of them the clerks were given a half holiday.

—Max P. Heinrichs has purchased the Owl Pharmacy at Fourteenth street and Clark avenue. In future it will be known as the Heinrichs Pharmacal Company.

—Leo J. Beele's drug store at Fourteenth and O'Fallon streets, was totally destroyed by fire a few nights ago. The insurance covered half the loss.

—Dr. Enno Sander, the veteran pharmacist and mineral water manufacturer, has landed back in this city from an extended trip to Europe.

—Dr. B. J. Ludwig has purchased the drug store at Leffingwell and Washington streets from David Ilch, of Alton, Ill.

—F. G. Kring has sold his drug store at No. 3110 Easton avenue to Dr. Fitzpatrick.

MONTREAL.

Montreal, Nov. 30.

—The bi-monthly meeting of the Council of the Pharmaceutical Association was held in the College of Pharmacy last week. S. Lachance, the president, occupied the chair; the following members were present: J. E. Tremble, Alex. B. J. Moore, C. J. Coventon, A. J. Lawrence, R. McNichol, R. W. Williams, Three Rivers; Harry Willis, Quebec, and J. C. Sutherland, Richmond. One flagrant case of contravention of the pharmacy act was laid before the council and it was unanimously decided to proceed against the offenders.

—One of our prominent druggists is in all probability bemoaning the absence of T. A. Chisholm, a prominent member of the butter and cheese trade of this city who got into the clutches of the law through his being connected with a very shady transaction. The former appears as bondsman to the tune of \$7,000. The culprit a short time ago jumped his bail and rumor now has it that he is on his way to South America.

—The council of the Pharmaceutical Association are continually asked by prospective students of pharmacy what examination they will accept in lieu of their preliminary. To settle all questions which may arise for the future it would be well to bear in mind that the preliminary of the College of Surgeons and Physicians and a B. A. degree of any recognized university are the only certificates which will be accepted.

—W. A. Hendrie is having the premises at the corner of Delorimer avenue and St. Catherine street tastefully fitted up preparatory to moving his branch store from 1040 St. Catharine street. The flooring will be of mosaic tiling and the ceiling of decorated metal. R. N. Miller, M. C. P. '94, will be in charge and expects the premises to be ready for occupation by December 15.

—The firm of Kerry, Watson & Co., wholesale druggists, which has lately dissolved partnership, will be still known under the old name, with Wm. S. Kerry as proprietor. The latter is a graduate of the College of Pharmacy and at one time occupied a seat on the Board of Examiners, but has since resigned from the Pharmaceutical Association.

—David Watson, late partner of Kerry, Watson & Co., has registered as doing business under the name of D. Watson & Co., with headquarters at 444 St. Paul street. Gray's Syrup of Red Spruce Gum will be his leading specialty, it being one of the agreements of the dissolution of partnership that he should retain this article.

—X. Bourque has resigned as head clerk with John T. Lyons and has taken charge of the French section of the business of Chandler, Massey & Co. W. Giroux, late with Dr. Lancot, has accepted a position with the same firm.

—N. P. Wheeler, traveler for Lyman Sons & Co., has returned from a very successful hunting expedition. He was accompanied during the trip by several Ottawa "Knights of the Pestle."

—The sympathy of the drug trade is extended to J. J. Teller, East End representative of Evans & Sons, Limited, owing to the death of his mother, which occurred last week.

—W. H. Reynolds, proprietor of Wellington Medical Hall, is recuperating in our Canadian Adirondacks from

a severe attack of typhoid fever and will shortly resume his duties.

—R. W. Williams, Three Rivers, a member of the Pharmaceutical Association, spent last week in town visiting his son who is in the city studying for his minor examination.

—The Retail Druggists' Association held an executive meeting last week, when a list of jobbers who have up to date signed the agreement of the association was read.

—The Dr. Kohr Medicine Co. is registered as doing business in this city with T. W. P. Patterson as president and J. A. C. Kirk as secretary-treasurer.

—The next preliminary examination of the Pharmaceutical Association will be held at the Montreal College of Pharmacy on January 3.

—Fred. A. Swift, who passed his minor last month, has obtained the position as head clerk in W. H. Chapman's West End pharmacy.

—W. R. Carmichael, Eastern representative for Evans & Sons, Limited, Toronto, spent a few days in Montreal last week.

—H. Houghton, graduate Ontario College of Pharmacy, is at present clerking with T. J. Quirk, St. Catharines street.

—John T. Lyons has sold out his branch store corner of Fulford and Coursol streets, to Dr. Robillard.

PENNSYLVANIA BOARD.

The examination by the Pennsylvania Pharmacy Board at Pittsburg, October 20, was conducted by President Louis Emanuel and Treasurer Henry C. Porter. At this meeting 132 persons presented themselves for examination, sixty-seven for registered pharmacists' certificates and sixty-five, for registered qualified assistant pharmacists' certificates; nineteen of the former and thirty-four of the last named class succeeded in passing a successful examination. The examinations of the board on the same day in Philadelphia were conducted by Dr. F. A. Boericke, George W. Kennedy and Charles T. George. At this meeting 263 persons presented themselves for examination, 140 for registered pharmacists' certificates and 123 for registered qualified assistant pharmacists' certificates. Of this number fifty-six of the former and eighty-seven of the last named class succeeded in passing a successful examination.

The next meeting of the board for the examination of applicants for registration will be held in Philadelphia at the Girls' Commercial High School building (old high school), Broad and Green streets, on Saturday, the 19th of January, 1901. All information relating to the next examination will be furnished by Secretary Charles T. George, Harrisburg.

Registered Pharmacists—David M. Bennet, Bridgeville; Harry A. Morris, Barnesboro; C. E. Smith, Smithton; Charles M. Coleman, Duquesne; Val. J. Blank, Etna; R. S. Brosius, Johnstown; Juliet Mc. A. Jennings, Sewickley; Thomas Cooper, William F. Vaske, Antonio Mangold, Edward L. Steigleder, all of Allegheny; Sarah Hoatelter, C. R. H. Heesom, R. H. McGeath, H. P. Reiser, A. P. McAdams, J. S. Doudna, Harry P. Kingsbury, Oscar E. Entress, all of Pittsburg; H. A. F. Seabold, Annville; John R. Minehart, Chambersburg; Daniel H. Swinehart, Pottstown; G. W. Pell, William H. McGarran, both of Scranton; Fred. J. Benner, Bethlehem; Charles L. Knerr, Allentown; Frank C. Schad, Tamaqua; W. A. Eldridge, Salem, N. J.; John M. Minick, Washington, D. C.; Edwin A. Keefer, New York City; Roy C. Jenkins, Coal Centre; John A. Lunny, Carbondale; W. S. Badgett, Baltimore, Md.; William Thomas Mundy, McAdoo; A. C. Haight, Luzerne; R. H. Thomas, Taylor; Warren W. Robinson, Kennett Square; James S. Saurman, Norristown; E. B. Stone, Jr., Camden, N. J.; Charles H. Davidson, Ulster; Mary Grace Mellon, S. Dolson, John A. Fisher, E. G. Eshelman, Arthur Bartholomew, Alfred W. Merz, Harry Hudson, Henry J. Blankmeyer, Robert W. White, Thomas B. Love, Mary C. Greer, Grace K. Mathers, Henry C. Woelcke, John T. Doughty, Edward J. Klopp, Hillman G. Malsbury, Max Greenblatt, F. K. Bartho, William T. Morris, Arthur Stengel, George Lyons, Emanuel Greenstein, F. H. Robinson, Edward A. Desch, Arthur Peiffer, William Steward Creighton, Henry Lyle, Caspertown Wilber, J. Leib, Harry Ellis Bosler, Ed. O.

Griswell, Otle E. Gessford, Gust. A. Elfret, Ambrose Hunshenger, Sr. M. Florentina, all of Philadelphia, Pa.

Registered Qualified Assistant Pharmacists—Leitha Reid, Frank W. Mathenhouse, Herman O. Eppell, F. C. Schilling, Bertrame Burref, Charles W. Stengle, I. H. Chew, Joseph C. McConagle, Henry M. Meiber, S. Selgman, W. S. Dickson, E. M. Weiner, Anthony Karabosz, all of Pittsburg; Charles W. Bahl, Harry Steuba, William Louis Laurer, Thomas H. Robinson, Henry W. Staver, W. P. Fluscher, James L. Tuophy, Harry William Wilson, Robert E. Bowers, Frank X. Schute, John A. Borneman, Otis Louis, William S. Dietrich, E. C. Swineford, Norman E. Hertzler, Herman E. Hayn, Martin Ketteres, J. Warren Northington, Lloyd W. Conrad, Prestle M. Headings, John Douglass, L. P. Berry, Clarence P. G. Fetterhoff, Irvin S. Stimmel, W. A. Johnston, Fred. Becht, James B. Mader, Charles F. Fager, F. D. Monroe, Robert F. Woodell, S. Marcus, John H. Winstanley, Howard F. Jackson, Alvon Billstein, Frank T. Dare, Otto W. Schmidt, Gust. A. Schultz, Leonard B. Botfield, Charles W. Ziegler, Henry Bell, Charles E. Wamsley, John M. Lefever, J. Taylor Young, all of Philadelphia; Fred. J. Maginn, Braddock; Will. G. Robinson, DuBois; W. R. Hocenein, Allegheny; William I. Lewis, Washington; J. R. Barnhart, Harmony; George H. Duelle, Kittanny; John W. Wiek, Slippery Rock; Joseph J. White, Renfrew; Albert H. Bittner, Allegheny; Thomas I. Dilworth, Allegheny; B. H. McQuiston, Butler; Louis A. Jamison, Butler; Charles A. Wherry, Apollo; Edward C. Meyers, Washington; Joseph D. Ferroll, Beaver Falls; John G. Elm, Allegheny; Harry B. Thompson, McKeesport; Norman W. Minesinger, Chicora; Emlin Jones, Plains; William J. Downs, Coaldale; James E. Nickel, York; Herbert S. Anthony, Reading; Ed. Q. Thayer, Harraonton, N. J.; Howard D. Miller, Williamsport; Nathan O. Eckels, Shippensburg; H. Harlan Jones, Norristown; Byron P. Wallston, Wayne; Benjamin Haffer McClury, Elizabethtown; Eugene Rothwell, Willow Grove; A. Helmer Smith, Smyrna, Del.; Howard Michel, York; J. D. Luddy, Chestnut Hill; E. E. Phillips, Christian B. Kyle, Middletown; John J. Everard, South Bethlehem; Amy S. Boyd, York; Alfred Young Craven, Bridgeport; A. R. Reburn, West Grove; Clayton S. Frey, Lancaster; Albert P. Shenkle, Phoenixville; Frank F. Moore, Camden, N. J.; F. C. Rodgers, Chester; John C. Caley, Columbia; John H. Park, Harrisburg; Ed. H. McCool, Mahanoy City; Oscar K. Wisegarver, Philadelphia; Robert F. Strauss, Wolmesdorf; George W. Rhoades, Camden, N. J.; Fred. Hileman, Dorranceton; Alvin Bildstein, Philadelphia; Walter P. Boder, Honesdale; Katherine B. West, Norristown; William B. Ackerman, Germantown; Ira C. Haftman, Johnstown; Edgar M. McCloskey, Bellefonte; Harry Nelvelson, New York City; Minot E. Gray, Wilkesbarre; Percy Freed, Allentown; William C. Trost, Ashland.

Decorations for the Holidays.

As the holiday season approaches, dealers must spend some thought on their decorations for this merry season, when we expect our profits to carry us over the dull days following.

A store decorated in a unique and seasonable style is sure to bring trade. Can you do better than talk to a man who has made his business an art and a study, and who can furnish decorations at a ridiculously low figure? If so, don't write to Frank Netschert, for he is just such a man. His indoor decorations of naturally prepared plants are better than Nature's product, because they do not fade, they do not dry up and fall apart, and still they contain all the charms of Nature's own. A trial will convince you. You have just time to consult Mr. Netschert, who will gladly send you his special 52-page catalogue. His advertisement on another page gives a fair idea of what to expect, and his prices are subject to 50 and 10 per cent. discount, allowing dealers who care to sell his plants a profit of 300 per cent. Write now, to be in time for the holiday trade.

Book Reviews.

QUANTITATIVE CHEMICAL ANALYSIS, adapted for use in the laboratories of colleges and schools. By Frank Clowes, D. Sc., Lond., emeritus professor of chemistry in the University College, Nottingham, member of Council of Chemical Society, etc., etc., and J. Bernard Coleman, A. R. C. Sc., Dublin, professor of chemistry in the Southwestern Polytechnic, Chelsea, S. W., Fellow of the Institute of Chemistry and of the Chemical Society. Fifth edition. Svo., 592 pages, cloth, \$3.50. Philadelphia. P. Blakiston's Son & Co.

This book has long been held in good repute in England as a guide for students in quantitative analysis, and it supplies a wider range of work and greater diversity of chemical manipulation than is ordinarily given in most text-books on this subject. The methods outlined are presented in concise and convenient form, and while intended primarily for advanced students, experimental and commercial chemists will find the book to be of great service. The subject matter is arranged in seven principal parts in the following order: Preliminary and general operations employed in analysis; gravimetric analysis; volumetric analysis; complex quantitative estimations; gas analysis; typical results of analyses; preparation of gases; uses of compressed gases and distillation of water. An appendix contains descriptions of a modification of the usual method of determining melting points, a modified method of rapid filtration, condensers for use in the distillation of liquids, etc. A most interesting part of the book is that devoted to the analysis of foods, tanning material and soap, those processes which are most frequently in use or more or less typical being fully described. The chapter on indicators used in the volumetric analysis of acids and alkalis is very brief, however, a few of the indicators employed in pharmacopœial methods of analysis not being even named. Barring this exception, we have nothing but commendation for this work, which should find a place in the pharmacist's library.

RICHTER'S TEXT BOOK OF INORGANIC CHEMISTRY. Edited by Prof. H. Klinger, University of Königsberg. Authorized translation by Edgar F. Smith, professor of chemistry in the University of Pennsylvania, Philadelphia, assisted by Walter T. Taggart, instructor in chemistry. Fifth American, from the Tenth German Edition, carefully revised and corrected, with sixty-eight illustrations and colored lithographic plate of spectra. 12 mo.; 430 pages; cloth, \$1.75. Philadelphia, P. Blakiston's Son & Co.

In this new edition of Richter's have been incorporated many of the more recent discoveries of chemical science, more especially those relating to the general properties and measurements of gases, to the atmosphere and its constituents, the theory of dilute solutions and electrolytic dissociation, electrolysis of salts, alloys, etc. It is therefore up-to-date, and may be accepted as a logical and authoritative presentation of the subject of inorganic chemistry. As is well known, the basis of this book is the classification of the elements according to the law of periodicity, the elements themselves being considered in single natural groups of similar chemical deportment. Each element and its combinations are then taken up independently. Students of twenty years ago who have not kept pace with the advances made in the methods of teaching chemistry will find much to learn in using this book. The atomic weights are given on the assumption that oxygen equals 16, hydrogen being considered unsatisfactory as a unit of comparison. All of the atomic weights of the elements are affected by this comparison, H becoming 1.01, Ba 137.4, Ca 40, Fe 56.0, Zn 65.1, etc. The thermo-chemical deportment of the various compounds of the halogens is discussed in detail with the endeavor to explain why it is that iodine is displaced by the other halogens, bromine by chlorine and fluorine, and chlorine by fluorine from their hydrides and their metallic derivatives. How many old students would understand that "the thermo-chemical sign of a reaction is obtained by deducting from the heat of formation of the products that of those reacting." Not many, we think. One of the merits of this book is the fulness with which the more important elementary sub-

stances and their compounds are treated. Another prominent feature is the application of chemistry to the useful arts. The book is well printed, on excellent paper, and bound uniform in style with the volumes constituting Richter's "Chemistry of the Carbon Compounds."

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS' DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

ARKANSAS.—Booneville.—J. T. Elkington, succeeded by Cochran & Elkington.
CONNECTICUT.—Derby.—Estate of Charles H. Coe, sold to George H. Harding.—W. S. Torrance, proprietor of The Sterling Pharmacy, succeeded by C. M. Thompson.
New Haven.—W. H. Van Buren, No. 1 College street, deceased.
FLORIDA.—Key West.—Dr. G. C. Nunez, No. 1101 Division street, removed to Havana, Cuba.
IDAHO.—Montpelier.—C. A. Hoover, sold to Frank Lyman.
ILLINOIS.—Chicago.—A. H. Scott, No. 320 West Erie street, removed to No. 235 Ashland avenue.
Winslow.—G. T. Nease, deceased.
INDIAN TERRITORY.—McAlester.—Mann & Springer, succeeded by Russell & Springer.
IOWA.—Blencoe.—C. H. Wheeler, sold to W. G. Backer.
Harper.—H. C. Vittetol & Son, sold to Sontag & Kanterberger.
KANSAS.—Fall River.—R. R. Hogue, succeeded by A. W. Hogue.
Stafford.—A. H. Roby, burnt out.
KENTUCKY.—Albany.—S. G. Smith, sold to Higginbotham & Stevens.
MAINE.—Biddeford.—Edward A. Tetrault, No. 11 Alfred street, should be added to D. D. List.
Brunswick.—C. W. Allen, damaged by fire.
MARYLAND.—Baltimore.—C. W. Bailey, No. 431 West Pratt street, deceased.
MICHIGAN.—Bay City.—J. K. Mead, Van Buren and Twelfth streets, removed to Omer, Mich.
Detroit.—A. P. Breitenbach, No. 1237 Champlain street, sold to Hogg & Wolter.
White Pigeon.—Hotchins Bros., sold to S. L. Wyman & Co.
MISSISSIPPI.—Biloxi.—W. P. Kennedy, damaged by fire.
Tunica.—Alexander & Hope, succeeded by M. J. Alexander.
MISSOURI.—St. Louis.—Frost-Johnson Drug Company, No. 518 Olive street, sold to J. D. Pearson.
NEBRASKA.—Cordova.—Beebe & Johnston, sold to J. T. Martin.
Grand Island.—H. D. Boyden, sold to Bauman & Bauman.
NEW JERSEY.—Asbury Park.—T. M. Stewart, deceased.
Manasquan.—T. Antonides & Son, sold to The Manasquan Pharmacy.
Passaic.—Carroll & Co., succeeded by William Carroll.
NEW YORK.—Babylon.—H. M. Burtis, sold to Philip W. Link.
New York City.—Lewis Hilf, No. 750 Third avenue, sold to Oscar G. Hickstein.
OHIO.—Cincinnati.—W. L. Reum, southwest corner of Vine and Findlay streets, assigned.
Cleveland.—James Bruce, No. 544 Prospect street, deceased.
Toledo.—J. B. Parnell, No. 1165 Dorr street, deceased.
OKLAHOMA.—Oklahoma.—Hooper Bros., sold to T. J. Sims & Son.
PENNSYLVANIA.—Allegheny.—D. H. Morris, No. 686 Preble avenue, deceased.
SOUTH DAKOTA.—Alcester.—Alcester Drug Company, succeeded by C. H. Hammer.
TEXAS.—Uvalde.—E. M. Hollingsworth & Co., sold to D. W. Barnhill.
VIRGINIA.—Manchester.—W. H. Washington, No. 1201 Hull street, succeeded by Washington & Early.
WISCONSIN.—Milwaukee.—Arthur Schacht, No. 1215 Clybourn street, sold to A. F. Koch & Co.
NOVA SCOTIA.—Glace Bay, Cape Breton County.—D. L. McDonald, should be added to D. D. List.
Halifax.—Estate of A. W. Drysdale, Agricola and West streets, sold to A. A. Thompson.—T. M. Power, No. 215 Lockman and also at No. 388 Göttingen streets, now T. M. Power & Son.
Pictou.—Kenneth J. McKenzie, new store.
Sherbrooke.—Dr. J. F. Ellis & Co., new store.
Sydney.—Walter E. Davison, new store.—Dr. A. D. McGilvary, succeeded by G. McGilvary.

Trade-Marks, Designs, Etc.

PATENTS.

Issued November 13, 1900.

- 661,489.—Frank M. Brooks, New York, N. Y. Bunsen burner.
 661,526.—Jasper J. Henry, Greencastle, Ind. Evaporating pan.
 661,646.—Levi L. Rowe, Boston, Mass. Bunsen burner.
 661,659.—Heinrich Goetz, Frankfurt-on-the-Main, Germany. Stopper for bottles containing volatile liquids.
 661,731.—Robert G. Callum, Washington, D. C. Thermostatic device.
 661,732.—Robert G. Callum, Washington, D. C. Thermostatic device.
 661,765.—John A. Just, Syracuse, N. Y. Rennet extract and making same.
 661,821.—Paul Seldel, Ludwigshafen, and L. Preuss, Bonn, assignors to Badische Anilin and Soda Fabrik, Ludwigshafen, Germany. Making anthranilic acid.
 661,871.—Arthur H. S. Holt, assignor to Badische Anilin and Soda Fabrik, Ludwigshafen, Germany. Making an indigo-leuco compound.
 661,872.—Henry S. A. Holt, assignor to Badische Anilin and Soda Fabrik, Ludwigshafen, Germany. Making nitrobenzaldehyde.
 661,911.—William H. Hall, New York, N. Y. Tooth powder box.
 661,929.—Edward J. Duff, assignor of one-half to United Alkali Company, Limited, Liverpool, England. Vacuum pan.

Issued November 20, 1900.

- 662,065.—William H. Ferris, assignor of one-half to G. T. Wade, Washington, D. C. Non-fillable bottle.
 662,074.—Joseph Koetschet, St. Fons, assignor to La Societe Chimique des Usines du Rhone, anciennement P. Monnet et Cartier Gilliard, Lyons, France. Nitro toluylle aldehyde.
 662,075.—Joseph Koetschet, St. Fons, assignor to La Societe Chimique des Usines du Rhone, anciennement P. Monnet et Cartier Gilliard, Lyons, France. Nitro toluylle aldehyde.
 662,076.—Joseph Koetschet, St. Fons, assignor to La Societe Chimique des Usines du Rhone, anciennement P. Monnet et Cartier Gilliard, Lyons, France. Acetone compound of nitro-meta-toluylic aldehyde.
 662,116.—Arthur Eichengrün, Elberfeld, Germany, assignor to Farbenfabriken of Elberfeld Company, of New York. Chloromethyl salicylate of thymol.
 662,143.—Rollo C. Carpenter, Ithaca, assignor to Schaeffer & Budenberg, New York, N. Y. Calorimeter.
 662,205.—Johannes Smit, Leeuwarden, Netherlands. Compound for preventing boiler incrustations.
 662,217.—John F. Brady, Chicago, Ill. Means for conserving liquid gases.
 662,258.—Edward N. Dickerson, New York, N. Y. Storing acetylene gas.
 662,338.—Max Bazlen, assignor to Badische Anilin and Soda Fabrik, Ludwigshafen, Germany. Double hydrosulfite and making same.
 662,339.—Max Bazlen, assignor to Badische Anilin and Soda Fabrik, Ludwigshafen, Germany. Double hydrosulfite and making same.
 662,340.—John A. Bell, Naperville, Ill. Vaginal syringe.
 662,345.—Louis H. Britton and H. W. Morrow, Lisbon, Ohio. Sucker.

TRADE MARKS.

Registered November 13, 1900.

- 35,397.—Certain named toilet preparations. Naamlooze Yennootschap Eau de Cologne Fabrick, Voorshoen J. C. Boldoot, Amsterdam, Netherlands. The word "Marigold" and the representation of the flower commonly known as the "marigold."
 35,398.—Toilet and medicinal preparation. Xavier Pene, New York, N. Y. The word "Baboba."
 35,399.—Dentifrice. Joseph Grant Pease, New York, N. Y. The word "Dentisol."
 35,400.—Medicated Bathing Fluids. George Buckle, New York, N. Y. The word "Sylvan."
 35,401.—Liniment. Adolph Lagerkrans, Oakland, Neb. The hyphenated word "Meritum."
 35,402.—Laxative Tablets. Romalne Pierson, Chicago, Ill. The word "Miracle."
 35,403.—Medicament. The Trommer Company, Fremont, Ohio. The word "Palmlaccol."
 35,406.—Certain named medicine. Earl S. Sloan, Boston, Mass. The portrait of the registrant.
 35,407.—Certain named medicinal preparation. Samuel O. Sterrett, Duluth, Minn. The word "Maltol."
 35,408.—Certain named remedy. Jean Baptiste Jourdain, St. Jean Baptiste de Rouville, Canada. A monogram composed of the letters "J B J."
 35,409.—Remedy for certain named diseases. James F. Bahl, Philadelphia, Pa. The title "20th Century."
 35,410.—Medicinal tonics. F. Comar & Fils et Cie, Paris, France. The word "Marsyle."

Registered November 20, 1900.

- 35,402.—Certain named medicinal preparations. John W. Hahn, San Francisco, Cal. The representation of a rooster.
 35,403.—Preparations for the complexion. George T. Brandon, Cleveland, Ohio. A fac simile of the signature "Rev. T. A. Brandon."

LABELS.

November 13.

- 7,885.—Title: "Red Cross Disinfecting and Deodorizing Powder." For a powder. Red Cross Chemical Company, Boston, Mass. Application filed October 18, 1900.
 7,886.—Title: "Red Cross Antiseptic Shampoo." For a shampoo. Red Cross Chemical Company, Boston, Mass. Application filed October 19, 1900.
 7,887.—Title: "Ro-Zone-Dust Bag." For a medical compound. Tha-Mou-Cure Co., Kokomo, Ind. Application filed October 5, 1900.
 7,888.—Title: "Cinealeo Tonic." For a tonic. Pittsburg Homeopathic Pharmacy, Pittsburg, Pa. Application filed October 16, 1900.
 7,889.—Title: "Cowgill's Expectorant." For a medicine. William Cowgill, Camden, N. J. Application filed October 18, 1900.
 7,890.—Title: "Suckow's Rheumatic Remedy." For a medicine. John K. Suckow, Pueblo, Col. Application filed October 18, 1900.
 7,891.—Title: "Cascarine." For a stomach medicine. Rea Bros. & Co., Minneapolis, Minn. Application filed October 18, 1900.
 7,892.—Title: "Corrective Syrup." For a medicine. Corrective Syrup Co., Boston, Mass. Application filed September 4, 1900.

November 20.

- 7,898.—Title: "Oil of Vanilla." For an extract. D. Lamont, Springwater, N. Y. Application filed October 6, 1900.
 7,900.—Title: "Woman's Friend." For an antiseptic. Standard Remedy Co., New York, N. Y. Application filed October 29, 1900.
 7,901.—Title: "Pa-kal." For a medicine. Albert H. Olmstead, St. Louis, Mich. Application filed August 27, 1900.

GEORGE R. REYNOLDS, one of the best known and among the oldest of the druggists in Washington, D. C., died there on the morning of November 23. He had not been in good health for some time past, and his death was not unexpected. The deceased was highly esteemed by a large circle of friends, possessed a fine character and a genial disposition. His life was one of quiet, earnest endeavor, marked throughout by honesty and conscientiousness. He was born in Baltimore fifty-four years ago, but went to Washington when a boy and had resided there ever since. Mr. Reynolds was a widower, and left no children.

Sodium Salicylate.

The superior quality of Herf & Frerich's Salicylate of Sodium should be called to the attention of every pharmacist and physician. It conforms in every respect to the requirements of the U. S. P., 1890. The following important points in favor of this product should secure for it the preference of physicians and pharmacists alike, viz.: Its pure whiteness, its perfect solubility, the absence of carbolic odor so objectionable in some makes, and the fact of its forming colorless solutions even if concentrated. The manufacturers of this pharmaceutical product are the Herf & Frerichs Chemical Co., St. Louis Mo., whose New York office is at 133 William street.

Velvee.

The popular preparation long known as Mayell-Hopp's Witch Hazel Jelly has been renamed Velvee. The name chosen is particularly appropriate as its application makes the skin as soft and as smooth as velvet. It is absolutely free from grease, mucilage or gelatine, and being put up in collapsible tubes, is economical, for there is no waste. Velvee retails at 25 cents per tube and is sold to the retail trade at \$2 a dozen. Special prices are made for gross lots and for two gross lots, and freight is paid on the latter quantity. Velvee will continue to be made by the Mayell & Hopp Co., Cleveland, O.

CARVER'S PHARMACY, PLYMOUTH, MASS

A New Bottle Cabinet.

Illustrated on the back cover of this issue is a new patent bottle cabinet. It measures thirty inches high, eighteen wide and twelve deep. It contains thirty drawers, the fronts of which are made of oak or cherry and have a metal handle and label. It is not only an exceedingly practical and useful article, but will be a handsome addition to the fixtures of any prescription department. Placed on the end of the prescription counter it will hold more than all the shelves ordinarily in use, and the bottles will be kept clean and free from dust. Each drawer can be labeled appropriately to indicate the size of bottles contained in it. These cabinets are carried in stock by the manufacturer and will cost you only \$15 each. Ten per cent. added pays freight to your door. Any size desired will be made to order by the manufacturer, Charles P. Whittle, 125 Portland street, Boston, Mass., with whom, if interested, we suggest you correspond.

The busy dispenser will at once recognize the value of the 'Cube' form of Morphine, not only for the safeguard of its form, but for the convenience and rapidity with which it leaves the bottle, no plunging in of knife to loosen out the product.

The New York Quinine and Chemical Works were the first in this country to furnish Cube Morphine, and those who are familiar with it mean to ask for N. Y. Q. when they say Cube.

Druggists' Glassware.

Every pharmacist wants to know where he can buy bottles and vials in greatest variety of the best quality at the best prices. If you are in need of a supply of flint, green and amber bottles and vials which will fill all the above-mentioned requirements, and wish to know more about them regarding prices, etc., write to The Star Glass Co., 147 North Fourth street, Philadelphia, Pa.

The Multiple Perfection Filter.

On another page is illustrated a filter which most fittingly has been called the Multiple Perfection Filter. It is the simplest, most complete and economical system in use for the filtration of extracts, wines, waters, syrups, and all other liquids. It is rapid, perfect and durable; can be repacked and is a new filter in five minutes. Send for new catalogue to Rheinstrom Bros., Cincinnati, U. S. A.

NEW YORK CITY BOARD.

At the November meeting, the following passed the examination and have been granted certificates:

AQUARIA.*

More has been written on the aquarium in pharmacy than on plants generally for the purpose of decoration. One pharmacist "declared his aquarium to be as useful on Saturday nights as an extra assistant, for while admiring its wonders his customers forget their hurry to be served." A juvenile customer on seeing some lively tadpoles swimming in the aquarium remarked that "Mr. X. had a lot of his pills swimming about in water with tails to them." An aquarium can be made or can be purchased. In the Ladies' Home Journal (February, 1899) appeared an illustrated article on "Making a Home Aquarium," but any one with a little mechanical ability can readily see by viewing the aquaria in the stores how one can be made. Some of the houses that make a specialty of druggists' glassware sell fairly good-sized and handsome aquaria.

An aquarium may consist either of (1) plants alone; (2) animals alone, or (3) a mixture of animals and plants. The ideal aquarium, and one which takes the least time after things are properly adjusted, is one made up of both animal and plant life. L. Murbach gives some notes on making permanent aquaria of this kind in The American Naturalist, 1900, p. 203. The most unsatisfactory aquarium is one consisting only of animal life, as the water requires frequent changing and the animals must be fed with great regularity.

An aquarium may be said to consist of three things: (a) a bottom soil; (2) water; (3) various forms of life. The soil may consist of silver sand and pebbles, or the rich bottom soil on the edge of ponds and pools, or a mixture of pebbles, sand and mud. The water may be secured from the hydrants of the city, but it is better to take clean pond water from a situation abounding in animal and vegetable life. If city water is used, it is best to add the plants first and get them thoroughly started, and then add the animal life. Plants in aquaria seem not only to produce food for the animals, but are a great means of aerating the water, particularly if there be a proper exposure. On the other hand, plants thrive best when there are some animals present, as the CO₂ exhaled from the latter serves as one of the elements of the food of plants.

Among plants that may be used in an aquarium are any of those that are found in ponds or pools abounding also in animal life. Diatoms, oscillaria, elodea canadensis, spirogyra, vallisneria, utricularia, mynophyllum, cladophora, anacharis and other plants are common, and are likely to be obtained from various pools and ponds. In the shops other aquatic plants may be purchased. Salvinia and lemna are very useful as well as decorative for the surface of the water. Among forms of animal life that are likely to be gathered with the plants enumerated above are various Amœbæ, Protozoa, Polyzoa, Crustaceæ, etc. Snails serve to remove the conservoid (vegetable) growths on the sides of the glass. Some of the pond beetles are scavengers of dead animal matter, whereas tadpoles and snails consume decaying vegetable matter. After one has a properly balanced aquarium

*Part of a paper read before the Pennsylvania Pharmaceutical Association, by Henry Kraemer.

the principle of conservation of energy in the correlation of life of plant and animal is well shown. Among fish very many interesting forms may be purchased. Some of these are comparatively expensive, although a great many can be obtained at a trifling outlay. Fish need to be fed every other day with either ground insect food or a rice dough, to be had of any of the dealers. In the experience of the writer, most satisfactory results in maintaining the life of fish have been obtained by keeping two kinds of aquaria always on hand—one containing plants and lower animals, and the other containing, besides these, fish. Every month or two the water in the fish aquarium is changed and a new stock of animals and plant life added from the aquarium without any fish. The fish seem to impoverish the aquarium in the course of time in not only consuming the lower animals, but also by picking at the plants.

There is probably nothing that can be used for purposes of ornament and pleasure that is so interesting and requires less care and expense than the putting up of an aquarium. The intelligence of fish is remarkable, and one soon becomes attached to them and will watch their movements with interest. There is nothing like the dirt or trouble or even uncertainty that is connected with the care of canaries and other birds.

Drug Clerk's Assets Were \$25; His Liabilities \$2,831.083.

Philadelphia, Dec. 1.—How a young drug clerk, struggling to make a living on a salary of \$8 a week, could become a debtor to the extent of \$2,831.083.43 would seem to puzzle the most astute manipulator of finance; and safe it is to say that there are not a few engaged in money transactions who would give a good deal to find such credit on small assets.

Arndt K. Housekeeper, who still dispenses drugs out at Narberth, was released from obligation in the bankruptcy court yesterday. His assets were \$25. Thirteen years ago he was following the same occupation in Philadelphia and it was there that he became entangled unwittingly in financial transactions that require seven numerals to express.

Housekeeper never benefited from the millions in his name. In fact, he only knows that one day a man entered the store where he was employed and asked him to sign some papers. Housekeeper was what is known as a "straw man." The man told him that he was a party to a big real estate deal, and it was necessary to have the property transferred through the medium of a third party.

LAUDANOSINE.—An interesting paper on the chemistry of this opium alkaloid appears in a recent issue of the *Berichte (Ch. & Dr.)* by Pictet and Athanasescu, in which they show that the original formula assigned to the base by its discoverer—Hesse—is correct. This empirical formula is $C_{21}H_{27}NO_6$, and they now show that the body is a methy-tetrahydro-papaverine derivative. By the reduction of papaverine chloromethylate by means of tin and hydrochloric acid, the authors have obtained a body which shows the greatest resemblance to the natural alkaloid laudanose. The only essential difference observed is that the reduction product is optically inactive, whereas the natural base is dextrorotatory. It is therefore probable that laudanose is d-N-methy-tetra-hydro-papaverine. This has been almost definitely confirmed by the fact that the artificially prepared body can be split up into its optically active isomers, which closely resemble the natural base in all their properties, including their angle of rotation.

THIOPYRIN.—Michaëlis and Bindewald some time ago showed that the action of an alcoholic solution of potash on the chloro-methylate of phenyl-methyl-chloropyrazol resulted in the formation of antipyrin. They now (*Berichte*, 1900, 273) show that, by using potassium sulphhydrate a corresponding sulphur derivative results, which they term thioantipyrin, or, shortly, thiopyrin. This new antipyrin analogue possesses the formula $C_{10}H_{12}N_2S$, and forms colorless plates melting at $160^\circ C.$, soluble in water and alcohol, but almost insoluble in ether. The body is being further investigated.

STATE OF TRADE.

Volume of Business Fairly Liberal.

New York, Dec. 4.—Mild weather has somewhat retarded the movement of seasonable articles, but a number of orders held over until the turn of the month aided materially in bringing the volume of general business up to fairly liberal proportions. Quinine has ruled quiet and the course of the market has been a source of disappointment to dealers, especially those who operate in a speculative way. Manufacturers' quotations remain unchanged, but in the outside market an easier feeling has developed. The causes of the depression are lack of important demand, continued liberal bark shipments and a decline of about 2c. per ounce at the Batavia auction sale last week. The principal weakness is in the Java variety, but other brands are easy, in view of the dull condition of the market, together with expected lower prices of bark at the next Amsterdam sale.

Opium has continued very firm both here and abroad, mainly on account of unfavorable crop conditions, but consumers' wants have been light and only a moderate volume of business has transpired. Holders, however, are not anxious sellers, and the outlook is considered favorable to further improvement in values in the near future. Morphine and codeine are seasonably active, but competition checks any tendency to advance, although it is claimed that the strong position of opium is likely to force prices to a higher level. Among the more important changes during the period under review are an advance of \$5 per ounce in manufacturers' quotations for pilocarpine muriate, and \$4 per ounce in eserine sulphate, both due to scarcity and higher cost of raw material. Under a similar influence holders of the comparatively small stock of lactucarium have advanced prices 25c. per pound and the tendency continues upward. Canada balsam fir is in reduced supply and higher with holders inclined to offer very sparingly.

Asafetida has continued to move upward in price under the influences noted last week and only small parcels are available. Chicle is decidedly stronger, the bulk of the stock here and in Mexico having gone under control of a syndicate, and it is expected that chewing gum manufacturers will be obliged to pay higher prices for their supplies. Aloes are firmer and fractionally higher quotations are named for Curacao and Cape varieties. Cannabis indica is decidedly stronger in sympathy with the London market. Jaborandi leaves are scarce abroad and extreme prices are looked for. Ipecac has declined about 10c. per pound owing to increased supplies and free offers from Europe. Lycopodium is a shade lower, the active consuming demand having subsided.

In the essential oil department the price changes are all in favor of buyers, but none is of special importance, and there is nothing that calls for extended mention as the changes are more in the way of revision than actual declines. The oils showing a lower range of quotations are anise, sassafras (both natural and synthetic) and wormwood.

A Week of Good Conditions.

Boston, Dec. 1.—The week has been one of pretty good conditions of trade, and has seemed especially busy. The community is in a general way healthy, with not a great deal of illness, except that diphtheria is prevalent. Druggists have not been kept quite so busy in the matter of prescriptions, yet in other ways have been doing well. No noteworthy changes in prices of chemicals are reported, but trade is good and the demand is steady. Nitrate of soda and English bleaching powder are perhaps as active as any lines. In drugs, trade also is good, opium being more prominent than anything else, and is a bit stronger. Fair trading in alcohols is found. No important features in dyestuffs and tanning materials are reported, although the market is fairly firm. Waxes are steady.

Steady Improvement All Along the Line.

Philadelphia, Dec. 1.—Business has picked up quite a bit during the last week, although not yet what could be called "brisk." There are signs, however, of a steady improvement all along the line, and with no untoward developments a good holiday trade should be the lot of all. Prescription business is fairly good; in some instances there is a notable change in the character of the prescriptions ordered, more of official and semi-official preparations and less of the specialties that flood the market. A few druggists have already begun to advertise for holiday trade, and many stores in the outlying sections present a very pretty stock.

No special change is noted in wholesale circles, business going along steadily and quietly, with holiday orders coming in briskly. A good sign of the times is shown in the character of these orders; as a rule they are for a better and higher-priced class of goods than for several years. Heavy chemicals and dyestuffs continue in good demand, although no large orders were placed during the week.

Business Rather Quiet.

Baltimore, Dec. 3.—The current of drug trade affairs in this city has been flowing rather smoothly and slowly of late. The movement of goods is of moderate proportions, and no developments of special significance have been noted. The local salesmen report a fair business during the week, while the out-of-town demand was restricted. Holiday goods have begun to make their appearance in the drug store windows. They consist chiefly of perfumery and toilet articles. No elaborate displays have so far been attempted, and it does not look as if special preparations of magnitude would be made this year. The market for botanicals is practically unchanged, while the movement of heavy chemicals is about up to the average for this season of the year.

No Complaint from Detroit.

Detroit, Dec. 1.—To-day being the first day of the month and the last day of the week, the wholesalers were kept at a keen jump to get the orders filled. The week, however, has seen its usual holiday lassitude. The weather, except that it is rheumatism inducing, is rather against a good drug trade. November did not run behind other Novembers, but the increase was not as great as made by some of the other months.

Western Business Good.

Chicago, Dec. 1.—The manufacturers have been busy this week on good staple orders. The demand for pharmaceuticals has improved, and business will make a good showing during 1900—better even than in 1899. The same is true of the jobbers and druggists' sundries men. All departments in the wholesale houses are more than usually busy. Orders are liberal both in number and in amount, and one hears no complaint at all about business conditions. Failures have been few and collections are good.

November a Satisfactory Month.

St. Paul and Minneapolis, Minn., Nov. 30.—But little can be said concerning trade in these cities the past week, broken in upon as it was by a holiday. Still, few complaints are to be heard, especially among jobbers, who have just concluded quite a satisfactory month's operations. The market on Western products has undergone no change. The retailers are, as usual, divided in the reports of their experiences. Most of them have found this week rather quiet. A number say they are noticing quite a revival of prescription work, the weather having been conducive to considerable sickness. The matter of collections—poor for so many weeks past—reveals little change, but as the druggists are selling right along "just the same," they are not inclined to grumble.

DRUGGISTS NOT ON HAND.

Pittsburg, Dec. 2.—There was a sensation in Judge Melvaine's court, Washington, Pa., on November 30. The cases of the Canonsburg druggists and their clerks indicted for illegal liquor selling, were to be called for trial. Two of the defendants are J. B. Donaldson and his clerk, J. B. Donaldson, Jr., both of whom failed to answer when their names were called. Their bondsmen were present and stated that the defendants knew that their trial was set for November 30. The recognizance of the defendants was forfeited. Then Mrs. J. A. Foote, proprietor of a Canonsburg drug store, and her clerk, Al. Geddis, were called, but they also failed to respond, and their recognizance was also forfeited. All witnesses for both cases were present.

D. W. Smith and R. S. Holbert, druggists of Washington, Pa., indicted on the same charge, had their cases continued until the February term. District Attorney Templeton and Lawyer W. S. Parker, who represents the defendants, had considerable discussion when the Donaldson case was called as Parker claimed that he had no time to prepare for the cases owing to other cases on hand and asked that the trials be continued. He declared that he would withdraw as counsel if Templeton persisted in calling the cases, but the district attorney insisted upon having his way.

MARKET REPORT.**NEW YORK MARKET.**

New York, Dec. 4.—A fairly steady jobbing market can be noted, with the general demand moderately active and the movement of small lots into channels of consumption satisfactory to dealers. Large transactions are exceptional as it is too near the end of the year to anticipate future requirements.

OPIUM.—Small lots continue to find a fair consuming outlet and the stronger position of the article at primary sources of supply has caused an advance in jobbing quotations to \$3.55@3.75 for 9 per cent. and \$3.65@3.85 for 11 per cent., according to size of order.

POWDERED OPIUM.—There is a continued satisfactory demand for consumption and values are higher in sympathy with the improvement in gum, the revised quotations being \$4.75@5 for 13 per cent. and \$5.10@5.25 for 16 per cent., the outside figures for single pounds.

MORPHINE.—A continued active inquiry is noted, with the tone of the market firm, but jobbers are not willing to sell on the old basis of \$2.40@2.60 for eighths, according to brand and quantity.

QUININE.—There is no improvement in demand, and with the general market somewhat unsettled, large buyers are disposed to hold off and await developments. Meanwhile quotations remain unchanged and nominally steady on the basis of 35@35½¢, for bulk in 100-oz. tins.

ESERINE SULPHATE.—An advance of \$4 per ounce in manufacturers' quotations has imparted a firmer feeling among jobbers and prices for small lots have been marked up 10@12¢, per grain in 3 and 5 grain vials.

PILOCARPINE MURIATE.—Manufacturers' prices have been advanced on account of higher cost of crude material and jobbers' quotations show an advance to \$9.9¢, per grain.

JABORANDI LEAVES.—Foreign markets are higher owing to scarcity and spot quotations have been advanced to 28@32¢, as to quantity.

IPECAC.—Lower prices at the last regular auction sale in London have weakened the local market, and jobbers have reduced quotations to \$3.25@3.50 for whole and \$3.45@3.55 for powdered.

COPPERAS.—Competition among producers has resulted in a decline in values and the revised figures for jobbing quantities are 1@1½¢, by the barrel and 1½@2¢, for less.

NUTGALLS.—The market is easier under a slow demand and quotations for jobbing quantities show a decline to 35@37¢, for whole and 39@41¢, for powdered.

LACTIC ACID.—Stocks are light and closely concentrated and jobbers have advanced quotations to \$7.25@7.50.

ALOES.—Quotations for powdered are unchanged at 20@30¢, as to grade and quantity, but the market is stronger in tone owing to scarcity and higher prices for gum and an early improvement is looked for.

CANNABIS INDICA.—Values are decidedly higher in sympathy with similar conditions in European markets and jobbers have further advanced quotations to 75@85¢.

BALSAM FIR.—Canada is in reduced supply and firmer with quotations for small lots advanced to \$3.25@3.50.

BALSAM COPAIBA.—There is a good consuming demand and with stocks light holders are firmer in their views. Central American is held at 45@50¢, and Para or Angostura 55@65¢.

PERMANGANATE OF POTASH.—Manufacturers' prices are lower and jobbers have reduced quotations to 20@25¢.

THYMOL.—A firmer feeling has developed owing to scarcity and quotations for jobbing quantities have been advanced to 85@90¢, per lb. and 45@50¢, per oz.

ESSENTIAL OILS.—A general revision of jobbing quotations shows a decline in anise to \$1.75@1.90, natural saffrairs to 50@55¢, synthetic 45@50¢, and wormwood to \$6.50@6.75.

A PROTEOLYTIC ENZYME IN MALT EXTRACT.

According to Fernbach and Hubert it is probable that extract of malt contains a proteolytic enzyme. They base their assumption on the following facts. When the extract is digested with water at 70° C., the albumin, which is in the usual way coagulable, is rendered non-coagulable. The result is identical when the solution is sterilized by filtration through a Chamberland filter, so that the change cannot be due to micro-organisms. Further, the cold extract dissolves gelatin, while the heated liquid does not do so. From a series of nitrogen determinations it appears that the mixture of the soluble bodies produced by the enzyme depends on the temperature and length of the digestion.

KEEPING FAITH.

Quite a number of druggists in this locality, especially some who heretofore have been accustomed to buying in quantities, have taken occasion recently to test the manufacturers and jobbers as to their loyalty to their signed agreement to uphold the N. A. R. D. tripartite agreement. It is very gratifying to be able to record that in every instance these druggists have failed to secure goods in violation of this agreement. They have uniformly been denied by the manufacturers, who have referred them to the jobbers, and the jobbers in turn have likewise kept faith by observing every feature of the agreement. It is understood also that certain buying clubs which expected to be able to knock out the plan have found that the knock-out blow has come from the other side. So the prospects seem good all around for ultimate and early success of the effort to control the cut-rate evil, and to do this in accordance with the principles along which the National Association of Retail Druggists is working. The retail trade is beginning to know its strength, and the work of organization is going on rapidly and satisfactorily. Local associations are springing up all over the country, and the combined influence of all these bodies is being exerted and felt with a force and weight which cannot be disregarded. The retailers can get what they want and what they should have if they will only organize in their own sections and demand their rights.

THE ERA COURSE IN PHARMACY.

Last Monday, December 10, there was mailed to all students matriculated in the December class, Part I. of the lectures in the Era Course in Pharmacy. At the same time the November class received Part II. and the October class Part III. The December class will be kept open until the last day of the month, and prospective students are urged to get in their matriculation orders in time to be enrolled in this class. If failing to matriculate during December, they must wait until the following month. A new class is formed each month and receives Part I. of the course, and subsequent parts at regular thirty-day intervals. It takes full ten months to complete the course; no more, no less.

With the near approach of the holiday season we would gently suggest to employers that a most appropriate Christmas gift to a valued clerk would be a subscription to the Era Course in Pharmacy. Its cost is small, only \$10, but the benefits are incalculable, and are to be derived in all the student's after life. The gift

is a lasting one. We would like to send a large number of such Christmas gifts to young men new in the drug business. Here is a chance for the employer who takes a real interest in his employes, and wishes to see them succeed in what is the best success. There is nothing better than a good education as a preparation for any calling.

A KNOWLEDGE OF LAW DESIRABLE.

The rights of every citizen of this country are secured to him by national and state constitutions and by laws made in conformity to them. It would appear, therefore, that the more one can know and understand about the provisions of our laws the better his rights and privileges can be safe-guarded. If this statement be true of the ordinary citizen, its application to the pharmacist as a citizen is more extensive and far-reaching. He has personal and property rights the same as any other citizen, but since legislatures have surrounded him and his business with statutory regulations for the protection of the public it does seem as though a thorough comprehension of his legal status, duties, liabilities, and environments was imperative. These statutory regulations have given him certain privileges, and they hold him accountable for the observance of regulations which do not apply to the ordinary citizen. He has more than common obligations to perform towards his fellow men. He has undertaken to do that which requires more than ordinary skill, and in its performance he is bound to use the prudence and care exacted of him by the very nature of his business.

Pharmacy laws in general prescribe how and by whom drugs and medicines may be sold; define poisons and the precautions to observe in selling them and, within widely prescribed limits, outline what constitutes the practice of pharmacy. These laws require the pharmacist to possess a certain amount of medical knowledge, but the laws which govern the practice of medicine prevent him from prescribing. A thorough understanding of the question of his own special field of labor and his rights therein, would have prevented much of the criticism and litigation against him in the past for "counter-prescribing." In addition to these laws the pharmacist is required to observe special regulations which come under the boards of health of various states, such as those which govern the adulteration of drugs and chemicals, etc. The sales of liquors he may make may or may not come under some provision of the pharmacy law, but they do come under the excise regulations of the national government, the law of the state in which he lives and the local ordinances of his place of business. As a citizen, he may be exempt from jury duty; as a pharmacist, he is never exempt from liability.

Besides a knowledge of his legal privileges and liabilities as a pharmacist, a knowledge of commercial law as coming under the property rights of citizenship is likely to prove of greatest

advantage. Thus he should understand the principles involving the acquisition of property, the purchase and sale of goods, the making of contracts, mortgages, leases, giving bonds, rights and duty of guarantors, and all of those miscellaneous regulations and statutes coming within the province of mercantile law, such as the making of negotiable paper, agency, partnership, etc. Ignorance of the law excuses no one, and the law is supreme. So much of it as specifically applies to the pharmacist in the practice of his calling and business relations should be understood in a manner that will yield the greatest good and guard from the dangers which threaten.

WRITE TO YOUR CONGRESSMAN.

As the entire drug trade knows, the Era has for some weeks past been conducting a thorough canvass of the drug trade in all its branches to secure signatures to a petition to Congress to repeal the stamp tax on medicines. Manufacturers, wholesalers and retailers alike have taken very great interest in this matter, and the petition has been even more liberally signed than we expected. The result of the canvass has been laid before the Committee on Ways and Means of Congress in just as strong a shape as we were able to place it, and, we believe, will have very much weight in influencing legislation in the direction desired. The Ways and Means Committee has prepared a bill to be submitted to Congress in a very few days, which bill provides for a total abolition of the tax on medicines, together with great reduction in other portions of the revenue act. It is not anticipated that much opposition will be developed when the matter comes to discussion in Congress. But we never know what may happen, and we want to urge every member of the drug trade in these United States to make it his personal duty to write at once to his representative in Congress, urging that such Congressmen vote in favor of this relief for the drug trade. Now is the chance, and the very best possible chance, to secure the relief which all so earnestly desire, and if druggists are not willing to go to the little trouble of writing these personal letters to their Congressmen they do not deserve any help, and if there be failure it will be due to their own lack of interest and effort. So write at once, and as strongly as possible.

OPINIONS.

About a week ago we wrote you in reply to the request for signatures to petition for repeal of stamp tax that we were in favor of keeping the tax on. We find that with the introduction of the stamp tax nearly all manufacturers at once raised the price on their goods to not only cover the amount of tax, but a considerable per cent. above the stamp, thereby compelling the retailer to stand the tax alone. We, in self defense, commenced to handle our own goods, and have been able to place our own goods with this community in about 75 per cent. of our sales. For instance, we used to sell about one dozen bottles of "Hood's" a month; now a dozen will last us four and sometimes five months. We sell our

own, and push it, and talk it, and our cash account does not suffer any by so doing. The same way with other patents. We are gradually crowding them out. We enclose you a sample advertisement of cut-rate druggists who are doing far more damage to the honest retailer than the stamp tax. We would suggest that the stamp tax be let stand, and every energy be exerted to keep goods out of the hands of cutters, whom we consider as the thorn to be pulled out, and for these reasons we are willing the tax should stand until manufacturers keep their goods out of the hands of cutters; besides that, it gives us a chance to put up our own goods and make a better profit on them than we could even at the old price.

WHALING & MEAD.

Cedar Vale, Kan.

I am in favor of killing the tax, and am willing to do what I can in that direction. But what assurance have the retailers that the manufacturers will lower their prices to us. It seems to me the first thing to establish is a reduction in price provided the tax is removed. When the tax on stamp act came in, the manufacturers not only increased the price to cover stampage, but added fully as much more to their medicines. They not only threw the tax on to the retailer, but increased his burden by raising the price of their product at the same time, bearing none of the expense themselves. I think about the best thing to do is to establish a system of boycotting on the manufacturers. At the time of our civil war the stampage was much higher; the manufacturers stood it like men and made no advance. I believe my advice to our Congressman will be to hold the tax where it is, unless they are assured by the manufacturers that the price of proprietary and patent medicines will be reduced proportionately to the retail druggist. If you can give me any light on the subject, I will be glad to hear it.

Lyons, Iowa.

D. H. SNYDER.

Your petition in regard to removal of the stamp tax received, but as Messrs. Mack & Co., of our city, have had one signed by the majority of the trade of this city, we have not thought it advisable to cover the ground again. We enclose a letter from Senator George C. Perkins, also our representative, Julius Kahn, so you see we are going to get their hearty support. We feel that the revenue tax on proprietary remedies should be removed first of all, as the retail drug trade of the United States is already taxed higher than any other branch of business. The amount we pay on alcohol alone is certainly enough for the drug trade to stand. We appreciate the great effort you have put forth trying to remedy this matter. Wishing you success,

EDWARD L. HALDWIN COMPANY.

San Francisco, Cal.

The letters referred to in the above are the following: In relation to the removal of the internal revenue taxes upon proprietary remedies, I would say that I think Congress will undoubtedly remove this tax at the coming session. Indeed, the matter is now under consideration by the Committee on Ways and Means in the House of Representatives and by the Finance Committee of the Senate, and my views are that they will agree upon an abolition of the proprietary tax and several of the other stamp taxes. Yours truly,

GEORGE C. PERKINS.

San Francisco, Cal.

I beg to assure you that I am heartily in favor of removing the tax on proprietary remedies, and will do all that lies in my power to secure the repeal thereof. Very truly yours,

JULIUS KAHN.

San Francisco, Cal.

I voice your sentiment, which came duly to hand under the title of "Kill the War Tax," and most especially "Clause 2," which states that others are enjoying protection of copyrights and trade marks under the laws of the Government and escape the payment of any war revenue tax, while the proprietary medicine man and pharmacist are burdened. This is, indeed, an unjust taxation. You may present and use my name in any way that is just and proper which will bring about a reforma-

tion or the repeal of this war tax, which I have oftentimes termed an unjust burden on the few. I assure you my hearty co-operation in this matter.

St. Louis, Mo.

T. M. SAYMAN.

In compliance with request, I sign and return the petition to Congress for the repeal of the proprietary tax. I deem it useless, for "coming events cast their shadows before." Instead of a repeal or even a reduction, I prophesy a continuance, and should not be at all surprised to see an advance in rates to what it was when repealed in 1883. In fact, the "powers that be" have already said so, i. e., that there will be little if any reduction. It will be several thanksgivings before we can offer thanks that the burden has been removed, I opine. However, luck to your efforts.

SAMUEL W. ALLEN, R. P.

Batesville, Ark.

I this day mail to my Congressman petition signed by three druggists of this place asking for repeal of Stamp Tax. Hope this will soon be accomplished as it is certainly a very unjust imposition on the drug trade. In event of repeal of this tax, have we any assurance from the manufacturers that they will restore old prices on their goods? I have not noticed any such expression in your columns in this regard. Suppose you get after this class now. We as retailers would like to know what they are going to do.

M. F. WORD.

Cartersville, Ga.

Note that the movement which you inaugurated to secure repeal of the high war tax on medicine has created a widespread sympathy and satisfaction in this and other cities. The writer is also secretary of the Cincinnati Chamber of Commerce, and we have had a number of meetings formulating plans for the repeal of the war tax. We are also sending delegates to Washington in this matter. Can you give me any special or other information regarding plans to pursue in this matter? Any information will be gladly received by the writer.

FRANK C. GROTE.

Cincinnati, Ohio.

In reference to killing the war tax, would say it is unjust and burdensome, particularly the tax on medicine. To-day we are paying the government nearly 6 per cent. on our gross receipts for stamps, as we did not advance our price one iota, and we have to stand our share of the documentary stamps, express, etc., same as others. This is true of all manufacturers in proprietary medicines, or nearly so, as but a few advanced their prices. We take pleasure in instructing you to add our name to your protest.

THE W. H. HILL COMPANY.

Detroit, Mich.

W. H. Hill, Secretary.

We are just in receipt of your blotter entitled "Kill the War Tax," and we take this occasion to thank you in behalf of the retail druggists and ourselves for the strong fight you are putting up for the repeal of the war tax. If you desire us to make distribution of the blotters or any other printed matter, kindly send same here and we will take care of it.

STERLING REMEDY COMPANY.

H. L. Kramer, Treasurer and General Manager.
Indiana Mineral Springs, Ind.

You have my hearty support in all your efforts to have the unjust War Tax repealed on drugs, etc. May you succeed in your efforts. Hon. W. A. Cauterhead is Congressman from this (the Fifth) district. He being a personal friend of mine, I will make a personal appeal to him to help the matter along all he can, and am certain he will lend us his valuable assistance.

H. L. TAYLOR.

Herkimer, Kan.

We note with great pleasure the interest you are taking in effort to kill the very obnoxious war tax which manufacturers such as ourselves are now subjected to. What can we do to help you? We know that your work

will be appreciated by druggists throughout the country. Wishing you Godspeed, we remain,

Baltimore, Md.
MCCORMICK & CO.

Within I append list of druggists of the larger cities of La Salle County, Illinois, and hope it will be followed by many more. As president of our local society I wrote a personal letter to one druggist in each of the cities and had it rushed forward in the "endless chain style." Thanking you for interest taken.

Peru, Ill.
B. G. SEEBACH.

Enclosed please find the great petition to Congress, which you sent me a few days ago, and to which I have obtained the signatures of most of the druggists in this city. Thanking you for the efforts you are making in the behalf of the retail trade,

Eau Claire, Wls.
OTTO J. S. BOBERG.

Some time since I forwarded to our representative in Congress from this district a similar petition to the above, signed by all the Oakland druggists, and have his written assurance that he will do everything he can to obtain the desired relief. Respectfully,

Oakland, Cal.
F. TOBRINER.

Enclosed find the signatures of the retail druggists in our city. This is a move in the right direction, for if there ever was injustice done, here is the place. Hoping that this will help accomplish the desired end, I am, with best wishes,

Port Huron, Mich.
C. F. HUEBER.

I have your valued favor and beg to inform you that I am opposed to the Revenue Tax, and if there is anything I can do to aid you in the war you are making on this tax I will gladly do so.

Sidney, Ohio.
B. S. HUNT.

We, the druggists of Mexico, thank you very much for the interest you are taking in killing the War Tax, which is unjust and burdensome, and we are with you heart and soul.

THE DRUGGISTS OF MEXICO, MO.

You may add our name to the "monster petition" which you are preparing for the repeal of war taxes upon Schedule B of the law on the subject.

New York, N. Y.
A. WERNER & CO.
Per J. K.

Yours regarding war tax received. Kindly add our name to your "Monster Petition to Congress." Thanking you for same, we remain,

DR. B. J. KAY MEDICAL CO.
Saratoga Springs, N. Y.

Enclosed find a list of the principal druggists of this city. We trust your war on the War Tax will be successful.

Niagara Falls, N. Y.
SPIRO COMPANY.

Am very glad to be able to help in getting such an unjust tax repealed, so please find enclosed petition signed.

Clio, Ala.
W. H. PARKMAN.

Enclosed find petition signed by druggists in this city asking for relief from the stamp tax.

MORRIS-MORTON DRUG CO.
Ft. Smith, Ark.

You may add our name to the list of those who desire the war tax removed from drugs.

THE J. F. HARTZ CO.
Detroit, Mich.

"SANG" OR GINSENG,*

(*Aralia quinquefolia*),

Some Information About the Great Chinese Root,

AND

CULTURAL DIRECTIONS.

By HARLAN P. KELSEY.

The cultivation of American ginseng (*Aralia quinquefolia*) in this country is receiving much attention at the present time. That ginseng can be grown successfully and with great profit if given proper conditions of soil and treatment, is now beyond question.

At the present time ginseng commands a cash price in the open market of from \$4 to \$6.50 per pound for the dried wild root, while the cultivated root brings as high as \$8 to \$12 per pound.

To show how the price of ginseng increased as the supply diminished, the following figures from reliable sources are quoted: In 1821, 352,992 pounds were exported at a value of \$171,786, or 48 cents a pound, while in 1897, 179,573 pounds were exported at a value of \$840,686, or \$4.68 per pound.

This export consists almost entirely of wild roots, as only recently has the cultivation of ginseng been successfully attempted in America, although it has been grown in China, Japan and Korea for a long time—the industry being a government monopoly in the latter country. It should be carefully noted that cultivated ginseng always commands a very much higher price than the wild root, and very recently the price of all kinds has greatly advanced.

These figures conclusively show that the supply is entirely inadequate to the demand, and that the wild root is becoming scarcer each year. Eventually it must become a cultivated crop, but the fact that it takes from four to six years' growth before it is properly ready for the market will keep many from attempting its culture, though making returns larger and more sure for those who devote the necessary care and attention to its cultivation.

The extraordinary value of ginseng being demonstrated, it only remains to be shown that its culture is comparatively simple and can be made a success.

The conditions may be stated in a few words: A rich, cool, loamy, loose soil, shade, and a heavy mulching of wood leaves or similar covering in autumn, which is left on during the next summer to decay and conserve moisture. Ginseng will thrive in almost any rich garden soil if given shade, either natural or artificial, moisture and constant cultivation.

This is the secret of growing ginseng, and although there are many ways of applying the above principles, still if these points are kept in view there can be but little doubt of success; where the conditions do not exist naturally, they can usually be artificially furnished.

For those who intend planting on a large scale, the following suggestions will aid in making a proper start. First, where possible, select a cool, moist piece of ground, preferably level or nearly so, and where there is natural loam, or where the ground is loose and rich. Well rotted stable manure is good for bringing up garden soil to a proper condition, as is also leaf mold, rotted sods, etc. The ground must be fertile. Sandy soil, if rich and moist, is not objectionable, but rather desirable; but in any case, the drainage must be good.

Propagation from Seed.—There are about 8,000 ginseng seeds to the pound. As it often takes eighteen months for the seeds to germinate if allowed to become dry, and as in this length of time there is danger of losing them from the depredations of field mice and ground squirrels, it is therefore wiser to stratify them for about twelve months and then plant out in beds. If, however, seeds are properly gathered and planted out before becoming dry, there is no reason why they should not sprout the following spring. To stratify the seeds, place a layer, say 3 inches deep, of moist sand or leaf mold and loam over the bottom of a strong,

*Copyrighted. Republished by special permission of the author.

tight box, then scatter a thin layer of seeds over this and cover with an inch of the sand or loam.

After filling the box in this manner, see that there are several inches of the covering over the last layer of seed to prevent drying out. A wire netting of fine mesh should be securely tacked over all to prevent the attacks of mice. The whole should be kept in a moist cellar, or may be left out of doors if the box is plunged level to the top in soil.

In planting the seeds, they should be scattered evenly and thinly on a prepared bed and covered with an inch or more of fine soil. The planting being done in the fall (twelve months after the seeds are collected and stratified), they should then be covered with leaves and straw, or similar covering, over which brush is laid. In the early spring the brush is removed and lath shade covers substituted.

The beds may be made either 4 or 6 feet wide, and any length, and should always be surrounded by boards firmly nailed to posts, giving a rest for the lath shades. The boards used are of ordinary inch boxing, and should extend 2 feet or more from the ground.

Where 6 feet-wide beds are made, the lath covers are 4 by 6 feet. Ordinary laths are nailed 1 inch apart to 6 feet strips 1 inch thick and two inches wide and then braced. Where the bed is made 4 feet wide, the laths are simply nailed to other laths with clinching nails. The latter size, being lighter, are the more easily handled covers, but the larger beds and shades are the most economical of room and lumber where the planting is on an extended scale. These lath covers are to stay on all summer, to be replaced by mulching and brush in winter. The beds and subsequent treatment after planting are the same for both seeds and plants.

Planting.—After the season's growth, the seedlings should be transplanted into permanent beds in the fall, after the tops have died down. Some prefer to wait till the second autumn, but the roots are more liable to be injured, and it is very important that a good, clean tap-root is preserved, making at maturity a larger and more salable article, that will command the best price.

A planting board is made of $\frac{3}{4}$ -inch white pine, or similar wood, 5 feet 9 inches or 3 feet 9 inches long, and 1 foot wide, to easily fit in the 4-foot and 6-foot beds.

This board is braced by light strips tacked across the ends and middle to prevent warping, and notches 5 inches apart are cut on the edges. A trench is then opened, by using a light spade and lifting the dirt away from the board, the back of the spade being flat against the edge of the board, on which the planter is standing.

The plants are set at the 5-inch intervals, care being taken to see that the roots are in straight, and the crown at least an inch below the surface. Dirt is pulled in with the hand as each plant is set, and after firming the row with the foot, the bed is smoothed off with a fine-toothed rake. The middle of the board is then placed directly over the row, and the planting of the next row is proceeded with. This leaves the plants 5 to 6 inches apart, each row containing 15 plants in a 6-feet-wide bed. To find out the number of plants such a bed will hold, multiply the length of the bed in feet by 30.

Some prefer sowing the seeds singly in drills 2 or 3 inches apart, and at intervals of 1 to 2 inches apart in the row. In this event the same planting board can be used, only the notches on one edge must be cut the required distance apart, the rows being 3 inches or less apart instead of 6 inches, as in the case of the plants. It is thus easy to figure out the area required for a given number of seeds.

The shading in summer may also be accomplished by raising the lath covering on a framework of scantling firmly attached to posts, and high enough to permit of standing under it.

The beds, however, should be boxed in as before noted, and on the approach of winter the sections of lath covering are removed to a barn or other dry place. This makes a rather elaborate structure, but it is really preferable to the beds being covered individually, allowing cultivation without handling of the shades. Each spring the beds should receive a fine dressing of very rich loam, which is to be scattered over the old leaf mulching. But all the weeds must be pulled out as they appear, and the

spaces between the rows kept stirred up loose with a small hoe or weeder, great care being taken not to strike and injure the roots or tops.

As the seed ripens it should be collected immediately and stratified as before mentioned, or planted out.

Ginseng can be grown under the shade of trees, but this method is not so satisfactory as the cultivation under artificial covering, and on a large scale is not recommended.

In any event, where possible, the ginseng garden should be planted on ground sheltered from strong, prevailing winds.

Preparing for Market.—After the roots are of sufficient size, that is, from 3 to 5 ounces or more in weight, green, dig very carefully, without bruising or breaking, and after washing perfectly clean in fresh water, place on wooden trays or boards to dry—in the sun where possible. Or the roots may be spread evenly and thinly on trays in a warm room. Too rapid drying is not desirable, and where the quantity to be dried is considerable it would pay to buy a small evaporator. It takes about three pounds of green root to make one pound of perfectly dry marketable article, and all extra care taken in its preparation for the market will be well repaid in the increased price obtained. Sell only to reliable dealers who are willing to pay a proper price for an unlimited amount of the product.

The small fibrous rootlets should be cleaned off during the drying process, as a better price is commanded for large smooth roots. After making sure that the roots are perfectly dry, cool off, and weigh at once in paper sacks of one to two pounds, finally packing in clean boxes of ten to twenty-five sacks each. If it is undesirable to dispose of the dried root at once, it would be best to pack in air-tight glass jars or seal in tins, to prevent damage caused by the boring beetle, which is said to attack it.

The roots, also, should be carefully graded according to size, appearance and weight, and marked accordingly on the outside of the packages before shipping.

The best markets are at New York, Cincinnati and San Francisco, from whence almost the entire product is shipped to China, whose people value it as a panacea for nearly all human ills.

With these instructions followed, success should be made of growing Ginseng, and the element of profit is so large as to be rather startling.

The greatest discouragement in growing Ginseng is the depredations of thieves. The root is so extremely valuable that if the location of a plantation is generally known, the crop would stand but little chance of maturing without at least a part being stolen.

Unless secrecy can be maintained it will pay, as a rule, to erect a high solid wall with barbed wire on top. An electric wire can be arranged around the plantation at little cost, which will ring a bell or bells located where desired if an entry be forced.

Any very valuable article finds ready thieves if unprotected—Ginseng being no exception to the rule—but it is amply worth any expense incurred in protecting it.

To conclude, it will be observed that with ordinary attention to details Ginseng can be grown with large and sure profits.

It seems probable that Ginseng can be grown in every State of the Union if the required conditions naturally exist, or are produced artificially, as it is found wild in perhaps thirty States.

Ginseng at one time was abundant in Ontario and Quebec, but has now become rather scarce, as it has been so energetically hunted by native "sang" diggers. This is the reason, also, for its present rarity in the United States.

PHARMACY IN ROUMANIA.

THERE is probably no country in Europe where civilization has advanced so rapidly during the last generation as in Roumania. This, like all the Balkan States, was long under Turkish rule, but since (in 1877) she has shaken off the Ottoman yoke and prospered under King Carol I., her progress has been wonderful. This change is especially remarkable in Bucharest, the capital city. The traveler by the Orient Express who alights here, whether from Paris, Vienna or Buda Pesth, will not fail to be struck by the handsome streets and buildings of this outpost of Western civilization in Oriental Europe. But we may refer those interested in general details to the charming description which the Queen of Roumania (Carmen Sylva) has written of her go-ahead little metropolis, and pass on to the special object of our remarks.

Roumanian Pharmacy

is regulated by the "Sanitary Law" of 1893. To practice pharmacy one must either graduate at the Bucharest University or present an approved foreign university diploma. In this latter case an examination is exacted, the jury being composed of a member of the Superior Sanitary Committee, a member of the Board of Pharmacy and three professors of the School of Pharmacy. The examination fee is \$50, and, if successful, the candidate's foreign diploma is endorsed by the Minister of the Interior. The number of pharmacies being limited by law, the possession of a diploma does not imply the right to keep open shop.

But many of the existing Roumanian pharmacies are still held by foreigners of Saxon or Austro-Hungarian origin. In a great number of cases the authorization to open these pharmacies was granted by the princes who reigned over Roumania previous to 1850, and the proprietors have now all taken out letters of naturalization, as required by law.

But since 1870 no pharmacy concession is granted without examination before a special jury.

Pharmaceutical Education.

like medical and veterinary studies, was commenced in Roumania in 1853, when a doctor of French origin, C. A. Davilla, and Dr. Nicholas Crezulescou, a Roumanian, organized a medical school on military lines. In 1870 this school was transformed into a Faculty of Medicine, and the School of Pharmacy was attached to this establishment, the veterinary school becoming an independent institution. The curriculum at the Pharmacy School formerly consisted of two years' study of (first year) physics, zoology, botany, mineral chemistry, qualitative analytical chemistry; (second year) organic chemistry and analysis, pharmacology and materia medica. A strong agitation was set on foot four years ago for the separation of

the School of Pharmacy from the Faculty of Medicine and its reorganization as an independent Faculty of Pharmacy. Messrs A. Altan, A. Volanschi and D. Nicolau, all pharmacists at Bucharest, vigorously took up the matter in their periodical, "The Pharmaceutical Bulletin." When the question of the reorganization of higher education was laid before the Roumanian Parliament recently these three gentlemen drew up a project for revising the pharmaceutical curriculum. They gained some of their points, but the question of separation from

the Faculty of Medicine was shelved. The school is now called the Faculty of Pharmaceutical Sciences, but remains attached to the medical establishment. The following classes are partly held at the Faculties of Medicine and Science, but the majority are at the Faculty of Pharmacy.

First year—Botany, Zoology, Mineralogy, Mineral Chemistry, Physics and Analytical Chemistry.

Second year—Organic Chemistry and Analysis, Pharmacology and Pharmacognosy, Galenical Pharmacy, Hygiene and Sanitary Laws.

Third year—Chemical and Galenical Pharmacy, Notes on the Roumanian Pharmacopœia, Chemistry of Food-stuffs, Bacteriology and Toxicology.

Each year's programme includes practical laboratory work.

The Chemical Institute.

shown in our illustration, was founded in 1863 by Dr. A. Bernath de Lendeway, the present director, who was the originator of instruction in chemical analysis in Roumania, and it was frequented by the medical, pharmaceutical and science students. It now depends on the Minister of the Interior. Besides the director, there are three first class and two second class chemists and various assistants.

The Superior Sanitary Committee

consists of nine doctors, a veterinary surgeon and a pharmacist nominated by the King from a list presented by the Minister of the Interior. This committee, besides its various other functions, supervises the exercise of pharmacy in Roumania, revises the Pharmacopœia, the pharmacy tariffs, etc., etc.

This committee is assisted by a Board of Pharmacy, the members of which, nominated in a similar manner, are four pharmacists and a chemist. The presence of the

A ALTAN.

CHEMICAL INSTITUTE, BUCHAREST UNIVERSITY.

latter seems somewhat unnecessary in a country where thorough chemical tuition is given to pharmacists. It is also thought by pharmacists that the local Board of

DR. BERNATH DE LENDEWAY, Chemical Institute.

LA AURORA PHARMACY, BUCHAREST.

M. ALTAN'S LABORATORY. ANALYTICAL AND GALENICAL.

Health, now authorized to inspect pharmacies, might profitably cede this duty to the Board of Pharmacy, many regrettable discussions and misunderstandings being caused by the incompetence, in pharmaceutical matters, of these local bodies.

The System of Limitation

of the number of pharmacies which prevails in Germany, Russia, etc., also exists in Roumania. The rule is one pharmacy per 5,000 inhabitants in the large cities, one per 3,000 in the smaller towns. The "branch" pharmacies existing in each village which boasts a doctor, belong to the proprietor of a pharmacy in a larger place in the same county and are ceded for a fixed term of years. These "branch" pharmacies are only compelled to have

a certain scheduled list of remedies on hand, the "definitive," or large pharmacies, are obliged to stock all the Pharmacopœia medicaments.

As in all countries where the "limitation" exists, it is a long and difficult process to arrive at the proprietorship of a pharmacy in Roumania. There are at present 184 "definitive" pharmacies and forty "branches," while the number of qualified and unqualified assistants, who can only occupy subordinate positions till a vacancy occurs, is about 450.

The Retailing of Medicaments

is legally preserved to pharmacists, medical men only having the right to supply medicine when more than five kilometres, roughly three miles, from a pharmacy. Raw drugs, poisons and proprietary medicines can only legally be sold by the "druggists" to pharmacists and to those who employ chemicals for manufacturing processes, etc. But this legal restriction is not invariably observed, nor do the authorities show the necessary strictness in punishing these infringements of the law. A libel action was brought against a pharmacy journal last year by a druggist for exposing the slack manner in which the law is administered, but the journalist proved his facts and obtained a verdict with \$90 damages. Another example of

the difference between the text of the law and its application is

The Roumanian Pharmacopœia.

Legally an annual supplement should be edited and published, but though the work dates from 1892, not a single supplement has yet been issued.

The Tariff of Prices of Medicaments

is drawn up by the Board of Pharmacy, approved by the Superior Sanitary Council and enforced by the Government. As a matter of fact, the authorities, not being legally bound in any way to take into account the recommendations either of the council or the board, act as they please. The tariff is accordingly kept as low as possible in the public interest, quite irrespective of the profits of the unhappy pharmacist. Added to this, as

ROUMANIAN PHARMACY EXHIBIT, PARIS EXPOSITION.

CENTRAL CHEMICAL INSTITUTE. PLATINUM VESSELS AND APPARATUS.

the difference between the text of the law and its application is

no chemical works exist in Roumania, the pharmacists have to import a large and expensive stock. This, together with the encroachments of the medical profession, is the Roumanian pharmacist's great difficulty. It is therefore evident that even in countries where the number of offices is limited, the pharmacists, like Mr. Gilbert's policeman, find their "lot is not a happy one."

Yet here, as elsewhere, they are a patient, hard-working and law-abiding class. The punishments for the violation of the pharmaceutical regulations vary from a \$20 fine to a sum of \$400 and the temporary closing of the drug store. Yet in the annals of the Roumanian courts for the last quarter of a century we find but four sentences pronounced against pharmacists, three being the minimum fine of \$20 and the other a three months' closing of the premises.

THE COUNTRY DRUGGIST TALKS.

The sheet-iron-stove-forum of the country drug store, where the town officials, doctor and others of the village gossips caucus nightly to develop new ideas in the management of municipal affairs and the next horse sale, and, incidentally, where arguments on topics of great moment are gushed forth with an occasional punctuation of tobacco juice, has no counterpart in the city store. But for all that, there is a fine line of comparison to be drawn between the keeper of the "wayback" shop and his city brother, which offers excellent justification for the oft-advanced "Resolved, that the retail druggist is an overworked public servant." Without any debate on the subject, simply viewing it in a lay sense, the following recital to a party of city retailers who had gathered for an "off evening" of pleasure in a quiet place outside their several stores, is entertaining.

It was the Up-State member of the party who was talking; the proprietor of the typical country store. "I've heard a great deal about you fellows here in the city," he said, "and I've read more in the drug journals. You all have an axe to grind and you keep at it constantly. You keep looking around the inside of your heads for ideas to benefit your business, then when you get one you sit in your stores and work it out on an elaborate plan. Just as you're getting pretty thoroughly convinced that you've found a great secret which will benefit your business and help other fellows to strengthen theirs, some one comes in for a two cent stamp, and you so far forget yourself that you give him change for a dollar for the fifty cent piece he gave you. Then your ideas vanish like mist before sunshine, and you take up a new tack vowing you are in the hardest kind of a business on earth and are the worst abused mortal to boot."

He was interrupted here by no less than four of his friends who wanted to add grievances to those stated. One said he should have mentioned the person who wishes to consult the directory; another had the telephone argument ringing in his ears; the third saw through the smoke of his own cigar the large stock of unsold cigars, cigarettes and tobacco in his stock, and the fourth wanted to talk about the stationery department of the drug store. Each was given his turn; each voiced his tale of woe, then all agreed they were afflicted likewise, but the Up-State man waved all away with a sweep of his hands.

"These are mere trifles," he said. "Really haven't you some substantial grounds for complaints? It's natural that a drug store should have everything you've mentioned. Why, to begin with, it's always a difficult matter to get postage stamps. The drug store man knows this, the public knows it; one and one are two; see my point? The drug man wants the public, and if he provides suitable means to get them he'll succeed. Now suppose a lady customer comes in for a stamp and she discovers she wants to drop a line to a friend but hasn't a scrap of paper. If you've a nice little package to show her, nine times out of ten she'll buy.

"We must have such combinations in our business, for if we didn't people wouldn't come to see us as often as we'd like. Now then, let's have a man come in. As sure as he sees the cigar stand he'll walk over there and ask for a stamp. Give it to him over the cigar case and he'll buy a cigar to pay you for the trouble. Don't be a mummy. Talk to him; maybe you'll sell him some

school supplies for his children or a pad of paper for his desk.

"But that's not what I want to get at; I want to show you fellows that you aren't half so bad off as you think you are. I wonder what you'd think if a customer came in and asked you for a 8 x 14 window light, with enough putty and points to put it in, eh? Well, that's part of my business, and if a little boy comes in my store and asks for a light of glass $9\frac{1}{4}$ x $13\frac{1}{2}$ I cut it for him, give him putty and points and maybe a couple of cents worth of black snuff, scented, go with the sale. Why you fellows haven't any kick coming at all. Wait till you put in wall paper, paints and oils and a few other things, then you'll understand that the retail drug store is more of a department store than you thought it was. I spent a half day with a woman customer recently picking out paper to harmonize with a green ingrain carpet on a bedroom floor. Then in the spring, when everybody's housecleaning and painting, they want paints. We mix all our own and send them around to the homes without extra charge. Occasionally one of our farmer friends comes to town to see us, and maybe we sell him \$25 worth of garden seeds, for we have everything from an early June pea to an "Our Own" brand pumpkin.

"Another point—some people like spring water to drink. We have a company supply us with gallon bottles which we sell six in a case for 30 cents, delivered.

"Oftentimes we cash checks for accommodation, and then maybe the person will spend a dollar or two for valentines, of which we have a full assortment, or a knife, razor or something in the way of an ornament, etc., from our endless variety."

Some of the crowd began to get uneasy, and it was suggested that it was time to go home, but the Up-State man was not to be stopped. "Say," he babbled, "I haven't told you about our candy counter yet. Why, we have the nicest assortment to be obtained anywhere in town. Oh, yes, I want you to know also that we always keep a 100-gallon tank of kerosene oil to supply the one and five-gallon orders of our customers. Sometimes we furnish cans and deliver the goods. However, this is a small feature of our business.

"From our association with drugs we understand the properties of good baking powder, and we make it once or twice a week to supply the demand, and I have known friends of mine in the business to sell tea and coffee."

This was enough to start the crowd, and they began to edge toward the door. The Up-State man lingered, and was overheard to remark to the man cleaning glasses as he followed after his friends: "Say, these fellows think they've got a kick; maybe they have, but it isn't a marker to the one I've got. What d'ye think?"

A DANGEROUS FAKE PRESCRIPTION.

The following prescription has been given widespread circulation in the daily papers as a wonderful cure for consumption, discovered by Prof. Hoff, of Vienna:

Acid, arsen.	 1
Acid, cinnamic	 3
Kal. carb. dep.	 2
Aqua distill.	 5
Make a perfect solution.	
Add	
Cognac	 2.5

Mix.

Sig.—Take after meals, according to instructions of physician.

Pharmaceutically, this prescription will not produce a clear solution with the amount of water present, nor is there sufficient potassium carbonate to effect solution of the acids. Medicinally, the compound is just as bad, worse, because it is distinctly dangerous.

BILL TO ESTABLISH THE METRIC SYSTEM.

The House Committee on Coinage, Weights and Measures has decided unanimously to report favorably the Shafroth bill to establish the Metric system in the United States. The bill substitutes the Metric system for the American system of weights and measures. The time for the adoption of the new system is January 1, 1903. The report will call attention to the fact that within the past few weeks Russia has adopted the metric system, leaving the United States and Great Britain as the only civilized countries adhering to the old system.

AN IMPROVED PROCESS FOR THE PREPARATION OF TINCTURA OPII DEODORATI.*

By FREDERICK T. GORDON.

Although furnishing a most satisfactory product, provided that there has been skill and care in manipulation, the present U. S. P. process for the preparation of Tinct. Opii Deodorati is far from being satisfactory itself to the working pharmacist. The U. S. P. process is long and tedious, involves the use of an expensive and highly inflammable solvent and calls for a high degree of skill and care to turn out a really creditable product. Any one who has ever tried the difficult task of pouring off the ethereal layer from the aqueous one and separating all the ether from the finished tincture will appreciate the allusion to care and skill. Then there is the ever-present danger of fire from the inflammability of the ether, a danger not imaginary, as frequent accounts of drug store fires and explosions from this cause will show, and the item of the cost of the ether, even if much of it is saved and worked up into liniments, as is done in many cases. For these reasons and others with which I will not weary you, there has long been a desire on the part of pharmacists for a practical process for making the deodorized tincture of opium that will stand the test of laboratory manipulation.

Various processes for the tincture and substitutes for ether have been suggested; of these, probably the most practical is the employment of a "denarcotized" opium, from which the undesirable principles have been removed before its use in making the tincture. However, the effective and economically practical denarcotization of opium is rather beyond the resources of the working pharmacist on a small scale, and besides there is good ground for dissatisfaction with the product made from this article. What the worker wants is a process cheap and effective and one that will put him on an equality with the large manufacturer, that is, unless the making of galenical preparations is to become a lost art in pharmacy.

Probably because of the unsatisfactory processes for its manufacture and its greater cost, the deodorized tincture of opium, although an ideal preparation of the drug from a therapeutic standpoint, has never gained the general use that its merits would deserve. Laudanum, a cheaper and easier made preparation, still holds full sway and is used in places where the other is used in drams. We thus have the strange spectacle of two preparations of the same drug having identical strength of active principle, of which the least desirable is the most prescribed. Then, too, this is an unnecessary multiplication of representatives of the drug, which is entirely foreign to the tendency of the age, which demands a simplicity of standards. I venture to hold the hope that by suggesting a method cheap and easy of application for the making of the better preparation, this may to a greater extent supplant the inferior, and I would earnestly ask my hearers to give this point of the subject their thoughtful consideration, that some good may come from the thought.

Lest I be accused of plagiarism, I wish to state that I do not claim entire originality for the process I am about to suggest; as I understand it, the employment of paraffin for the deodorizing of opium was suggested many years ago, but the idea was never taken up, as far as I can learn, and was forgotten. A month or so ago the idea was mentioned in conversation by Mr. J. E. Elfreth, of this city, as being possibly of value and practical; its advantages seemed so great at once to both of us that we determined to work it out practically. To him belongs the credit of reviving an old and forgotten idea; my share was in the testing and elaborating of a practical working process. I may state that the assays, etc., were also a part of my work.

The process I have the honor to suggest as a substi-

tute for the present U. S. P. method is as follows, the formula being for 1,000 Cc. of finished product:

"Take of granulated opium, of U. S. P. standard, 100 grammes; put this in a suitable bottle and add 300 Cc. of boiling water. Macerate for from 24 to 48 hours, according to the fineness of the opium, with frequent agitation; then transfer the drug and menstruum into a percolator, and percolate in the usual manner with tepid water until the drug is thoroughly exhausted (i. e., until a drop of the percolate is entirely free from taste and gives only a slight cloudiness with Mayer's reagent), reserving the first 300 Cc. of percolate and collecting the dilute percolate separately. Evaporate at a gentle heat the dilute percolate to 200 Cc., mix this with the concentrated portion and bring both to a temperature of about 180° F. in a suitable evaporating dish. Now add 150 grammes of paraffin, U. S. P., having a melting point of 120° approximately. In small pieces, and when this has melted and become fluid, agitate the two liquids together thoroughly for five or ten minutes until the paraffin no longer seems to darken in color. Set the dish aside until the paraffin has cooled and hardened, break the crust and pour off the deodorized aqueous solution of opium from it, washing out the dish and the under side of the paraffin crust with a small quantity of water to remove adhering tincture. Filter the solution of opium through a good filter, make up to 800 Cc. with cold water added through the filter, add 200 Cc. alcohol, and make up to 1,000 Cc. with sufficient water to balance the loss from shrinkage of the mixture of alcohol and water."

The resulting product is a clear, deep red-brown tincture, bright and transparent, entirely free from odor of opium and possessing a clean, bitter taste slightly suggestive of that drug. This tincture is permanent, does not precipitate on standing and fully represents the desirable qualities of opium. The advantage of the process just stated as a practical working one will be apparent at once to the pharmacist; instead of having to deal with a highly volatile and inflammable solvent that must be separated from the aqueous layer by troublesome decantation, he simply has to pour off the deodorized percolate from a solid body; indeed, the veriest tyro cannot fail of success along these lines.

One or two questions must be answered before this method can be granted recognition. The first of these, "does the paraffin thoroughly remove the narcotic and odorous principles from the opium percolate?" is answered by the appearance, odor and taste of the finished product decidedly in the affirmative. To test this further, some of the paraffin used in making the tincture was

N
10

melted and shaken up with warm sulphuric acid; this took on a dark color, had the nauseous taste and smell of crude opium and on evaporation gave a residue that answered to the tests mentioned for narcotine. The second question, "does the paraffin dissolve and remove any of the morphine from the percolate?" is very important; this can be answered positively in the negative. First, some of the paraffin was carefully washed to remove possibly adherent traces of drug, melted and shaken up with $\frac{N}{10}$ sulphuric acid, and this was tested for morphine.

To these tests there was shown not the slightest trace of morphine, even when the residue was treated so as to obtain any possible alkaloid free from foreign matters. Pure meconate of morphine was then warmed in a test-tube with fresh paraffin for an hour or more, the paraffin tested to see if any had dissolved and the meconate washed free from paraffin and weighed again. To this test not the slightest indication of solubility was afforded, the meconate of morphine having been chosen as being very nearly the same salt of morphine as is probably present in opium.

To reach conclusive results, assays of various samples of opium and tinctures made from them were carried out. From a granulated opium bought from a jobbing house, with a guaranteed assay of 15.20 per cent. morphine, a tincture was made that assayed 15 per cent. morphine. In my hands this opium assayed 15.10 per cent., 1-10 per cent. less than given. A gum opium (dried) was next used, assaying 13.45 per cent. morphine; this gave a tincture perfect in all respects, yielding 13.30 per cent. morphine. Several other samples of the drug were used with like results, the assay in all cases agreeing in showing the finished tincture to have lost about 1-5 of 1 per cent. morphine in the process of manufacture. This may be, and is, likely due to difficulties in the complete exhaustion of the opium, as it was conclusively shown

*A paper read at a pharmaceutical meeting of the Philadelphia College of Pharmacy. Reprinted from Amer. Jour. Phar.

that none of the morphine was lost in the paraffin. It seems to me that a process that will give these results leaves little to be desired. I might state that these assays were in every case made in duplicate and by different methods, they agreeing to all practical intent. The morphine yielded in the assay of the tincture was remarkably light in color even before washing, and seemed very free from contaminations.

The relative cost of the two methods, based on the price of materials lately quoted, is \$1.40 per 1,000 Cc. for the U. S. P. tincture to \$1.05 for the "paraffin tincture," a saving of 35 cents, due chiefly to the saving of the cost of the ether. This, with the decided advantage of easy working, should certainly suggest the adoption of the "paraffin method" as the official U. S. P. process in the 1900 Pharmacopœia, if the same results as I obtained should be reached in the hands of the working pharmacist, and of this I have not the slightest doubt. Furthermore, with an easy and cheap mode of manufacture, we can also consider the question of adopting this preparation as the sole liquid representative of opium, relegating laudanum to the limbo of confections, boluses and such ancient products of pharmaceutical skill. If it should be found necessary to its preservation, the percentage of alcohol could be slightly increased in the new *Tinctura Opii Deodorati*. If I may be permitted, I would respectfully suggest this proposition to pharmacists for general consideration.

A little point arising from working details may be of value to pharmacists. Granulated opium is far superior to powdered opium for making any of its preparations by percolation, its use doing away with many of the troubles of percolating a powdered drug that will gum in spite of the addition of sand, calcium phosphate, etc. Opium in this form can be purchased in the open market, but the pharmacist can easily prepare it for himself by cutting the crude drug into thin slices, drying these thoroughly and grating the crisp slices through a very coarse wire sieve. This, I believe, is the basis of the method of the manufacturers. Of course, an assay must be made of the granulated opium, as the drug will lose much moisture and weight in drying and increase in strength thereby.

BUYING AND OVERBUYING.

It has been truly said that ours is a nation of great producers and great consumers. We make no mistake when we declare that it is a nation of gigantic enterprise. Manufacturing merchandise of every description and in great abundance as we do, no one need suffer because of lack of supply. As buyers we can get more than we need, with a little additional thrown in gratuitously. Big houses and little houses in competition with each other for trade fling out almost innumerable inducements to the retail merchant in matters of price, style, quality and finish, and even tempt him with large datings and discounts. Occasionally rebates are offered. Able and persistent salesmen are sent out whose persuasive powers are so great that the retail merchant must possess unusual strength of mind to avoid falling a victim to their allurements.

The picture is not in the least overdrawn. It indicates the conditions with which every buyer must contend, whether he purchase for a wholesale house, for a department store, or for a store of any other description. The conditions apply with equal force to country merchants and to city merchants.

Everything is made extremely pleasant for the buyer. Accordingly, it is extremely easy to overbuy.

The successful buyer is one who is conversant with his business, and who is likewise a man of resolute character. He is one who keeps close tab on his stock, and who can tell you in a moment just what amount of stock he has on hand of every grade. He is one who studies his trade and the requirements of his customers. As a result, he knows what novelties he can sell and to what extent. He is always in position to regulate his purchase, and thereby keep his stock in proper condition.

He is always wide-awake and well informed on what is being offered in the market. Does he read? Yes. He carefully scans every trade journal that is issued touching the line of goods that he buys, and thereby he obtains new ideas, and very frequently secures most valuable information. In a word, he is a thoroughly posted man.

More failures can be attributed to overbuying than to any other one cause, with perhaps the exception of incompetency and lack of capital. Overbuying is to be avoided only by close application, constant vigilance and all-round information. To disregard possible overstocking is to invite embarrassment. The judicious purchasing of goods, in quantity as well as in kind, is one of the corner stones of success. (F. C. Brunhouse, in *The Spatula*.)

DIFFERENT DRUGGISTS' METHODS.

Unlike most callings, the retail druggist seems to have no set rules to guide him in his daily business routine, and as a result each proprietor has his own system of conducting affairs adjusted to his surroundings and trade. While none of the great number of the druggists of the United States takes pains to publish his particular system of keeping shop, there are times and occasions when matters of this especial interest crop out, casually and otherwise. The meeting room of the local pharmaceutical association is one of the places where innumerable good things concerning pharmacy and some things not so good, come to light.

At a recent gathering of pharmacists, the question of price-cutting was being discussed. One pharmacist, whom his neighbors had persistently classified as an "aggressive cutter," was giving his experience after this fashion: "Years ago I used to be a cut-rate druggist in every phase of the term. Why, I'd rather have sold a customer at a loss than to let him get away. But I don't have that feeling now, and, to tell the truth, I am only a cutter in name. You will question this statement, but I ask you to send some one to my store and learn my prices. I will wager I get just as good prices on my proprietary goods as any of you here. True, I may sell some preparations below the average, but there is method in my seeming madness. I buy in large quantities, and I can afford to sell a little cheaper and still make as much profit as my neighbor who sells at a higher figure. No, I am not a cutter; just called so by those who knew me when I did slash prices. I do business as a cutter, but do not cut."

Another druggist made a business of catering to small trade, and to this end studied the calls of his trade for certain articles. A child coming in his store for 5 cents' worth of castor oil, rhubarb or oil almond received as much consideration as a purchaser of a dollar's worth of goods. "Because," said the druggist, "the 5-cent customers come to me about forty times as often as do the dollar kind. I have specialties which I sell for 5 and 10 cents, and I find the demand constantly growing."

"I try to exercise a certain independence in dealing with my trade," is the way an out of the city druggist opened a discussion on price cutting. "If a customer comes in my store with a prescription, I name the price. If he says it can be purchased at such and such a store for so much less, I always hand it back, telling him to get it filled there. I cannot do it. I do the same with my proprietary articles, and I find I have just as good trade as any other druggist in the city, and at better prices."

Syrup of Terpin

Terpin	2 grams.
Tincture of vanilla.....	1 gram.
Alcohol, 90 per cent.....	30 grams.
Glycerin	67 grams.
Syrup	50 grams.
Honey	50 grams.

(L'Union Pharm.)

Hair Restorer.

Tincture of cantharides.....	7.0 grams.
Tincture of galls.....	7.0 grams.
Essence of musk.....	20 drops.
Carmine	0.5 grams.
Alcohol	28.0 grams.
Rose water	140.0 grams.

EXAMINATION QUESTIONS

NEBRASKA STATE BOARD OF PHARMACY.

THEORETICAL PHARMACY.

1.—In lieu of a question on a pharmaceutical subject for No. 1, you will be rated on the general character of your answers, your writing and orthography. There are at least five typographical errors in this paper; you will be expected to discover them and correctly write the misspelled words on page 1 of your examination book.

2.—Define (a) Botany, (b) Mineralogy, (c) Zoology, (d) Chemistry, (e) Physics.

3.—Define Weights, Measures, Specific Gravity. What is the initial unit of the Metric System? What relationship does Cc. bear to it? What does the gm. represent?

4.—What is an Infusion, a Decoction, a Suppository? What are the official weights of the three kinds of suppositories specified?

5.—(a) What would be the equivalent in avordupois weights of 1450 gms.; the equiv. of 1,000 gms. being 2 lbs. 3 ozs. 119.9 grs.?

(b) What would be the equivalent in apothecaries fluid measure of 1,725 Cc., the equivalent of 1,000 Cc. being 33 fl. ozs. 300.6 m.?

Show your calculations in both (a) and (b).

(c) How many fl. ozs. in 1 pint, Imperial.

6.—(a) What amount of morphine would be contained in 100 grs. P. v. Opil?

(b) 100 Cc. Tr. Opil?

(c) 100 Gm. P. v. Ipec. et Opil?

7.—R Aloe Purificata 13.00

Mastiche 4.00

Rosae Gallicae 3.00

Aqua q. s.

M. ft. Pilulae No C.

Re-write above prescription in English terms and troy weights.

8.—Desiring to make 1 gal. of 60 per cent. alcohol from 75 per cent. alcohol; how much water would be required (not taking into account the reduction in volume in mixing)?

9.—Comp. Ext. Colocynth 80 gm.

Mild Mercurus Chloride 60 gm.

Ext. of Jalap. 30 gm.

Gamboge 15 gm.

Water, a sufficient quantity to make 1,000 pills.

Write the formula (metric) for 30 of above pills and give the name of the pill.

10.—(a) What is a deliquescent salt? Name one.

(b) What is an efflorescent salt? Name one.

(c) What is meant by a number 20 powder?

TOXICOLOGY.

1.—(a) What is Toxicology? (b) What is a poison?

2.—(a) How does a poison differ from a corrosive? (b) Give an example of each.

3.—(a) Describe completely the treatment and antidote for poisoning by Morphine. (b) Aconitum.

4.—Give the maximum safe dose for an adult of each of the following: (a) Tinctura Opil, (b) Ergota, (c) Tinctura Aconiti, (d) Hydrargyri Chloridum Mite, (e) Hydrargyri Chloridum Corrosivum.

5.—Give antidote and treatment for an overdose of: (a) Cannabis Indica, (b) Strychnina.

6.—(a) Name five poisons and their antidotes. (b) Name five corrosives and their antidotes.

7.—Describe the toxic effect of each of the following: (a) Chloral, (b) Morphine Sulphas, (c) Pilocarpus.

8.—What would be the antidotes and general treatment for poisoning by (a) Phosphorus and its compounds, (b) Arsenic and its compounds.

9.—(a) Do you use a poison register? (b) State as nearly as you can the law relating to poisons.

10.—(a) Give general treatment in case of poisons by unknown substances, and state what you would give when an emetic is indicated, (b) Name five emetics.

MATERIA MEDICA.

1.—Give the origin, official name and parts used: Isinglass, Cochineal, Spermacti, Spanish Fly, Ox Gall.

2.—Give origin, official name and official preparations of: Glycerine, Lard, Pepsin, Suet, Cod Liver Oil.

3.—Give official names and tell what parts of the following plants are used: Indian Turnip, Nux Vomica, Castor Oil.

4.—Describe: Roots, Rhizoma, Tubers, Barks, Leaves.

5.—Give Habitat, botanical origin and parts of plant used: Broom, Pulsatilla, Saffron, Cotton, Hops.

6.—Describe Ergot. What is its habitat, medicinal properties and dose.

7.—What is: Manna, Asafoetida, Lycopodium, Mace, Lupulin.

8.—Give origin, habitat, description of Ipecac.

9.—From what are the following prepared: Syrupus Fuscus, Mel, Stryax, Flx Liquida, Camphora.

10.—Identify drugs marked 1 to 10.

CHEMISTRY.

1.—Define an atom. A molecule. Can both exist in a free state? What is valence? When is an element divalent?

2.—Give the theory of Atomic weight. Which element is taken as the standard? How many atoms does a molecule contain?

3.—Chemically, how are acids distinguished from other substances? Into what two classes are they divided? Give an example of each class.

4.—What elements are termed the Halogens? When combined with Hydrogen what do they form?

5.—Complete the following equations:

6.—Mercury. Give symbol, atomic weight, equivalence. Give chemical symbols for Mercurous and Mercuric Chlorides. Give common names.

7.—Give chemical formula for Ethyl and Methyl Alcohols and give common name of each.

8.—The at. wt. of C is 12, of H-1, of N-14, of O-16, and of S-32. The chem. formula of Quinine Sulphate is $(\text{C}_{20}\text{H}_{24}\text{N}_2\text{O}_5)_2\text{H}_2\text{SO}_4\text{H}_2\text{O}$. What is the Molec. wt. of Quinine Sulphate? Show your calculations.

9.—When a Hydroxide is combined with a fixed oil, what is formed?

10.—If you should find an unlabeled package which you thought was Corrosive Sublimate, how would you verify your supposition?

BRITISH PHARMACEUTICAL NEWS.

London, Nov. 23.

Irish Magistrates and the Pharmacy Act.

The magistrates at Tullamore, Ireland, have gone dead in the face of previous decisions both in Great Britain and in Ireland, which have adjudged that the unqualified assistant who sells a poison is liable to a fine, and on November 17 they dismissed a case, holding that the employer and not the assistant should have been proceeded against.

The British Pharmaceutical Conference.—The Local Committee who arranged the social programme for the visit of the British Pharmaceutical Conference to London, last summer, announce that the receipts, including subscriptions, just balance with the expenditures and that thus there is neither deficit to be made up nor excess to dispose of.

The Chemists' Assistants' Union has drawn up a scale of remuneration which it considers is the minimum which ought to be accepted: For unqualified men, \$200 annually indoors, and \$500 outdoors, and for qualified men, \$400 and \$750 respectively. This, and the fact that the Union offers to interfere between employer and assistant in the matter of hours of labor and in certain cases recommend the assistant to leave his employer, seems very much like trade unionism.

The Chemists' Defence Association.—Mr. Glyn Jones is just now very active on behalf of the Proprietary Articles Trade Association and the Chemists' Defence Association. He is attending a large number of meetings in Scotland and the north of England and at those which have as yet been held resolutions in favor of the two associations were passed.

An Advertisement is a Warranty.—In an action brought by a firm of electric belt makers against a man who had bought one of their belts but had not paid for it, the judge of the Westminster County Court held, on November 21, that an advertiser was bound to fulfil the promises of his advertisements and as the defendant said that the belt made him worse instead of curing him, as the advertisement held out, Judge Lumley Smith gave judgment for the defendant.

Imprisonment as an Alternative to a Fine.—The Linlithgow sheriff has fined a youth named Gardner \$16 for illegally selling opium, a noticeable point in connection being that, in default of payment, a term of imprisonment is imposed. This is, I believe, the first occasion on which prison has been adjudged as an alternative to a fine under the Pharmacy Act, and it is doubtful if the sheriff has the right to impose it.

An Insane Chemist.—Samuel Wyatt, a chemist and druggist, who shot at and seriously wounded his father at Longford last July, has been pronounced insane and will be confined in a lunatic asylum during the Queen's pleasure.

Metargon is a Compound.—According to Professor Ramsay and Dr. Morris Travers, who communicated the results of their experiments to a meeting of the Royal Society on November 15, Metargon is not an element, the points of difference in its spectrum from that of argon

being due to contamination with a volatile carbon compound.

British Boards of Examiners.—At the November Council Meeting of the Pharmaceutical Society of Great Britain, the Boards of Examiners were appointed. There were three changes in the London board, all the new appointments, however, being of gentlemen who had previously served. In the Edinburgh list Mr. David Gilmour, of Dunfermline, the brother of Mr. William Gilmour, a former examiner, and Prof. F. Orpen Bower, who succeeds Prof. Bayley Balfour, of Glasgow University, are the new members of the board.

Company Matters.—Boots (Eastern), Limited, a company which has a large number (eighty-six) of chemist shops in England, has had a very successful year, the net profits amount to \$97,500 and the holders of ordinary shares will receive 12 per cent.

Magor's, Limited, a Birmingham company owning a number (fourteen) of chemist's shops which were acquired from a local pharmacist named Magor, has been having a disastrous time, the loss for the year ending March 31 amounting to no less than \$26,000.

Lewis & Burrows, Limited, a company owning twenty-two shops in London and district, made a profit for one year ending September 30 of \$35,350, and a dividend of 6 per cent. will be paid.

LITHIUM BICARBONATE.

By LYMAN F. KEBLER.

For some time past repeated inquiries have come for lithium bicarbonate, and certain manufacturers are supplying an article which they call by this name. Theoretically it is possible for this chemical to exist, but thus far, so far as the writer knows, it has never been prepared, except in solution. Being anxious to know whether some one had really succeeded in preparing lithium bicarbonate, the writer secured a sample and made a careful analysis. It consisted of white crystalline crusts. One part of the finely powdered chemical required 75 parts of distilled water, at 15° C., for solution. The solution was alkaline to litmus. On heating a given weight to 200° C. for some time there was a loss of 0.29 per cent.; farther heating to fusion increased the loss only slightly. On intimately mixing one part of the finely powdered article with twice its weight of pure powdered ammonium sulphate and igniting there was left lithium sulphate. By this process the article contained 98.39 per cent. of lithium carbonate. This method includes as lithium the inorganic incidental impurities of which traces are present.

By the acidimetric system the sample contains 97.97 per cent. of lithium carbonate. By estimating the lithium as lithium phosphate the result shows that the article contains 18.42 per cent. of lithium, which corresponds to 97.39 per cent. of lithium carbonate.

Lithium carbonate contains 18.918 per cent. of lithium.

Lithium bicarbonate contains 10.294 per cent. of lithium.

Lithium carbonate requires about 75 parts of water at 15° C. for solution, but when it is suspended in water and a current of carbon dioxide introduced until saturation results 20 parts of such water will dissolve one part of the chemical. It is generally believed that the increased solubility is due to the formation of lithium bicarbonate. On allowing such a solution to evaporate spontaneously or even with the application of a small amount of heat, there will be formed prismatic crystals or crystalline crusts, but these crystals have never yet proved, on analysis, to be lithium bicarbonate, but always the normal salt. In fact, this procedure is usually employed for the purpose of preparing pure lithium carbonate.

From the above results and our general knowledge there is only one deduction, viz., that the article supplied in this case for lithium bicarbonate is nothing but crystallized lithium carbonate, and in all probability this is the only chemical that has ever been supplied for lithium bicarbonate. (Am. Jour. Pharm.)

PHARMACY.

SYNTHETIC INDIGO.—Dr. Brunck, the principal managing director of the Badische Anilin und Soda Fabrik, delivered a lecture on the manufacture of indigo, and Professor Adolph von Baeyer one on the chemistry of indigo, at the opening of the new premises of the German Chemical Society in Berlin (Br. and Col. Dr.) Dr. Brunck urged the familiar claims of the synthetic product as against the natural substance, and gave some remarkable figures as to the growth in the manufacture of the former. Already about £900,000 had been invested in the indigo department and laboratories of the Badische Company, and it is calculated that the quantity of indigo produced annually in Ludwigshafen would require the cultivation of more than 100,000 hectares, that is, a quarter of a million of acres, of land in India. In July, 1897, the company built factories sufficient to supply the demand of Germany for indigo, and these were so planned as to fit it with a larger scheme if they proved successful. Dr. Brunck referred to the processes for the manufacture of indigo, based upon the researches of Adolph von Baeyer, and starting from toluene. Such methods are of comparatively small importance, because the quantity of toluene available for use as raw material is limited; it is calculated that the total quantity of toluene at present produced would only suffice for the manufacture of about one-fourth of the quantity of indigo used annually, and the whole of it is actually required for other purposes. The circumstances are different with reference to the manufacture of indigo as practised by the Badische Anilin und Soda Fabrik. The process employed (Huemann's) uses, as its initial material, naphthalene, a product which is available in practically unlimited quantities. This body is oxidized by treatment with highly concentrated sulphuric acid in order to obtain phthalic acid. The next process is the conversion of the phthalic anhydride into anthranilic acid. This is combined with chlor-acetic acid and the condensation product treated with caustic alkali, upon oxidation with the air, yields indigo. This process, in which the sulphuric acid is reduced to sulphur dioxide, is dependent for its commercial success upon the possibility of cheaply regenerating the sulphur dioxide to obtain once more highly concentrated sulphuric acid. For this purpose the catalytic process of the Badische Company is employed. In the manufacture of phthalic anhydride for the production of indigo in this way between 35,000 and 40,000 tons of sulphur dioxide are produced annually and reconverted into sulphuric anhydride and sulphuric acid. The Badische Company, with their entire output, now takes rank as the largest manufacturers of sulphuric acid in the world. For the conversion of phthalic anhydride into anthranilic acid large quantities of chlorine are required, and chlorine is again needed for the production of the chlor-acetic acid, while for the melting operation to produce an indigo body a caustic alkali is requisite. The problem, therefore, is how to obtain this chlorine and caustic alkali most advantageously. For this purpose an electrolytic process has been adopted, but here there was the further difficulty that the chlorine obtained was not sufficiently pure. Hence another invention by a chemist of the firm was brought into play, and the chlorine is purified by liquefaction, its manipulation being largely carried on in the liquid condition. After these preliminary stages comes the actual manufacture of indigo by means of the Huemann process.

CINNAMIC AND ANTHRANILIC ACID.—From a recent decision handed down by the United States General Appraisers in this city the following information concerning the commercial manufacture of these products is taken: Cinnamic acid can be made from benzaldehyde, which is produced by the fermentation of amygdalin of bitter almonds, but owing to the present large demand for it for industrial purposes, it has within recent years been produced almost wholly, as a commercial article, synthetically, from the coal-tar hydrocarbon or product known as toluene or toluol, a much cheaper and more

abundant source, and when so produced is often known in trade as "artificial oil of bitter almonds." It (benzaldehyd) can also be made from a number of other substances, including naphthalene, but not as economically or conveniently as from toluene or toluol. Cinnamic acid can also be made directly from vegetable indigo, and from benzoic acid sublimed from gum benzoin. The commercial supply of the latter is, however, insufficient for the production of any considerable proportion of the benzoic acid now used in the arts, for which reason, and owing to the high cost of gum benzoin, the great body of the benzoic acid used in commerce in recent years has been made from coal-tar products. Synthetic cinnamic acid does not contain prussic acid and is purer and far less expensive than that made from bitter almonds.

The melting point of anthranilic acid (which is sometimes called amido-benzoic acid) is at 145° C., and it dissolves readily in water or alcohol. Its empirical formula is $C_7H_5O_2N$. The usual sources of production of the article, within recent years, are acetyl-orthotoluidine and orthonitrotoluene, both of which are derivatives of toluol or toluene, from coal tar. When it is made from acetyl-orthotoluidine the latter is oxidized, and the resulting acetyl-amido-benzoic acid upon saponification produces anthranilic acid. When anthranilic acid is made from orthonitrotoluene the operations are reversed, the latter body being first oxidized to orthonitrobenzoic acid and this new compound is transformed into anthranilic (or amido-benzoic) acid by reduction. Both articles constitute initial or starting points in the production of artificial indigo by different methods, and are also employed in making dyes, flavoring extracts and perfumery.

INDIA RUBBER is not the product of a single species of tree, but is produced from a variety of trees and plants. Some of these flourish only in a moist soil and atmosphere, while others thrive on a stony soil provided they receive ample though intermittent rainfall. In all cases, however, a tropical or subtropical climate is requisite. Most of the india rubber of South and Central America and India is obtained from trees, but in the islands of the Indian Archipelago the supply is derived chiefly from a gigantic creeper which, in five years, attains a length of 200 feet and is from 20 to 30 inches in circumference, yielding annually from 50 to 60 pounds of caoutchouc. Java, Sumatra, Penang, Singapore and French Indo-China are already large producers of crude india rubber, and its production in the West Indies has been sufficient to indicate the entire practicability of its being made an important industry in Cuba and Porto Rico.

MELTED WOOD.—The following remarkable statement comes from Consul-General Hanauer, of Frankfurt. He says that M. De Gall, Inspector of forests at Lemur, France, has invented a process for melting wood. By means of dry distillation and high pressure, the escape of developing gases is prevented, thereby reducing the wood to a molten condition. After cooling off, the mass assumes the character of coal, yet without showing a trace of the organic structure of that material. The new body is hard, but can be shaped and polished, is impervious to water and acids, and is a perfect electrical non-conductor. If the inventor can make a satisfactory substance of this kind, it will undoubtedly have a considerable future. (Sci. Am.)

POTATO STARCH AS A SOURCE OF DEXTRIN.—In Europe large quantities of potato starch are used for the manufacture of dextrin, or British gum, as it is often called. In the process of manufacture the starch is submitted to a high temperature, preferably in contact with the diluted vapors of nitric acid. The action of the heat, in connection with the slight quantity of nitric acid present, is sufficient to convert the starch into dextrin, in which form it is used for various kinds of mucilage, as, for instance, applied to postage and other stamps, the sealing edge of envelopes, etc. The manufacture of dextrin or gum of this kind is an important branch of the industries connected with starch.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulae and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Kilmer's Swamp Root and Antiphlogistine.—(Subscriber and A. P. B.) We cannot give the formulas for these proprietary preparations.

Elixir Bromidi Comp.—(Xlcor.) We know of no formula under this title. Why do you not try the formula for compound mixture of chloral and potassium bromide of the National Formulary which contains the substances in just the proportions you name, viz., "120 grains each of potassium bromide and chloral hydrate and 1 grain each of extracts of cannabis indica and hyoscyamus to the fluid ounce." In this formula you will note that the resinous extract of cannabis indica is held in suspension by means of tincture of quillaya, as it is practically insoluble in the liquid. If the mixture is filtered the resin will remain on the filter.

Potassium Permanganate with Organic Substances.—(J. W. R.) asks for a method by which the following prescription may be prepared so there will be no precipitation:

Colorless hydrastis	3 ounces.
Potassium permanganate	6 grains.
Extract white pinus.....	1 ounce.
Distilled water, enough to make.....	8 ounces.

No method of compounding can be devised by which this prescription may be put up without causing precipitation. Potassium permanganate is incompatible with both colorless hydrastis and "extract white pinus," the permanganate being decomposed and thrown down with organic matter as a dark brown precipitate. Potassium permanganate should never be prescribed in combinations of this kind.

Registration Under the New York State Pharmacy Law.—(W. H. S.) In farther reply to your query in which you state (this journal, November 29, 1900, page 597):

"I am registered in New York State under the law of '92, having been in business there at that time. I am now out of the State. What action should I take and to whom should I apply to re-register under the new law?"

Sidney Faber, secretary of the present New York City Board of Pharmacy, writes: "As chapter 367 of the Laws of 1897 expressly requires licensees of the former New York City Board of Pharmacy to register before the present Board, it would appear that your correspondent would lose his right to practice pharmacy here, he not having complied with the law of 1897." This is a phase of the present law we unintentionally overlooked in forming the reply to your query. We suggest you place yourself in communication with Mr. Faber at once and he will give you an opportunity to register before the present Board goes out of existence. If you are registered by any of the boards of pharmacy in the State when the new pharmacy law becomes operative (January 1) you can legally practice pharmacy in the district for which you were originally licensed without further registration.

Antipyrin and Spirit of Nitrous Ether.—(Subscriber) asks if a prescription containing antipyrin and spirit of nitrous ether should be dispensed.

Authorities differ somewhat in their opinions of the toxicity of the products formed in this reaction. Scoville, in discussing the subject, says that isonitroso antipyrin, the product which causes the green coloration when antipyrin and spirit of nitrous ether are brought together, "was formerly thought to be poisonous, but is

now considered safe if the mixture is all used up within two weeks. Long standing results in the formation of other and more objectionable bodies." The green color, as stated above, is due to the formation of isonitroso antipyrin $C_{11}H_{11}(NO)N_2O$, and can only occur in the presence of free nitrous acid. Commercial spirit of nitrous ether is almost invariably acid in reaction, or soon becomes so in aqueous solution, when, in the presence of antipyrin, the green color is sure to develop. To prevent this Caspari says an excess of alkali should be added to the mixture and he suggests that it would be well if physicians who wish to prescribe the two substances together in a mixture and wish to prevent the formation of the unsightly color, will add to their prescription some potassium or sodium bicarbonate. The prescriber, after being made acquainted with these possible reactions, should be the one to say whether a given mixture containing antipyrin and spirit of nitrous ether should be dispensed.

Sodium Bisulphite, Hydrochloric Acid and Potassium Permanganate.—(Inquirer) asks "What is the reaction when hydrochloric acid, water and sodium bisulphite are mixed? What gas is given off, and is it injurious to health? What is the reaction when the following solution is added to the foregoing solution: sulphuric acid, water and potassium permanganate?"

In discussing the possible reactions here it will be noticed that the proportions of the various substances to be employed are not given, neither is the method of preparing the two solutions stated. However, when hydrochloric acid is added to a solution of sodium bisulphite in water sulphur dioxide, SO_2 , is evolved, according to the following equation:

The amount of SO_2 evolved depends upon the concentration of the solution. Water at ordinary temperatures takes up between 9 and 10 per cent. of SO_2 , so that in the above solution the amount of sulphur dioxide actually evolved would be that above the amount required to saturate the water in which the sodium bisulphite is dissolved. The Pharmacopœia gives two tests for sodium bisulphite in which hydrochloric acid is employed, the first being an identity test, and the other a test to prove the absence of hyposulphite. In the first test sulphur dioxide is evolved as expressed by the above equation, and may be recognized by its characteristic odor of burning sulphur, and also by its blackening a strip of paper dipped into mercurous nitrate test solution and held over the escaping gas. Consult the Pharmacopœia on these reactions.

The properties of sulphur dioxide are very well known and may be found described in almost any general chemistry or one of the dispensatories. Briefly, sulphur dioxide is a colorless, irrespirable gas, having the odor of burning sulphur and an acid taste. Respired in concentrated form it proves fatal to life; if diluted it causes cough and headache. In the gaseous form it is much used as a disinfectant and bleaching agent, and solutions in water are in common use by brewers and others as antiseptics.

Regarding the addition of the permanganate solution to the first solution much depends upon the presence of SO_2 in the latter at the time when the addition is made. Sulphurous acid and sulphites reduce permanganate by the abstraction of oxygen and are themselves oxidized to sulphuric acid or sulphates, as the case may be. Thus:

We have no information as to the order of mixing the substances in the second solution. By adding sulphuric acid directly to potassium permanganate a reaction indicated by this equation takes place:

If the permanganate be first dissolved in the water and the sulphuric acid then added, the decomposition indicated by the above equation does not at once take place, except in presence of oxidizable substances. If the permanganate solution be added to the first solution after all of the SO_2 is evolved and there be no sulphite present,

no visible reaction will be noticed. If either SO_2 or sodium sulphite be present, then a reaction will take place, the decomposition of the potassium permanganate being indicated by a discharge of the color.

TO STUDENTS OF THE ERA COURSE.

Order of Recitations.

The question is often asked by Era students, "Can I send in my recitations on Part II. before completing the lectures in Part I.?"

Yes, students may answer the lectures in any order they see fit, and may reserve the lectures in Part I. or any other part, until the latter part of their course, if this plan will be of convenience to them.

Postage.

Always include a two-cent stamp when you address the Director upon any subject upon which a reply is desired. Otherwise your question cannot receive attention. The Era Course is an expensive one to conduct, and the postage upon letters to students is a heavy bill of expense.

Graduation.

In order to graduate from the Era Course students must make satisfactory recitations upon 75 per cent. of the lectures for the year and pass a satisfactory examination at the close of the term.

A satisfactory recitation or examination is one receiving a grade of 75 per cent.

J. H. BEAL, Director.

GOVERNMENT COMPETITION IN SERUMS.

If the annual report of the Secretary of Agriculture is to be credited, the United States will continue its encroachment upon the rights of legitimate manufacturers of curative serums, regardless of the protests received from the trade. It is difficult to find any justification for the Government's wilful usurpation of private rights. Here is what the report says:

"The work of preparing serum for treating hog cholera and swine plague has been continued. Inspectors of the Bureau have been engaged in treating a large number of animals in two counties in Iowa, two of the same counties in which work was conducted during the previous year. The results in general, so far as can be determined at the present time, will not justify definite conclusions, but are sufficiently encouraging to justify continued experimentation, including some experiments on entirely new lines.

"The preparation of the large quantities of antitoxic serum necessary to conduct this work in the field has entailed a large amount of routine work in the laboratory, and also at the experiment station, where the animals for supplying the serum have been treated. Full reports are being kept this year, as last, of the herds that are treated. Cultures are taken from the sick animals, and are sent to the laboratory for further tests and identification, and care is taken not only to demonstrate the exact character of the disease so far as possible existing in the animals which are treated in the field, but also to test the quantity and character of the serum used for treatment. Important variations in cultures, cultural products and their bearings which have developed in this work are being carefully studied.

During the past fiscal year 1,076,060 doses of blackleg vaccine have been prepared and distributed among the various States and Territories, as itemized below. The demand for this preventive is steadily increasing, and the summarized reports of 2,000 cattle owners testify to the great efficiency of the preparations in reducing losses from blackleg to a minimum. It is conservatively estimated that the annual loss from this disease when no preventive measures are taken amounts to about \$6,000,000. This estimate is based upon the reported loss of from 10 to 25 per cent. of all young stock in the vast districts of this country where blackleg prevails.

"So far as can be judged at the present time, the loss after vaccination during the past year has been less than one-half of 1 per cent.

"Since the beginning of the distribution of blackleg vaccine in August, 1897, the total number of doses furnished to the cattle raisers of this country amounts to 1,711,900, and the indications are that between 2,000,000 and 2,500,000 doses will be required to supply the demand during the fiscal year ending June 30, 1901.

"The distribution for the year covered by the present report included thirty-seven States and three Territories.

"The biochemical division has made and distributed 10,722 doses of mallein for testing horses for glanders. The greatest part of this was supplied to the War Department, while small amounts were distributed in twelve different States. It has also made and supplied to State authorities 33,400 doses of tuberculin to be used for testing cattle for tuberculosis."

NEWS AND TRADE DEPARTMENT.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

Li Hung Chang has informed General Chaffee that he and all the people of the Province of Chi-Li are extremely gratified at the behavior of the American troops toward the Chinese.

A resolution has been introduced into the German Reichstag favoring a joint protection by the Powers of the liberty of Christian worship in China.

Sheng, the Chinese Imperial Director of Posts and Telegraphs, announces that the Emperor and Empress-Dowager are about to return to Peking.

The ministers at Peking have agreed to moderate the demands on China so that the punishments to be inflicted on the Chinese officials guilty of aiding the Boxers shall be inflicted by the Chinese Government instead of by the Powers. The Chinese Government is to formally admit its liability for indemnity and then the matter is to be left for future negotiation.

The last of the American troops to leave China is the Fifteenth Infantry, which sailed for Manila last week on the transport Rosecrans. Only a legion guard remains in China.

South Africa.

Lord Roberts is on his way home to England.

General De Wet was unsuccessful last week in his attempt to invade Cape Colony. The British not only stopped him, but think they have him surrounded and have hope of capturing him and his entire force.

The British met with a reverse in a small engagement near Buffelspoort last week.

The Philippines.

More activity is shown in the military operations in Northern and Southern Luzon, and severe loss has been inflicted on several bands of insurgents.

Ambassador Choate, in response to a complaint, has been informed by the British Foreign Office that the authorities in Hong Kong have been unable to find a Filipino Junta there.

About 2,200 Filipinos took the oath of allegiance to the United States at Vigan, Luzon, on November 30. It is believed that they were fighting rebels, although they did not surrender any firearms. General Young reports that one reason they gave for their surrender was the re-election of President McKinley.

Other Foreign News.

The relations between Portugal and the Netherlands are somewhat strained, although nothing serious is anticipated. The Netherlands minister to Portugal and the Portuguese minister at The Hague have left their posts. The trouble arose from the fact that the exequatur to the Dutch consul at Lorenzo Marquez, Portuguese South Africa, has been withdrawn by the Portuguese Government.

Secretary Chamberlain was made the object of fierce attack last week in the British House of Commons, but regained favor by a masterly speech on conditions in South Africa. He intimated, among other things, that the expenses of the war would be paid by taxing the gold and diamond mine owners who would profit by the change to British rule.

A coal famine in Norway is threatened.

Mr. Kruger reached Holland last week and was received with tumultuous enthusiasm by the people. The Dutch Government, however, has informed him that it can give him no assistance, as has also the Italian Government.

General Mercler, in an extraordinary speech in the French Senate last week, proposed that the army should be organized and kept in readiness for an invasion of England, which he seemed to think would be an easy task. He declared that the scheme could be held over England like the sword of Damocles. He was not permitted to go on with his speech, and although it caused some remarks in England, the matter is not taken very seriously on either side of the Channel.

DOMESTIC.

Congress.

It is expected that the Senate will ratify the Hay-Pauncefote treaty on the Isthmian Canal this week, with an amendment giving the United States the right to close the canal to an enemy in time of war.

Representative Foss, of Illinois, has been elected chairman of the House Committee on Naval Affairs.

The House passed the Army Reorganization bill last week.

It practically places the strength of the regular army at 100,000 men. An amendment prohibits the sale of intoxicants at military posts. The bill now goes to the Senate for action.

Governor Lind of Minnesota has appointed Charles A. Towne to fill out the unexpired term of the late Cushman K. Davis in the Senate.

The bill reducing the war revenue taxes by the sum of about \$40,000,000 is being considered by the House this week. The largest reduction is in the tax on beer, which it is proposed to reduce about \$10,000,000.

Senator Hanna is pushing the Shipping Subsidy bill with great determination and it seems probable that it will become a law before the end of the session.

The Isthmian Canal Commission, in their preliminary report, unanimously recommend the Nicaragua route in preference to the Panama route. The cost of the canal is estimated at \$200,540,000.

The President last week nominated William D. Bynum, of Indiana, to be Commissioner to revise and codify the criminal and penal laws of the United States.

A resolution has been introduced into Congress directing the Secretary of War to investigate the charge that the death of Cadet Oscar L. Booz, of Bristol, Pa., was due to hazing at the West Point Military Academy.

Other Government Affairs.

Eight bidders have made proposals for the construction of the five battleships and six armored cruisers to be built within the limit of cost fixed by the appropriation.

A committee of Baltimore business men called on Secretary Gage last week to urge him to continue at the head of the Treasury Department another term. The Secretary assured them that he expected to remain at his post for some time.

Brigadier-General Charles P. Egan, of army beef fame, was restored to duty last week by the President and at once placed on the retired list.

The President has selected George von L. Meyer, of Massachusetts, for Ambassador to Italy.

The War Department estimates for the fiscal year 1901 call for \$186,000,000 and for 1902 for \$172,000,000. The appropriation for the present fiscal year was \$148,000,000.

Other Domestic News.

The Denver Board of Aldermen has passed a bill licensing prize fights.

A gold field richer than any found in Alaska since the Klondike discovery has been reported on the Yellow River, a branch of the Kuskokwim.

Ten councilmen in Scranton, Pa., resigned last week after agreeing not to accept office for five years and to refund to the city the amount of the corruption fund which the Municipal League showed that they had shared.

It is reported that Western railroad men are planning the resurrection of the Trans-Missouri Passenger Association, a trust or "pool" to keep up Western passenger rates. The headquarters are to be in Kansas City. Such a pool would be contrary to the United States Inter-State Commerce law.

Thirty persons were killed in Jimulco, Mexico, last week in a wreck on the Mexican Central Railway.

David B. Hill has been conferring with the foes of Croker in the Democratic party in New York City of late, and it is rumored that he may head an attempt to overthrow Tammany Hall.

John M. Higgins, a member of the Indianapolis City Council, was sentenced to the State prison last week for offering to accept a bribe for pushing a measure through the council.

On Tuesday morning of last week four townships that were formerly Indian reservations in Minnesota were thrown open for settlement; by noon practically every available piece of land was taken.

The anti-vice crusade in New York City is resulting in an exodus of disorderly persons from the lower East Side. Proceedings are being taken by many landlords to evict immoral tenants.

The effort to perpetuate the Dewey arch in New York City has been definitely abandoned.

Ideal and Universal.

The Ideal Rubber Company have been happy in the selection of names for two of their high-grade water bottles, "Ideal" to suggest perfection, and "Universal" to indicate the demand for them. As the manufacturers say they are made of the finest grade of Para rubber, and guarantee them to be perfect in every particular, these bottles may be offered to your customers with the assurance that they will give entire satisfaction. For catalogue and prices of druggists' sundries, write to the manufacturers, Ideal Rubber Company, Brooklyn, N. Y.

THE DRUG NEWS.

THE CUTTER'S PLAINT.

It is frequently desirable, when a fight is on, to know the condition of mind of "our friend, the enemy," in order that the fight may be carried on with good judgment. The cutter, as a rule, has the sympathy of the public, for his specious arguments, though entirely fallacious, appeal directly to the public's weaknesses and prejudices. A cutter in Wheeling, West Va., who finds that the N. A. R. D. plan is working so well as to make his path a rocky road to travel, has recently brought suit against certain druggists, alleging unlawful combination, illegal restraint of trade and all the rest of the stock phrases. His complaint, which has just been filed, is a very lengthy document, but, inasmuch as it will prove interesting, perhaps instructive, to druggists generally, its major specifications are here given:

Charles R. Goetze, complains of Christian Schnepf, Charles Menkemeller, W. W. Irwin, John Coleman, J. T. Goodwin and Louis Schrader (trading under the firm name and style of J. T. Goodwin & Company), Ohio Valley Drug Company, a corporation, Logan Drug Company, a corporation, of a plea of trespass on the case, for this, to wit, on the 7th day of December, 1898, and from thence, for a long space of time, to wit, until and at the time of damage and injury to the said plaintiff as is hereinafter mentioned, to wit, at the County of Ohio, State of West Virginia, as aforesaid the said defendants wrongfully, maliciously and injuriously confederated and conspired together against the said plaintiff as is hereinafter mentioned.

The plaintiff says that defendants Christian Schnepf, Charles Menkemeller, W. W. Irwin, John Coleman, are engaged in business in Wheeling, West Va., as retail druggists; that the defendants J. T. Goodwin and Louis Schrader (trading under the firm name and style of J. T. Goodwin & Company), Ohio Valley Drug Company, a corporation, Logan Drug Company, a corporation, are carrying on business as wholesale druggists, in said city of Wheeling, County of Ohio, State of West Virginia.

The plaintiff says that he is now and has been engaged in the retail drug business in the city of Wheeling, West Virginia; that he has built up an extensive business, and that by reason of sharp competition he was obliged to and has been conducting what is known as a cut rate drug store since December 7, 1898. * * * Plaintiff says that because he has conducted a cut rate drug store and has charged reduced rates as aforesaid, he has incurred the ill-will and displeasure of the defendants, and each of them, and that the defendants have wrongfully, maliciously and illegally conspired and confederated together for the purpose of destroying his trade and driving him out of business in the city of Wheeling, West Va.; that pursuant to said unlawful, malicious, illegal and wrongful purposes, they have conspired and confederated themselves together, and have made it known that they and each of them would refuse, and they have refused, to buy from any wholesale druggist, manufacturer or jobber, who would sell to this plaintiff; that they have devised a plan in order to effect such purpose, which said plan consists in refusing to buy from any drummer or representative of any wholesale druggist, manufacturer or jobber, who does not present what is known as a sup containing a printed or written agreement under the terms of which the said drummer or representative obligates himself not to sell to this plaintiff, and that unless the said drummer or representative has said slip and agrees not to sell to this plaintiff, the said defendants engaged in the retail business in this city refuse and decline to buy from said drummer or representative; that by such conduct they have intimidated, persuaded and induced many wholesale druggists, other than the defendant, to refuse and decline to sell to this plaintiff and that but for such intimidation the said druggists would willingly and gladly sell to this plaintiff.

Plaintiff says that the said defendants are continuing their illegal conduct, conspiracy and boycott and will continue same unless they are deterred by this suit, and he says that punitive damages should be inflicted on said defendants for the purpose of compelling said defendants to desist, and to permit this plaintiff to buy wares and merchandise wherever he pleases, and at such price as is satisfactory to the wholesale druggist or manufacturer, and at such places and prices as he could buy, except for the wrongful acts of the defendants as herein set forth; and this plaintiff says that by said combination the de-

fendants are seeking to prevent competition and a reduction of the prices charged by the defendants in this community.

And the said defendants have entered into confederation with each other for the purpose of regulating the price of drugs, merchandise or manufactured articles commonly used in the drug business, and to drive this plaintiff out of business and destroy his business, enable the defendants to maintain the prices as to them seem proper without any respect or consideration for the consumers who require and need drugs, prescriptions and other articles sold by this plaintiff and the defendants and drug stores generally.

This plaintiff further states that he has frequently ordered goods from the wholesale druggists, defendants herein, and wholesale druggists in other parts of the United States, and has offered cash for said orders for goods sold by said druggists and that the said druggists defendants herein, and other wholesale druggists, have refused to sell to this plaintiff although reasonable prices and the prices charged to other purchasers have been tendered at the time by this plaintiff and that the refusal to sell this plaintiff was solely due to the wrongful combination and boycott instituted by these defendants against the plaintiff. Plaintiff further states that the defendants have entered into the confederation and conspiracy aforesaid and have agreed with them that they would not sell to this plaintiff any goods or drugs of any kind at any price, although said plaintiff has offered to buy and offered to pay for same in cash at the time the order was given, and at the price charged to other defendants herein and to other druggists and generally to the retail trade, and in carrying out said confederation, conspiracy and boycott the wholesale druggists have agreed with the other defendants not to purchase goods from any dealer who would sell to this plaintiff. Plaintiff states that said action is solely because he has been unwilling to increase his charges for his goods and merchandise to the price fixed by the retail druggists of this city and the wholesale druggists in collusion therewith, and the defendants have announced time and again that they would withdraw the boycott and conspiracy and would sell to this plaintiff if he would agree to accede to their demands and charge the price fixed and agreed as aforesaid.

The plaintiff states that the defendants are members of the Wheeling Druggists' Association of Wheeling, an incorporated organization whose membership consists of about forty retail and wholesale druggists doing business in and about the said city of Wheeling.

Plaintiff further states that in pursuance of the plans and purposes herein set forth, the defendants confederated and conspired together to have the said Wheeling Druggists' Association, at its meeting during 1898, and since that time, pass resolutions requesting, directing and forbidding any member of said association to buy or to have business dealings with any wholesale druggist, jobber or manufacturer who sold this plaintiff goods; that the said Christian Schnepf, one of the defendants herein, while serving in the capacity of president of said association, and while acting as one of the chief conspirators against this plaintiff, on more than one occasion visited the city of Pittsburgh, and as a representative of said association requested, directed and forbid the wholesale druggists, jobbers and manufacturers of said city to buy or to sell any goods to this plaintiff, warning them that if they disregarded the request that they, the defendants herein, and other members of said Wheeling Druggists' Association, would not purchase any more goods of those selling goods to this plaintiff; that the defendants, together with other members of said Wheeling Druggists' Association, had printed, or written, a letter addressed and mailed to, and circulated among wholesale druggists, jobbers and manufacturers within several hundred miles, requesting the said wholesale druggists, jobbers and manufacturers who sold this plaintiff, not to do so, with a warning that if they sold this plaintiff any goods that they would not purchase any goods of any that disregarded their demand.

Plaintiff further says that W. W. Irwin, one of the defendants herein, since December, 1898, wrote a letter to wholesale druggists with whom this plaintiff had been dealing for years, warning them that if they continued to sell goods to this plaintiff, that he, and the other defendants herein, and members of said Wheeling Druggists' Association, would refuse to buy any goods from said wholesale dealers.

The plaintiff further says that since the beginning of the boycott many wholesale druggists in various parts of the United States, at the request of the Wheeling Druggists' Association, and at the request of the defendants, did agree to give their active support to the Wheeling Druggists' Association and to these defendants, in their combination and conspiracy to destroy the business of this plaintiff.

Plaintiff further says that since the said resolutions were adopted by the said Wheeling Druggists' Association at the instance of these defendants as aforesaid, and

since the agreement of certain wholesale druggists in other States to aid and abet these defendants in their design to destroy the business of this plaintiff as aforesaid, that this plaintiff has found it impossible to get drugs, goods and merchandise from some wholesale dealers from whom he was formerly able to purchase, and that others have required him to pay in advance for shipment, whereas heretofore they were perfectly willing to sell it on reasonable and usual time and terms, and others have refused to sell him at all at any rate, and others have charged him a greater rate than they formerly charged or that they charged others, including the defendants herein. Plaintiff states that by reason of said illegal, malicious and unlawful conspiracy, boycott and combination it has been necessary for him to buy from others who were willing to brave the displeasure of these defendants and their co-conspirators and sell this plaintiff, and this plaintiff has been compelled to buy in vastly larger quantities than he otherwise would have been required to buy, and in vastly larger quantities than would have been necessary in his business if unhampered and unmolested by these defendants; that he was compelled to so buy in said large quantities as aforesaid because of the fact that by reason of the said wrongful, malicious and illegal acts of the defendants it was impossible to secure goods within a reasonable time and as needed by him or his customers, and because of the fact that he could not rely on obtaining goods when and as he needed and in the quantities needed the plaintiff was compelled, in order to carry on his business to buy at one time and in vastly larger quantities as aforesaid whenever he could find a wholesale dealer willing to sell to him as aforesaid. Plaintiff says that by reason of these facts he has been required to invest large sums of money in drugs, wares and merchandise to an amount not less than \$10,000 in excess of what would otherwise have been a reasonable and ample stock to carry, and that he has been required to carry such excess of stock for a period of two years prior to this date and that the interest on said excess of stock has aggregated not less than \$600 a year, making in all the sum of \$1,200.

Plaintiff says that he has further sustained a loss by the depreciation in value and deterioration in quantity and leakage and breakage of such goods purchased as

aforesaid in advance, and in such excessive quantities, and which he was required to do by the combination and boycott of these defendants, and that he has been further required to pay in addition to the cost of said goods, expressage or freight on said goods in excess of charges made to these defendants and their co-conspirators in the sum of at least \$1,000 per annum, making a total expenditure of at least \$2,000, and which sum for the said freight and express charges he would not have been required to pay but for the boycott as aforesaid. And this plaintiff says he has also lost a large amount of trade because he was unable to get promptly and at the time of the order such goods as were required to make said sales and which goods he would and could have had but for the boycott instituted and conducted by these defendants as aforesaid, and that his loss by reason thereof has been at least \$7,000 per annum, aggregating the sum of \$14,000.

Plaintiff says that in addition to the aforesaid wrongful acts that said defendants have further conspired together and endeavored to persuade and induce others, customers of this plaintiff, from purchasing any drugs, wares or merchandise from this plaintiff or from having plaintiff fill their prescriptions, and that by such conduct they have caused said plaintiff the loss of \$2,000. The plaintiff states that the aforesaid acts and conduct of said defendants was instituted and conducted maliciously and wilfully and for the express purpose of compelling this plaintiff to increase his price and charges for goods, wares and merchandise, and for the filling of prescriptions so as to correspond to prices charged in like cases by those defendants who are retail druggists in this city, and that this plaintiff was unwilling to increase his said prices, as the prices they desired him to charge were extortionate and he preferred to manage his business in his own way and according to his own ideas and to charge reasonable prices, which prices he did charge, and at which prices he made a fair and reasonable profit and at which prices he would have made an additional profit except for the wrongful conspiracy and boycott as aforesaid on the part of said defendants, and plaintiff states that by reason of the conduct of the defendants as herein set forth, he has been damaged by defendants in the sum of fifty thousand (\$50,000) dollars and therefore he brings this suit.

New York and Vicinity.

MANHATTAN PHARMACEUTICAL ASSOCIATION.

The Manhattan Pharmaceutical Association met in special session Saturday afternoon, December 8, to receive and act on the report of the Conference Committee on prices, and to reconsider the report of the Special Committee on the New York Consolidated Drug Company.

George E. Schweinfurth presented a report of a meeting held by the Conference Committee a few days since. He said the proposed schedule had been changed in the following respect: All 50c. articles to sell for not less than 40c., instead of the minimum of 45c., as heretofore; all 25c. articles costing over \$2 a dozen full price; all 50c. articles costing over \$4 a dozen full price; \$1.25 articles not less than \$1.10, and \$1.50 articles not less than \$1.35. The committee needed money to sustain its pro rata share of expense in carrying on the work, and Mr. Schweinfurth moved that \$100 be voted for that purpose. Mr. Pringle amended to give the committee full power, and this was included in the motion.

Mr. Faber asked if the committee was to act with other organizations, and Mr. Schweinfurth replied in the affirmative, enumerating the organizations as the Kings County Pharmaceutical Society, North Hudson County (N. J.) Druggists' Association, Jersey City Druggists' Association and New York Retail Druggists' Association. The German Apothecaries' Society had been invited to send a representation, but had decided not to. Mr. Weiss thought the movement would not go through unless all the associations united, and he favored making some inducement to get the German Society to send a committee. Mr. Faber asked Mr. Schweinfurth if he had received a letter announcing the stand taken by the German Society, and on receiving an affirmative reply, stated that the Germans did not refuse because of animus toward any pharmaceutical association, because it had none, but on the ground that it was inconsistent with their position in withdrawing from the N. A. R. D., to enter any movement favorable to it.

Mr. Muir was accorded the privilege of the floor, and speaking as chairman of the Joint Conference Committee, he said: "As I understand it, this is not a committee

of the N. A. R. D., but committees from the retail pharmacists' associations of New York, and it does not meet under the auspices of the N. A. R. D. The meetings are open to every pharmacist. We want every pharmacist's opinion so we can fix a price list that will be satisfactory to all. Then we intend submitting it to the retail pharmacists of Greater New York, and if 75 per cent. agree to it, we shall appeal to the N. A. R. D. for the protection offered to sustain our prices, against the 25 per cent. who have not come with us."

The discussion which followed related to the supposed connection of the N. A. R. D. with the work of the Conference Committee, and was participated in by President Smith, Mr. Alpers, Secretary Swann, Treasurer Hitchcock and Mr. Weinstein. Mr. Weiss wanted the motion of Mr. Schweinfurth delayed to give opportunity to secure a representation from the German Apothecaries' Society. President Smith said there was nothing in the motion to prevent a representation from the German Apothecaries' Society attending the meetings of the Conference Committee at any time, and the motion was carried by a vote of 23 for to 1 against.

The next matter was introduced by Mr. Schaaf. He referred to the resolution adopted at the last meeting instructing the secretary in sending out notices for the December meeting to invite members to join the Consolidated Drug Company, as a direct slap at the N. A. R. D. He did not think it in keeping with the conduct of the Manhattan Association under present circumstances, and moved that that part of the report of Mr. Searles adopted at the last regular meeting be rescinded. Mr. Faber asked if Mr. Schaaf was present at the last meeting, and received a negative reply. He did not believe Mr. Schaaf had the right to bring the matter up. Mr. Schaaf said he understood only five had voted to adopt Mr. Searles' report, but President Smith stated the vote to all intents was unanimous, as there had been no objections recorded.

Mr. Erb thought the best way to dispose of the matter was to reconsider the whole report, and he so moved. The motion having prevailed, Mr. Erb then moved the matter be tabled. Such action was taken by unanimous vote. The meeting then adjourned.

REID, YEOMANS & CUBIT, NEW YORK.

HOBOKEN DRUGGISTS' ASSOCIATION.

The recently organized and more recently reorganized Hoboken Retail Druggists' Association evolved itself into a permanent organization at Hoboken, N. J., Monday evening, December 3, and agreed to sustain a constitution and by-laws which include the uplifting of prices and the betterment of pharmacy in general.

The meeting was called to order by Temporary Chairman F. W. Traeger, through whose influence the association decided to make the forward movement above mentioned. Nine members answered the roll call, but this does not represent the strength of the body, as seventeen of the twenty-five retail dealers in the city have signified a willingness to co-operate in the plan. When the reading of the minutes of the previous meeting by Temporary Secretary J. Hostmann had been finished, it was decided to effect a permanent organization, and this was accomplished by the unanimous adoption of a constitution and by-laws to which each member subscribed his name.

The Committee on Nomination of Officers reported the ticket as follows: President, F. W. Traeger; vice-president, William S. Brenner; secretary, J. Hostmann; treasurer, William Ohlandt; trustee, A. Rohnde.

Secretary Hostman read the constitution as adopted, following which it was decided to name a Committee of the Whole on Membership. This was done and each member volunteered to call on certain druggists and endeavor to secure them as members.

A discussion of the N. A. R. D. and a schedule of prices followed. A motion prevailed to make formal application for membership in the National Association at an early date and the matter of securing a uniform price list was referred to the Executive Board with the recommendation that a schedule be drawn up to be presented at the next meeting. Adjournment was then taken to Monday evening, January 7, at 10.30 P. M.

TESTING THE TRIPARTITE AGREEMENT.

A number of local retail dealers who have been accused to buying their proprietary medicines direct from the various manufacturing houses have been testing the strength of the tripartite agreement lately. Without exception orders thus sent have been returned with the information that sales could not be made except through the legitimate wholesale houses.

GERMAN APOTHECARIES SOCIETY.

The annual meeting and election of officers of the German Apothecaries' Society was held Thursday evening, December 6. The officers chosen were: President, Charles F. Schleussner; first vice-president, Charles Schur; second vice-president, Oscar Krause; recording secretary, Charles F. Klippert; corresponding secretary, Sidney Faber; librarian, George C. P. Stolzenburg; archivist, George Leinecker; trustees, Charles Schur, Henry Imhof, Charles Kessler; delegates to the American Pharmaceutical Association, R. C. Werner, Fred. Plump, Otto Boeddiker, Gustav Ramsperger and Prof. George C. Dickman.

When the office of treasurer was reached the name of Felix Hirseman was presented, but before Mr. Hirseman was asked if he would accept the office, a motion prevailed that it was the sentiment of the members that the confidence of the association in Mr. Hirseman and his work in the N. A. R. D. convention at Detroit be asserted and expressed to Mr. Hirseman. This course was taken to offset the action of the society at a recent meeting in refusing to adopt Mr. Hirseman's report as delegate to the N. A. R. D. convention. The office of treasurer was then formally tendered to Mr. Hirseman, on acceptance of which he was unanimously elected.

A letter from George E. Schweinfurth, secretary of the Joint Conference Committee formed to devise plans for the abolition of the cut-rate evil, was read. It requested that a committee from the German Association be named to attend the next meeting of the Conference Committee. The letter created some discussion, members arguing that the committee's work was along the lines of the N. A. R. D. plan and as the German Society had withdrawn from the N. A. R. D. it could not well enter into any agreement favored by the national organization; others contended that the plan was not connected with the N. A. R. D., but was a spontaneous movement on the part of druggists for the raising of prices. The matter was finally settled by a vote of 29 to 21 against sending the committee. The members of the German Society have decided heretofore they were individually in favor of a rise in prices. Peter H. Henkel, of Eighty-eighth street and Amsterdam avenue, was elected to membership.

COUGH MIXTURE SAID TO HAVE CAUSED BABY'S DEATH.

Oscar B. Epstein, druggist at 947 Forest avenue, the Bronx, was arrested early Wednesday morning, Dec. 5, on a warrant issued by Coroner Lynch charging manslaughter. Mr. Epstein is held responsible for the death of Howard Milliken, the twenty-two-months-old baby of Thomas Milliken, a tin fitter of 912 Trinity avenue, who alleges that the child's death was due to the effects of a cough mixture of Mr. Epstein's manufacture.

William S. Gordon, grandfather of the infant, went into Mr. Epstein's store Saturday evening and purchased a bottle of a proprietary consumption cure. While talking with Mr. Epstein he asked for a remedy for a cold and Epstein gave him a sample of his "Yankee Cough Syrup." Gordon states he administered the cough remedy to the infant as directed, but without effect until Tuesday night, when the child fell in a sound sleep and was put to bed. Wednesday morning the infant was found dead.

Dr. John Rigelman, the family's physician and also connected with the Coroner's office, laid the case before Coroner Lynch. Mr. Epstein gave bonds for his appearance. The viscera of the child have been given over to Prof. Withans for examination and a sample of the cough mixture to Prof. Lederle for analysis.

Mr. Epstein was seen by an Era reporter and stated that his cough mixture, as customary in preparations of this sort, does contain opium, but not in quantity fatal to an adult, although it might have a serious effect on a baby. He declared he had told Mr. Gordon that a teaspoonful was the ordinary dose. Mr. Gordon, he says, then asked him how much should be given a child and he states he replied five drops in a teaspoonful of water. He was not asked for the dose for a baby.

At Coroner Lynch's office it was said that it was doubtful if the charge of manslaughter would be sustained.

DRUGGISTS AT PATERSON (N. J.) ORGANIZE.

At Paterson, N. J., Thursday evening, December 6, seventeen of the twenty-eight druggists in the city met and decided that the cut rate evil should be abolished and the remedy adopted was the N. A. R. D. plan. It was also decided to affiliate with the national organization.

The meeting was called to order by J. C. Gallagher, of the Jersey City Druggists' Association, who had canvassed the town a few days before and found conditions favorable. Mr. Gallagher outlined the organization plan, after which G. E. Pellett was chosen temporary chairman and G. H. Golding secretary. A skeleton form of constitution was then adopted with the following provisions: Name, Paterson Retail Druggists' Association; officers, president, vice-president, secretary, treasurer and three trustees; dues, \$6 yearly; annual meeting in January; meetings, second Thursday of each month; nine members a quorum. Following the approval of the constitution permanent organization was effected by the election of these officers: President, G. E. Pellett; vice-president, Arthur Nussey; treasurer, L. Kent; trustees, C. C. Smith, Dr. J. A. Brown and Roland Loveland.

Mr. Gallagher gave a brief digest of the working of the N. A. R. D., explaining the benefits and urging that the association affiliate with the national body. The suggestion was unanimously adopted and the secretary was instructed to forward an application at once to Secretary Wooten of the N. A. R. D. It was also decided that the Executive Committee prepare a schedule of prices to be presented at the next meeting, which is to be held this evening. President Pellett, Treasurer Kent and Trustee Smith were appointed a committee to secure rooms.

ABOUT THE NEW PHARMACY LAW.

"I do not believe," said a prominent retailer while "talking over matters" last week, "we should direct too much attention to the technicalities of the new pharmacy law, for in so doing we stir up discussions which involve the points argued in such a manner as to put them beyond all understanding. There are some kinks in the law which cannot be explained to satisfy all minds and it's my opinion only a court definition will settle them. I have had more queries about registration under the new law than I could answer in a month. I think I understand the point, yet I am not quite sure I could successfully defend the position assumed by the law, if I tried, and I have read the statute at least a half dozen times. In some of these letters complaints are made against the law that will bear fruit, I think, later on. Not to discourage any one, I predict a whole lot of work for the All-State Board of Pharmacy following January 1, 1901."

SILVER, CHECK SWINDLER, JAILED AGAIN.

John S. Silver, who swindled Henry Buch, druggist at No. 661 Columbus avenue, and a number of other uptown druggists, out of money on bad checks, and who was held under ball of \$1,000 for the Grand Jury on Mr. Buch's charge, was arrested last week on complaint of H. J. Barlow, of No. 27 West Ninety-eighth street, on a charge of grand larceny. Barlow alleged he engaged in stock transactions with Silver, and advanced sums amounting to over \$500 for Silver's manipulation, but never received any returns, although Silver bargained to share half the profits and sustain all the losses. Silver waived examination, and was held in \$1,000 for the Grand Jury.

SMALLPOX SCARE HOOMS BUSINESS.

Druggists on the west side of town in the smallpox infected belt are doing a rushing business these days, and in several stores the services of extra clerks have been necessary. The section where the disease broke out and over which it spread before the authorities could adopt stringent measures to check it, extends from Sixtieth to Seventy-second street and from Amsterdam avenue to the North River. One druggist in this territory stated that he had sold over 500 tubes of vaccine since the outbreak of the disease. Camphor and asafetida are also dispensed in large quantities.

BROOKLYN DRUGGIST MARRIES.

F. N. Bliss, owner of the drug store corner President and Henry streets, Brooklyn, and also of a store at Rye, N. Y., was married to Mrs. Mary Stevens at White Plains, N. Y., Wednesday, November 22. Mr. and Mrs. Bliss spent their honeymoon at Lakewood, N. J., following which they went to Rye, where they will reside. Mr. Bliss is a member of the Kings County Pharmaceutical Society.

WHOLESALE DRUGGISTS HOWLERS TROPHY CUP.

The members of the teams composing the Wholesale Druggists' Bowling Association intend purchasing a silver cup at a cost of about \$200 for presentation to the winning team at the close of the present season. The cup will not remain the permanent property of the team winning it, but will be awarded to the highest team at the end of each season.

The games played Saturday, December 8, resulted as follows: Johnson & Johnson 770, Parke, Davis & Co. 738; Parke Davis & Co. 741, General Chemical Co. 746; Johnson & Johnson 761, General Chemical Co. 747; Lanman & Kemp 775, Colgate & Co. 736; Colgate & Co. 786, Merck & Co. 812; Lanman & Kemp 733, Merck & Co. 691.

The standing of the teams follows:

Teams.	Played.	Won.	Lost.
Johnson & Johnson.....	10	8	2
Dodge & Olcott.....	8	6	2
Scabury & Johnson.....	8	6	2
Lanman & Kemp.....	8	5	3
National Lead Co.....	8	5	3
Colgate & Co.....	8	4	4
Parke, Davis & Co.....	8	4	4
Merck & Co.....	8	3	5
General Chemical Co.....	10	2	8
Church, Dwight & Co.....	8	0	8

Drug Clerk and M. D.'s Wife Elope.

Floyd Williams, a drug clerk of Cuba, N. Y., and Mrs. Whipple, wife of Dr. Harry Whipple, of the same place, disappeared on the same day last week and it is alleged that they have eloped. Mrs. Whipple is twenty-three years of age while Williams is about thirty. He is married and has several children. He was a confidential friend of Dr. Whipple. The couple were traced as far as Syracuse, N. Y., but here they eluded their pursuers and where they are at present is unknown although it is believed they may have come to this city.

Tarrant Fire Inquiry Report.

Fire Marshal Seery has ready his report of the inquiry into the causes of the Tarrant & Co. fire and explosion on Warren street, and was to present it to Fire Commissioner Scannell during this week.

Coroner Bausch is awaiting the report before taking steps toward holding an inquest. It is said if the facts warrant it the testimony taken before Commissioner Seery will be sent to the District Attorney.

NOTES.

—The wholesale botanic drug business formerly conducted under the name of Walter Adams & Co. at No. 46 Cliff street, this city, will hereafter be conducted by George A. Elwood, who for the past forty years has been connected with the business. As noted in the November 29 issue of the Era the business of Walter Adams & Co. was recently placed in the hands of a receiver, but the statement that the company's affairs were being closed up was incorrect. Mr. Elwood explains that the judgment rendered against the firm some weeks ago was entered upon a disputed claim and that he has taken an appeal and given a bond to secure it. The receiver, after being in possession but a few days, was ousted. Mr. Elwood is now in full control and will continue the business at 279 Pearl street.

—Forty-one barrels of Norwegian cod liver oil which survived the Tarrant & Company fire, were sold at auction, Friday, December 7, by the insurance company. Ten barrels brought \$20, and the remainder were "knocked down" for \$19.50. The barrels were black, the brand mark being obliterated and the goods had not been repacked. Four barrels, repacked, sold for \$19 each. It was claimed the insurance company had not the right

to sell the goods, inasmuch as they were not in the Tarrant & Company building, but in a building on the south side of Warren street, across from the ruined building.

—At the meeting of the Chemists' Club, 108 West Fifty-fifth street, Friday evening, December 7, a committee of three was named to make investigations regarding the provisions in the new city charter made by the Charter Revision Committee. At present the Bureau of Combustibles permits only 1,000 pounds of sulphur and oil of vitriol to be stored within a building in the city. This the chemists find a great inconvenience, as much more is used daily and weekly than is specified. The committee will endeavor to secure satisfactory legislation on the subject.

—Among the visitors to the trade last week were the following: John F. Queeny, Meyer Bros. Drug Co., St. Louis; R. J. Gooding, Old Fort, N. C.; W. E. Dennis, Far Rockaway, L. I.; S. B. Leonardi, Tampa, Fla.; J. H. Brown, Rousseau & Brown, Woonsocket, R. I.; Mr. Young, Lee & Osgood, Norwich, Conn.; L. J. Schlesinger, Yonkers; E. C. Frisbie, Talcott, Frisbie & Co., Hartford, Conn.; Charles West, Eastern Drug Co., Boston, Mass.; Samuel Strong, Strong, Cobb & Co., Cleveland, O., and R. K. Willard, R. E. Willard & Son, Pittsfield, Mass.

—The Troy Pharmaceutical Association, of Troy, N. Y., recently organized, elected the following officers last week: President, Henry Schneider; first vice-president, Charles E. Shacklady; second vice-president, Robert Glass; secretary, F. W. Schneider; treasurer, Charles H. Mansheffer. It was decided to hold meetings the first Wednesday of each month at the rooms of the Chamber of Commerce. At the next meeting the matter of closing during certain periods Sunday will be considered.

—Richard Blum, a dental student, of Brooklyn, who was detected smuggling phenacine into this port on his arrival on the Grosser Kurfuerst, October 2, was examined before United States Commissioner Shields last week in proceedings to secure his removal to this city for trial. Only one witness—the customs inspector—was examined, and he testified he had found ten ounces of phenacine in Blum's effects. The goods had not been declared. The case will be continued this week.

—The members of the Legislative Committee of the New Jersey State Pharmaceutical Association, C. C. Smith, chairman, Charles Holzhauser, Charles Dare and J. C. Gallagher, have drafted a bill on the lines of the one which became a law in this State this year for the advancement of the pharmacist in the State Militia to the grade of second lieutenant with the title of military pharmacist. The bill is to be introduced at the next session of the Legislature which convenes next month.

—Bids for yearly contracts on crude drugs, pharmaceuticals, plasters, surgical instruments, etc., for the Department of Public Charities of the city, were opened at the department headquarters at the foot of Twenty-sixth street, East River, Monday noon, December 10. The contracts amount to about \$30,000, and bids were submitted by nearly all of the large drug houses in the city. The awards will not be made for at least a week.

—Contracts amounting to over \$300,000 will shortly be awarded for supplies to the medical department of the United States army. Bids for these supplies were opened simultaneously in St. Louis and New York, Thursday, December 6, and have been forwarded to Washington from where the contracts are to be awarded. The supplies requested include 100,000 ounces of quinine, 6,000 dozens of plasters and other goods in proportion.

—The Saratoga Extract and Chemical Co., of Saratoga Springs, N. Y., has incorporated to manufacture and sell extracts, drugs, etc. The capital stock is \$50,000 and the directors are Cassius B. Thomas, Edgar D. Starbuck, William W. Allerdice, William L. Thompson and Fred. W. Gardner, of Saratoga Springs, and H. H. Smith and Charles Webster, of Corinth, N. Y.

—The Scientific Alliance of New York announces the following meetings for the rest of December: December 17, Academy of Sciences; December 18, Entomological Society; December 21, Microscopical Society. The members of each society are invited to attend the meetings of all the others, and visitors interested in any of the subjects are cordially invited.

—At the next session of the State Legislature it is said that the "Patent Poison Bottle Bill" which passed both branches and was vetoed in 1899 by Governor Roosevelt, will be presented with a number of amendments. The bill was introduced again in 1900 and was killed in committee. The bill is being urged by the owners of the patent of a poison bottle.

—A. A. Cavagnaro, a prominent pharmacist of San Francisco, Cal., was in the city visiting friends within the last week. Mr. Cavagnaro, while a busy man, has found time to mingle in the local politics of his place, and will represent the townsmen in his district in the next State Legislature of California.

—Joseph P. De Gregori, of the class of 1900 of the Brooklyn College of Pharmacy, who left for the Paris Exposition during the summer, has recently written to friends that he has entered the military service in Italy, and will hereafter be identified with the medical corps of the army of that country.

—The American Cataphoresis Cure Company has incorporated in New Jersey with a capital of \$80,000. The headquarters of the concern are in Jersey City, and the incorporators are: C. T. Russell, L. H. Stewart and S. A. Russell, all of Jersey City.

—At the annual meeting of the Humphreys' Homeopathic Medicine Company on December 4, the following officers were elected: Frederick H. Humphreys, president; F. L. Humphreys, vice-president; Herbert B. Harding, secretary and treasurer.

—H. Harms, of the Nelden-Judson Drug Co., of Salt Lake City, Utah, was in the city for a brief stay last week. He left early this week for Germany, where he will spend some time at his former home.

—The John Schroeder Company, of this city, has incorporated to sell chemicals, etc., with a capital of \$1,000. The incorporators are J. Schroeder and E. B. Daly, of Brooklyn, and W. Gundlach, of this city.

—The Board of Governors of the Drug Trade Club met Monday afternoon, December 10, and elected five persons to membership to fill vacancies. There are a number of names on the waiting list of the club.

—In the awards for subsistence for supplying the United States Army troops in the field for the current month, Tarrant & Co. received contracts for furnishing Malted Milk and "Horlick's Malted Milk."

—John J. Benson, who was proprietor of the drug store at the southeast corner of Lexington avenue and Ninety-second street, will open a store shortly at Henry and Baltic streets, Brooklyn.

—The Retail Druggists' Bowling Association has decided to hold its annual "ladies' night" Monday evening, January 7, at the Association alleys, Fifty-seventh street and Sixth avenue.

—A meeting of the Italian Pharmaceutical Association was called for Wednesday evening, December 5, at 149 Bleecker street, but through some misunderstanding it was not held.

—W. J. Carr, of Parke, Davis & Company, has returned to his desk after an absence of several days, necessitated by an injury to his foot, resulting from stepping on a nail.

—Sulphuric acid in the rosin factory of Ernst Zoebel, at Nos. 112-116 Second avenue, Brooklyn, caused a fire which did \$5,000 worth of damage, Monday, December 3.

—T. J. Murray, of Murray & Roberts, corner Sixth avenue and Fourth street, Brooklyn, has sold his interest to Mr. Roberts, who will conduct the business hereafter.

—C. Bardos has accepted a position with H. T. Albert, No. 305 First avenue. Mr. Bardos was formerly at the Boulevard Pharmacy, No. 2781 Broadway.

—S. B. Leonardi, one of the foremost retail druggists of Tampa, Fla., who has been visiting friends in the city for the last week, has returned home.

—The pharmacy of Chumar & Son at Twenty-third street and Eighth avenue, known as the Opera Pharmacy, has recently been sold to A. Leibstadter.

—Meyer Bros., who own stores at 1657 Second avenue and 1210 Third avenue, will open a store at 153d street and Melrose avenue in a few days.

—Charles S. Evans, a well known retail druggist of Utica, who had been visiting in the city for ten days, returned home last week.

—C. C. Hinchman, of the firm of Williams, Davis,

Brooks & Hinchman Sons, of Detroit, Mich., was in the city last week.

—Robert Vanderveer, formerly with C. A. Minton & Co., Red Bank, N. J., will open a drug store in Red Bank, January 1, 1901.

—William Churchill, of the scientific department of the local branch of Parke, Davis & Co., is confined to his home by illness.

—T. M. Maddox and Dr. Robert C. McCall, Southern representatives of McKesson & Robbins, were in town last week.

—C. A. Whetmore, New York State representative for McKesson & Robbins, is in the city for the holidays.

—M. R. Mandlebaum is nursing an attack of erysipelas at his home and may not be about for several days.

—J. F. Wurthmann has sold his branch store at No. 1277 First avenue to his nephew, Charles H. Mierow.

—S. Anagpras has secured a judgment against Henry P. Crosher, the notorious drug swindler, for \$528.

—L. Blaspan & Co. will open a new store at Lexington avenue and 126th street, Saturday, December 15.

—David Neer has resigned his position with his father at No. 95 Bridge street, Paterson, N. J.

—The pharmacy of H. Millert & Co., at No. 53 Second avenue, has been sold recently.

—J. S. Lane, Eastern representative of Schieffelin & Co., was in the city last week.

—Henry A. Vogt has sold his store at No. 1691 Lexington avenue to Mr. Robinson.

having license in Massachusetts has been closed at eleven o'clock at night since December 4, and no liquor of any kind can be purchased after that hour, except at drug stores on physician's prescriptions. In Boston there has been great and general tribulation as a result of this ruling, but it has not been learned that physicians or druggists have been kept especially busy since active compliance with the law was enforced.

NOTES.

—Plans for the new Lowell Textile School, provided for by the joint generosity of the State and Frederick H. Ayer, have been accepted. They call for a set of buildings around a hollow square on Moody street in that city and the work on the foundation will begin at once. The building when completed will be 260x355 feet. The main building will be given over to administration, classrooms, art designs and chemistry, while the wings will be used for classes in spinning, weaving, dyeing and finishing. The building will be named in honor of Royal Southwick, grandfather of Frederick Fanning Ayer, of New York City, donor of the land. The entire building plant has been arranged with reference to an extensive development in the future.

—Especially successful was the third annual ball of the James W. Tufts Mutual Aid Society held this week in Roughan Hall, Charlestown district, and attended by about 500 people. During the early part of the evening, while the members and friends of the organization were assembling, a concert was given by the orchestra. The hall was prettily decorated for the occasion. The grand march was led by President J. W. Fanjoy and Mrs. Fanjoy. Mr. Fanjoy acted as floor director, assisted by a large number of aides. Among the invited guests present were James W. Tufts and family, Superintendent George E. Burton and Assistant Superintendent Hopkins.

—One overhears some interesting things in a drug store sometimes while waiting for prescriptions to be filled. In a recent bribery investigation hearing at Cambridge the matter involving the payment of a check for \$6,500, so it was shown, had been openly discussed in Milliken's drug store, and the attentive clerk there was, in consequence, summoned to appear as a witness to give important testimony.

—The bowling team of the Eastern Drug Company defeated the Station A post office employees in a match on the Carruth alleys one night this week, winning three strings. The drug team was made up of Grant, whose total score was 236; West, 242; Cullen, 268; Quinn, 252; and Williams, 248, a total of 1,246, as against 1,179 total score of the post office men.

—Fire which broke out in the fifth story of the six-story building at the corner of Court and Hanover streets, this week, caused considerable damage. The street floor for many years has been occupied by Knight's drug store, and the entire five floors above were given over to the use of C. W. White & Co., truss manufacturers.

—Dr. John Bowker, the Lawrence druggist who for years has been such a traveler and lecturer, much like Burton Holmes, who is now so prominently known in the field of entertainment, is in much demand this season in many places where people seem especially desirous of hearing his lectures on the Paris Exposition.

—The American Remedy Company suffered a slight damage from a fire this week in the Music Hall Vaudeville Theatre building, where the company has offices. The cause is unknown.

—This week's exports at the Port of Boston include, among other things, drugs and chemicals, \$7,312; India rubber manufactures, \$14,446; tobacco, \$835; spirits, \$8,871.

—Michael Burke, who formerly lived in Lawrence where he was employed in a pharmacy, now has a position at Parker's drug store in Lowell.

—A. S. Hoyt, of Blake's pharmacy in the Forest Hills District, went to New Hampshire to pass Thanksgiving with friends.

—E. H. Cross, a druggist at Huntington, has leased a part of his drug store to a jeweler and watch maker.

IN AND ABOUT BOSTON.

LIQUOR OFFICERS MAKE LIFE UNPLEASANT FOR SOME "DRUGGISTS."

Boston, Dec. 8.—Ever since the town of Spencer voted "no license" and appropriated \$2,500 at the annual town meeting for the pursuit of illegal venders of liquor, the officers have been especially active. It is felt that the town will feel so well satisfied with the work of keeping illegal rum sellers from plying their trade that there will be little trouble in securing a vote to continue this work for a longer period than the year covered by the vote. There have been some alleged drug stores in Spencer which have claimed particularly watchful attention on the part of the officers. It is now hard for proprietors of some "drug" stores to sell liquors and eternal vigilance is the price the illegal sellers are paying for the small amount of business which they are permitted to do by the present liquor officers.

In the past few months there have been several convictions, as the result of these arrests. For each conviction of a liquor seller there have been on an average about ten raids that have been unsuccessful, where the officers have failed to secure evidence enough to convict. These raids, as well as the successful ones, have kept the officers on the alert both night and day. The "drug" stores have proved the hardest places to convict or prove a sale against. Thomas Deslaunier was given a three months' sentence in jail and his "drug" store on Elm and Chestnut streets closed by order of the Massachusetts State Board of Pharmacy. He also paid a fine of \$50. He had previously paid \$50 on a previous arrest. Louis E. P. Moreau was convicted and fined \$50 and was sentenced to the House of Correction for three months. H. G. Aikens, another druggist, was fined \$50 for violation of the liquor law and Alfred C. Beaulac, who was convicted and paid a fine of \$50, was in the employ of Dr. Verner as drug clerk. From all this it can be seen that the special officers have been alive to make a record of convictions and that the so-called drug stores have had their share of punishment that has been meted out to the illegal sellers in the town. The honest druggists doing a legitimate business benefit somewhat by the closing of the stores not strictly pharmacies.

Druggists Not Affected by the Law Which Causes General "Kleeking."

Boston, Dec. 8.—Because of the ruling this week by the Supreme Court at Fall River in the Kelly and Sutcliffe case, every hotel or bar in that city and every other town

PHILADELPHIA.

PHILADELPHIA ASSOCIATION OF RETAIL DRUGGISTS.

Philadelphia, Dec. 7.—The monthly meeting of the P. A. R. D. was called to order by President McIntyre at 2.45 p. m. Friday afternoon, December 7, in the Museum Hall of the Philadelphia College of Pharmacy, a large attendance being noted. After the reading and adoption of the minutes of the last meeting, various routine reports were received; that of the recording secretary noting favorable replies to the petition of the Association asking for the repeal of "Schedule B" of the War Revenue act, and that of the financial secretary announcing a balance of \$369.88 on hand for the association. The Executive Committee reported having passed favorably on twenty-three new members, and bills to the amount of \$33.23. Attention was called to the ruling of the Internal Revenue Department requiring the registry of stills used for pharmaceutical purposes by druggists.

The Committee on Department Stores reported that all of the department stores here had now agreed not to sell medicinal articles in the future, which report was received with much applause.

The Committee on County Organization reported having assisted the druggists of Chester, Pa., in forming a retail druggists' association; attention was also called to the work of Messrs. Perry and Stiles in having aided in the successful formation of a similar association in Camden. Mr. Dougherty, secretary of the Wilmington, Del., association, was introduced and spoke of the work of organization along N. A. R. D. lines being done in his city and State and the good results therefrom.

The Committee on Nominations reported the following list of nominees for the various offices to be voted on at the January meeting: For president, Messrs. McIntyre, Rumsey and Cliffe; for first vice-president, W. H. Poley; for second vice-president, H. C. Blair, Jr.; for third vice-president, M. Krantz; recording secretary, F. T. Gordon; financial secretary, C. H. Campbell; treasurer, Dr. E. R. Smiley; Executive Committee, Messrs. Perry, Leedom, Eppstein, C. W. Shull, Weisner, Baer, Howard, W. W. Chalfant, Theo. Campbell, Stiles, Finerty and Gatchell.

On being called on for a report of the committee appointed to visit the State Pharmaceutical Board to endeavor to come to an understanding regarding the Board's suits for violations of the Pharmacy law, Mr. Cliffe stated that a very satisfactory conclusion had been reached in this matter; a large number of suits had been discontinued on representation of the P. A. R. D.; others successfully defended and a saving of many hundreds of dollars to Philadelphia druggists had been effected. D. H. Potts then asked why the proposition of the State Board to the association's committee had been published in the newspapers before it reached the committee, remarking that this looked as if ignoring this committee. A reply was made by Messrs. Cliffe and Perry that they had been assured that no disrespect had been intended by the Board's attorney, the publication in the newspapers having been with good intent to reach as many druggists as possible in the easiest and speediest manner.

The draft of the proposed new State Pharmacy law was then offered by Mr. Perry, which, in view of the importance of the subject and the time it would take to consider its features, was referred to a special committee elected at this meeting. This committee was to meet at an early date to organize and consider the new law, and was ordered to report back to the Executive Committee within fifteen days.

Mr. Perry read the report of Mr. Little, the representative of the association recently engaged for special work, which noted that Mr. Little had collected \$126, made over 500 calls on druggists, secured thirty-nine new members and had assisted in the settlement of a number of the suits of the Pharmacy Board against druggists. In view of the importance of the work yet to be done along these lines, Mr. Perry asked for a vote of \$90 to continue the services of Mr. Little, which was granted to January 1.

The Executive Committee, Mr. Perry acting as spokesman, then offered a schedule covering the retail prices of nearly two hundred staple drugs to the consideration

of the meeting, stating that the prices given were in nature of suggestions and asked for suggestions from members. The idea carried out in adopting a scale of prices was that those made final were to be the minimum selling prices; any member could adopt such higher prices as his locality and trade might justify. After a brief discussion, this schedule was ordered to be referred to a special committee of five, to be appointed by the president, and they were to make a report at the next monthly meeting of a schedule of prices on these lines that would cover the varying conditions of the different sections of the city. It was recognized that there would be much difficulty in agreeing on an equitable basis, in view of the widely different conditions in sections of the city; this fact was to be the first consideration of the committee, who were to allow a wide latitude over the fixed minimum price.

There being no further business before the meeting, it then adjourned, to meet Friday, January 4.

P. C. P. NOTES.

Philadelphia, Dec. 8.—The class of '01 paid a visit to the Smith, Kline & French Company laboratories last week under the guidance of Prof. La Wall, who was formerly in charge of the analytical department of that firm, and a most enjoyable and instructive morning was spent by the students. Every facility was afforded the students to inspect all the various departments and processes of manufacture of the many varieties of goods made by the Smith, Kline & French Company, and at the close of the visit a unanimous vote of thanks was tendered the firm for its courteous reception.

Joseph W. England, for over ten years editor of the "Alumni Report," has tendered his resignation of this office to the Publishing Committee, as his duties at Mulford's prevent him from continuing the multifarious duties connected with the editorship of this journal. When Mr. England took charge of the "Report" ten years ago, it was published only once a year, and was even then of little importance or general interest. From this unpromising beginning, Mr. England has built the Alumni Report up to what it is to-day, the recognized organ of the alumni and students of the P. C. P., published monthly.

NOTES.

—A number of Chester druggists came together Friday afternoon in answer to an invitation to meet for the purpose of forming a retail druggists' association in that city, and at once got down to work. With the assistance of Mr. Little, the organizer of the Philadelphia Retail Druggists' Association, a permanent organization was soon effected and officers elected and installed. The officers are: President, Mr. Kelly; secretary, Mr. Falley; Executive Committee of five, M. H. Bickley, chairman. The association voted to affiliate with the N. A. R. D. and endorsed its plans in full. It is purposed to include all Delaware County druggists in this association, and letters of invitation are to be sent to all as soon as possible. This association starts out with the brightest prospects and will have full support from the P. A. R. D., through whose Committee on Organization it has received much valuable help. The successful organization of the druggists of Camden, N. J., and Chester, Pa., into active associations is the outcome of P. A. R. D. work, and it is anticipated that similar results will soon be reached in other nearby counties.

—Chester druggists are now having about the same experience with the provisions of the State Pharmacy law as that which stirred up Philadelphia druggists early last month. Using the same means of collecting evidence, the State Board has discovered a number of violations of the law, particularly in regard to the display of certificates of registration and renewal, and a number of summons for the violators have been issued. There is much indignation at what is termed the "unnecessarily harsh and uncalled-for action" of the State Board in prosecuting druggists who are guilty of technical violations only of the law. It is stated in the daily papers that nearly one-half of the druggists of Allegheny County and Pittsburg are to be prosecuted by the board for having adulterated goods in stock, but this statement is probably much exaggerated.

—The recent suit of the J. Ellwood Lee Company

against the United States Government to recover the value of revenue stamps placed on belladonna plasters, etc., in accordance with a ruling of the local collector, was heard Wednesday in the United States Court by Judge Dallas. Quite a number of prominent druggists, college and analytical celebrities were called by both sides as witnesses. The testimony brought out the curious fact that very little about the manufacturing details of plasters was known to the majority of pharmacists outside of that business. The decision in the case will be handed down later and will be of importance as bearing on other suits to be brought if this is successful.

—Shoemaker & Busch are actively engaged in removing their stock into their new quarters, the buildings formerly occupied by the General Electric Company. These are large and commodious and will give ample room for the extensive laboratories, store and work rooms and offices planned by this firm, which will be among the finest in the city. Mr. Busch is personally superintending the details of alterations and removing which, he avows, is the hardest job he ever undertook in all his wide experience.

—The following changes of ownership and location during the past week are noted: W. N. White, of Eleventh and Jackson streets, has sold out to D. J. Lynch, who will conduct the business there; Mr. Crane, of Thirteenth and Snyder avenue, has sold out to Dr. Weatherley; W. A. Johnson has succeeded Dr. Emil Jungmann at his Sixth and Green streets store.

—Valentine H. Smith & Co. have completed alterations on their plant by taking in the adjoining building, a step that was necessitated by want of facilities to handle the increased business of the firm. They are now in shape to conduct their large city business.

—L. J. Steltzer, of Sixth and Cumberland streets, is making extensive alterations in his store and dwelling. When these are completed Mr. Steltzer will have one of the finest houses in the northeast section.

—H. Meyer has been appointed chief druggist at the Philadelphia Hospital in place of Jos. W. England, who resigned some time ago to accept a position with Mulford & Company.

—George Nickum, for several years head clerk with Henry C. Blair, has accepted a position in a similar capacity with J. H. Stein, of Reading, Pa.

BALTIMORE.

Maryland Pharmaceutical Association.

Baltimore, Dec. 8.—The indications that the semi-annual meeting of the Maryland Pharmaceutical Association to be held here next week will attract a large attendance are very encouraging. Many responses have been received to the circular sent out by Chairman Owen C. Smith, of the Executive Committee, and other evidences of eager interest in the gathering are being abundantly manifested. Various matters of special concern to retail druggists will come up for consideration, and all the problems which affect the profession will be thoroughly ventilated. An event of special moment in connection with the meeting will be the visit of W. C. Anderson, president of the National Association of Retail Druggists, who is expected to speak on the aims and purposes of the organization and set forth the conditions which confront the trade. An active participation in the proceedings from the counties of Maryland is looked for, and the event will doubtless be productive of beneficial results.

Druggists as Financiers.

Baltimore, Dec. 7.—Among the developments of exceptional interest here this week were certain revelations which laid bare the peculiar financial methods adopted by a young local attorney, who is now in the toils on the charge of swindling. The case is of interest to pharmacists because a druggist happened to be selected by the lawyer in question as his first fiduciary agent and because the latter also became the instrument of discovery. The pharmacist in question is W. L. Pierce, Fremont avenue and Saratoga street. Mr. Pierce was approached last May by one Thomas James Pritchett, a member of the Baltimore bar, and asked to become a receiver of de-

posits in a bank about to be started by him (Pritchett). The method of operation seemed to be entirely regular and practicable, and Mr. Pierce assented. An agency was opened and soon funds from people in the neighborhood began to come in. After a short time, however, when a woman depositor desired to draw her money, she was put off by Pritchett on one pretext or another and suspicions as to the lawyer-banker's integrity were aroused. Mr. Pierce took Pritchett to task about the matter, but obtained assurances which satisfied him for a time, until there was more trouble of a similar nature. Then Mr. Pierce gave up the agency. It appears that Mr. Pierce was not the only druggist solicited by Pritchett to serve as agent. The lawyer seems to have shown a decided preference for pharmacists and to have found their stores most convenient for operations of the kind undertaken by him. Pritchett also figured prominently in the organization of a trust company, in which a number of druggists are said to hold stock. Every one of them, however, it must be said, is entirely innocent of wrongdoing.

Married in Florida.

Baltimore, Dec. 8.—Herman Ivah Thomsen, formerly a member of the wholesale drug firm of J. J. Thomsen's Sons, of Baltimore, and now an importer of drugs here, and Miss Alice Wellington Sawyer, of Jacksonville, Fla., were married in that city this afternoon. The wedding, though quiet, was a notable affair. The home of the bride's parents, Mr. and Mrs. Augustus Sawyer, had been elaborately decorated for the occasion, all the flowers being sent from Baltimore. The ceremony was performed at the house by Rev. Dr. Van Winder Shields, rector of St. John's Episcopal Church. John Thomsen, the groom's brother, acted as best man. Mrs. Thomsen is a graduate of Vassar and has since leaving that institution been a member of the faculty of St. Mary's School, at Garden City, Long Island. The couple will make their home in Baltimore.

Drug Trade Howlers.

Baltimore, Dec. 8.—The mighty men of McCormick & Co., who have hitherto proved formidable antagonists for nearly all the teams of the Baltimore Drug Trade Bowling Club, were as nothing before the Root and Herb quintette last night, being defeated in all three games with ridiculous ease. Only in the third contest did the Root and Herbs appear to let down, scoring only 727 points against 829 and 813 respectively in the other two, while their opponents could not do better than 722, 682 and 632. Davis, of the Root and Herbs, was high man with 208 points and an average of 185½. Armour made 178 in the first game for McCormick & Co. On Tuesday night Sharp & Dohme had an easy time with Muth Bros. & Co., taking all three games by 665, 748 and 807 points against 633, 630 and 621. The several teams now stand as follows:

Teams.	Games		Per cent.
	Won.	Lost.	
Root and Herbs.....	15	3	.929
McCormick & Co.....	12	6	.667
Sharp & Dohme.....	12	6	.667
James Baily & Son.....	9	6	.600
Muth Bros. & Co.....	7	11	.389
Winkelman & Brown Drug Co	3	15	.167
Parke, Davis & Co.....	2	13	.133

Cut Rate Druggist Strikes Back.

Baltimore, Dec. 8.—Charles R. Goetze, a druggist of Wheeling, W. Va., who has been selling patent medicines at cut rates, on the 5th inst. entered suit against nine wholesale drug firms for \$50,000 damages because of an alleged conspiracy to drive him out of business by refusing to sell goods to him. The case grew out of the attempt on the part of the wholesalers and the retailers to maintain a compact which has for its purpose the elimination of the cutter. The outcome of the suits will be watched with deep interest by druggists all over the country.

NOTES.

—Louis Schulze is in receipt of a letter from President McKinley acknowledging the receipt of the resolutions

adopted by the Maryland Pharmaceutical Association at the last annual meeting in favor of the repeal of the War Revenue tax on medicines. The President, through his secretary, informs the association that the resolutions have been transmitted to Congress.

—J. H. Winkelmann, until recently of the Winkelmann & Brown Drug Company, has secured desk room in the building occupied by A. C. Meyer, on Lombard street, until he finds a location suitable for engaging in the manufacture of the specialties which he reserved when he disposed of his stock in the corporation with which he was long identified.

—Among the visiting druggists in Baltimore last week were Mr. Brame, of Watson & Brame, Winston, N. C.; Joseph B. Boyle, of Westminster, Md., and J. E. Seitz, of Glen Rock, Pa.

—J. W. Westcott and J. H. Winkelmann, Jr., have resigned from the Wedgwood Club and W. L. Campbell and J. B. Hall, on the waiting list, have been elected to fill the vacancies.

—Druggist James S. Webb has sold his pharmacy at the corner of Pratt and Bond streets, to Daniel Sullivan, who formerly clerked for Mr. Ryan, at Hampden.

LOUISVILLE.

Druggist Wins First Round in Gas Fight.

Louisville, Ky., Dec. 7.—Charles A. Scribner, the druggist at Sixth and Jefferson streets, is the first victim between the two local gas companies. Judge Toney recently ordered an injunction against the Kentucky Heating Company prohibiting them from selling gas for illuminating purposes and they are accordingly notifying all their customers to desist from the use of their gas for lighting purposes. On Thursday an inspector visited Mr. Scribner and asked him if he was complying with the order and he stated that he was. The inspector apparently was not satisfied and in a few minutes another employe with the tools needed in turning off the supply, arrived. He announced that he had instructions to turn off the gas and said that he intended to obey orders. Mr. Scribner informed him that he did so at his own risk. The gas employe paid no heed to the warning and started for the basement. Mr. Scribner was after him in an instant and they met at the head of the stairs. The druggist caught the man by the arm and wheeled him about. Then he summoned Frank Stein, a clerk, and together they escorted him to the door. Mr. Scribner was angry, there is no denying that fact, and as a parting reminder gave the employe of the gas company a kick. A warrant, charging the druggist with disorderly conduct, was then sworn out and executed. Mr. Scribner was presented in the police court and his case was continued until Monday. Mr. Scribner is indignant. To a representative of the Era he said: "I told them that I was not using their gas for illuminating purposes and they should have been satisfied with my word. The trouble began on Monday, when a representative of the company came to me and notified me that they could no longer sell gas for lighting purposes. I told him that I would have my pipe removed and I supposed that it would be all right. I could not afford to let them shut off my supply of heating gas at this time. I would be unable to fill prescriptions or conduct my chocolate counter. In addition, there is a man lying ill in my store and it would be suicidal to let him remain there without a fire." The plucky druggist is still burning natural gas.

NOTES.

—The retail druggists of Louisville are showing a great interest in the Knights Templar Conclave which will be held in Louisville next year. The affair is a national one and many visiting druggists are expected to be in attendance. The retail druggists have already effected an organization and a meeting was held on Monday. Chairman R. J. Synder, of the Sub-Finance Committee, announced that the organization had been completed and that the canvassers were now at work. One committeeman was assigned to each ward and it will be his duty to visit every drug store in the district assigned to him. The canvassers on this committee are: First Ward,

H. H. Nachand; Second Ward, Fred. Bender, Jr.; Third Ward, Fred. Schneider; Fourth Ward, George Schanz; Fifth Ward, Julius C. Vogt; Sixth Ward, Simon N. Jones; Seventh Ward, R. J. Synder; Eighth Ward, Foster Baird; Ninth Ward, C. J. Rosenham; Tenth Ward, C. M. Edmunds; Eleventh Ward, Oscar C. Dilly; Twelfth Ward, C. A. Dralle.

—An explosion in the laboratory of the Louisville College of Pharmacy on Tuesday morning was responsible for a disastrous fire. Students were experimenting with a retort of acid, when it exploded. The report was deafening and could be heard for several blocks. Passers-by were almost frightened out of their wits and they felt no better when they saw a crowd of bare-headed students rush from the building. That no one was injured is a miracle. But the building caught fire and the fire department was summoned.

—The funeral of the late General Benjamin F. Scribner was conducted in New Albany last Sunday. Many friends and former comrades gathered to pay the last mark of respect. His old comrades served as pall bearers.

—J. T. Crecelius is seriously ill of appendicitis at his home on Jefferson street. For several days his recovery was despaired of, but his condition is now much improved.

CINCINNATI.

Hamilton Co. Drug Association Changes Name.

Cincinnati, Dec. 8.—The Hamilton County Retail Druggists' Association have changed the name to the Ohio Valley Druggists' Association. As the name suggests, the object is to make any druggist in the entire Ohio Valley eligible for membership. This move of the association extends the territory of membership over the entire southern portion of Ohio and Indiana and the northern parts of West Virginia and Kentucky. An entirely new constitution will be adopted, which will allow any wholesaler whose object is in conformity with the N. A. R. D., to become a member. An office of the association will be opened in the Atlas Bank building, and Charles Herbert Jones will be selected as an organizer. Mr. Jones will visit all the druggists in the territory, and it is confidently expected that the association will have one of the largest rolls of membership in the country. A board of control will be appointed by the president, which will conduct the affairs of the association.

NOTES.

—News of the death of Prof. F. H. Renz at New York City was received among the older druggists of this city and Covington, Ky., with much sorrow. Prof. Renz was one of the pioneer druggists of Covington, and was professor of Botany at the Cincinnati College of Pharmacy during the terms of 1873-74. Among his oldest friends who mourn his demise are Paul Bauer, the veteran salesman of the Stein-Vogeler Drug Company, who was an intimate friend of his. E. L. Pieck, a former clerk of his, conducts a store at Sixth and Main streets, Covington, opposite the one Prof. Renz conducted in the 70s. J. M. Riffe, Jr., the druggist at Seventh and Madison streets, Covington, served his apprenticeship under Prof. Renz. While in business here he was considered one of the brightest and ablest men in the profession.

—Indictments have been found against William Vashti and Edgar Deane, for counterfeiting labels of well-known patent preparations, among them Paine's Celery Compound and Peruna. Their method was to buy up empty bottles of the preparations, which they refilled and labeled with the counterfeits and then resold them. Vashti was identified as a resident of Allegheny City, Pa. Deane, who was released on bond, has skipped and so far has not yet been apprehended. The prosecutors claim to have a clear case against both of them, and make the statement that they will eventually land them both in the penitentiary.

—Arthur Heineman, druggist in Wall street, New York City, was in this city the past week visiting his parents and brothers. Mr. Heineman, who formerly conducted a drug store here, called upon many of his old acquaintances, and also attended the Friday afternoon meeting:

of the Druggists' Bowling Club. He expressed his opinion upon the ability of the club as bowlers, and says they can beat any club of druggists in the country at the game.

—Harry Streithorst sold his store at Sixth and Smith streets to Dr. A. Strashum, formerly of Chattanooga, Tenn. Mr. Streithorst will for the present remain in charge of the prescription department.

—Frank Haerberly, clerk at Rapp's Pharmacy, corner of Longworth and Plum streets, is confined to his bed seriously ill with typhoid fever. John Messman is temporarily filling his position.

—Martin Dodsworth, the chemist of Nelson, Baker & Co., Detroit, Mich., spent a few days among his many friends in Cincinnati the past week.

—Frank Knaeble has removed his drug store from Enright street and Warsaw avenue, Price's Hill, to Clinton and Freeman streets.

DETROIT.

GREAT INDIGNATION OVER WHITE'S PARDON.

Detroit, Dec. 8.—Will White, one of the proprietors of the White & White Headache Powders, quartermaster of the Michigan troops during the Cuban War, acknowledged thief of many thousand dollars of the State's money, is again at his desk in his manufacturing drug business in Grand Rapids, and a free man. It will be remembered that White was implicated in a deal by which the State was defrauded of many thousands of dollars, and that he "skipped" for parts unknown. These parts included, it transpires, Africa, the Holy Land, and other places very interesting to visit. But the pretty boy got a little homesick and came home a few days ago, not, it is alleged, without a pretty good idea that all he had to do was to "fess up" and be forgiven. Then came several grand stand plays and emotional situations. Restitution of funds was made to the State, petitions for his pardon were sent broadcast, and the average small person who read the daily papers full of stories of Willie's friends and welcomes home, must have thought it a beautiful thing to be a thief and steal money from the State. However, when White stood before the court at Lansing, pleaded guilty and was sentenced by Judge Weist to ten years' penal servitude at Jackson State prison, morality in Michigan caught her breath again. A sheriff took him to the prison early Tuesday morning, where he donned the prison garb and was set to work in the tailor shop.

In the meantime Governor Plngree, who appointed White to the office of quartermaster, expressed the opinion right and left that White's sentence was an outrage, and Tuesday evening he culminated his speeches by issuing a full pardon for the convict. Wednesday evening "General White" went back to his Grand Rapids home and the next morning took up the reins of his drug business which he dropped a year ago for his Old World journeyings. Public indignation for the Governor's slap at Justice and insult to public morals is at the boiling point. There is nothing but contempt for White, who does not seem to be so constituted that he can feel remorse or shame. What is it to steal a few thousand dollars from a rich State like Michigan? "To the office belong the spoils." When a man has pink cheeks and a nice moustache and knows how to dance well, and dress well, and becomes the pet of an erratic Governor, why should he not help himself to the favors of the gods? Who cares for morals?

ANN ARBOR DEMORALIZED.

Detroit, Dec. 8.—Letters and other communications to the druggists here from Ann Arbor say that the cut-rate fever attacked that city day before yesterday. A druggist by the name of Saulsbury showed a well-developed case of it very suddenly on that day, to the great consternation of the other druggists of the town and to the disgust of the Detroit druggists who have been much interested in the full prices that have always prevailed there. A year ago Saulsbury threatened to cut, but somebody took him in hand and he did not do it. This time it seems he did not threaten—he just did it. That was Thursday. A meeting of the other druggists was held and it was decided to give Mr. Saulsbury a merry fight. So this morning a large placard bearing the words,

"One-third off on drugs" appeared in every drug store window in the town. It is thought this will hold him for awhile; indeed, it is anticipated that it will close his doors.

Detroit druggists feel very badly about the matter. The high standards sustained by their neighbors at Ann Arbor have been sort of beacon lights for them. While they do not believe that the big cut of one-third will be held up very long, they think it will be hard work to restore full prices on all articles. Some of them criticize the Ann Arbor druggists for paying this kind of attention to Mr. Saulsbury. They think they could have shut off his sources of supply very easily and without going very far from home. But it is possible that the Ann Arbor druggists know their own business best.

NOTES.

—The Michigan Drug Company, Detroit, is spending between three and four thousand dollars in fixing up its sundries salesroom. The walls are being lined with new quartered oak show cases with plate glass fronts and shelves and lighted with electricity. Mirrors in the top of the cases reflect the objects on the shelves and serve to throw the light down. An entire set of new cases will be placed on the floor space. Plans for adding two or three floors to the top of the building have been drawn and are under consideration by the firm.

—Albert P. Breitenbach has sold his store at 1237 Champlain street to Hogan & Walter and has bought the store at 1004 Champlain street.

THE NORTHWEST.

St. Paul, Minn., ec. 7.

—Successions: The J. N. Miller Mercantile Company, St. James, Minn., by J. K. Sonnesyn & Co.; Smart & Battelton, Blue Earth, Minn., by G. I. Smart; E. E. Gallogly, Butte, Mont., by Christie & Leys; P. Q. Boyden, Hudson, Wis., by T. F. Moran; Wood & Light, Doland, S. D., by J. A. Light; C. L. Miller, Galva, Iowa, by Charles Millin; H. B. Robertson, Montrose, Iowa, by J. B. Worden; Everist & Co., Clemons, Iowa, by Barnes & Co.; A. McKay & Co., Bisbee, N. D., by T. A. McKay & Co.; F. A. Graves & Co., Lucas, Iowa, by F. A. Graves; W. R. Lewis, Alliance, Neb., by Butler & Tillotson; C. C. Clark, Blanchard, Iowa, by Dr. A. W. Davies; I. L. Gould, Sheldon, Iowa, by R. W. Ady & Co.

—Judge Snow, in the District Court at Winona, Minn., has denied the application of the plaintiffs for a new trial in the case of the J. R. Watkins Medical Company against the Dr. Ward Medical Company. Patent medicine rights were involved, and it is possible the matter may now be appealed to the Supreme Court by the plaintiffs, who were defeated in the original trial.

—New stores: C. L. Rich, Litchville, N. D.; W. C. Tuttle, Portland, Ore.; G. E. & F. E. Melden, Priest River, Idaho; J. J. Walker, Hamilton, N. D.; J. W. Cole, Elkton, Ore.; M. E. Harris, Hinckley, Utah; James Colby, Sallna, Utah; A. A. Witham, Paisley, Ore.

—Fred W. Ames, of Minneapolis, originally a druggist, who served in the Spanish war as colonel of the Thirtieth Minnesota Regiment, has been decided upon as chief of police of Minneapolis by his brother, Dr. A. A. Ames, the newly elected Mayor.

—Walter Bennett is under arrest in this city, charged with having passed numerous forged checks for small amounts. Among his victims are C. T. Heller, treasurer of the N. A. R. D., and Rietzke & Co.

—M. B. Grieve is reported to have sold at Bossberg, Wash.; W. M. Mahoney at Ponca, Neb., and P. H. Caudland at Sallna, Utah.

—George Lockett, who for the past two years has been in a New York drug store, has returned to this locality.

—Dave Englund is going into business in St. Paul, where Yost was before he removed to Minneapolis.

—P. J. Adams has returned to the city from Hinckley and gone to work in the Ryan Hotel Pharmacy.

—E. Demers, of Minneapolis, has gone to work at Belgrade for L. S. Waller.

—George Hobbs & Co., Cedar Falls, Iowa, have removed their stock to Edgewood.

They Relieve in Expansion.

We have been informed that the large increase in sales of Planten's Capsules and Perloids (Improved French Pearls) of Sandal Oil and its various combinations has obliged the manufacturers, Messrs. H. Planten & Son, to greatly enlarge their facilities for producing these salable and reliable specialties. See that your stock is well kept up, so that no sales will be lost, for there are no "just as good" Planten's Capsules. Messrs. H. Planten & Son have recently completed an entire new and improved plant for the manufacture of empty capsules of all kinds, which will enable them to double their former capacity and fill orders promptly and without overwork. It is very gratifying to note in these times of active and not always honorable competition that the popularity of Planten's Capsules continues to increase steadily, and the explanation is that the manufacturers have always maintained the high standard of quality and workmanship which first made these goods the favorites. If you wish information of any kind in reference to anything in the line of capsules, especially of encapsulating your private formulas, write Messrs. H. Planten & Son, the "Pioneer American Capsules House," established 1836 in New York.

Burnham's Clam Bouillon.

Druggists who sell hot soda will find Burnham's Clam Bouillon a popular and profitable drink. The manufacturers are also the proprietors of the famous Burnham's Clam Juice, which is having such a large sale, and of which, by the way, the United States Government some months ago ordered 20,000 bottles sent to the hospitals in the Philippines, and large supplies of the same for the army hospitals at home. The Bouillon may be served in a deliciously palatable form as follows: One-third hot water, one-third milk or cream, one-third Clam Bouillon. Mix the hot milk and water in a small glass, then add the Clam Bouillon. Season to taste, with a small lump of butter, pepper and salt. This drink is a winner, and all who are interested in increasing their hot soda sales and the popularity of their store with patrons of the soda fountain, should add this to their list of drinks. Attractive fountain signs will be mailed on application to E. S. Burnham Co., No. 53-61 Gansevoort street, New York, to whose advertisement on another page we refer our readers.

A Window Attraction.

The Lightning Medicine Company, Muscatine, Iowa, have prepared an attractive window display to call attention to Mull's Lightning Pain Killer and Mull's Pioneer Cures. The "Old Pioneer" is a healthy, sturdy-looking old man, made of papier mache, painted in four colors, and is a work of art. This window attraction will be sent at your request when placing an order for \$5.51 of this company's remedies, with your jobber. A handsome display easel, free samples and a novel line of advertising matter will also be furnished you. In each \$1 box of these remedies is a draft of \$1 as a guarantee, and you make 100 per cent. profit on the dollar sale, as the goods cost you \$6 per dozen. See their advertisement, which appears on another page of this issue.

We desire to again call attention to the new prescription pad and cover, which we here illustrate. This is a very practical article of its kind. The pad locks securely into the cover, and yet each leaf is easily detached. It is neat, strong and exceedingly simple to adjust.

your prescription business. We suggest correspondence with the manufacturers, J. B. Burr & Co., Hartford, Conn., who will gladly mail samples and prices on application.

Hot Soda.

Druggists who have never seriously entertained the idea of carrying hot soda during the winter months should consider the many different classes of customers to whom such a feature of their business would appeal. There are those who drink to get warm, those who drink only to satisfy the palate, and those who drink for nourishment—take a bracer in the form of a quick liquid lunch, so to speak. And we have not mentioned those who drink simply to quench thirst, naturally preferring hot drinks in cold weather, and those who drink just because it is the popular fad. This department of the present-day pharmacy will bring very profitable returns if the right hot soda apparatus is used, and the business pushed in a vigorous and attractive manner. The Tufts' Hot Soda Fountain is a superior apparatus, inexpensive, and occupies but a small space. You can obtain information regarding the hot soda business, as well as catalogues and prices of this apparatus by dropping a postal to the American Soda Fountain Company, successors to James W. Tufts and A. D. Puffer & Sons, No. 282 East Congress street, Boston, Mass.

A New Remedy for an Old Disease.

The manufacturers of Cosmos Tablets, an advertisement of which appears on another page of this issue, claim that they have such unbounded confidence in Cosmos that they absolutely guarantee it to perform the duties for which it is intended, and authorize druggists to sell their goods on the condition that the money will be refunded in case Cosmos Tablets do not cure those ills for which they are recommended. The manufacturers desire one druggist in each locality to take the sole agency and act as jobbers in their immediate vicinity. This is a first-class opportunity for some hustling druggist. It will allow you a profit (60 or 75 per cent.), which they believe no other preparation of its kind does. These goods are put upon attractive display cards, which can be placed on the counter, and will readily sell themselves, as the manufacturers' guarantee is a very prominent feature of the display card. Write for particulars to the Cosmos Chemical Works, No. 159 Front street, New York.

Two New Bottle Tops.

The Saltsburg Bottle Works Company has patented an ingenious device for controlling tooth powder as it comes from the bottle. It is a non-detachable top, which is easily opened up by pulling up, and closed by simply pushing down; it prevents waste and all spilling of tooth powder except upon the brush. As the top is not expensive, the pharmacist who puts up his own tooth powder may find it profitable to use such a top on his bottles and thus increase his sales. The same company is also advertising a new Paragon Powder Sprinkler, which is called No. 2 to distinguish it from No. 1, which has been on the market with excellent results for some time. No. 2 should be a rapid seller, as it has a large opening for the delivery of powder, is attractive in design, is non-corrosive, and reasonable in price. To those interested, samples and prices will be furnished upon application to the Saltsburg Bottle Works Company, Pittsburg, Pa.

Holly for the Holidays.

Frank Netschert, the man who prepares natural plants so that they will stand different degrees of temperature, claims he has a holly that cannot be duplicated by Nature. This is saying a good deal, but Mr. Netschert evidently knows what he is talking about. His prices would allow for the decoration of a store at a cost which will not exceed, or even equal that of the natural plant, and in addition, will last much longer, have a better effect, is easier handled and more attractive. He claims to be able to furnish you with your holiday decorations in plenty of time for Christmas decoration, so if you have an up-to-date store and want up-to-date decorations, write to Netschert. You will find his price list on another page of this issue. His address is Frank Netschert, No. 7 Barclay street, New York, and No. 187 South Clark street, Chicago, Ill.

Granulated Jamaica Ginger.

You know by experience that there are various grades of Jamaica ginger, you also know that it pays you to buy the best in the market. McCormick & Co. are trying to interest the manufacturing pharmacists in a special grade of granulated Jamaica Ginger which they claim will be particularly valuable, as it is ground from root especially picked and selected for the resinous matter it contains, and has the flour ginger sifted out. For samples of this ginger, or of mustards and other spices, insect powder, orris root and talcum powder, send to the importers, grinders and manufacturers, McCormick & Co., Baltimore, Md.

Straub & Co.'s New Mill.

The pharmacist who makes his own preparations will be interested in a mill that is illustrated on another page of this issue. It is particularly designed for the use of druggists, as it will grind and pulverize wet or oily substances, such as vanilla and tonka beans, peanuts for making peanut butter, horse-radish, carbonate of ammonia, all kinds of drugs, spices, roots, herbs, etc. If you want to know more about this mill, or about other mills made by the same firm, write to A. W. Straub & Co., No. 3737 Filbert street, Philadelphia, Pa.

Calendars.

We learn from C. I. Hood & Co., Lowell, Mass., that there has been an unusual demand for Hood's Calendars this year, that their full edition has been exhausted by acceptances of Hood's Calendar Offer, and that, for this reason, they have been compelled to order 300,000 more calendars. As the distribution of Hood's calendars depends almost entirely upon the sale of Hood's Sarsaparilla, this condition must be very gratifying to C. I. Hood & Co., in spite of the trouble and expense necessary in ordering an extra edition of calendars.

It Drains the Last Drop.

That is what the Charleroi Oval does. It is so designed that the last drop can be drained from it, and no sediment left. These bottles are easy to clean, beautiful in appearance, and make an attractive package—conditions which the careful druggist appreciates. Further information will be obtained by corresponding with the manufacturers, W. H. Hamilton Company, Pittsburg, Pa.

Duroy Port Wine.

In handling this wine, druggists may feel assured that it is one of the purest, best and most delicious wines ever dispensed by the retail pharmacist. It will pay you to handle it. Samples of this wine will be sent to you if you address the Duroy & Haines Company, Sandusky, Ohio, who are the sole proprietors.

In sounding the praises of their products, the New York Quinine & Chemical Works speak with no uncertain voice. Most of their products are C. P., and can be had from any wholesale dealer. Where druggists or doctors cannot secure supplies of N. Y. Q. products, they will be supplied direct by addressing No. 114 William street, New York City.

STATE OF TRADE.**Approach of Holidays Restricts Trade.**

New York, Dec. 11.—Decidedly colder weather has stimulated the demand for seasonable articles, but the near approach of the close of the year is restricting the demand to actual requirements of the consuming trade, and the volume of general business has shown a gradual shrinkage. Quinine has attracted considerable attention and the developments of the past week have been of unusual interest. Two of the domestic manufacturers reduced their quotations 3c. per ounce to the basis of 32c. for bulk in 100-oz. tins. This was followed on Thursday by a decline of 2c. per cent. in the average unit value of bark at the monthly sale on Thursday last in Amsterdam. The next day German brands of quinine were reduced by the makers 5c. per ounce to the basis of 30c. for bulk, and the decline was immediately met by all domestic manufacturers. In consequence of these developments the outside market became very much demoralized and none of the principal holders was inclined to quote. London also was cabled lower, but there has since been a slight recovery in that market and some are of opinion that bottom prices have been reached. The bark situation, however, is an important factor, and much will depend on the future course of prices of raw material. The consuming demand has been light and unimportant and speculators have shown no disposition to operate except at further concessions in price.

A continued firm feeling has prevailed among holders of opium and crop conditions are still unfavorable. December is a critical month in producing districts, and it is claimed that unless there is a material improvement there shortly the winter sowings will suffer considerable damage. Morphine and codeine continue active, but owing to the influences noted last week there is no quotable change in prices. Salol quotations have been reduced 50c. per pound by the local agents of manufacturers.

In the department of essential oils the holiday trade is practically over, and business is limited mainly to moderate quantities to meet the light current requirements of consumption. Changes in price have been few and unimportant. Anise and cassia are lower and the Messina essences slightly higher, all in sympathy with primary markets. Oil limes, distilled, was reduced 10c. per pound. Among the indigenous roots a general revision of quotations shows a slightly reduced range for golden seal, serpentaria and senega, but jobbing prices are not materially affected. St. Vincent arrowroot is lower under the influence of corresponding conditions abroad. Star anise seed also has declined under a similar influence.

Citrate of iron and quinine was reduced 5c. per pound by manufacturers, and all the minor quinine salts are lower in sympathy with the recent decline in sulphate. Gum sandarac is firmer under reduced stocks, and Valencia saffron is easier. Union salad oil has been reduced 2c. per gallon by manufacturers.

A Little Better in Boston.

Boston, Dec. 8.—Good weather has stimulated trade a little. Drug stores are setting forth sundries suitable for holiday presents. On Sundays and evenings druggists often reap the benefit of the hours when other places of business are closed, and a well-made display of goods frequently brings its reward in chance sales. In the list of general drugs, opium and quinine have been fairly active, with no change in prices, although the last-named is expected to show lower rates before long. Of the chemicals, nitrate of soda is more active than anything else. Alcohols and spirits are in fair demand without change in prices. Fair trading in dyestuffs is reported. Waxes show moderate demand and steady prices.

Comparatively Quiet.

Philadelphia, Dec. 8.—Business has been comparatively quiet during the past week, with a tendency to a steady volume that will average up fairly well. A few complaints are heard in certain localities where the number of stores is in excess of the demand, but generally there is little cause for other than satisfaction with conditions such as now rule the drug trade in this city.

Wholesale houses report things steady and quiet, with a fairly large number of local and out-of-town orders. Heavy drugs and chemicals are unchanged, with quotations a shade higher than last week. Drug importations through the local Custom House are becoming quite a factor in its returns, much of the importations formerly through New York now coming direct to Philadelphia, especially from Germany, since the establishment of a line of steamers from here to Hamburg.

Fair Activity in Baltimore.

Baltimore, Dec. 10.—Although there is much complaint about the business from retailers who assert that they are not doing any better than during July, the dulllest month in the year, the wholesalers report gratifying activity all along the line, which suggests that the retailers may be taking a jaundiced view of the situation and are in reality busier than they suppose. The manu-

facturers, too, make encouraging statements and admit that the volume of transactions is ahead of last year, although most of the salesmen have been by this time called in until after the holidays. The market for botanicals is in the main steady, no unusual features having developed of late, while the movement of heavy chemicals appears to be of usual proportions.

December Commences Well.

Detroit, Dec. 8.—December has opened up exceptionally and unexpectedly well for the wholesalers. The bulk of trade, however, has been in the sundries departments. Some of the smaller druggists about town are reported to be buying two and three times their usual amount of those articles. Already the stock in some lines is getting low at the jobbers. From the looks of the orders every young man in the city will own a "military hair brush" after the holidays. Retailers are making vigorous kicks on the little legitimate drug business they are doing. They say the thing that keeps them going is the custom at this time of the year for people to come in, select something in the sundry line, and order it put aside for future delivery. The weather and the general health in Michigan are against regular drug trade.

Business Better in the Northwest.

St. Paul and Minneapolis, Minn., Dec. 7.—The linseed oil trust has, as it were, "come to its milk" some more. The price has declined four cents, standing now at 64 cents. At this rate the quotations will soon be back at the plane held before they were elevated to the abnormal figures of six weeks ago. Jobbers report business progressing in satisfactory shape. Retailers, too, are feeling better, many of them noting a distinct improvement this week. Furthermore, collections are here and there showing a tendency to revive, despite the proverbially unfavorable month of December. Prescription work holds its own and in some instances even more. Still, more than one drug store proprietor finds trade disagreeably quiet. One of them, in St. Paul, expresses his conviction that this year the trade was brisk before election and flat afterwards, thus reversing the customary order. He and some others account for this, partially, on the theory that customers are "saving up for Christmas" and that other channels of trade than the drug are to reap the chief benefit.

"HEATH'S HOME AND SCHOOL CLASSICS."

Under this title the well-known publishers, D. C. Heath & Co., of Boston, are issuing fortnightly two series of books which should prove of interest to parents, teachers and all who have to select books for children. These books contain carefully chosen selections from the world's best literature by such distinguished authorities as Edward Everett Hale, Mary A. Livermore, Thomas M. Balliet, George H. Browne, W. Elliot Griffiths, Elizabeth Stuart Phelps Ward and others. The Story Book Series, adapted for children up to the age of 10 or 12 years, may be used for supplementary reading in the earlier half of the school course. In this series may be mentioned such classics as Browne's "The Wonderful Chair and the Stories it Told," Mrs. Craik's "So Fat and Mewmew," Ewing's "Jackanapes" and the "Story of a Short Life," "Goody Two Shoes," Ingelow's "Three Fairy Stories," "Mother Goose," "Old English Wonder Stories," Ruskin's "The King of the Golden River," Thackeray's "The Rose and the Ring," etc. The Young Reader's Series are suited for the reading of older children, boys and girls from 10 to 12 years of age, and may be used as supplementary reading books in the second half of the school course. In this series are embraced such stories as Defoe's "Robinson Crusoe," Fouque's "Undine," "Gulliver's Travels," Lamb's "The Adventures of Ulysses," Lamb's "Tales from Shakespeare," Martineau's "The Crofton Boys," Motley's "The Siege of Leyden," Shakespeare's "The Tempest," "The Comedy of Errors," and others. Each book contains complete texts, with only such changes as are necessary to adapt it for home and school reading. The yearly subscription for 24 single numbers in paper covers is \$2.50. Singly the price is 10 and 15 cents in paper; cloth, 25 cents.

MARKET REPORT.

NEW YORK MARKET.

New York, Dec. 11.—Buyers are keeping close to actual necessities, owing to the near approach of the end of the year, and general business shows gradual shrinkage, but the volume continues of satisfactory proportions, and the movement of seasonable articles has been stimulated by the advent of colder weather.

OPIMUM.—The market continues firm under the influence of corresponding conditions abroad, and jobbing parcels are held at \$3.55@3.75 for 9 per cent. and \$3.65@3.85 for 11 per cent., according to size of order.

POWDERED OPIUM.—Small lots are finding a fair consuming outlet, and jobbing prices are firmly maintained at \$4.75@5 for 13 per cent. and \$5.10@5.25 for 16 per cent., the higher figures for single pounds.

MORPHINE.—A continued firm and moderately active market is reported, with jobbing quotations unchanged on the basis of \$2.40@2.60 for eighths, according to brand and quantity.

QUININE.—A sharp decline in values of bark at the last monthly auction sale had a decidedly depressing influence on the quinine situation, and the market became very much demoralized. Manufacturers reduced quotations 5c. per oz., and jobbers revised their figures to the basis of 30@31c. for bulk in 100-oz. tins, according to brand.

SALOL.—Manufacturers reduced their prices 50c. per lb., and the revised jobbing quotations are \$2.50 in pounds, \$2.55 in halves, \$2.65 in quarters and 24c. in ounces.

CITRATE OF IRON AND QUININE.—Manufacturers' quotations are 5c. per lb. lower, and jobbers have reduced their range to \$2.10@2.45, as to quantity.

ESERINE SULPHATE.—Owing to the influences noted last week, jobbers have further advanced prices to 12@15c. for 365 grain vials.

PILOCARPINE MURIATE.—Jobbing quotations are again higher, and 365 grain vials are held at 11@15c. and 10@15 grain vials 10@15c.

ESSENTIAL OILS.—Quotations for anise show a decline to \$1.80@1.95, and cassia to \$1.05@1.15 in cans and \$1.30@1.45 for less. Bergamot has been advanced to \$2.40@2.70 for ordinary and \$2.70@2.90 for finest. Orange is higher and held at \$2.05@2.30.

ARROWROOT.—St. Vincent is easier abroad, and spot jobbing quotations have declined to 15@18c., as to quantity.

ANISE SEED.—The star variety is lower, and jobbers are now quoting 32@37c.

SAFFRON.—A slightly easier feeling has developed, and quotations for small lots have been reduced to \$10.75@11.75, as to quantity.

GUM SANDARAC.—Market firmer under reduced stocks, and for jobbing parcels the quoted range is 26@31c.

PRICKLY ASH BERRIES.—Market firmer, owing to scarcity, and quotations for jobbing quantities have been advanced to 90c@\$1.

FLAXSEED.—There is no quotable change in ground, but for whole cleaned, jobbers have advanced prices to \$7.50@7.75 per bbl. and 5@6c. per lb. for less.

SASSAFRAS BARK.—Stocks are light, and quotations for small lots have been marked up to 12@16c. for whole and 17@20c. for powdered.

GUM ASAETIDA.—Extra grades are very scarce, and jobbers have advanced quotations to 50@60c. No. 1 is held at 45@55c. and powdered 50@60c.

BENZOIC ACID.—German is easier, with quotations showing a decline to 60c@\$1, as to quantity.

WHITE LEAD, RED LEAD AND LITHARGE.—Manufacturers' prices are slightly lower, and jobbing quotations have been reduced to 6½@7c. by the keg and 8@10c. for less.

AMERICAN PHARMACEUTICAL MACHINERY IN ENGLAND.

Arthur Colton, of Detroit, has just returned from England where he took contracts for large quantities of pharmaceutical machinery. He is now getting ready for shipment six power tablet machines, four gelatine pill-coating machines and five pill-making machines. Mr. Colton's inventions in pharmaceutical machinery are in use in nearly all factories here.

—The next annual meeting of the Maine Pharmaceutical Association will be held at Portland, Tuesday, Wednesday and Thursday, July 9, 10 and 11, 1901. Committee on Entertainment are D. W. Heseltine, J. A. Broe, Chas. M. Hay, Alfred Sturges, W. B. Harrington and F. W. Jewett, all of Portland.

THE METRIC SYSTEM.

As stated in this paper last week, a bill to establish the metric system in the United States has been introduced into Congress and favorably received. It is believed that it will be enacted into law, to become operative January 1, 1903. This is very cheering intelligence to those who have worked so long, often against great discouragement and apparently unsurmountable obstacles, to secure the substitution of this accurate, scientific, logical and simple system of weights and measures for the cumbersome, inconvenient and inconsistent systems now in popular use. The greatest obstacle has been and is the usual attitude of the general people, the lazy disinclination to any change from custom. To establish the metric system in general use it will be necessary to overcome this inertia, to educate the people to it. This will not be so difficult as it seems in advance. When compelled by law to use it, and particularly when it is appreciated how simple is the system and how easily mastered, its adoption will come quickly and with little friction.

It is gratifying to note that the newspapers in their treatment of this matter are assuming a position very different from that held by them a few years ago; they are advocating the system, not opposing it. The New York Sun, for instance, speaks thus:

If the bill becomes a law there will be a large demand for tables giving the metric equivalents of the tables we all learned at school. It will be some time before most of us can think easily in terms of metres, kilograms and hectolitres. We have a fairly accurate mental conception of what is included in a mile, an acre or a pound avoirdupois, but some practice will be needed before we can think of a kilometre except as about three-fifths of a mile or of a kilogram except as about two and one-fifth pounds. In other words we will be inclined at first to translate terms of the new into terms of the old system before we grasp their meaning, just as a young student of languages gets his first notion of the meaning of foreign words by translating them into his own tongue.

A little practice, however, in the use of metric tables will enable us to employ them for just what they stand for without any intrusive thought of the old standards; and when we are able to think, for example, of a square kilometre as such and not as a little over one-third of a square mile, we shall be ready to enjoy the full advantage of the most scientific and least complicated system of weights and measures ever devised. We shall then speak, as far as weights and measures are concerned, the language of business and commerce that has been adopted by nearly the whole civilized world; and thus a large source of perplexity and misunderstanding, that is actually a business impediment, will be removed.

THE APPRENTICE'S QUALIFICATIONS.

The following letter has been received from the Dean of the College of Pharmacy of the University of Minnesota:

I learn from your editorial in the issue of the Era of December 6 that it is believed the New York State Board has practically decided to designate the necessary requirements for apprentices at a complete grammar school training or an equivalent.

It is to be regretted that the Board has set so low a standard. To say that a grammar school training is a sufficient one for a pharmacist is equivalent to saying

that a pharmacist need not be educated. Of course, a grammar school graduate may evolve into an educated person and even into a capable pharmacist, but it will then be because of the acquisition of knowledge in addition to that gained at the grammar school.

It would be a good plan for the board to raise the requirements by an additional year's academic work every year until four years' additional academic work (equivalent to four years' high school work) would be reached. That is, say during 1901 admit grammar school graduates, during 1902 those only who present a full year's additional school work, during 1903 those who present two years', etc., until in 1905 and thereafter four years' high school or college work would be required.

Many States, at least some I know of, look to New York for precedents, but we want New York to set us better examples. It can do so, and I am among those who are hoping that it will.

The New York Board is just as anxious as is our correspondent to have a better educational equipment of the apprentice, but the matter is one of expedience, of making haste slowly. The board has left to it, by the law, the power to frame such requirements in this direction as it sees fit, and it intends, we believe, to raise the standard just as much and as quickly as is expedient and wise. Eventually, and soon, there is no doubt it will reach the plane advocated by the writer above quoted, but the change must be gradual, not abrupt. It will not do to violently disrupt the old-established order of things. The question of what we want is very different from that of what we can get, and in this State the pharmacists consider themselves very fortunate in having gotten what they have. The board may safely be relied upon to work out this apprentice problem wisely and well. It has just inserted the wedge and will drive it in by successive heavy blows.

IT PASSES THE HOUSE.

Last Saturday, December 15th, the House of Representatives at Washington passed a bill prepared by the Ways and Means Committee providing for a reduction of the revenues through the removal of certain of the war taxes imposed under the act passed in 1898. Among other features of the bill it provided for the repeal of Section B of the Stamp Tax Act, so far as it relates to medicines and this provision was passed without any discussion. In fact there was very little debate over the bill, only a few efforts being made to amend it in some minor particulars. It will now go to the Senate for approval, and it is believed that this will be quickly accorded it.

The drug trade has very great reason to be pleased with this action of the House, as undoubtedly it has been due to the combined efforts of the trade that the repeal of the stamp tax on medicines has been accomplished. For once druggists have gotten together and have all worked to the same end.

The legislative committees of the National Association of Retail Druggists, the National Wholesale Druggists' Association and the Proprietary Association of America have, as all know, taken formal action on this matter in the way of resolutions and protests to Congress. Many local organizations, boards of trade, etc., as well as state pharmaceutical associations have in the past few months taken similar action. But we believe that this journal has had no little in-

fluence in inducing the Committee on Ways and Means to frame the measure in such manner that it would relieve the drug trade of the stamp tax burden. Some months ago the Era commenced a campaign to this end, which became very active as the time approached for the convening of Congress and it was made known that this question would be one of the first to receive consideration. A printed form of petition was sent to every wholesale drug house, to all the proprietary manufacturing concerns, and to 40,000 retail drug stores in the United States. As a result, these petitions have come in to us by the thousand, and were in turn submitted to the consideration of the committee and Congress. Every State in the Union was heard from, and from the thousands of signed petitions received it was evident that the drug trade in its several branches was a unit in its demand for the repeal.

Several hundred copies of this petition were sent also to the secretary of the N. A. R. D., who in turn supplied them to the secretaries of all the affiliated organizations. Of the 50,000 petitions circulated by this journal the majority were returned to us, but many druggists sent them direct to their Congressmen with personal letters requesting consideration and relief. The Philadelphia Association of Retail Druggists took the Era's petition, had it signed by several hundred, and sent it direct to the committee. The same was done also in New England, and it is safe to say that there is not a member of Congress who has not been made fully aware, by these petitions and personal letters, that the drug trade wanted relief. A word of praise may also be spoken for many private firms among the wholesale and manufacturing trades who supplied all their salesmen with copies of this petition and secured thereby many hundreds of signatures.

Beside frequent letters to members of the committee and to Congressmen, the Era joined in a delegation of representatives from the three associations above named in a visit to Washington recently, and secured interviews with members of the committee. We present above also a letter of acknowledgement from the chairman of the Ways and Means Committee to whom, by special representative, were forwarded the signed petitions, embracing many thousands of signatures.

We cannot express too much appreciation of the cordial support which the trade has given to this movement. All that seemed to be necessary was that some one should take the initiative and assume the expense of a canvass of the drug trade. The result has certainly proven that our efforts have been appreciated, and we are sure that they have influenced to greater or less extent the action of the Ways and Means Committee and the members of Congress assembled. We shall continue the campaign by bringing the matter strongly to the attention of the proper committee in the Senate, and we believe it is safe to prophesy that equally favorable consideration will there be received and the bill passed.

Fifty-Sixth Congress.

SERENO E. PAYNE, Chairman.

John Dalzell, Joseph W. Babcock,
 Albert J. Hopkins, James D. Richardson,
 Charles H. Grosvenor, Samuel M. Robertson,
 Charles A. Russell, Claude A. Swanson,
 George W. Steele, Geo. B. McClellan,
 James A. Tawney, Francis G. Nowlands,
 Samuel W. McCall, Sam Bronson Cooper,
 Chester I. Long, Oscar W. Underwood.
 Hull Greenfield, Clerk.

COMMITTEE ON WAYS AND MEANS,
 HOUSE OF REPRESENTATIVES.

Washington, D. C., Dec. 13, 1900.

The Pharmaceutical Era,
 396 Broadway,
 New York, N. Y.

Dear Sirs:—

Yours received, and I will send you a copy of the bill proposing a reduction of the revenue and the report accompanying the same. We propose to repeal all of the war revenue taxes so far as they relate to medicines.

So you see that the Committee has given heed to the various representations made by the parties interested which it has received.

Very truly yours,
 SERENO E. PAYNE.

To the Editor: I notice on page 615 of December 9th issue the remarks you have made relative to the tax under the head of "It will benefit the retail druggist." Permit me to thank you for the stand you take and to assure you that the work you have done is appreciated by druggists. I think if publications try to bring all branches of the trade entirely together, as you have done, that it will result in our mutual advantage. We wish all to work in harmony instead of at cross purposes, and I have noticed the Pharmaceutical Era has always worked to this end.

Again thanking you, I am,

Yours very sincerely,

E. C. DeWITT,

Chairman Committee on Legislation, P. A. of A.
 Chicago, Dec. 11, 1900.

To the Editor: The stamp tax on Schedule B is like the income tax. Why should not the retail druggist take a hand to repeal the same? I have written to a personal friend in the United States Senate to help to repeal that act B. It was O. K. some thirty years ago when the manufacturer was short of assistance from the retailer, but now that the public is not willing to help the manufacturer it is outrageous that the retailer should pay all of the war tax and more for the rise of other material in connection.

Gordon, Neb.

C. E. HOFFMAN.

To the Editor: You will find enclosed a list of names, some druggists, some business men and county officials, all friends of our Congressman, Hon. James E. Watson, Congressman of the Sixth District of Indiana. Hoping this will be all satisfactory and have some influence on reducing the revenue tax.

Connersville, Ind.

H. C. BRAGG.

To the Editor: I am the only druggist in this town but enter my righteous protest with the same fervor as if my petition contained a million names, if it only counts as one. My candid opinion is that this was a wholesale robbery, to express it mildly.

Denver, Idaho.

J. J. PULSE.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

A FEW DON'TS.

Don't say I'm out of so and so, I have some coming, etc. Always say we, etc.

Don't shout through the 'phone and thereby stop all conversation, but speak into the receiver in a low voice.

Don't tell the customers everything, but let them tell you something. They will like you better.

Don't be anything but pleasant, it will make you customers.

Don't be late in the morning or at meal time.

Don't try to see how big a price you can get for goods; nothing hurts one's business so much as a reputation for high prices.

Don't fail to look neat and tidy; anyone can have his shoes shined without being a dude.

Don't part your hair in the middle, it belittles the profession.

Don't be too careless as to the appearance of your windows, you can't have them too clean nor change them too often.

Don't hold the twine in your teeth while tying a package nor lick the label.

Don't put one label over another unless it be the same medicine.

Don't throw paper on the floor, but always in the waste paper basket or box.

Rockford, Ill.

DRUGGIST.

DRUGGISTS PROTEST.

To the Editor: Recently the Supreme Court of Illinois rendered a decision nullifying that part of the Pharmacy law pertaining to the sale of patent medicines, which is certainly one of the biggest outrages perpetrated by a judge or judges in a long time, and an outrage not so easily perpetrated had the druggists been on the lookout,

had they been thoroughly organized and each and every one in thorough sympathy with the organization. The druggists do not realize what a power they would be if they would stick together. It is certainly an outrage to knock out a law which prevents the indiscriminate selling of medicine, patent or otherwise. The grocer or butcher or other dealer who sells patent medicine handles it only as merchandise, he knows nothing about the ingredients entering into the compound, neither does he care. It is true the druggist does not know what the average patent medicine contains, but he does know some of the ingredients entering into the majority of them and can talk intelligently about them if he is asked any questions by the customer. For years the retail druggist has been imposed on in every way. Prices have been raised to him and his profits have been reduced, and now this latest outrage. If things go on this way, in a short time there will be nothing left for him; he will in his old age have to turn to something else to earn his living, and all for the want of organization. Organize to-day and stay organized; don't forget about it to-morrow. Get together occasionally and talk things over; don't be afraid of one another, get acquainted with each other, then you can accomplish something. It is certainly not very encouraging to think that a few patent medicine manufacturers can have such an important part of our pharmacy law knocked out without some protest.

C. A. REDIG.

A CONVENIENT METHOD FOR ADMINISTERING TINCTURE BENZOIN COMPOUND.

To the Editor: Doctors have been trying for a long time to administer Tincture Benzoin Compound without the nauseating after-effects that sometimes accompany this compound. The disadvantage of mixing with water is a well known pharmaceutical incompatibility, and if a person attempts to take it in this way he will find his mouth and throat lined with a coating of resinous gum which is very disagreeable and again nauseating.

A common way of administering this tincture is upon block or granulated sugar; this has also its disadvantages.

Now a very pleasant method of administering this is as follows:

B. Tincture benzoin compound.....	2 drams
Honey, clarified	2 drams
Elixir simplex, q. s., a. d.	1 ounce

Mix the tincture and honey to form a homogeneous mixture, then add elixir. This forms a very palatable emulsion. The dose is from 15 minims to 1 dram.

New York. WILLIAM FRASER.

ABOUT THE STAMP TAX.

One of our friends amends the petition to Congress to read as follows:

We, members of the drug trade of the United States in its several branches, retail druggists, wholesalers and jobbers and manufacturers of proprietary preparations, herewith respectfully petition the Honorable Congress of the United States to increase the special tax imposed under Schedule B, Section 25, and its dependent sections of the Revenue act, so far as such tax is laid upon proprietary medicinal preparations.

First.—Because the manufacturers thereof derive a compensation through legislation out of all proportion to the value thereof.

Second.—Because, abusing the intelligence of the common people, they are a menace to the public standard of moral precepts.

Third.—Because the proceeds thereof are needed for our public schools, or the enforcement of national sanitary measures.

Fourth.—Because their protection is an injury to the drug trade generally, the nefarious methods of pushing their wares a disgrace, lowering the standard of the pharmaceutical profession in the eyes of all good people. Butterfield, Minn.

A. SIEMENS.

ALIZARIN GREEN AS AN INDICATOR.—J. Formanek recommends alizarin green as an indicator in certain cases of alkalimetry or acidimetry, since it is equally sharp towards acids and alkalies, giving a carmine red with the former, and bright green with the latter. The tints are readily seen by artificial light. Carbonates should be determined when using this indicator by titrating back, adding an excess of acid, boiling off the CO₂, then retitrating with alkali.

BOOKKEEPING FOR DRUGGISTS.*

By CHARLES H. LAWALL.

It is a lamentable fact, as well as an indisputable one, that less than 10 per cent. of the retail druggists in the larger cities, particularly in Philadelphia, keep a systematic record of their business transactions so as to be able to ascertain their loss or gain for a given period beyond the approximation furnished by the amount of money in bank and the total sum of outstanding indebtedness. It is also probable that, of the number who do keep books, but a very small proportion attempt to classify their receipts and expenditures in order to learn the relative importance of the various branches of the business. Why this should be so it is impossible to state. Certainly, the retail druggist is not exempt from ordinary business laws and customs and no matter what other line of business you may select, nor how small the volume, the proprietor keeps his accounts in such a way as to be able to discover just what per cent. of profit has been made in any given period of time.

The average druggist has little or no conception of the per cent. to be charged up to running expenses and if he pays cash for all goods purchased and thereby gets the advantage of the discounts, he has an idea that he is fulfilling all of the requirements of sound business policy.

In consideration of these facts the writer of this paper took up the subject of "Druggists' Bookkeeping," with the aid of a practical bookkeeper, and it is to be hoped that the following outline for a simple system of bookkeeping may accomplish some good in calling attention to the necessity of keeping abreast of the times in commercial knowledge as well as that pertaining to the professional side of pharmacy.

The receipts and expenditures have been itemized as follows, so as to afford a comparison of the various branches of the business.

One month has been selected as a convenient period of time and the amounts are arbitrary and not intended to be correctly apportioned.

I. Items of Expenditure.

1. Purchases from manufacturers and wholesalers to replenish stock	\$100 00
2. Purchases of stamps	30 00
3. " " soda supplies	25 00
4. " " additional store fixtures and apparatus	3 00
5. " " additional soda fountain fixtures	5 00
6. Expense of light	10 00
7. " " help	100 00
8. " " expressage and cartage	3 00
9. " " rent	75 00
10. Purchases of cigars	50 00
Total	\$401 00

II. Items of Receipts.

1. Sales (drugs, prescriptions and patents)	\$500 00
2. " (soda water)	200 00
3. " (stamps)	30 00
4. " (cigars)	80 00
Total	\$810 00

Considering "Mr. Jones" as having started in business, an inventory must first be taken and entered in the books, as follows:

INVENTORY JANUARY 1, 1900.

Cash.	Cash Balance	\$1000 00
Mdse.	Drugs on Hand	2000 00
Store	Store Fixtures	500 00
Fixt.	Soda Fountain and Fixtures	500 00
Total Inventory		\$4000 00

For the keeping of the accounts but two books are necessary, a "Day Book" and a "Ledger."

All transactions are first entered in the "Day Book" in the following manner:

TOTAL AMOUNTS OF EXPENDITURES AND RECEIPTS.

To February 1, 1900.

Expenditures.	Paid.
Mdse. Purchases from wholesalers to replenish stock	\$50 00
Expense. Purchases of stamps	30 00
Cigars. Purchases of cigars	40 00
Soda. Purchases of soda fountain supplies	25 00
	\$145 00

*Read at the twenty-third annual meeting of the Pennsylvania Pharmaceutical Association, and reprinted from the Proceedings.

Expenses.		
Expense.	Light	\$10 00
	Heat	5 00
	Help	100 00
	Expressage and cartage.....	3 00
	Rent	75 00
		\$193 00
Bought on Account.		
Mdsc.	Purchases from wholesalers	\$50 00
Cigars.	Purchases of cigars.....	10 00
		\$60 00
Total expenditures		\$308 00
Receipts.		
Mdsc.	Sales (drugs and prescriptions).....	\$500 00
Soda.	" Soda Water	200 00
Expense.	" Stamps	30 00
Cigars.	" Cigars	80 00
		\$810 00

INVENTORY FEBRUARY 1, 1900.

Mdsc.	Drugs on hand.....	\$1800 00
Cigars.	Cigars	5 00

(Store Fixtures remain the same.)

The "Ledger" is afterwards used to post the accounts under the proper head in each instance, a sample sheet being given as follows:

LEDGER ACCOUNTS.

Mr. Jones' Capt. Acc.		Mdsc.	
Dr.	Cr.		
\$4217	\$1000 cash	Inv. \$2000	\$ 500 sale

\$1810	\$1810		
Cash bal. \$1472			

STATEMENT FEBRUARY 1, 1900.

Resources.		
Mdsc.		\$1800 00
Store Fixtures		1000 00
Cigars		5 00
Cash		1472 00
		\$4277 00
Liabilities.		
Open accounts		\$60 00
Mr. Jones' capital, January 1st.....		\$4000 00
Net gain		217 00
Present capital		\$4217 00
		\$4277 00

Of course, various modifications of this general outline may be used, as in a case where the prescription business, drug sales and patent medicine sales are desired to be kept separately; the difference being in making the entries distinct from each other in the day book and afterwards opening accounts in the Ledger under each heading.

The use of a cash register which indicates the nature of the transaction simplifies matters very much for close differentiations like this, but there is no doubt that if every druggist would adopt some such system he would find himself enriched beyond his expectations by the knowledge afforded him of the relative importance of the several divisions of his business.

WHAT SIDE LINES CAN A DRUGGIST CARRY PROFITABLY, AND HOW SHALL THEY BE DISPLAYED AND ADVERTISED?*

BY S. R. CRABTREE.

When we speak of side lines, we enter a field limitless in extent and replete with resources. In the good old days, long since gone by, there was no demand nor necessity for such innovations; but as the exploiters of our profession multiplied and competition increased it became necessary for additions to the regular line of stock to be made in order that the traditional "two ends" might not become estranged. Those whom we now call pioneers in the profession tell us that cigars and choice tobaccos were one of the first additions to be made. But now these articles are considered an essential and not an auxiliary. So intimately associated with the business have they become, in fact, that it has taken a judge of the Supreme Court of one of our New England States to decide that cigars are not drugs. Toilet articles and sick-room requisites come next in order of succession, no doubt, and they, with the soda fountain, have also from long association come to be regarded as indispensables. High grade confectionery, paints, oils and stationery have also won a stable position as necessary adjuncts.

Among the more recent acquisitions are optical goods, wall paper, photographic supplies, fishing tackle, athletic goods, insecticides, plants and flowers; yea, and in isolated cases, light lunch counters in connection with the soda fountain. Of these, the old stand-bys (cigars, toilet articles, sick-room requisites, confectionery, stationery, paints and oils) are expected to be kept in every drug store and hence do not require the attention in our advertising that should be bestowed on the newer additions. However, these stocks should be kept fresh and should be displayed at as good advantage as possible at all times, as stale, out-of-date goods in an unkempt condition are sure to direct trade to your competitor. Your friends will stand by you only so long as you use them as well or a little better than the other fellow does.

In agricultural districts there is a large and increasing demand for insecticides of various kinds, ranging from Paris green to Bordeaux mixture. There are standard formulae for the more common sprays and mixtures, and a few carefully conducted experiments will enable one to evolve others; then by doing a little judicious missionary work among the farmers, explaining to them the merits of each kind for particular insects, a profitable trade may be worked up. This class of goods can be handled more intelligently by the druggist than by general dealers, but if the druggist is not willing to anticipate the wants of the farmer in this direction and attempts to overcharge for what preparations he does keep, he cannot justly complain if the trade is gradually absorbed by other lines of business conducted by men of better judgment and business discretion. Favorable legislation gave druggists an appreciable advantage in this line a few years ago, but I know of some who so far abused this advantage by charging excessive prices that they have lost nearly all this business since "the bars were let down." It pays to be just, even if you do have a corner in the market.

An ingenious method of advertising stationery and wall paper is to make up a quantity of envelopes from wall paper and have a neat, catchy advertisement printed either on wall paper or some special brand of stationery you wish to call attention to, and mail it to your customers. A mailed circular will receive careful attention where an "under-the-door" variety is never noticed.

Many pharmacists perfect themselves in fitting glasses, and find the investment of labor and time incurred a profitable one. This branch should be given more attention than it receives, especially from country druggists, whose customers live remote from regular oculists and opticians.

Photographic supplies are undoubtedly becoming the most popular side line of the day. The camera "fend" is everywhere present and must needs indulge in all the fads pertaining to the business, and to whom shall he turn for supplies but to the ever accommodating knight

* Read at the last annual meeting of the Maine Pharmaceutical Association.

of the pestle and postage stamp? The chemicals required in making the various baths and solutions are a part of our legitimate stock, anyway, and the mechanical supplies can be readily classed with stationery and like goods; and besides, many of us belong to the aforesaid class of "fiends" and hence are in a position to give valuable advice to the uninitiated, those usually referred to as amateurs.

It is not an infrequent occurrence to see dark rooms in connection with the store, where developing may be done either by the proprietor for profit, or it may be maintained for the convenience of patrons as a feeder for business. The idea is worth considering, anyway.

Athletic and sporting goods are carried by nearly all country druggists and by many town druggists; they are convenient lines to handle, as they hold sway only for a short season and the demand for them is usually brisk. A limited space display in one of your windows is generally all that is needed in the way of advertising, using a liberal supply of price cards if the competition be sharp.

As for plants and flowers, they speak for themselves; and while not yielding a great profit, they are very useful for decorating purposes and attract attention and trade from a class of customers not reached in other ways.

I have no sympathy with the theory advanced and practiced by some, who convert their places of business into miniature department stores, dabbles in miscellaneous notions and succeeding in nothing, thereby lowering their professional standing without adding to their commercial prestige.

In general, only those side lines should be handled that do not encroach on your neighbor's business. If your brother druggist is supplying all the needs of the neighborhood with a certain line, better let him continue and thrive and yourself launch out in a field not already occupied, where you may also thrive, than to inaugurate an opposition to him in which you are sure to have a price war and finally get the trade in such a condition that there is nothing in it for either of you.

Wars of conquest are no longer tolerated among the enlightened nations of the earth; neither should unjust competition exist among the members of a profession supposed to be actuated by a high sense of honor, justice and consideration for the rights of others.

HOT SODA.

Here is a conversation, reported by the Confectioners' Journal, which is very appropriate with respect to the drug trade.

We had occasion lately to go into the retail store of one of our subscribers, and on looking around, we remarked:

"You have a fine store here, Mr. —."

"Yes," he replied, "I flatter myself that it is."

"Yet there is one thing lacking."

"Indeed! What is that?"

"A hot soda apparatus."

We hardly had time to complete the sentence before a customer entered and walked up to the counter:

"Give me a hot soda."

"Sorry, sir," replied the proprietor, "but I can't accommodate you."

"Why not?"

"Don't keep it," said the proprietor.

"That's strange," replied the customer, "all the other stores sell it."

And out he walked with a look of mingled disappointment and disgust.

We watched the proprietor to see the effect of his customer's sharp retort.

"You will hardly believe it," he said, "but that makes about the tenth man I've had in my store within the last fifteen minutes, all bellowing for hot soda."

"There's nothing hard to believe about that," we replied, "and therefore don't you think we were right in our remark about the 'one thing lacking?'"

A thoughtful look crossed his face and then with emphasis he replied:

"Well, it won't be lacking very long."

On our next visit we found a clerk behind a hot soda apparatus, around which were clustered a dozen or more customers, each waiting his turn for a glass.

SOME LINKS BETWEEN NATURAL HISTORY AND MEDICINE.*

BY J. ARTHUR THOMSON, M.A., F.R.S.E.

(Prof. of Natural History in the University of Aberdeen.)

Let me thank you, first of all, for your kindness in giving me this opportunity of addressing you, which I can assure you I regard as a pleasure and an honor. As my work does not lie exactly alongside of yours, I thought we might find a convenient line of contact by considering for a little some of the links between natural history and medicine. But as the day has already doubtless been long to some of you, as to me, we may perhaps consult our mutual convenience by trying to observe the virtue of brevity, and be content with illustrations of a subject which obviously affords material for prolonged discourse. The links between natural history and medicine which I wish to-night to illustrate are many and varied. Some were forged centuries ago, and some of these have since snapped; others are strictly modern; others, such as the role of mosquitos in spreading malaria, are at this moment in process of being formed and tested.

THE LEECH.

One cannot think of links between natural history and medicine without recalling, first of all, that a familiar animal—the leech—was used for so long (since before the Christian era) and so much (for all manner of ailments), that its name, which is said to mean "heal," became that of the medical practitioner himself. For people used to say, "Send for the leech" when we should say, "Send for the doctor," and leeching was synonymous with medical treatment. Yet, as everyone knows, a reaction set in; the leech—the animal, I mean—and bloodletting went out of vogue; leechponds disappeared; and I suppose the trade in leeches is now relatively trivial. There is a record of a Breton peasant, in 1883, who had received from the surgeon half a dozen leeches to apply to some congested or inflamed part. Being ignorant of the method of application, he handed over the problem to his wife, who in this case was wrong, for, on a neighbor's advice, she fried the leeches and gave them to the poor man. In spite of their bitter taste, he managed to get outside of them all, and died thereafter.

It is evident that the gentle art of using the leech is decadent. In the British Medical Journal for March 18, 1898 (I quote on the authority of Dr. Fernie), it is stated that "leeches, on which the older physicians placed such reliance, seem to be coming again into fashion. But we have known the ordering of a few leeches in a leading London hospital, not so many years ago, cause consternation among the dressers; a consultation had to be held as to which was the "business end" of the leech, and the combined intelligence of the staff was brought to bear on the problem "how to make him bite."

In former days, not very remote, a thoroughly qualified medical man was expected to have a knowledge of natural history, developed along a line which is now but rarely followed. He was expected to know a large number of forms, not because of their scientific interest, but because of their supposed practical value. In other words, he had to know the "animal simples," the uses of animals as medicines, uses which sometimes suggest gross superstition, but sometimes extraordinary insight. If we consult a compendium of animal simples, such as one by Dr. Fernie, we get two opposite impressions. We are amazed, on the one hand, at the credulity which is implied both in those who prescribed and in those who swallowed many of the reputed medicines. We wonder, on the other hand, at the justification which modern science has given to some of the old prescriptions.

It seems to me that we may divide the old prescriptions into three sets—those with no justification, perhaps 75 per cent.; those with an obvious justification, perhaps 20

* Address to the North British Branch of the Pharmaceutical Society, reprinted from *Phar. Journal*.

per cent.; and those which have found some justification—by no means obvious—as the result of recent scientific progress, these forming the remaining 5 per cent.

OLD PRESCRIPTIONS.

The first set of old prescriptions, which I select from Fernie's 'Animal Simples,' includes those which have no real justification:—Rheumatic patients were told to take a black cat to bed with them, for it is rich in curative electricity; the dust of a dried magpie was used in Germany as recently as 1880 as a cure for epilepsy; the skink lizard once held a place in British pharmacopœias as a cure for leprosy and much else; to stop hæmorrhage the patient was recommended to lay hold of a dead toad, "horror and fright constraining the blood to run into its proper place for fear of a beast so contrary to humane nature;" to lay an open pickled herring on the soles of the feet on going to bed was deemed a cure for swollen legs—to thrifty Scots it would seem sheer wastefulness; we would prefer an internal application. These are a few of the least extravagant of the many old prescriptions which may, I suppose, be dismissed as without any justification.

The second class of ancient prescriptions includes those which may have something in them, for the obvious reason that the animals used contain certain potent or at least useful chemical substances. It is not surprising that decoctions of ants should have been found to have at least some effect, for ants contain formic acid; it is not surprising that powdered pearls—a dose for the wealthy—might be of some service, since pearls are made of lime; it is not surprising that the snail in its chemical complexity might have dietetic value. Has it not been called "the poor man's oyster?"

TOADS AND SNAKES.

Now, we cannot have much interest either in the grotesque prescriptions or in those whose justification is obvious, but there is a third set whose character affords food for reflection. I refer to those in which there lurks an undeniable kernel of truth—reached we can hardly tell how—which has been justified scientifically by modern researches. It has been shown that what seemed absurd (or worse) had sometimes a real justification. Two examples must suffice. Preparations of the toad were prescribed for such maladies as dropsy, and we now know that phrynin, the active principle in the toad's skin secretions, has a powerful influence on the pulsations of the heart; is very like the digitalin from the foxglove, and thus might really have a good effect in cases of dropsy from heart affections. As Dr. Hewlett points out in *Science Progress*, dried toads and toad ash, and toads in other forms, have been used medicinally since the time of Aristotle, and were recognized in *materia medica* till the end of the eighteenth century. Now, since the alkaloid phrynin, found in the skin glands of the toad (and also to a slight extent in the frog) causes, when injected, contraction of the arterioles, rise of blood pressure, increased cardiac contraction, and so on, it is at least conceivable that it might be of some real service in ancient days.

I take a second illustration from the treatment of snake-bite. The venom in this case is well known to be of proteid nature, not alkaloid like that of toads and salamanders. It is the secretion of a specialized salivary gland. (a) The natives of several countries have been in the habit of drinking diluted snake poison to render themselves immune; this is certainly approached by the modern recommendation—e. g., by Professor Fraser, of Edinburgh, and Dr. Calmette, of Paris, that an antitoxin serum, prepared from snake venom, should be injected into the person bitten. (b) In many African snake medicines the bile of the snake is an important constituent; this is certainly approached by the recent evidence furnished by Fraser and Phisalix, that the bile of a venomous snake is an antidote, or even more than that, a preventive against the fatal effects of a bite. (c) An old Indian remedy for the bite of a certain snake is to chew the root of a labiate plant—*Lagostemon puricallis*, this is certainly approached by the discovery of Phisalix, that the juice of the dahlia tubers, or of the fungus *Russula*, has immunising properties against the viper's venom. Let us note the line of discovery, doses of bile neutralize venom (Fraser); biliary salts and cholesterol

have, like the intact bile, a neutralizing or immunising effect (Phisalix); vegetable cholesterol will work like animal cholesterol, and even tyrosin from the dahlia has the same important effect (Phisalix). Thus we come back to herbalist medicine again.

THE LION'S HEART AND NEWER LINKS.

Similarly let me remind you in a few words of an old-fashioned kind of remedy which, until recently, provoked only a smile from modern physicians. I refer to the prescriptions that the coward should devour the raw heart of the lion, that the weakly should eat the heart of an ox, that the lethargic should dine on a ram's brains, that the jaundiced should try the liver of a fox, and so on at great length. Yet surely there is some approach to this in the modern treatment of those unfortunate subjects whose thyroid glands have in some way gone out of gear, with the result that goitre or myxœdema ensues, for they are ordered to eat the thyroids of sheep or calf, or are treated with doses of thyroid extract. The results are apparently very effective; and the historical inference seems to me to be plain—that the old physicians were not such fools as they sometimes seemed.

But let me now give a few illustrations of what I would call newer links. The importance of having other organisms besides man to work with is at once a trite and difficult question, but let me recall a recent instance which can offend no one. It is said that the importance of the thyroid is somehow bound up with the iodine compound (thyreo-globulin), which it contains. But has not the matter been complicated by Professor A. Gautier's paper of last year, in which he demonstrated in the normal thyroids of dog, pig, sheep, and other mammals, besides man, the presence of minute quantities of arsenic. Though there are insensible quantities in the skin, arsenic is absent from the organs of the body, except thyroid, thymus, and brain. In the thyroid it exists in combination with nucleins, along with the usual phosphoric nucleins. Does not this shed some light on the alleged advantage of arsenical medicines in treating diseases of the thyroid, and will it not lead us to translate "no health apart from the thyroid," into "no health without arsenic?"

PARASITES AS LINKS.

But let me now pass to illustrate another kind of link—namely, in connection with parasites. Here natural history and medicine have over and over again joined hands, and it does not seem too much to say that, without the labors of zoologists in working out life-histories and interrelations, the medical treatment of parasites would have remained very empirical. The two illustrations which I take both concern mosquitos. As long ago as 1878 Dr. Patrick Manson called attention to the part played by mosquitos in spreading a minute threadworm parasite, well known as *Filaria sanguinis hominis*. His work has been confirmed by several workers, especially by Bancroft. Though the story has not been quite completed, it is almost certain that it will end as Manson and Bancroft predict. The story is this: The mature parasites live in the lymphatic vessels in man, and are by no means very small, measuring from 3 inches to 4 inches in length. They give rise to minute embryo filaræ, which live in the blood-vessels, swimming about when the host is sleeping, resting when he is active, perhaps because of the difference in the calibre of the capillaries during waking and sleeping hours. They cause very serious disease, which I need not try to discuss. Now, when a mosquito bites an infected subject during the night it takes away with the drop of blood some embryo filaræ. From the mosquito's stomach these embryos bore to its muscles, especially in the thorax, and grow with great rapidity for seventeen days. It used to be stated that the mosquitos only fed once and died within a week, but Bancroft points out that this was because the learned doctors omitted to feed the insects. By giving the introduced house mosquitos of Australia a little banana to suck, Bancroft kept them alive for weeks—indeed, for a couple of months. It is believed, though it has not been proved, that no further change will occur in the young filaria within the mosquito unless it pass somehow into man, there to develop into the full-grown worm of 3 inches or 4 inches. Bancroft has suggested that a life-sentenced prisoner might be of some use to the world if he could be induced to swallow some mosquitos bearing filaræ, on condition of receiving a free pardon. It is difficult to believe that a prisoner would, in

the circumstances, strain at a gnat. But how does the filaria normally get into man? It used to be supposed that the exhausted mosquito fell into watertanks, that the filariæ emerged, and passed into man when he drank the infected water. But there is no evidence that the filariæ ever liberate themselves in this way from their mosquito host, and Bancroft has shown that the young filariæ put into water die in three or four hours. Therefore, water cannot be the vehicle of infection. It is now supposed either that man must swallow an infected mosquito or that he may put his finger into his mouth after killing one; or that, when an infected mosquito is biting man, the filariæ, excited by the entrance of the warm blood, may burst into the mosquito's gullet and pass down its proboscis into man. This part of the story remains obscure.

MOSQUITOS AND MALARIA.

That mosquitos play a part in infecting man with malaria is an old and widespread belief, to which recent experimental work has given a scientific basis. An elaborate argument in favor of the popular belief was published by King in 1883, and since that date many workers have made contributions towards a solution of the problem—Manson and Ross in Britain, Laveran and Calmette in France, Koch and Pfeiffer in Germany, Bignani, Mendini, and Grassi in Italy. The question of priority is as difficult as it is tiresome. The general arguments in favor of the hypothesis, well summed up by Nuttall, are very suggestive:—The malarial season usually corresponds with a period of warmth and moisture—conditions which favor the development of mosquitos; malarial regions are mosquito regions; devices which protect against mosquitos—curtains, cities, drainage, and so on—also protect against malaria; these are three of the many general arguments. But, suggestive as these arguments are, they do not prove the correctness of the mosquito-malaria hypothesis. Experimental evidence was necessary, and it has been forthcoming. Following a suggestion of Manson's, Ross exposed malarial subjects in India to mosquitos, and observed that crescent-shaped parasites (Proteosoma) passed with the drops of blood from man to mosquito, and underwent a further development in the insect host. He also showed that only some of the many different kinds of mosquitos were suitable intermediate hosts for the malaria-parasite. Furthermore, he succeeded in producing malarial infection in birds—e. g., sparrows and crows—by means of infected mosquitos. He was led to the conclusion, since confirmed by others, that malarial infection results from the bites of mosquitos whose salivary glands contain the parasite. I need not try to follow the numerous researches of other workers, but it is important to notice that Grassi and Bignani succeeded in infecting a patient with malaria as the result of the bites of a mosquito (*Anopheles claviger*), and in tracing the development of the parasites in those same mosquitos after they had bitten a malarial patient. We have here a good instance of the confirmation of general arguments by experimental evidence.

THE VALUE OF A CONTROL EXPERIMENT.

But let us now notice the value of a control experiment. If malaria is due to the introduction of a parasite from the mosquito to the human blood, then there should be no danger in a malarial district provided that the mosquito's bite can be avoided. This idea led to the erection of a mosquito-proof hut near Ostia, in one of the worst parts of the Roman Campagna, to serve as a cage for two volunteers who agreed to submit themselves to the test. Dr. L. Sambon and Dr. G. C. Low, of the London School of Tropical Medicine, arranged to live from May to the end of October in this hut, situated in a region "where scarcely a person spends a night without contracting malarial fever of a virulent type." No quinine or other drug was to be taken; the volunteers were to live in the mosquito-proof hut from an hour before sunset to an hour after sunrise, for the mosquitos feed only during the night. The experiment seems to have been quite successful. On September 13 Professor Grassi and other investigators visited the hut, and sent this telegram to Manson: "Assembled in British mosquito-proof hut, having verified the perfect health of the experimenters amongst malarial-stricken inhabitants, I salute Manson, who first formulated mosquito-malarial theory.—Grassi." Similarly, Dr. Elliot reports that the members of the

Liverpool expedition, sent this year to Nigeria, have been perfectly well after four months in some of the most malarious regions, and that they attribute their immunity to the careful use of mosquito nets.

As my chief interest at present is not with malaria, but to illustrate the scientific method, I ask your attention to another experiment. The story of the two volunteers on the Campagna is a fine illustration of scientific enthusiasm, and of confidence in scientific methods and results. What they have shown is that by avoiding mosquitos, or by getting mosquitos to avoid you, malaria is escaped. But it may be argued that this is only negative evidence. The question is whether malaria can be produced in a healthy person by the bites of infected mosquitos. In a recent number of the *British Medical Journal* it is stated that a consignment of mosquitos which had been fed on the blood of a malarial patient in Rome was received in London in July, and that a son of Dr. Manson, who had never been in a malarial country since he was a child, allowed himself to be bitten, and thereafter suffered from well-marked malarial infection of double tertian type. Microscopic examination of his blood showed the presence of numerous malarial parasites. This must be regarded as almost final proof of the hypothesis—shall we not say fact?—that malaria is transmitted by mosquito bites.

It is plain that in the solving of the practical problem of malaria the medical investigator has need of all the assistance that natural history can give him—e. g., as to the many different kinds of mosquitos and their habits, or as to the life history of the sporozoon parasite, which is the real cause of the disease. A knowledge of the breathing habits of the larvæ (familiar to us in common gnats) explains the success of a petroleum film as a means of killing them off in marshes; a knowledge of the appetite which various fresh water fishes have for them suggests another method of destroying them in ponds, and so on. On the other hand, since there is always action and reaction between science and its corresponding art, it must be frankly allowed that it is the practical importance of malaria which has led the British Museum entomologists to hurry on at present with a monograph on mosquitos.

PHAGOCYTES AND PROTOPLASM.

Let me illustrate another perhaps less obvious link. In almost all animals, from sponges to mammals, there are, within or apart from blood fluid, wandering amoeboid cells, technically called phagocytes. As you know, they perform many functions both in health and disease. They form the bodyguard, struggling with invading bacteria; they surround and engulf irritant particles; they help to repair wounds, to regenerate lost parts, and so on. Phagocytosis has become to the pathologist a word of comfort, and perhaps there has been even some exaggeration of its importance. What I wish to point out is simply that much of the working out of the theory of phagocytosis has been in the hands of zoologists, as Metschnikoff shows clearly in his "Lectures on the Comparative Pathology of Inflammation." The beginning of it was in 1862, when Hæckel observed that grains of indigo injected into the mollusc *Thetys* were surrounded and engulfed by amoeboid cells.

Or, again, you are, I believe, professionally interested in the influence of chemical reagents on the complex substances which we sum up in the term protoplasm. But that is obviously one of the perennial problems of biology. Let me recall one of the sensational researches of the last eighteen months, as the result of which Professor Loeb announces that if eggs of sea urchins are transferred for a couple of hours to sea water to which magnesium chloride has been added (disturbing the normal proportions of salts), and are then replaced in their natural medium, they develop without fertilization and even form larvæ. It is too soon to say much about it; but here, obviously, if it is only to find out the fallacy, is one of the many problems where biological and medical or pharmaceutical students may profitably join hands.

A VICTIM OF OVER-EXERTION.

Finally, another illustration, which may seem at first sight almost further afield than the last. There are few subjects in medicine more important than nerve fatigue and nerve rest. Let me remind you of what I may call

a natural history contribution to neurology. Is it not the case that almost from infancy many of us—especially those of us who are fond of laziness—have been urged to consider the little busy bee which improves each shining hour. A more intimate and critical knowledge of bees and their behavior entirely shakes our confidence in this exemplar of our childhood. I wish to lift only one corner of the seamy side by asking how the shining hour improves the busy bee. Whenever we ask this question we are struck by the fact that the worker hive bee has but a short life—often only for a few weeks after his industry begins. It is a victim to over-exertion. With all its getting, it gets not wisdom, but foolishness, for its brain cells go steadily and surely out of gear. Hodge compared the brain of bees issuing from the hive in the morning—when they were presumably fairly fresh—with the brain of bees who came last into the hive in the evening—presumably tired out—and demonstrated what, fifty years ago, would have excited great wonder—the structural effects of nerve fatigue.

The same striking contrast is seen when the brain of a young bee, fresh from the comb, is contrasted with that of a relatively old bee. A large number of cells have passed into what may be called a state of irrecoverable fatigue—collapse. As Professor Hodge says: "The nerve cells, in the course of the bee's daily work, gradually cease to be functional and die off, until no more are left than are sufficient for the necessary vital functions." His work suggests that there are three grades of nervous fatigue in animals; (a) that from which recuperation is usual, what one might call the normal daily fatigue; (b) that from which recuperation is possible but difficult, which one might call extra wear and tear; and (c) that from which there is no recovery, the final functional collapse of nerve cells as in the bee's brain, and in some forms of old age. The state of the nerve cells in the brains of some hibernating animals is also very interesting in this connection. I am not competent to follow the matter further, e. g., in application to man, but I think the suggestiveness of a contribution like this must be plain to all. At any rate, I recommend a reconsideration of the little busy bee, but in a scientific rather than in a poetical light. The story of the bee's brain is a warning against over industry, and one of the sections in the apology for rest.

CONCLUSION.

I have then illustrated some of the ways in which natural history has been linked to medicine and some of the links that remain to the great advantage of both. But my illustrations do not cover a tithe of the real and possible kinds of links, nor have they suggested at all that the deepest service of natural history is probably in helping to lay the biological foundation stones on which the stately edifice of medicine, both curative and preventive, is reared.

I have mentioned a variety of animals—the leech, the toad, the snake, the mosquito, the bee, the sea urchin, and so on—but the possibility of illustration is endless. Perhaps in the study of every animal one may find some suggestion of service in the study of man. As I was thinking of this, a Japanese waltzing mouse came dancing into the focus of my consciousness. But it is as good an illustration as any other, though it may not at first sight seem promising. The mouse moves only sideways, neither backwards nor forwards, and surely it becomes at once interesting medically in connection with defective equilibration and the like in man, when we note Von Cyon's discovery that it has only one of the usual three semi-circular canals developed.

Even in my few illustrations I have probably made mistakes by touching subjects which are beyond my field of work, but to pounce upon these is to ignore the whole aim of my address, which is to suggest that the various departments of science—yours and mine and that of others—are all correlated. It is not solely by the aloofness of specialism and the pre-occupation of expert research, but by mutual interest and active co-operation as well, that we make progress in understanding the one problem which, in some form or other, is before us all—the Order of Nature. And it is this valuable width of scientific interest and sympathy which an actively functional society like this is well suited to foster.

MY FIRST DAY IN A DRUG STORE.

As Told by One Who Was a Clerk in the Late 50's.

"There is as much difference between a drug store of forty years ago and the modern establishment of to-day," said a well-known member of the jobbing trade recently, while in a reflective mood, "as there is between the stage coach and the railway train. Progress has marked the development of both; and yet to look in the retail drug store of 1900 one almost hesitates to say it is a virtual improvement over the friendly old store of my boyhood days, for in these times the druggist is called on to supply his customers with the conveniences of a hotel while putting up with a small profit on his sales; whereas the druggist of my youth was independent and made a nearly equal profit on all things.

"But that is neither here nor there—I want to tell you about my first day in a retail drug store, still this thought of comparison comes to me, when in memory I see myself behind the counter in those old days and note the young men occupying a similar place in a twentieth century pharmacy of to-day. I appreciate conditions and realize that pharmacy has advanced, if actual dispensing and financial considerations are the same. Druggists of to-day are more careful in professional duty, and they have pharmacy laws before them as a gentle reminder to keep business up to a certain standard. There were no pharmacy laws in my time; things were of the go-as-you-please style, and well do I remember my first day in a retail store. I thought surely I was a king, for to be permitted to rub elbows, as it were, with the doctor—all druggists were so named then—gave me sort of a distinction that was really elevating. With me it was a pleasure to perform the humblest duties of handy man, for I was working with an ideal in view and salary cut no conspicuous figure. In fact I think I started at \$1.50 a week. But my first day's disasters mortgaged this for nearly a year, so I could not appreciate the fruits of honest toil.

"I had been placed in the store upon earnest solicitation of my father, and my introductory duty was "to sweep out the place." I progressed quite well until I came upon a two-gallon jug in my field of operations, which would not move readily out of my way, although I used the broom persuasively. Finally I applied my boot, with the result that I tipped over the vessel, causing it to break. It contained two gallons of laudanum, freshly made in the old-fashioned way, which required fifteen days' maceration of the opium. After cleaning up the mess the best I could, I reported to the 'doctor' and was treated to the most elaborate tongue lashing I ever received in my life. I was told I had destroyed nearly \$35 worth of laudanum and must pay for it from my salary. I lost sight of my ideal. I saw the \$1.50 weekly dwindling away into nothingness, and then the hard truth dawned upon me that there were lots of other pursuits more enjoyable than being a 'doctor' druggist.

"But for all that I remained at work. Perhaps it was the fact I had to give a chattel mortgage on my salary that held me; at all events I resolved I would stick it out the first day, at any rate. Shortly after noon the 'doctor' went out on business and the other clerks absented themselves from the store one by one, until I was left solely in charge. Very soon two men came in and asked for some 'chindine' (chindine). I knew about as much about the article as a native of South Africa does about a snow storm, but I excused myself, telling the prospective customers I was new in the store and did not know where it was kept. One of the men very graciously located it for me, and assured me 'the doc.' let him have it three packages for a quarter. Thinking this to be the truth, because of his familiar use of Dr. —'s name, I made the sale at the figure quoted. I felt quite elated over what I had done, and joyfully informed 'the doc.' on his return. He simply cussed me a few times, said something about he wouldn't have any store left if I stayed with him much longer, and then added some figures to my laudanum debt. I afterward learned 'chindine' was twenty-five cents a bundle.

"Numerous other petty difficulties kept my blood in circulation during the afternoon, and I returned from supper prepared to vindicate my actions for the day by

being wonderfully good in the evening. My opportunity for demonstration came in a short time. 'The doc.' was engaged with a friend when a man came in for a pint of brandy. I went to my employer and he gave me these instructions: 'On such and such a shelf you'll find two bottles marked Spts. Vini Gallici A, and Spts. Vini Gallici B. The A bottle contains imported brandy and the B bottle contains brandy we make ourselves. Fill this bottle from the B bottle.' I found the bottles, but there was not enough in the B bottle, so 'the doc.' directed me to a keg in the cellar. I drained this, but the customer's bottle was not quite full, and anxious to satisfy 'the doc.' that I was interested, I called to him from the head of the cellar stairs: 'There aint enough brandy here; you'll have to come down and make some.' He came down all right, but did not make brandy. I had occasion to remember his coming for several days afterwards and it taught me to keep mum on all articles of home production.

"Nevertheless, I weathered through my experience school successfully, though it was unprofitable financially, and I always believe my first day's experience was one of the atoms that composed the molecule which has since grown into a latter day definite distinction between the duties of the junior clerk and those of the porter. Sometimes I wonder how many pharmacists of the older school engaged in business at the present time ran the gauntlet of first day experiences like myself. Wouldn't it be interesting to hear from them?"

PRESERVING FISH BY BORIC ACID.

The difficulty of keeping their merchandise fresh is a cause of great trouble and loss to fish dealers and ship-pers. Ice is only partly satisfactory, inasmuch as its use has a tendency to deprive the fish of flavor and firmness, while the moisture from its melting hastens decay. Hence it has been the desire of the United States Fish Commission to devise some other method by which fish may be preserved, and recently experiments with this end in view have been conducted at Wood's Holl.

Bluefish, weakfish and bonito were used for the purpose. In the first experiment twenty-four weakfish were taken alive from the nets, carefully dressed, and washed with a 1 per cent. solution of salicylic acid in sea water. Notwithstanding the well known preservative quality of salicylic acid, this trial was a total failure. So likewise was the next experiment, which was made with a 5 per cent. solution of formaldehyde. But very different and entirely successful results were obtained by the use of boric acid.

Twenty-four weakfish, freshly killed and dressed, were washed with a 3 per cent. solution of boric acid in sea water. Twenty-four hours later they looked as if they had just come out of the sea, the flesh being hard and firm and the eyes clear, though no ice had been used. It was not hot weather, and other weakfish, killed and dressed at the same time with these, but not treated with boric acid, were in advanced stages of putrefaction. One of those preserved with boric acid was cooked and eaten and found to be excellent.

This promises to be a most important discovery. The fish thus treated are in no sense "embalmed," but after the removal of the viscera the inside of each is simply washed with a sponge that has been dipped in the solution. This must be done immediately after the capture of the fish. If the latter are thrown about, left for a while before being dressed, and then put in barrels, the preservative process will not work satisfactorily.

The conclusion drawn is that the boric acid solution retards decay in its first stages, being so effective even in hot summer weather that there is time to get the fish to market, where it may be iced and kept fresh for a long time. The acid is not used as a preservative in the ordinary sense, but as an agent of cleanliness. As each fish is merely sponged over, the amount of fluid that remains on it is very small. Its employment can have no injurious effect on the consumer. One important point in its favor is that it prevents the formation of ptomaines, which are sometimes so dangerous.

NOTES ON INDUSTRIAL CHEMISTRY.

It is difficult for the chemist who is not in direct touch with the industrial side of chemistry to keep informed of its rapid strides, and as the International Congresses held at Paris during the past summer presented a chance for the discussion of such matters the journals reporting the proceedings of these meetings contain much material that can with profit be brought to the attention of all who are interested in chemistry. In this paper a few of these matters will be briefly discussed.

The electrolytic method for the preparation of the hydroxides of potassium and sodium can be carried out with greater success in the case of the former. While a number of factories prepare potassium hydroxide by the decomposition of a solution of potassium chloride, the chlorine being used to make bleaching-powder, only one factory in Germany decomposes sodium chloride by this method. The products are separated by means of a porous diaphragm or by the use of mercury, according to the Castner process as modified by Solvay.

The Solvay process, as used for the preparation of sodium carbonate, cannot be used for the preparation of the corresponding potassium compound. This is made by passing carbon dioxide through a mixture of magnesia and a saturated solution of potassium chloride, when a difficultly soluble magnesium potassium carbonate is precipitated. Part of the carbon dioxide is driven out by heat, and the potassium carbonate extracted by water.

Carbon dioxide and sulphur dioxide, which are prepared by burning coke and sulphur or sulphides, respectively, are purified by passing them into saturated solutions of their neutral salts and decomposing the acid salts thus formed with the evolution of the pure gases. The solutions of the neutral salts can be used repeatedly for this purpose.

The method of preparing potassium ferrocyanide by heating animal matter, potassium carbonate and iron, is still used in three German and some English and American works; but in Europe the main source of supply is coal gas. When a mixture of calcium hydroxide and iron sulphate is used to remove the hydrogen sulphide, the following reactions take place:

During this process the cyanogen compounds are also absorbed by the ferric hydroxide, and, after the mass has become useless on account of the accumulation of sulphur, they are isolated in the following manner: The mass, which contains sulphide of iron, sulphur, salts of lime, and free lime, ferrocyanides and sulphocyanides of iron and ammonia, is treated with water to remove the soluble part, and the residue, after treatment with lime to form the calcium ferrocyanide is corrected, by the action of potassium chloride, into an insoluble compound of potassium and calcium ferrocyanide, which is decomposed by potassium carbonate with the formation of potassium ferrocyanide. In one English factory the gas is passed through a solution of an iron salt and the Prussian blue formed is decomposed by caustic potash. In one factory in Germany the "vinases" are heated and the cyanogen compounds formed from the decomposition of the trimethylamine are converted into Prussian blue as in the other method. In 1899 the production of potassium ferrocyanide in France, Germany, England, Belgium, Holland, and the United States amounted to 10,500 tons, of which 50 per cent was converted into potassium cyanide. Potassium sulphocyanide, which is also obtained from the coal gas, is only made in comparatively small quantity and is converted into a copper salt which is used as a constituent of paint for the hulls of vessels. This copper salt acts as a poison to the crustacea which foul the hulls of ships.

Potassium cyanide, which, since its introduction as a solvent for gold in extracting the latter from its ores, has been manufactured in such quantities, is prepared almost entirely by one method, that of Roessler and Hasslacher. After the introduction of the electrolytic method for the preparation of aluminium some disposition had to be made of the metallic sodium which had formerly been used in the preparation of this substance. This problem was

solved by the introduction of a method for the preparation of potassium cyanide which was very simple and in which the sodium could be used. By its action on potassium ferrocyanide a mixture of potassium and sodium cyanides and iron is formed. By washing and crystallizing the product, the substance which is sold under the name of potassium cyanide is obtained in such amounts and so cheaply that it has displaced the synthetic method and the Liebig method, in which the ferrocyanide was treated with potassium carbonate. Attempts have been made to utilize the nitrogen of ammonia for the preparation of potassium cyanide; but the processes devised for this purpose are as yet in the experimental stage. About 7500 tons of the cyanides, which are used in the extraction of gold and in plating on account of the formation of soluble double cyanides, were manufactured in 1899.

The amount of sulphuric acid manufactured has been steadily increasing from year to year at a rapid rate. The following figures of the industry in Germany will perhaps give a clearer idea of the change: In 1882 the amount was 358,149 tons; in 1890 the amount was 627,392 tons; and in 1897 the amount was 845,582 tons.

As yet very few of the mechanical ovens for roasting the ores have been introduced into Germany, although they are used in a number of factories in the United States. The ovens used in Europe are of the Parret-Malétra type, with 4, 5, or 6 plates, in which the source of heat is the burning sulphur, if fine ore is to be used; but in some places a series of muffles are placed one above another and the zinc blend is roasted by the passage of the hot gases over the muffles in succession, while the ore is removed from a higher to a lower muffle as the process proceeds.

There has been practically no change in the Glover tower except the introduction, in several cases, of two small towers in place of one large one.

Each manufacturer or builder has his own peculiar idea regarding the size and shape of the leaden chambers, some using several large ones, and others a number of small ones. The usual size of the chambers in Europe is 8 X 12 meters, while in America the manufacturers often use 12 chambers 5 meters long. The general shape is that of a parallelepiped; but many devices have been introduced to bring about a more thorough contact of the gases and so produce a better yield. In some cases the entrance tubes for the gases are arranged tangent to the sides and the exit tubes at the centre, so that a circular motion is imparted to the gases. In others, one chamber is placed inside of another, thus economizing space and overcoming, to some extent, the fluctuations in temperature. In some furnaces devices are used to cool the interior of the chamber, such, for instance, as columns or pipes, through which cool air can circulate, extending up into the chambers. The Glover tower has greatly increased the efficiency of the process, as 15 to 20 per cent of the acid is formed there. The amount of nitrate used to produce 100 kilograms of the monohydrate varies from 0.53 to 1.12 kilograms.

In the concentration of the acid in platinum vessels great care has to be observed to prevent a loss of platinum, as a small amount of impurity may produce a marked effect. The purer the acid the less the danger of attack; but with acids of equal purity the amount of loss increases with the concentration. For many years acid of 93 per cent monohydrate was considered satisfactory for all purposes; but the demand for an acid of 95 to 99 per cent has necessitated the introduction of other material than platinum for concentration vessels, and one of platinum and gold is now used with success for this purpose. A vessel which can furnish 10,000 to 12,000 kilograms in twenty-four hours would have to contain 56 kilograms of pure platinum; but one containing 52 kilograms of platinum and 4 kilograms of gold can be used to greater advantage as the loss in the case of the platinum vessel is 1 gram per ton and, at the highest, 0.1 gram per ton for the platinum and gold vessel, a saving of about \$940 a year. The latter also requires less heat and less attention. An alloy of platinum and cast-iron and simple cast-iron vessels have been used with some success if the material is carefully selected. Of course the deterioration is more rapid, but the loss is proportionately no greater and

the amount invested is much less. Porcelain vessels have also been used for this purpose.

Within a few years a method for the preparation of sulphuric acid has been introduced which does not necessitate the use of the cumbersome leaden chamber, but is based on an observation made by Berzelius of the influence of one substance in producing a reaction between two other substances without itself undergoing any change. He called this catalytic action, and substances of this nature were called contact substances. A number of observers have repeated the experiments made in 1831 by Philipps, when sulphurous acid and oxygen were made to combine by the presence of a third substance, and have attempted to apply this method for the preparation of sulphuric acid on the large scale. Winkler and others have used platinum asbestos as the contact substance; but all efforts in this direction for several years led to the conclusion that the method was only applicable to the preparation of the fuming sulphuric acid with a maximum yield of 67 per cent.

In 1898 an observation was made which rendered it possible to use this method with great success, and at the present time at least eight firms are preparing the acid by this method. It was found necessary to reduce the temperature of the gases in order that they might combine, and this can be done in a number of ways. This method has probably not been generally adopted on account of the lack of knowledge of the details, and a belief that it is as yet only in the experimental stage. The royalty is also high and owners of the old style plants cannot afford to cast these aside at once, and in fact there is still doubt as to the part this improvement will play in the industry.

As yet the price has not been affected; but when the supply from this source increases, the chamber acid methods may have to be improved to enable them to compete with the new method, and the matter may adjust itself by a division of labor, when the concentrated acid will be made by the contact method and the dilute acid by the chamber process at a profit to the manufacturers of each.

The advantages claimed for the new method are a large economy in space, a reduction in capital invested of 30 to 40 per cent, and the saving of all expense for nitrate or concentration. The price of this acid is, however, 15 per cent less.

J. ELLIOTT GILPIN (in Amer. Chem. Jour.)

PHARMACOGNOSY:—ITS RELATION TO PHARMACY.*

BY H. LEROY SIMPSON.

Some time ago when, desirous of becoming a registered pharmacist and having had the required amount of experience, I sought examination of that noble quintet who say who may and who may not be registered pharmacists within the bounds of the Commonwealth of Massachusetts, well do I remember the first question of that examination, one part being, "What is Pharmacology?" another, "What is Pharmacognosy?"

Again, a little more than a year ago, when in an examination at our capital city, I met this long word "Pharmacognosy," and of course we must all feel that it means something of great importance to the druggist of to-day when it appears in the examinations of the leading pharmacy boards of our country.

Pharmacognosy, while in itself not a science, may be regarded as the art of applying scientific knowledge in the examination of drugs, which forms one of the most important branches of materia medica and closely allied is the skillful preparation of drugs into the many different pharmaceutical preparations.

This forms the foundation of pharmacy. It is on this foundation that we stand as first assistants to the doctor and it is our knowledge of this which makes us proficient or deficient pharmacists.

The road that the average pharmacist of to-day has to travel is one full of rough places, rocks and dangerous

* Read before the Maine Pharmaceutical Association at its last annual meeting.

precipices and the better knowledge he has of pharmacy the easier can he meet these barriers.

The wave and tide of "cut prices" are fast sweeping over our "Pine Tree State." Men of no scruples, no knowledge of pharmacy have forced the druggist to sell his merchandise at little or no profit, therefore he must depend no longer on patent medicines for a large share of his income but must bring his knowledge of pharmacognosy to the front in the way of pharmaceutical preparations.

Our colleges divide the work in pharmacognosy into two parts: first, the examination of drugs without the aid of instruments; second, the examination of drugs with the microscope.

I will not attempt to go into detail on this subject but simply try to show how it may, with profit, be applied to our every-day store life as druggists and servants of the public. How many of us do not see the crude drugs as they enter our store! Too many times this is left to the clerk, who, never having had an opportunity to learn, does not know the difference between a good and a poor article or between an adulterated and an unadulterated drug. Take, for example, some of the crude drugs we sell to the general public. (And right here let me say that the quality of these goods goes a long way in determining our standing as druggists.) Cloves, for instance, a drug we all sell for domestic use. This drug furnishes an excellent example. It comes into the market in all kinds of qualities, with as many different prices. We can buy the best for from twenty-two to twenty-six cents per pound, clean and bright with the flower heads not separated from the calyx. Compare these Penang cloves to the Zanzibar variety that we so commonly see, costing from twelve to fourteen cents per pound, and which are more or less broken and mixed with sticks and other foreign matter. If we buy the best we make from two hundred to four hundred per cent. profit. Would it not pay us to do this?

Cardamom costs from 85 cents to \$1.50 per pound. Can we afford to use the cheapest, mostly pericarp or outer coat, almost wholly inert? The same can be said of cinnamon, some of the bark being almost devoid of taste. Can we afford to dispense a dark acacia in place of the white gum?

Take licorice root, generally used for its sweet taste. Much of it is worm eaten and contains no glycyrrhizin. Would it not pay us to purchase a good quality and then place a piece of ammonium carbonate with it to develop the glycyrrhizin?

Let us now depart from the household drugs and glance at some of our most important medicinal drugs. First, let us take one of the most important drugs of our Pharmacopœia, digitalis. Trace it from the time it reaches the store until it is made into the different preparations and into the hands of the patient. Digitalis can be bought for many different prices. Buy the best and see that you get an unadulterated herb. A slight knowledge of pharmacognosy will tell you this. Twice have I seen digitalis adulterated with mullein. We find by analysis that digitalis is made up of several active ingredients, some soluble in alcohol, some in water and some in a mixture of the two. Many druggists there are to-day who, it must be through a lack of knowledge, make the infusion from the fluid extract. This can hardly be looked upon in any other way than criminal when we know that digitonin, the diuretic principle, is soluble only in water and when the physician writes for "Infusion Digitalis" he wants and expects a diuretic and we, as conscientious and educated pharmacists, can dispense nothing else than an aqueous solution of the drug any more than we would dispense strychnine when morphine was ordered.

Another important drug is *Prunus Virginiana*, or wild cherry bark. This drug comes into the market in many varieties, some almost if not entirely worthless. Buy a young, bright bark, it costs but little more, and then use care in its preparation. We know that its virtue depends upon H C N (hydrocyanic acid) and this being volatile, the vessels used in its manufacture must be kept well closed and should not be metallic. Some druggists have trouble with the syrup fermenting. I have found that by percolation this is, in a large measure, avoided, no air being shaken in, and that the product is much brighter and better; and to see the general public

go by your "don't care" neighbor's store and come to you will more than repay you for your extra expense and trouble.

So on we might journey through the Pharmacopœia, taking up each drug, and we would find that a knowledge of pharmacognosy is highly essential in the selecting of the drug and in the manufacture of its preparations.

Fellow druggists, an opportunity lies before us. Shall we grasp it or let it gradually slip from us? Shall we let the old, time-honored custom of manufacturing standard preparations be torn from us? To each and every one of you I most emphatically say "No." Let us be intelligent manufacturing pharmacists and this we cannot be without a clear knowledge of pharmacognosy; make all our preparations from the best of drugs and throw the strongest ray of pharmaceutical light in the face of every physician until the very image and contents of the United States Pharmacopœia and National Formulary are forever anchored in his mind, first, last and always. Then, when he writes a prescription, will he think of these standard works and not of those proprietary nostrums which are flooding our very midst.

Let us work together on this line and by so doing we shall aid the lengthening of the lives of humanity and put down this indiscriminate outpour of "rainbow preparations" which is the curse of the pharmaceutical and medical professions.

CASH DISCOUNT LIMIT.*

By G. S. MANN.

To sell closely and quickly, to credit carefully, to discount purchases and to collect promptly, should be the rule of every business man. In some lines of trade the discounts for cash will amount to enough to pay the expenses of the business. In such lines, therefore, one should never fail to take advantage of the discounts offered.

Some retail dealers appear to think that a few days later than the terms stated will make no difference. In such conclusions they are greatly mistaken. "Three per cent. 10 days" means just what it says, and the purchaser ratifies the contract of sale of which this is an important part whenever he accepts the goods. He should, therefore, be as scrupulous to observe that part of the agreement as any other.

The clause above quoted does not mean: "Send the money when you get ready and take off your discount," but instead it is: "If your remittance reaches us within ten days from date of the invoice, we will give you 3 per cent. discount."

Does the retail merchant ever realize that anything less than this is not a payment in full? The amount of the discount or the delay beyond the date may be trifling, but the times through which we have been passing have been of the kind to demonstrate that it is trifles which make or mar business. As a fact, the aggregate of such trifles is a considerable amount.

Certainly no fair-minded and honorable business man would continue the practice of varying from the letter of the contract after once giving the matter careful thought.

The practice of exceeding the discount limit on invoices is an indication of a desire to get the best of the jobber in little things that often proves a forerunner of worse to come. Hence, in part, the attention that the jobber is likely to pay to such matters and hence in part also, the reason why the merchant should refrain from such things in the sense of avoiding the appearance of evil.

While in an individual case slightly exceeding the discount limit seems a matter too small to notice, the aggregate of many items is a considerable loss to the jobber. A delay in payment or a discount unjustly deducted, both of which are breaches of the contract of sale, are in fact large factors that must be considered by the jobber and carefully covered in his calculations. He must have a margin of profit, sufficiently large to take care of these expenses without loss. The universal compliance with the contract of sale by the customers of a jobber would enable him to lower his prices.

*Reprinted from The Spatula.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Coloring Incandescent Electric Light Globes.—(W. B. J.) See the March 29 and May 24, 1900, issues of the Era, pages 344 and 357, respectively.

Carminative Powder.—(R. and C.) Under the name of "Pulvis aromaticus" the Pharmacopœia gives a formula for a carminative powder consisting of cinnamon, 35 grams; nutmeg, 15 grams; cardamom, 15 grams, and ginger, 35 grams. A formula recommended by Spielman is: Powdered cinnamon, 20 grains; powdered cloves, 12 grains; powdered vanilla, 6 grains; rice flour, 6 drams; sugar, ½ ounce. Dose, six to twenty grains.

Powder Dividers.—(E. L. M.) A number of machines are in use in this country. Here are some of them: "The Diamond," made by Fox, Fultz & Co., 31 Warren street, this city. Price \$1; "Michael's," for sale by McKesson & Robbins, 91 Fulton street, this city. Price \$4.75; "Allen's," manufactured by Harold Allen, Englewood, N. J.; "Dessau's," manufactured by W. F. Dessau, 459 West Madison street, Chicago, Ill., and "Hull's," a device invented by W. J. Hull. Your jobber should be able to obtain almost any one of these machines for you.

Stove Polish.—(E. W. H.) See this journal August 23, 1900, page 197. Here are some other formulas:

(1) Mix 2 parts of black lead, 4 parts of copperas and 2 parts of bone black, with water, so as to form a creamy paste. This is said to be an excellent polish, as the copperas produces a jet black enamel, causing the black lead to adhere to the iron.

(2) Vegetable wax 8 parts.
Plumbago, in fine powder.....200 parts.
Mineral oil 100 parts.
Oil Lavender..... 1 part.

This formula is highly recommended and is said to be much used in France for blacking and polishing handsome ornamental iron stoves and heating apparatus.

(3) Make two saturated solutions each containing separately tannic acid and copperas. Mix together 2 parts by weight of the solution of copperas with 3 parts of the tannic acid solution and add 1 part of good oil blacking, 1 part of lamp-black, 5 parts of powdered plumbago and grind together. To make the tannic acid solution take 3 cwt. of water warmed to about 180°F. and add as much tannic acid as will dissolve (about 20 to 25 per cent.). Prepare the copperas solution in a similar manner with 2 cwt. of water warmed to 180°F.

(4) Plumbago.—Make into a thin paste with sodium silicate or water glass. This paste makes an excellent polish and should be brushed thoroughly.

Bleaching Sponges.—(P. A. L.) Ordinarily sponges are cleaned and bleached by the use of permanganate of potassium, followed by a solution of sulphurous or hydrochloric acid. This is substantially the process adopted by the National Formulary, a method which satisfactorily whitens the sponges, but often partially destroys their tissue. Sometimes the sponges are first soaked in dilute hydrochloric acid and then treated with the permanganate. In bleaching, the first thing to do is to clean, wash and squeeze the sponges. They should be well beaten to get rid of sand and loose earthy matter, soaked in water for some hours, then squeezed dry, and placed in a tub containing dilute hydrochloric acid. After remaining in this solution until all effervescence is over and no hard particles are seen or felt—stirring them about with a stick is useful to hasten the process—they should be well squeezed and transferred to a pan of water

under a running tap. Next, the sponges are placed in a 2 per cent. solution of potassium permanganate. After soaking them for a few minutes—the exact time can best be judged by the color, which ought to be dark brown—they are to be removed, again washed, and put into another tub of solution of half a pound sodium hyposulphite and one ounce oxalic acid to one gallon of water. Here the sponges soak for about fifteen minutes. Finally, take them out and wash them thoroughly. By this treatment the sponges are rendered perfectly white and remain so. Many sponges contain a more or less dark-colored core, and if treated only with permanganate and acid the core is either not bleached at all, or if bleached somewhat, the tint is apt to grow darker again. By the combination of the three solutions every portion is thoroughly and permanently whitened.

Roeser claims that bromine water is preferable for bleaching sponges, especially after being used in surgical operations. The sponge is thoroughly disinfected and may be put through the process eight or nine times without destroying its texture. His method is this: Wash the sponges in warm distilled water (not above 150°F.) which contains in each liter 20 drops of 10 per cent. solution of caustic soda. After thoroughly treated in this manner, they are drained and placed in vessels containing the bromine water, which is made by adding 30 grams of saturated aqueous solution of bromine to one liter of distilled water. Leave the sponge in this solution until it is decolorized, and repeat with fresh bromine solution until it is thoroughly bleached, which is hastened by warmth and exposure to sunlight. After removal from the bromine bath, squeeze the sponges well and immerse them in a dilute solution of soda (20 drops of a 10 per cent. solution to the liter), and lastly wash out all traces of bromine odor with distilled water.

Phosphoretted Resin.—(F. M. O.) "Phosphoretted resin" is the name given to a preparation devised by Gerrard in the early seventies as a means for keeping phosphorus in a condition for ready manipulation and accurate division. The following is one of the methods for making the preparation: Take a strong, wide-mouthed, well stoppered bottle, and weigh it; then melt a sufficient quantity of resin to fill the bottle; let the bottle be warmed, then pour in the resin to nearly, but not quite fill the bottle, reweigh, and for every 96 parts of resin take 4 of phosphorus. Now observe that the resin is in a fluid state; if so add the phosphorus and securely cork the bottle. Place in a sand bath previously warmed and apply heat to 392°F.; digest at this temperature and shake frequently until the phosphorus is dissolved. The resin used should be of the black translucent kind and quite free from water.

In conducting the process it is necessary to observe the following precautions: In adding the phosphorus, if possible, let it be in one piece, taking care that the resin is previously in a fluid condition, as then the phosphorus readily sinks below the surface and is covered by the resin; otherwise, if the phosphorus be in small pieces and the resin semi-fluid the former would rest on the resin and speedily take fire. By observing the above procedure this accident may be avoided. A bottle full should be made at one time, as there is increased danger of the phosphorus taking fire if the vessel is only partially filled. This preparation contains 4 per cent. of phosphorus. The mass may be powdered and should be kept under water to prevent oxidation.

Tolu as a vehicle for phosphorus in pills was proposed by Abraham (1874), who stated it will retain 4 per cent. of the latter if combined with it in the melted condition. The British pharmacopœia directs a phosphorus mass to be made by triturating 3 grains of phosphorus with 120 grains of tolu balsam under hot water until no particles of phosphorus are visible. Then 57 grains of wax are added and thoroughly incorporated, also under water. The water must be kept hot enough (60°C. or above) to melt the phosphorus and thoroughly soften the balsam and the wax, and the mass so made is stored under cold water. When dispensed every two grains, representing 1-30 grain of phosphorus, are incorporated with one grain of powdered curd soap, a little alcohol being used if necessary to obtain a plastic mass, then rolled into pills.

PHARMACY.

THE PROPERTY IN A PRESCRIPTION, according to the editors of the *Lancet*, is vested in the patient who pays the fee for consultation, i. e., so far as concerns the ownership of the piece of paper on which the prescription is written. "Ownership of a piece of paper does not, however, necessarily imply an unqualified right in such owner to deal as he pleases with its written contents, as, for example, to multiply copies of them." At the same time, there is no recorded decision known to the *Lancet* which limits the rights of ownership in the contents of a written document and deals directly with a prescription. There is no doubt (says *Pharm. Jour.*) that the opinion expressed by our medical contemporary is correct; an ordinary prescription becomes the property of the patient who pays the fee for the medical advice given, and it is difficult to see how it is even possible to prevent the multiplication of copies, unless the prescriber makes a stipulation to that effect when giving the prescription. The solution of the further problem of preventing the too frequent repetition of the medicine ordered also rests with the prescriber, all that is necessary being a written instruction to the dispenser to retain or destroy the prescription, or not to supply the medicine oftener than a specified number of times.

"GIAOURDI," A NEW MILK FOOD.—The New York Medical Record, in its report on a recent meeting of the New York Academy of Medicine, gives the following formula for the preparation of a new milk food, which is very popular in Greece. The milk is boiled for about an hour with constant stirring until it becomes fairly thick; a small quantity of a ferment, made by soaking a dry fig in three ounces of water over night, then adding a few drops of lemon juice and a very little rennet, is added. The result is a smooth, semi-solid, easily digested milk food, of an agreeable taste and quite well borne by the most delicate stomach. This preparation, which may easily be made by the druggist, is finding much favor with physicians, it being claimed for it that it is more agreeable to the taste than either koumyss or matzoon and can be taken by the most delicate patient without disturbance of digestion. The proportion of ferment to milk is a tablespoonful to the quart, but this will vary with the quality of the milk and the desired thickness of the curd to be formed.

HOSPITALS IN UNITED STATES.—Some idea of the enormous growth in numbers and importance of the hospitals of the United States is given in a paper read by D. T. Sutton at the meeting of the Association of Hospital Superintendents recently held in Pittsburgh. Within three years, we learn, \$245,000,000 has been spent in the United States in the erection and equipment of new hospitals, in enlarging and improving old hospitals and in general expenses. Over 1,000 new hospitals were built, a gain of 65 per cent. The approximate cost of these buildings was \$50,000,000. There are to-day about 2,500 hospitals and asylums proper in the United States. These employ about 65,000 persons in various capacities. The hospitals pay yearly in salaries about \$23,332,000. Over 1,000,000 patients are annually treated and 37,500 physicians attend them. In all of the hospitals there are 300,000 beds. (Medical Standard.)

WAITING ON CUSTOMERS IN TURN.

A reprehensible habit exists among many clerks of waiting on people out of turn, says the *Keystone*. This habit leads to serious consequences in the loss of trade. It is a habit, too, that can be so easily corrected by cultivating the faculties of observation and attention that it is really inexcusable. It is a species of discourtesy which produces greater irritation in the customer than almost any other. A busy business man steps into a store; possibly he is on the way to his office and already late. Every clerk is busy; nobody pays any attention to him. He waits impatiently a few minutes for some one

to be at leisure. Meantime another customer has come in, perhaps four or five minutes after the first one, and the first clerk who is at leisure waits upon the second customer before he does the first one. If the first one doesn't go out of that store without making a purchase, resolving never to enter it again, he ought to. It should not be so, but it seems to be a fact, that American-born clerks are much more likely to commit this unpardonable error than foreign-born clerks. We don't say that the clerks are altogether to blame in this matter. In most cases it is probably largely the fault of the proprietor. It is his business to drill the clerks, not only with respect to waiting on customers in turn, but all other matters which will help trade along. Does he do it? Generally not, it would appear. In large stores, where there are numerous clerks and an usher is employed to see that customers are properly waited on, probably the fault which we complain of does not exist to any great extent and should not exist under any circumstances at all, because a man whose sole occupation it is to watch the customers as they come in and dispose of them till they can have attention, should never make any mistakes in having them waited upon out of their turn.

SLOT MACHINE DIRECTORY FOR DRUGGISTS.

A new "penny-in-the-slot" directory has made its appearance in Brooklyn, and is being rapidly adopted

by the retail druggists of that borough. George Upington, publisher of the Brooklyn Directory, is introducing the machine, and already has enough orders to keep him busy for some time. The machine, a picture of which is given here, is simple; it operates by putting a penny in a slot, pressing a knob, which allows the directory to be opened; the desired address having been obtained, the book closes and locks automatically. Mr. Upington furnishes the machine and directory to druggists free of charge,

and allows 5 per cent. commission on the gross receipts. Each druggist is furnished thirty slugs (for opening the book) a month for his own use, and a new directory each year.

MR. STODDART FOR BUFFALO'S MAYOR.

Buffalo recognized in a way the retail druggists in politics several years ago when its people elected Dr. Conrad Diehl, who is interested in a retail store, to the office of Mayor; more recently, or just now, when the political pot is beginning to boil, a pharmacist is again in the field as a candidate for the chief executive chair. This is Thomas Stoddart, member of Stoddart Bros., druggists. Mr. Stoddart fills the requirements regarding popularity, business ability and progressiveness. His record and position in pharmaceutical circles are well known. The nomination is not to be made for several months. It is also said in Buffalo that a strong mayoralty breeze which may develop into a wind, is blowing from the direction of two other pharmacists, R. K. Smither and Neil McEachren. The latter is a member of the City Board of Aldermen.

NEWS AND TRADE DEPARTMENT.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN. China.

- A dispatch from Count von Waldersee says that the negotiations for peace with China are seriously under way, the initial obstacles having been overcome, and full accord existing between the ministers of the powers at Peking. The Chinese plenipotentiaries find no further difficulty in communicating with the Court direct.
- To expedite the preliminary negotiations at Peking, Secretary Hay has accepted the British suggestion that China must accept the terms presented before the final negotiations can begin.
- It was disclosed by correspondence laid before the British Parliament last week that Japan has become a party to the Anglo-German agreement.
- Our army transport service has landed all of the supplies in China necessary to carry Gen. Chaffee's troops comfortably through the winter.

South Africa.

- Lord Kitchener reports that 18 officers and 555 men are missing from Gen. Clement's force. They consist of four companies of the Northumberland Fusiliers. Judging from the message, they were captured by the Boers. Gen. Clement's casualties on December 13 amounted to five officers and nine men killed and many wounded. This capture takes rank among the worst British disasters of the war.
- Harold Darringdale, an American, has been arrested in Cape Colony, on the charge of fomenting an Afrikaner rebellion. The arrest has made a great sensation, and startling disclosures are promised.
- The running fight between Gen. Knox and Gen. De Wet is still in progress in the southern part of the Orange Free State. Gen. Knox seems unable to corner the Boer leader.
- The Liberal leaders in the British Parliament are urging that hostilities be brought to a close by some concessions to the Boers, but the only result of their advice is that the Conservatives refer to them as traitors.
- Lord Roberts sailed from Cape Town with his wife and daughters last week for England.
- The House of Commons has agreed to appropriate \$50,000,000 for military expenses in South Africa.
- Mr. Brodrick, the new English Secretary of State for War, in addressing the House of Commons last week, took a most gloomy view of the situation in South Africa. He described the great difficulties of the army in waging guerilla warfare, and the small progress that is being made, and predicted that the present heavy expense will continue for a long time.

The Philippines.

- Orders have been sent to Gen. MacArthur to begin sending home volunteers from the Philippines immediately.

Other Foreign News.

- The Gokteik viaduct, in the Shan hills of British Burmah, the highest railroad bridge in the world, has been completed by the Pennsylvania Steel Company, and formally handed over to the Burmah Railway Company. The building of this bridge is another instance where the British firms were unable to compete with the terms offered by American firms.
- Czar Nicholas, of Russia, is now rapidly progressing on the road to health.
- Mr. Kruger remains at The Hague, where he is treated with great esteem by the Dutch government and people, but there seems to be no likelihood that he will receive any material aid from any European power.
- An Antarctic expedition, headed by Dr. Otto Nordenskjold, will leave Christiana next August.
- A wave of crime has terrorized many citizens of Paris. Since the close of the exposition it is estimated that more than 2,000 who have thus lost employment have joined the criminal army.
- King Oscar of Sweden, who has been seriously ill, is much improved.

DOMESTIC.

Congress.

- The Senate, last week by the decisive vote of 65 to 17, amended the Hay-Pauncefote treaty so as to give the United States authority to close the canal to an enemy in war time. The Senate also struck out Article III, which provided for the submission of the treaty to the other powers for their acceptance. These

amendments change the character of the treaty radically, making the proposed canal an American, instead of an international waterway. It is believed that Secretary Hay, who negotiated the treaty, has offered to resign his place in the cabinet on account of the Senate's hostile action, but it is said that the President has prevailed upon him to stay.

Something of a scandal has arisen from the fact that of the \$40,000,000 reduction in internal revenue taxes proposed by the War Tax Reduction bill, over \$9,800,000, or nearly one-quarter, is a reduction in the tax on beer. It is charged that this large proposed reduction in the beer tax is due to the efforts of Congressman Babcock, who was appointed to the Ways and Means Committee very recently, and who is said to have had charge of the collection of the brewers' contributions to the Republican campaign fund. The administration is said to be opposed to any reduction of the beer tax, while the brewers are urgently asking that the reduction be doubled.

In passing the Army Reorganization bill last week, the House added an amendment prohibiting the sale of intoxicating liquors at the "canteens" or post exchanges at army posts, or on army transports. This amendment was added by a vote of 159 to 51, to the delight of many members of the Women's Christian Temperance Union, who crowded the galleries. Friends of the canteen, who believe that it is a benefit to the soldier by keeping him away from worse resorts, deplore the action of the House, and hope that the amendment will be killed by the Senate. One of these, Congressman Fitzgerald (Democrat, Massachusetts), offered another amendment prohibiting the sale of liquor in the capitol building, but it was ruled "out of order."

The Shipping Subsidy bill is encountering considerable opposition, and may fail to pass. A recent speech of President James J. Hill, of the Great Northern Railroad, before the Bankers' Club in Chicago, is being widely quoted against it. President Hill is having four of the largest steamers in the world built in this country for the Pacific trade, and if the bill becomes a law he will receive a generous slice of the \$9,000,000 a year, yet he opposes it on the ground that American ships can be built and sailed profitably without a subsidy, and because he thinks that the bill before Congress is drawn so as to give an unfairly large share of the subsidy to a few men.

The Senate has confirmed the nomination of George Von L. Meyer, of Massachusetts, to be Ambassador to Italy. The Pension Appropriation bill, as completed by the House Sub-committee on Appropriations, carries about \$145,270,000.

Congress will adjourn for the holidays on Friday of this week and the session will be resumed on Thursday, January 3.

The President has sent to the Senate a number of treaties with Great Britain extending for a year the time for the ratification of the reciprocity treaties affecting the British West Indies. He has also forwarded reciprocity treaties with Nicaragua, Ecuador, the Dominican Republic and Denmark, the latter affecting the Island of St. Croix only.

Other Government Affairs.

Ex-President Harrison, in a notable speech at Ann Arbor, Mich., last week, upheld the contention that the Constitution "follows the flag," and extends its provisions regarding citizenship, tariffs, etc., over Puerto Rico and the Philippines.

The Supreme Court now has before it several cases whose adjudication will decide whether or not the Constitution follows the flag, and the decision is being awaited with the greatest interest. Many believe that if the Supreme Court decides that the Porto Ricans and Filipinos are citizens, and that the products of our new island possessions can come in free of duty, Congress will give them up rather than accept the political and commercial results that would follow such a decision.

The death of Cadet Osear L. Boez at his home in Bristol, Pa., and the charge that his fatal illness was caused by hazing at West Point have caused no small stir at Washington and the press throughout the country, and the charges are being investigated by Col. Mills, superintendent of the military academy, by a committee appointed by the Secretary of War and by a committee from the House of Representatives.

Other Domestic News.

The first train was run through the Great Northern tunnel, in the Cascade Mountains, last Sunday. The tunnel is 13,200 feet long, and the rock measures 5,300 feet at the thickest place.

J. Pierpont Morgan & Co. have bought the Pennsylvania Coal Company.

The centennial of the founding of the seat of government at Washington was celebrated last week in that city with imposing ceremonies in which the President and all the other high officials participated.

Statistics published last week show that in the whole Dominion of Canada there have been only 271 divorces granted in thirty-two years: in Prince Edward Island, with a population of 100,000, there has not been a divorce in thirty years.

The Ohio Supreme Court has dismissed the contempt proceedings brought some time ago by the Attorney-General of Ohio against the Standard Oil Company. This is probably the last that will be heard of the order issued nearly ten years ago by that court condemning the Standard Oil Company under the State Anti-Trust law, and ordering it to wind up its affairs. The company asked for time to do this, and has not gone out of business yet. The court now refuses to condemn the company for its long delay, and this makes its own order of no effect.

The world's output of gold for the calendar year 1899 was \$306,584,900. The production of the United States was \$71,053,400, a great increase over the preceding year.

Fifty independent glass manufacturers are waging a lively war with the glass trust. They held a meeting

in Cleveland last week, and may consolidate and form a rival concern.

The yellow fever situation in Havana is improving. Twenty-eight cases are now under treatment, including only one American.

Lieut. Hobson and Finley Peter Dunne (author of the celebrated "Dooley" papers), who have been ill with typhoid fever, are both recovering.

Andrew Carnegie has offered \$50,000 to the city of Chattanooga for a library, if the city will appropriate \$5,000 a year to maintain it.

The Tennessee Anti-Cigarette law has been declared void by Judge Sneed, of the Knox County Circuit Court, because it does not bear the signature of the Speaker of the State House of Representatives.

The Government cotton crop report, giving 10,100,000 bales for 1900-1901, caused a panic in the market last week.

THE DRUG NEWS.

WAR TAX REDUCTION BILL PASSES THE HOUSE.

All Amendments Beaten, Including the One to Stamp Express Packages.

Washington, Dec. 15.—The War Tax Reduction bill was passed by the House to-day, the opposition refraining from voting. An effort to recommit and report a measure cutting the revenue \$70,000,000 instead of about \$40,000,000, was beaten, 131 to 155.

The amendment to tax express receipts was defeated. An amendment providing that the inheritance tax should not be levied on estates of persons who died prior to June 13, 1898, was adopted, 34 to 53.

Mr. Newlands' amendment to tax corporations was voted down. The effort to wipe out the tax on tea was also defeated. So was one to reduce the beer tax.

Efforts to introduce an income tax feature were looked upon as useless, in view of the Supreme Court decision.

DRUG SWINDLER CONVICTED.

John Bick, president of the Palestine Drug Company, No. 107 South Second street, St. Louis, Mo., was convicted in the Court of Criminal Corrections at St. Louis, December 8, of counterfeiting wrappers of Castoria and the remedy itself, the charge being made by Mr. Camp, of the Centaur Company, of this city. Bick was exposed in the Era during April of this year and again in November. His method of operation was to go about the country offering to trade new preparations for shelved or uncalled-for proprietary medicines. When a dupe was found, the old remedies would be shipped to St. Louis, repacked and sold for any price the firm could get. It was rarely the Palestine Company ever returned the goods promised for those taken. A Brooklyn manufacturer was asked by the company early in the year to replace a lot of labels for his preparations which it was alleged had been damaged. Fortunately the manufacturer did not comply.

New York and Vicinity.

PRICE SCHEDULE ADOPTED.

Joint Conference Committee's Action—Committee Named to Appoint Canvassers to Secure Druggists' Approval.

The second meeting of the Joint Conference Committee of Pharmacists of Greater New York, represented by delegations from four of the five pharmaceutical organizations of the city, was held in the New York College of Pharmacy, Thursday afternoon, December 13. It resulted in the adoption of a minimum price schedule, which was entrusted to an Executive Committee, composed of one member from each affiliated organization, to be put into effect as soon as a canvass can be made of the pharmacists of the city showing over 75 per cent. of them in favor of the list.

The meeting was called to order by Chairman Muir shortly after 3 o'clock, and reports of committees were heard from different organizations.

G. H. Hitchcock, for the Manhattan Pharmaceutical Association, said the report of the Conference Committee was not acted on in a manner acceptable to some of the members at the regular meeting of the society at which it was represented, so a special meeting was convened, when the committee was voted \$100 to pursue its work and given full power.

O. C. Kleine, Jr., said the Kings County Pharmaceutical Society had adopted the report of its committee, accorded it full power and given \$100 to carry on the work.

A. L. Goldwater did not make a full report at the meeting of the Greater New York Pharmaceutical Association, as it was not clear to him whether his organization, being composed of about two-thirds proprietors and

one-third clerks, was eligible to membership in the N. A. R. D., but since the time of meeting a letter had been received from Secretary Wooten, of the N. A. R. D., stating the society could join, and he was positive now the members would unite in the work to be taken up. Mr. Goldwater guaranteed personally his society's pro rata share of expense.

A. Bakst stated the Retail Druggists' Association had adopted the committee's report, but had voted no money. He promised that his society should not fail to pay its share for the work to be done. He had made a personal canvass of his district, and would report that 90 per cent. of the druggists were in favor of a rise in prices.

F. O. Cole, for the Jersey City Druggists' Association, said a minimum price list had already been adopted by his association and was in effect. However, he believed his association had a large interest in the success of the New York plan, and would therefore donate \$25 for use of the Conference Committee.

Chairman Muir thought the sentiment quite complimentary, but believed New York could get along without Jersey's financial aid, although it would accept its moral support.

Mr. Gallagher, of the Jerseyites, promised this by asserting his society always stood ready to help in every way it could.

The matter was satisfactorily disposed of by the adoption of a motion by W. C. Anderson that Mr. Cole's offer without the financial consideration, be accepted.

Secretary Schweinfurth read a communication from the German Apothecaries' Society, in which it was stated that the society had refrained from sending a delegation on the ground that inasmuch as the conference was under the auspices of the N. A. R. D., such action would be inconsistent, as the society had cut off its relations with the national body.

Mr. Cole believed there was a general misunderstanding on the part of a good many to the effect that the joint conference was affiliated with the N. A. R. D., when as a matter of fact it was merely "a getting together" of pharmacists to adopt a schedule of prices better than those received at present and devise means for sustaining the same. He moved that the secretary be instructed to answer the communication of the Germans explaining the exact position of the committee. This was unanimously adopted.

On motion A. E. Hlegeman was substituted for T. J. France in the Kings County Society delegation.

The matter of the price list was next taken up. It was thought some additions should be made to the list adopted at the previous meeting and Mr. Anderson presented the following one.

All 5c., 10c. and 15c. articles shall be sold at full prices.

All 25c. articles at not less than.....	20c.
" 35c. " " "	25c.
" 50c. " " "	45c.
" 60c. " " "	55c.
" 75c. " " "	65c.
" \$1.00 " " "	85c.
" 1.25 " " "	\$1.10
" 1.50 " " "	1.25
" 2.00 " " "	1.75

(Infant foods and beef extracts not included in this list.)

This was a signal for much discussion, and at the close of the debating it was decided to adopt the list. During the argument many interesting points were brought out. Mr. Weinstein wanted to know if after the schedule went into effect and proprietary articles not included in the protected rebate list were sold below the schedule, if the seller would be classed an aggressive cutter.

Mr. Anderson replied that the only manner of determining the aggressive cutter was by selecting those who deliberately refused to maintain a certain schedule of prices agreed upon by a majority of the druggists of any locality, and if a man cut below these prices he should be classed an aggressive cutter, "no matter what he cuts on." He illustrated the point by citing an example: Take a proprietor who is in the agreement and the price is fixed on his production at not less than 85c. while the price of a similar production by a proprietor not in the agreement is quoted at 65c. Is it justice to the proprietor who has said he would befriend us to sell his preparation at 85c. and advertise the same remedy by him who is against us at 20c. less? It was agreed that such a procedure was unfair and that the list should include all proprietary articles.

Chairman Muir thought inasmuch as infant foods and beef extracts were not strictly proprietary goods they should not be included in the price list, and on motion these exceptions were made.

Mr. Anderson then moved that an Executive Committee be named to consist of one member from each affiliated body and that this committee have power to canvass the city and determine when the price list shall go into effect. This was adopted and the following committee named: William Muir, Kings County Pharmaceutical Society; G. H. Hitchcock, Manhattan Pharmaceutical Association; A. L. Goldwater, Greater New York Pharmaceutical Association; A. Bakst, Retail Druggists' Association.

On motion of Mr. Cole it was decided that any pharmaceutical society in Greater New York desiring to affiliate with the committee shall have power to appoint one of its members to the Executive Committee.

Adjournment was taken subject to call of the chair.

TO CANVASS THE CITY ON PRICE LIST.

The Executive Committee of the Joint Conference Committee met Saturday afternoon, December 15, and decided to make a canvass of Greater New York on the adopted minimum scale of prices with a view to putting it in effect as early as possible. Manhattan, the Bronx and Brooklyn were divided into districts and one canvasser assigned to each. The work will be completed in about two weeks.

KINGS COUNTY PHARMACEUTICAL SOCIETY.

At the last meeting of the Kings County Pharmaceutical Society, held Tuesday afternoon, December 11, it was unanimously decided to name a committee of three to confer with the heads of the various wholesale houses on the accepted list of the N. A. R. D. in Greater New York with reference to adopting some plan whereby the wholesaler cease the practice of retailing at wholesale prices.

This action was the termination of a long discussion which began when Mr. Muir reported on the business transacted at the Manhattan Pharmaceutical Association with relation to the work of the Conference Committee of that body on price revision. Mr. Muir explained the position of the German Apothecaries' Society in not sending a delegation to the conferences of the Joint Committee. He believed the stand had been assumed through a misunderstanding that the committee was affiliated with the N. R. A. D., and he asserted that now the situation had been made clear, there was good reason to believe the society might reconsider its former action and send a delegation. "If they do not unite as a society," said Mr. Muir, "I think the majority of individual members are with us, for they believe in the raising of prices."

W. C. Anderson related the progress of the work of the N. A. R. D. plan throughout the country. He reported his visit to the Essex County Retail Druggists' Association at Newark, N. J., November 29, and stated this association had adopted a price list to go into effect January 1, 1901; the N. A. R. D. plan had been put in operation in New Haven, Conn., which had been fighting ground for the last eight years; Chicago was making great progress; Detroit, where the plan had been considered impossible, was working successfully under an advanced price schedule; Minneapolis, where the first price list was made up, was doing excellently; Indianapolis, where cutters had declared to break up the plan and had failed, had secured the co-operation of these same cutters; progress in New Jersey, where it had been stated the plan would not be accepted because of the withdrawal of the State Association from the N. A. R. D., besides the movements in Camden, Bayonne, Hoboken, Newark and many other places. Paterson, which had been considered the "black eye" of the country for price cutting, had recently organized and was working successfully. He spoke of difficulty in Maryland, but thought it had been brought about by a misunderstanding and hoped to set matters right. He had been invited to attend a meeting in Baltimore and had accepted. The plan was working well in Greater New York, although the retailers had not yet formally adopted a schedule of prices.

Then the question was asked if there was anything in the tripartite agreement relating to the wholesaler selling at retail.

Prof. Anderson replied he did not know of anything to that effect, but believed it was a question for the N. A. R. D. to take up immediately.

Mr. Muir said he understood the wholesaler was not to sell retail at less than schedule price.

Then a discussion began on the relation of the wholesaler and retailer, which resulted in Mr. Muir offering a motion that the members of the Kings County Pharmaceutical Society refuse to patronize wholesalers who sold goods at retail.

Dr. Schilling thought it would be better to name a committee to visit the wholesaler and Mr. Muir withdrew his motion, substituting for it the appointment of a committee of three to act on Dr. Schilling's suggestion.

H. O. Wichelns wanted to know "if a wholesaler was allowed to retail, if a retailer was allowed to wholesale." He said he often had calls for half dozen lots of different preparations and wanted to know if he was to sell at a reduced price for the half dozen or the uniform price on each bottle. He was informed that in accordance with the N. A. R. D. plan he would be required to sell at the scheduled price of each bottle, no matter how many were sold in quantity.

Mr. Wichelns also referred to employes in jobbing houses buying goods at cost and re-selling them.

Mr. Muir thought these were matters which could be satisfactorily adjusted by local associations and called for the question, which, being put, the motion was carried.

Mr. Paradis, as chairman of the committee to report on the scheme of Mr. Young to buy druggists' sundries at reduced prices, proposed at the last meeting, stated his committee had held three meetings, and finally decided that the savings were not large enough to warrant adoption by the society, but if individual members desired to investigate further they could consult Mr. Young. The report was adopted.

Secretary Tuthill read a letter from Charles F. Squibb in which the writer thanked the society on behalf of his mother, Mrs. E. R. Squibb, for the resolutions touching the death of Dr. E. R. Squibb.

A communication was also read from H. L. Kramer relating to the Cascaret offer and Secretary Tuthill urged members who had not taken advantage of the offer to do so at once.

George U'pington, publisher of the Brooklyn Directory, appeared in the interest of a slot machine directory (a description of which is given elsewhere in this paper) for druggists' use.

Prof. Bartley, of the Brooklyn College of Pharmacy, conferred the degree of graduate in pharmacy on the following candidates, who had now completed the experience and age requirements: Edward E. Tarber, Ralph F. Harloe, John H. Witzemberger and Adolph L. Goelz.

Treasurer Ray reported a balance on hand November 13 of \$394.91; receipts, \$30; disbursements, \$136; balance December 11, \$288.61. Dr. Ray also gave the following report of the college finances: Balance on hand, \$3,385.85; receipts, \$512, and a special deposit of \$1,548.75, making in all \$5,446.60. This was received with applause, as it means a substantial increase of the building fund.

The following were elected to membership: J. J. Mayer and F. L. Downs, and these applications were received: Charles S. Rowlinson, Fred. H. Weyer, J. J. A. Van Diense, Fred. Schroeder, Jr., E. B. Weissberg, John Keelgar, Philip Nehrbas, Robert J. Reid and John F. Golding.

MANHATTAN PHARMACEUTICAL ASSOCIATION.

At its meeting Monday evening, December 17, the Manhattan Pharmaceutical Association voted an appropriation of \$100 to the New York College of Pharmacy to be used in connection with the \$180 already subscribed by the Alumni Association of the college, for the purchase of microscopes for the use of the post-graduate class. The matter was brought up by C. O. Bigelow who told of the need of the money for such a purpose and the work of the Alumni Association in aiding the work. Mr. Bigelow concluded his remarks by offering a motion that \$200 be given to the fund. Mr. Pringle thought the money could be best raised by assessing each member of the association and Mr. Tobin believed that all members of the association should be notified before any action was taken. Mr. Kleinau amended Mr. Bigelow's motion to read \$100 and Mr. Bigelow accepted this, adding "the other \$100 could be raised by subscription."

Mr. Tobin said the absent members should be considered, but President Smith said he was there to represent the absentees' interest and each had been properly informed of the meeting and had only himself to blame for failure to attend.

Mr. Lascoff amended the original motion to the effect that the money be raised by subscription and if the sum so secured fell below \$100 the deficit to be made good by the association. This was lost on vote, the motion that \$100 be donated prevailing.

William Muir was granted the privilege of the floor and he gave a short talk on the proposed legislation against the military pharmacist law. He said the method of procedure would effectually repeal the bill. It was embodied in a revision of the military code that was to be proposed, one of the provisions of which struck out the rank of military pharmacist. He warned the association to be on the alert and to use its influence in blocking legislation of this character. He advised that a letter be written Governor-elect Odell, stating that the

military pharmacist law was a good measure and should be kept on the statute books of the State.

G. E. Schweinfurth reported the last meeting of the Joint Conference Committee in detail. Treasurer Hitchcock reported the condition of the finances as follows: Balance on hand last meeting, \$465.35; receipts, \$53.75; disbursements, \$100; balance on hand, \$419.08.

William Chubbuck, of Rockaway Beach, was chosen to membership and four applications for membership were received.

A motion prevailed that a committee of three be named to consider the constitution and by-laws of the association and report at the next meeting if they need revision, with the proposed amendments.

AGAIN THE PHARMACY LAW.

"There will be little trouble over the shorter hours clause," said a member of the All-State Board of Pharmacy last week in referring to the right of the Legislature to regulate the number of hours a drug clerk shall work. "as this feature of the law has been declared constitutional by a Senator who opposed the bill. He considered it this way: For a clerk to work longer than twelve hours a day week after week is too great a burden for him physically and mentally. The strain he is put to makes him unfit, so to speak, to safely handle drugs and medicines in compounding prescriptions and he is amenable to the Health laws. The board does not care to prepare a schedule of hours for all the proprietors of stores in Greater New York, as the proprietors are better fitted to do this, but we shall insist that the law be enforced and in this we may encounter some difficulty."

"People imagine there is going to be a revolution in the drug trade after January 1, but there will not be; it may be several months before we get down to actual business and make the law felt in its every branch. There is the poison schedule to be considered. We must proceed slowly in this and may consume some time before we make any changes. Then we have power to "regulate pharmacy," but the scope of this term is so broad it is out of consideration now; what we will have to contend with will be the registration and I expect we shall have a lot to do in this regard, for people cannot seem to grasp it even after reading the law."

ESSEX COUNTY (N. J.) DRUGGISTS MEET.

A regular meeting of the Essex County (N. J.) Retail Druggists' Association was held Wednesday afternoon, Dec. 12, at the New Jersey College of Pharmacy in Newark. The session was well attended, and an encouraging gain was reported in membership. The entire meeting was devoted to the recently adopted schedule which was to have become operative January 1, and the outcome of the discussion of it resulted in changing the date to Feb. 1.

Treasurer Egge reported \$103 received, expenditures of \$76.94, leaving a balance of \$26.06. Secretary Wuensch stated that the association had joined the N. A. R. D. with a membership of 113, which represented over 85 per cent. of the druggists in Essex County. The different canvassing committees reported the result of their work, which had been highly satisfactory, and showed there were but ten druggists who had refused to agree to the adopted schedule of prices. The next meeting of the society will be held Jan. 10.

Druggist Said to Have Eloped.

Dr. Joseph A. Powellson, who has conducted a drug store at 1,198 Webster avenue, the Bronx, and Mrs. Louise Romer, wife of a Third avenue furniture dealer, disappeared on the same day last week, and it is asserted they have eloped. Dr. Powellson's business is reported to be in excellent condition, and Gustav A. Raszewski, who was a friend of the druggist, says he has been notified by letter from Dr. Powellson to sell the store. Some friends of the missing couple are sure they have not eloped, but that their disappearance on the same day is but a coincidence.

H. C. P. ALUMNI ASSOCIATION DINNER.

The members of the Alumni Association of the Brooklyn College of Pharmacy proved their regard for their alma mater at the third annual dinner of the association at "The Argyle," Brooklyn, Wednesday evening, December 12, by presenting, to use the words of Toastmaster F. P. Tuthill, "the largest number ever in attendance at an alumni dinner." While not all present were alumni of the Brooklyn College of Pharmacy, those who were not were enthused with the fraternity idea, as was shown in the speeches following the dinner. The menu was an excellent one and the pleasure of the feast was added to by excellent music. The first speaker called on by Toastmaster Tuthill was Andrew Myhr, president of the Alumni Association, who spoke on the association. Others who spoke were: G. C. Diekman, "The Alumni of New York College;" O. C. Kleine, Jr., president of the Kings County Pharmaceutical Society, "The Pharmaceutical Association;" E. H. Bartley, "The Faculty;" C. W. Parsons, "The Pharmaceutical Press;" William Muir, "The N. A. R. D.;" William L. Perkins, "Pharmaceutical Jurisprudence;" P. W. Ray, "The Pharmacist;" P. Schapiro, "The Senior Class." Regrets were received and read from the Alumni Association of the New York College of Pharmacy and Harry B. Ferguson, of the New York College.

RETAIL DRUGGISTS' ASSOCIATION.

At a meeting of the Retail Druggists' Association, held Friday evening, December 7, the report of the Committee to meet the Joint Conference Committee of the pharmaceutical associations, was accepted and the committee was given power to continue the work with the right to draw on the association's treasurer for all necessary moneys to sustain its pro rata share in aiding the movement. The date of the annual ball was fixed for March 8, 1901, and the place, Terrace Garden, Fifty-eighth street near Third avenue. Arthur Brianson was proposed for membership and Mr. Morrison was elected a member.

The following nominations for officers to be elected at the next meeting were made: President, J. Weinstein, J. Bakst, J. Hammer, N. Khasan, C. H. Bernstein; vice-president, A. Goldman, A. Bakst, J. Pick, J. Hammer, D. Duckman, A. Lindemann, Mr. Godkin, I. Mitchell, Khasan and M. Nissleson; recording secretary, L. Marmor; financial secretary, Bernstein, A. Bakst, Nissleson, A. H. Solotaroff, Bockshitzky, Duckman, J. Hammer, Lindeman, Paletz; treasurer, J. Bakst, Bernstein, Nissleson, Khasan, Glassman, Lifferts.

WHOLESALE DRUG TRADE HOWLERS.

The games played Saturday resulted as follows: Dodge & Olcott 779, Merck & Co. 739; National Lead Co. 751, Merck & Co. 675; National Lead Co. 763, Dodge & Olcott 795; Church, Dwight & Co. 752, Seabury & Johnson 733; Lanman & Kemp 727, Seabury & Johnson 745; Lanman & Kemp 647, Church, Dwight & Co. 679. The standing of the teams follows:

Teams.	Won.	Lost.	Score.
Dodge & Olcott.....	8	2	887
Johanson & Johnson.....	8	2	790
Seabury & Johnson.....	7	3	812
Lanman & Kemp.....	5	5	783
National Lead Company.....	5	5	763
Parke, Davis & Co.....	4	4	811
Colgate & Co.....	4	4	788
Merck & Co.....	3	7	812
Church, Dwight & Co.....	3	8	752
General Chemical Company.....	2	8	747

A NEW WHOLESALE HOUSE.

After Jan. 1, 1901, the Harlem Drug House proposes to begin a general wholesale business at 214 East 120th street. The firm has a capital of \$20,000 and is composed of the following members: O. Gorden, H. Goldblum, L. Herson, N. Kruskal and John Jaffe. Mr. Kruskal told a reporter for this paper it was the purpose of the new concern to deal with the druggists of Harlem and The Bronx, although sales would not be confined to this field. He believed that a wholesale house was needed in the district, and this was the reason the company had been formed. He said application had been made for recognition on the legitimate list of jobbers.

DISCUSSING NEXT STATE MEETING.

Already a dozen members of the Entertainment Committee of the New York State Pharmaceutical Association, have been discussing the features of the next annual meeting to be held in their home city, Buffalo, June 4-8, next, and if their arrangement along lines suggested come to fruition the meeting, with the entertainment adjunct, will be one of the best the association has known. Inasmuch as the meeting will occur during the Pan-American Exposition, the Entertainment Committee proposes that the druggists shall not miss this grand show, hence it has been suggested that each of the five working convention days be given respectively to sections of the committee. George Reiman has been selected as chairman of the General Committee, while A. J. Werner, Nell McEaohren and J. L. Perkins will navigate the other committees. The first day will be left to the care of the General Committee, which will devote its time to caring for the members as they arrive, assisting them in locating, etc. Those who expect to attend the meeting are urged to engage quarters early. Some New Yorkers have already reserved rooms at the Buffalo hotels.

STODDART BROS. WIN FIRE INSURANCE SUIT.

A jury in Part 11. of the Supreme Court at Buffalo, last week handed in a verdict for \$548.78 in favor of Stoddart Bros., druggists, in that firm's suit against the Palestine Insurance Company, of Manchester, Eng., to recover insurance alleged to be due on a "use and occupancy" policy. The druggists carried use and occupancy insurance in addition to regular business insurance against fire, and in the fire—which was caused from the building adjoining—at their store in 1899 the building and furnishings were so damaged that business was practically suspended, it requiring several weeks to adjust matters. Stoddart Bros. claimed \$16 a day. The insurance company offered an insignificant amount, then the case went to the courts.

PATERSON RETAIL DRUGGISTS ASSOCIATION.

The second meeting of the Paterson Retail Druggists' Association was held in Paterson, N. J., Thursday evening, December 13, a full attendance of members being present. At the last meeting different members promised to bring absentees to the Thursday night meeting, and the promises were fulfilled, for every druggist in Paterson—there are twenty-eight—was present or represented. The executive committee presented a minimum price schedule in accordance with a resolution passed at the last meeting, but it was thought incomplete by the members inasmuch as it did not cover articles sold at intermediate prices, such as 35c, 65c, 75c and 85c. A number of additions were made to it and it was referred back to the committee for revision and will be presented at the next meeting, which is slated for this evening.

NOTES.

—Dr. W. G. Gregory, well known druggist of Buffalo, was arrested recently on a charge of selling a preparation of his own under the name of Victor Spring Mineral Water. The complainant was Augustus Florian, who claims the water Dr. Gregory sold as natural was artificial. The Erie County grand jury has been asked to indict Dr. Gregory. According to local gossip the case is one of spite and involves a point of law relating to the ownership of the Victor Spring. Dr. Gregory has stock in the defunct Victor Spring Mineral Water Company, also a judgment for \$170 against the company and on these points he claims ownership of the spring. The members of the disbanded company dispute this right and adopted, so it is said, the plan above to catch Dr. Gregory napping. Rumor has it that an offer has been made to drop the charge and suspend sentence if Dr. Gregory will confess judgment. "Of course this is not possible," the doctor's friends say, and in the event of an indictment the case will be watched with interest, as Dr. Gregory vows "to fight to the end."

—A meeting of the Alumni Association of the New York College of Pharmacy was held in the college rooms Wednesday evening, December 12. This being the first meeting since the death of Dr. E. R. Squibb, resolutions

of respect were adopted. Similar action was taken on the death of Alfred W. Hoff, class of '92, of Keyport, N. J., notice of his death having but recently been received. It was decided to invite Mr. Tripler to attend the next meeting to lecture on liquid air, and Harry B. Ferguson was delegated as a committee in the matter. Encouraging reports were made by the committee having in charge the recent alumni dinner; also by the committee on the annual ball, January 30. The association elects the floor manager for the ball and Charles Bjorkwall was chosen to the place. The association gave a reception to students of the college last evening.

—The next meeting of the New York Section of the Society of Chemical Industry will be held to-morrow evening at the Chemists' Club, 108 West Fifty-fifth street, at which time the following papers will be read: F. Kniffen, "The Recent Powder Explosion at Indian Head;" V. Coblentz, "A Brief Review of the Pharmacopoeia Commission and its Work;" J. Brakes, "The Determination of Titanic Acid Colorimetrically;" J. A. Bradburn, "The Bicarbonate Tower in the Ammonia Soda Process;" H. Schweitzer, "Resolutions of the last International Congress for Patent Legislation, etc., and Their Relations to the Patent System and the Industry of the United States."

—Among the druggists who visited the trade last week were: H. A. Morgan, Milford, Mass.; G. Pedrick, of G. F. Robes, Salem, Mass.; James M. Bush, London, Eng.; S. G. Sternes, Nashville, Tenn.; E. A. McFadden, Hackensack, N. J.; J. H. Allen, Millbrook, N. Y.; R. S. Matthews, Atlantic Highlands, N. J.; James A. Goodale, Dover, N. J.; E. M. Neal, Spurlock, Neal & Co., Nashville, Tenn.; Franklin C. Burke, Flemington, N. J.; John W. Doe, of Doe & Gongga, Bar Harbor, Me., and Palm Beach, Fla.; T. Benjamin and F. E. Benjamin, Riverhead, N. Y.

—Perhaps the largest class in the history of the New York Board of Pharmacy was examined at the New York College of Pharmacy at the meeting of the board Monday, December 17. It was the last meeting of the board and everyone who could tried to pass. About 150 were examined. The board will hold sessions at the New York College of Pharmacy during the latter part of the month to allow candidates who were successful to register. The first meeting of the new Board of Pharmacy will be held at Albany, January 7.

—The O. Porsch Chemical Company has incorporated in this State with a capital of \$300,000. Its principal offices are at 62 Maiden Lane and 19 Liberty street. The new corporation has absorbed the business of O. Porsch's Son and will continue the importation and manufacture of specialties for the chemical trade but on a larger scale than the old firm. The officers of the corporation are: President, O. Porsch, Phar. D.; vice-president, H. A. Heydt; secretary and treasurer, E. Porsch.

—Edmund D. Lawall, druggist, 127 Avenue C, filed a petition in bankruptcy last week, with liabilities \$38,915.77, and no assets. Mr. Lawall is in partnership with A. C. Searles in the drug business, also in the real estate business under the firm name of Lawall & Searles. The liabilities represented are said to be mostly on notes made by the real estate firm. The largest creditors are L. C. Whiton, \$11,525, notes, and Damascus S. Mason, \$5,000.

—Edgar Pinchot, who was in the wholesale drug business in this city from 1859 to 1874, died Friday, December 14, at his home in Milford, Pa. During his drug business Mr. Pinchot was associated with Albert Bruen, now of the firm of Bruen, Ritchey & Co., at 214 Fulton street, and Charles H. Hobart. Mr. Pinchot left the firm in 1874 because of ill health. He will be remembered by the older members of the trade.

—B. R. Dauscha, at 1294 Madison avenue, has decked his windows with fancy soaps and perfumes, making them look quite attractive. Many other druggists in the city have arranged tasteful displays of their goods in their windows, but not one seems to have made a special decoration. "Perhaps business is so good they have not had time," said a druggist in excuse for not having "fixed up" his windows.

—A photograph of the post graduate class of the Brooklyn College of Pharmacy was taken last week. Included in the group were the members of the class, Miss Flora C. Fuhs, Nathaniel I. Gillman, Edward Kleine, Charles

Menkes, I. Neustaedter and Adolph D. Lindermann and Professors W. C. Anderson, J. F. Golding, Walter H. Kent and Elias H. Bartley and O. C. Kleine, Jr., and William Muir.

—The proceedings of the recent meeting of the N. W. D. A., compiled by Secretary A. B. Merriam, have been issued. The book contains 400 pages, is well made up typographically and is a faithful record of the meeting. The book also contains three excellent half-tones of the three principal officers of the association.

—The new building of Lehn & Fink on William street is rapidly nearly completion, but will not be ready for occupancy before April 1, 1901. When the firm moves into the new quarters it will add to its business a department for druggists' sundries, taking up a complete line in this branch of the trade.

—By invitation of Timothy L. Woodruff, the students of the Brooklyn College of Pharmacy, under direction of Professors W. C. Anderson and J. F. Golding, will, on January 16, 1901, visit and inspect the establishment of the Maltine Co. on Eighth avenue, Eighteenth and Nineteenth streets, Brooklyn.

—A handsome Christmas window is that shown by Reid, Yeomans & Cubit in their store at 142 Nassau street. It consists of an elaborate display of perfumes in all styles, shapes and sizes to tempt the Christmas shopper and in all there is represented over \$2,000 worth of bottled sweetness.

—The Carroll Drug Co., to deal in drugs and chemicals, has incorporated in New Jersey with a capital of \$10,000. Its offices are at Passaic and the incorporators are W. H. Carroll, D. L. Rue, J. McLellan, J. M. Ryan, P. H. Terhune, F. F. C. Demarest and G. T. Welch, all of Passaic.

—The Chemist and Druggist, published at London, England, and The Chemist and Druggist, of Australasia, published at Melbourne, Victoria, have established a branch office in the Park Row building, this city. John E. Glass is the American representative of both papers.

—The smallpox scare still continues to boom business, and every druggist can say his sales of vaccine and vaccine points has been large. One druggist in a section quite remote from the infected district reports the sale of 5,000 vaccine points up to date.

—Bids for a "hurried order" for the United States Army to be delivered Friday, December 21, were opened December 11 and the awards were made to Schieffelin & Co. and McKesson & Robbins. The whole order amounted to about \$60,000.

—The New Jersey College of Pharmacy has recently issued its prospectus for the year. It is a neat-looking book of fifty-five pages and contains half tones of the faculty and college rooms, beside descriptions of the different branches of study.

—The trial of Richard Blum, dental student of Brooklyn, who is charged with smuggling ten packages of phenacetin into this port in October, was scheduled to take place before United States Commissioner Shields, Tuesday of this week.

—The Uwantu Medical Co., of Jersey City, N. J., has incorporated to manufacture medicines with a capital of \$125,000. The incorporators are C. L. Angell, G. O. Angell, of New York, and C. B. Fish, of Jersey City.

—The American Stomach Bitters Co., of Buffalo, has incorporated to manufacture patent medicines. The capital is given at \$10,000 and the incorporators are P. C. Witte, Elizabeth Witte and Clara E. Meyer, Buffalo.

—Graduates of the New York College of Pharmacy in Central New York have arranged to hold a dinner at Bagg's Hotel, Utica, Thursday evening, December 27. H. B. Ferguson, of this city, will attend.

—The Cady Drug Co., of Plattsburg, N. Y., has incorporated with a capital of \$10,500 to conduct a drug business. The incorporators are T. W. Cady, H. W. Cady and W. S. Jaques, all of Plattsburg.

—In the awards made recently by the Charities Department for drug supplies of all kinds for the year, large contracts were given to Schieffelin & Co., McKesson & Robbins, Lehn & Fink and others.

—Bauer & Black, of Chicago, have recently established an office in this city at 24 Gold street with W. H. Hall in charge. Mr. Hall has as his assistant Frank Parker, who is well known to the trade.

—F. Mortimer Stage has purchased the store of B. H. Rose, 2519 Broadway. Mr. Stage was formerly with Smith & Stage at Fifty-seventh street and Seventh avenue.

—Meyers Bros., of Seventh street and Third avenue, and Eighty-sixth street and Second avenue, deny that they have opened or will open a drug store at 153d street and Melrose avenue as was stated in the Era of last week.

—The Formaldehyde Co. of Jersey City has been incorporated with a capital of \$500,000. The incorporators are Walter C. Gabell, W. H. Lyons and K. K. McLaren.

—Henry E. Brown, who conducted the drug store at 50 Beaver street for many years, made an assignment last week to Rufus W. Sprague, Jr., without preference.

—President Anderson of the N. A. R. D. was in attendance last week at the semi-annual meeting of the Maryland State Pharmaceutical Association at Baltimore.

—Englehard & Goldman are brightening the interior of their store, corner of 116th street and Third avenue, by a new coat of paint and a general cleaning up.

—Mr. Fehrer, who formerly worked for John Klehl, druggist at 105 Third avenue, has purchased the drug store of H. Millert & Co., 53 Second avenue.

—C. C. Kraemer has opened a new store at Nostrand avenue and Fulton streets, Brooklyn, where Jackson's pharmacy was formerly located.

—Hector Labadu, of the firm of J. Labadu & Co., the largest jobbing druggists in the city of Mexico, was in the city for a few days recently.

—Theodore Speathers has changed his address from Seventeenth street and Ninth avenue to Eleventh street and Fourth avenue.

—A. P. Kerley, formerly of the Sherman Square Pharmacy, has purchased the drug store at 102d street and Broadway.

—George Bjorkwall has moved his store from 117th street and Manhattan avenue to 118th street and the same avenue.

—Richard McNally has resigned his position with H. M. O'Neill, at 104th street and Columbus avenue.

—George W. Evans, of the Evans-Smith Drug Co., of Kansas City, Mo., was in the city last week.

—Prof. Edward Kremers, of the University of Wisconsin, visited friends in New York last week.

—E. Flint has lost his position through the failure of H. E. Brown, druggist at 50 Beaver street.

—N. Kruskal has sold his store, corner 114th street and Madison avenue, to his nephew, I. Kruskal.

—R. J. Reid has accepted a position with Reid, Yeomans & Cubitt, at No. 142 Nassau street.

—E. H. Gane, chemist for McKesson & Robbins, is seriously ill with typhoid fever.

—L. D. Orr has severed his connection with W. F. Muchmore, Easthampton, L. I.

the offense charged against him was punishable by law, and inasmuch as he had not been convicted of it, the board could not revoke his license. The petitioner filed his petition two years ago, but no action was taken under it until the present time, when it was given a hearing. The attorney general's office sent someone to represent the board, and it was practically admitted that the certificate had been improperly annulled, but it also was contended that the delay on the part of the petitioner in prosecuting the petition was practically an acquiescence in the action of the board, so the petitioner could not obtain the relief sought. The court took the case under advisement.

NOTES.

—In the court at Springfield a case of an unusual nature has been brought by a Westfield man against a Westfield drug firm from which he claims damages on account of an alleged mistake in selling him medicine. The plaintiff is Charles W. Spear, of Westfield, and the defendants are Frank S. Mason and Sarah S. Mason, of Westfield, and George J. Schirch, of Holyoke, under the firm name of Schirch & Mason. The sum of \$3,000 is demanded. The plaintiff alleges that the defendants sold him an extract or tincture of belladonna in place of extract or tincture of burdock which he asked for. He claims that he took a portion of the belladonna, was made ill, and suffered in mind and body, and that his life was greatly endangered thereby.

—At the annual election, City of Boston, on December 11, three druggists were among those elected to the Common Council, as follows: William M. Curtis, Republican candidate from Ward Twenty-one, who is a clerk in the drug store at 2986 Washington street, Roxbury District. He has served before, consequently was honored by re-election to office, as was Frank H. Howe, Republican candidate in Ward Twenty-five, a member of the drug firm of L. M. Gladdis & Co., Cambridge street, Allston District. Frank E. Graylord, also a drug clerk, was one of the Republican candidates from Ward Twelve, and received the largest number of votes of any of the nine candidates in that ward, three of whom were elected.

—The annual gathering of the traveling salesmen of the Mellin's Food Company took place at Young's Hotel on Thursday evening, December 13. Those present, numbering about thirty men, discussed the work of the past year. Many of the salesmen had not met since a similar gathering a year ago. Thomas Doliber, president and treasurer of the business concern, presided at the meeting and extended the congratulations of the company for the successful work of the last year. A fine dinner was served.

—Charles L. Dean, of Dean, Foster & Co., manufacturers and dealers in druggists' glassware and sundries, has been honored at Malden, his home, by re-election to the mayoralty of that city. There was no opposition to the election of Mayor Dean, and he is the first candidate for this office who has ever had the field to himself. The chief reason that Mayor Dean has had no opposition is the general satisfaction his administration of the last two years has given.

—Dealers in cigarettes in Fall River are looking sharp just now because the authorities are on the war path there. This week ten or a dozen were summoned to appear in court to answer to the charge of selling cigarettes to minors. These dealers, it is claimed, have been wilfully neglecting to comply with the cigarette law.

—The drug store in the Union block at Dalton has been bought by Albert Silvernail, of Stockbridge, who already is in possession of his new purchase. John J. Glynn, formerly employed there as clerk, has been retained in the same capacity.

—Arlie B. Toward, a druggist at 474 Columbus avenue, Roxbury District, who has been ill and began to convalesce, has had a relapse and his condition is once more dangerous.

—Among the week's exports at the Port of Boston were drugs and chemicals, \$20,523; hops, \$1,972; India rubber manufactures, \$17,969; tobacco, \$2,865; spirits, \$6,911.

—Too free use of carbolic acid to cure a toothache from which she was suffering nearly caused the death of a sixteen-year-old girl at Manchester this week.

—A novel feature at the fair in Lorimer Hall, Tremont

IN AND ABOUT BOSTON.

A DRUGGIST DEPRIVED OF HIS LICENSE SEEKS TO REGAIN IT.

Boston, Dec. 15.—William H. Underhill, a druggist in Haverhill, seeks a writ of certiorari in the Supreme Court with a view to having the State Board of Pharmacy certify to the Court its proceedings incidental to the revocation of his license, which he alleges was erroneously done, and asks that the error be corrected and his license be reissued. The proceeding gives birth to an interesting question relative to the power exercised by the board over licenses and the case attracts the attention of all druggists in this State. By the decision of the Supreme Court it is hoped to define the powers of the State Board of Pharmacy in the future. Up to July, 1898, Underhill was engaged in business in Haverhill. He also practised medicine in Marlboro. It is alleged that he aided and abetted a certain firm in that city in violating the liquor law. The matter was brought to the attention of the defendant board and it revoked the certificate issued to him to carry on the business of a pharmacist in Haverhill, on the ground that he had broken its conditions. Under the statute, a certificate cannot be revoked for an offense punishable by law until after a conviction in court. Hence, the petitioner takes the position that as

Temple, is a "drug table," supplied with toilet articles of all kinds, sundries and patent medicines.

—After an illness from typhoid fever for several weeks, Druggist Ruder, of Northampton, is now apparently on the way to complete recovery.

—A Salem firm of contractors is erecting in that city a two-story frame structure to be occupied by H. K. Mansfield, druggist.

PHILADELPHIA.

ECHOES OF THE STATE BOARD "CRUSADE."

Philadelphia, Dec. 14.—At a special meeting of the State Pharmacy Board held in this city yesterday, December 13, it was unanimously agreed that the board go ahead with its prosecutions of violators of the State Pharmacy law. Already three hundred or more cases have been heard before a magistrate or have been settled outside of court, and hearings have been set for ninety-two more cases before Magistrate Devlin on December 21st.

As declared by members of the Board, their purpose in pressing suits against those who violated the law by non-display of certificates of registration and renewal, was to obtain funds for criminal prosecutions against gross violators, the State not providing any funds for such purpose, and attention was called to the point that all suits hitherto brought were tried in a civil court. While this plan of the board is no doubt a very laudable one, it comes hard on the druggists who have to furnish their \$12.50 towards the prosecution of actual law-breakers, and it will have a salutary influence in opening their eyes to the injustice of making them pay for a protection to the "dear public" that is rightfully a part of the police duty of the State, and if this awakening bears any fruit, the price is a small one to pay.

In spite of the criticisms of many, the "crusade" of the State Board has been a very real blessing to the druggists of this State. It has familiarized many with the law that by their own admissions they were ignorant of, it has shown in a most positive manner the inequalities, inconsistencies and shortcomings of the present pharmacy law and has awakened a wholesome sentiment for the enactment of a new and better one; it has drawn attention to the slackness with which many druggists conduct their poison sales and other legal duties, and, best of all, it has stirred up a desire for local organization that might have taken the N. A. R. D. years of labor and teaching to bring about. The "crusade" has brought home to druggists the all-important fact that they are helpless before any threatening condition unless they come together and organize, and it has also taught them the power of a well-directed organization in gaining what they ask for. And for these blessings in the unpalatable disguise of \$10 fines and costs the druggists of Pennsylvania will yet rise up and call the much maligned board blessed.

Most of the above comments might well be placed in parentheses, for they represent the views of some of Philadelphia's most prominent and conservative druggists, men who can see through a hole in the mill stone, and as time goes on less and less of the bitter comment of a month ago is heard as sober judgment brings the real condition of affairs home to the most intolerant. For, as was brought out in the last meeting of the P. A. R. D., the State Board is simply enforcing the law, and violators thereof are law breakers, even if their methods of doing their duty have brought criticism upon the board's members.

E. J. Sponseller, agent of the State Pharmacy Board, has made charges against twenty-two Reading druggists for failure to secure renewals of their certificates of registration and to display these as required by law. The majority of the druggists have agreed to pay the \$10 fine and costs, and have promised to be more careful in the future about these matters.

P. A. R. D. Notes.

—A meeting of the committee elected at the last monthly meeting of the P. A. R. D. to draw up a new State pharmacy law was held at the College of Pharmacy Wednesday morning, December 12, at 9:30 A. M. Organization of

the committee was at once effected and it got down to work in short order. Most of the members of the committee were present, and it is reported that much of the proposed law was drawn up in accordance with the latest ideas in pharmaceutical legislation. The committee will meet again on December 9 at the same hour and place.

—H. L. Stiles, of the Executive Committee of the P. A. R. D., spent Thursday in Norristown assisting druggists there to form a retail druggists' association to cover Montgomery County. The visit of Mr. Stiles was the outcome of correspondence between Norristown druggists and the Committee on County Organization of the P. A. R. D., in which the aid of the Philadelphia body was asked for this purpose. The P. A. R. D. is doing very important work of late in aiding in the formation of local associations in the nearby counties, Norristown making the fourth on the list in the past month.

—The Executive Committee wishes to urge upon all members of the P. A. R. D. that they push the sales of "Foodigest" and thereby help to swell the amount to be given by Mr. Cohen to the treasury on his "three per cent. offer" recently accepted by the association. To accomplish the work planned for the near future, money is an absolute necessity, and the Executive Committee welcomes this means of giving it the needful funds. Mr. Cohen has begun to advertise extensively.

NOTES.

—In answer to an invitation from Messrs. D. E. Bransome and A. B. Wilson, two well-known patrons of sport, quite a number of local bowlers met at the Philadelphia Bourse last Saturday, December 8, to take steps for forming a bowling league here similar to those of New York and Baltimore. A great deal of enthusiasm was shown by all present and plans were laid for a league to embrace the employes of the large wholesale and manufacturing houses that bids fair to develop into a strong body at a very early date.

—The "December Pharmaceutical Meeting" of the Philadelphia College of Pharmacy is to be held Tuesday, December 18, at 3 P. M. The programme embraces a paper by Dr. Henry Leftman on "Explosives," one on "Syrup of Iodide of Iron" by F. W. Haussmann, and one on "Magnesium Boro-Citrate" by Dr. H. V. Army, of Cleveland, Ohio. All are invited.

—The store at Thirteenth and Lombard streets is now in the hands of painters and carpenters preparatory to changing owners and when completed will present a very handsome appearance in a color scheme of green and gold.

—E. C. Stout is making extensive alterations to his store at Forty-sixth street and Woodland avenue, and intends to enlarge considerably the space devoted to both sales and prescription work.

—Wm. E. Whiteside, of Spruce street and Woodland avenue, is soon to dispose of his store and retire from business at that location.

"We Are Here to Stay."

The above is the title of an interesting booklet prepared for the trade by F. Huhn, in which he tells you of his superior facilities for lithographic work. One of the most attractive catalogues we have ever seen is his new "Twentieth Century Catalogue," which is filled with samples of lithograph labels and engravings of every description. Anything you can possibly need in the way of labels is represented there, and we advise you to see this catalogue before placing your orders elsewhere. Mr. Huhn has a factory at New Haven, Conn., equipped with the most modern machinery for the manufacture of the highest grade of pill and powder boxes, of all styles and sizes. If you are interested, and desire samples and prices, write to F. Huhn, Nos. 72 and 74 Pine street, New York.

The "Allenburys" Pastilles.

These elegant Pastilles are unrivalled in appearance, taste and efficacy. There is an enormous sale of them in England and Europe, and they are taking rapidly on this side wherever known. Send for list of varieties and literature to Allen & Hanburys Limited, No. 52 Warren street, New York.

BALTIMORE.

MARYLAND PHARMACEUTICAL ASSOCIATION.

Baltimore, Dec. 12.—The Maryland Pharmaceutical Association at its third semi-annual meeting to-day, which took place at the Maryland College of Pharmacy, admitted to membership one woman druggist and one colored pharmacist. The female member is Miss Jane Craven Cooper, of Chestertown, Md., who enjoys the distinction of being the first woman admitted. Miss Cooper is a graduate of the Philadelphia College of Pharmacy. The colored druggist is Howard E. Young, who some time ago opened a store on Druid Hill avenue and appears to be quite successful. He was induced to engage in business on his own account because no one wanted to employ a colored drug clerk and he did not care to take up other work.

The semi-annual meeting was also exceptionally interesting by reason of other business transacted. Various important questions came up for consideration and elicited spirited discussion. The primary purpose of these gatherings is to map out the work for the various committees and otherwise direct attention to the aims and purposes of the organization. The assemblage was called to order at 3.15 P. M. by the president, William E. Turner, of Cumberland, who, after calling Vice-President William E. Brown to the chair, read an address in which he stated that the notable increase in interest as well as in membership was highly gratifying and should spur the individual members on to greater activity in the matter of augmenting the benefits to be derived from such affiliation to druggists and pharmacists throughout the State and to induce all who have not yet joined with their colleagues to do so and assist in promoting the welfare and prosperity of the profession. If the organization had no other object in view than to secure proper legislation relative to the practice of pharmacy, that would be sufficient reason for every druggist to cast his lot with the association.

The president expressed himself as by no means certain that the tripartite agreement formulated between the N. A. R. D., the National Wholesale Druggists' Association and the Proprietor's Association to suppress price cutting and other trade abuses could be carried out. The recognition given by officers of the N. A. R. D. to a certain patent medicine company in consideration of a plan of distributing the goods of the latter was to be deprecated; for, if the N. A. R. D. is to succeed, it should and must adhere to the principles outlined at the St. Louis meeting. The N. A. R. D. must stand on its own foundation.

President Turner discussed the unjust and discriminating war revenue tax and earnestly advocated its repeal. He proceeded to impress every member with the expediency and profitableness of making some business and financial sacrifices to bring about the elimination of the tax.

The Executive Committee reported twenty-five applications for membership since the annual meeting in June, and at the evening session this number was increased to thirty.

The Legislative Committee reported through its chairman, Dr. A. R. L. Dohme, that a thorough canvass of the State was being made so as to get every pharmacist heartily in accord with the effort to obtain a pharmacy law and also to get the support of the public with the same end in view, the intention being to have popular sentiment completely worked up by the time the next Legislature assembles.

The Committee on Pharmacy, through its chairman, H. L. Meredith, Ph. D., advanced the opinion that it was the duty of everyone to whom the preparation of a paper had been assigned to give his best endeavors to this effort so that a capable presentation of the respective subjects could be offered at the next annual meeting.

H. P. Hynson, chairman, reported for the Committee on Adulteration that several cases of blindness brought about by the daily use of essence of ginger prepared with wood alcohol had been brought to the attention of the Maryland Medical and Chirurgical Faculty at its semi-annual meeting and he deemed these cases a proper matter for investigation in order to ascertain to

what extent methyl alcohol is used in making pharmaceutical preparations. The committee was instructed to undertake such an inquiry and report the result at the annual meeting. A motion declaring it to be the sense of the association that methyl alcohol should not be so employed was unanimously adopted.

Encouraging reports were also received from the Committee on the Proposed Pure Food and Drug law and on membership. In this connection it is pertinent to mention that the association is in receipt of letters from President McKinley and the Maryland delegation in Congress expressing sympathy with the effort to secure commissioned officers' rank for Army apothecaries, which recommendation formed the substance of a resolution adopted at the last annual meeting of the association.

At 8 P. M. a social session, enlivened with vocal and instrumental music, was held. This part of the programme, however, was preceded by an address delivered by Prof. Wm. C. Anderson, president of the N. A. R. D., who explained to the association the working plan of the tripartite agreement. He expressed himself as being thoroughly in earnest and desirous of seeing the retailers make every effort to put the compact in operation. He answered a number of questions propounded by those present, and at his suggestion a committee of three was appointed to arrange a schedule of prices, employ a canvasser and submit the scale to the retail trade of Baltimore City. This committee consists of Dr. A. R. L. Dohme, A. J. Corning and Oscar E. Ross, the two latter being among the most prominent retailers in the Monumental City.

Several hours were spent in the exchange of social amenities and a number of impromptu addresses were delivered. The gathering did not come to a close until after midnight. It is to be regarded as one of the most successful ever held.

Drug Trade Bowlers.

Baltimore, Dec. 15.—In the Baltimore Drug Trade Bowling Club series of games at the Diamond last Tuesday night James Bailly & Son won all three contests from Parke, Davis & Co. by 746, 689 and 658 points against 619, 651 and 648 respectively. Pindell made high score (173) and high individual average (153) for Parke, Davis & Co., while Covey secured this distinction for James Bailly & Son with 178 and 157 points respectively. Last night James Bailly & Son contested with the Winkelmann & Brown Company, taking two out of the three games. The scores were 705, 712 and 783 against 712, 743 and 598 points. The highest total of the evening, 188, was made by Ryers, of James Bailly & Son. Lockwood, one of the Winkelmann & Brown Company's crack bowlers, was off and could not do better than 170. The week's work leaves the teams in the following position:

Teams.	Games Won.	Games Lost.	Per Cent.
Root and Herbs.....	15	3	.929
McCormick & Co.....	12	6	.667
Sharp & Dohme.....	12	6	.667
James Bailly & Son.....	14	7	.667
Muth Bros. & Co.....	7	11	.389
Winkelmann & Brown Drug Co. 4	17		.190
Parke, Davis & Co.....	2	10	.111

Baltimore Creditors Win.

Baltimore, Dec. 14.—Notice of the dismissal by the House of Lords of the appeal in the bankruptcy proceedings against the English branch of the Charles A. Vogeler Company, of this city, has been received by George R. Willis, counsel for John B. Ramsay, L. B. Kemp and Mr. Dulany, trustees of the company. According to Mr. Willis bankruptcy proceedings were instituted by Alfred Cook, an English creditor, and on an adverse decision by the lower court Mr. Cook carried the case to the House of Lords. The appeal has now been dismissed. The amount involved is not known, but it will probably inure to the benefit of the trustees and creditors. Mr. Ramsay said the English branch had been doing a big business, but he did not know how much money was tied up by the legal proceedings or to what extent the Baltimore creditors would be benefited.

Beware of Eloquent Drug Clerks.

Baltimore, Dec. 14.—Answering a ring at the front door of a fine Madison avenue residence several evenings

ago, the servant found a dark-haired young man about thirty years old, who handed her a package of glycerine tablets, which he said he had orders to deliver there. As the servant received the package the alleged clerk attempted to enter the house, ostensibly until the servant returned with the money for the tablets. The servant, however, closed the door and left him on the outside. Inquiry, of course, developed the fact that the tablets had not been ordered, the delivery having been merely a ruse to get into the house and make away with whatever valuables happened to be within easy reach.

High Interest Not Paid.

Baltimore, Dec. 13.—Among the Baltimore druggists interested in investment schemes which promise large returns was John H. Zwanzger, who does not seem to have found the plan as remunerative as he was led to believe, for he has just filed an application in the courts here asking that a receiver be appointed for the American Guaranty Company. The company, which has an office in the Atlantic Trust building, it appears from the bill of complaint, promised to give a half carat diamond or \$50 on each bond running for twenty-six weeks on a weekly payment of \$1.50, or a total of \$32.50. The bond had ten coupons, each of which was to be redeemed at the expiration of twenty-six-week periods. When the first payment became due Mr. Zwanzger endeavored to get his money, but was told the company had been unsuccessful. On threatening suit he got the amount paid in and he now seeks to recover the large interest promised on the bonds.

NOTES.

—Last week's visitors in Baltimore included W. R. Tyree, Washington; Mr. Brame, of Watson & Brame, Winston, N. C.; Dr. E. A. Wareham, Hagerstown, Md.; J. A. Williamson, Frederick, Md.; Dr. S. C. Finley, Delta, Pa.; Joseph B. Boyle, Westminster, Md.; S. Van Trump, Trump, Md.; Dr. I. J. Martin, Ellicott City, Md.; R. H. Stolz, Richmond, Va.; Dr. James Gerry, Shrewsbury, Pa.; Dr. E. E. Wolff, Cambridge, Md.; R. S. McKinney, Taneytown, Md.; Wm. E. Turner, Cumberland, Md.; J. L. Henley, Tappahannock, Va., and D. C. Aughinbaugh, Hagerstown, Md.

—Dr. John J. Abel, professor of pharmacology at the Johns Hopkins University and one of the leading American authorities in his particular field of research, suffered injuries last week as a result of a vacuum tank explosion. For a time it was feared that he would lose the sight of both eyes, but it now appears as if these organs can be saved.

—Frank Creighton, a popular young druggist of Alexandria, Va., was married on Wednesday of last week to a Pittsburg belle. The couple received numerous presents and the best wishes of a host of friends.

It Pays to Advertise.

The New Haven Mills Manufacturing Company, New Haven Mills, Vt., say that ever since they began the manufacture of hardwood boxes, cases, cabinets, etc., they have been deluged with orders, and that both their hardwood and softwood factory trade is being extended far and wide. They do a large mail order business with some of the largest houses in America. So it would seem as though the terms of the trial order which they solicit in their advertisements have proved mutually agreeable to buyer and seller, and that druggists in need of this company's products will find it to their advantage to communicate with them.

Whiskies, Wines, Alcohol, Etc.

The Turner-Looker Company, Cincinnati, Ohio, desire to call especial attention to their circulars which are sent to all the druggists in the United States, with the exception of those who are in two or three of the largest cities. This company ship their whiskies, wines, alcohols, etc., direct to all responsible dealers; otherwise, they ship with draft attached, or require the money in advance, and make prices accordingly. Any information regarding their goods that you may desire, will be gladly furnished by them.

CHICAGO.

FAKE MEDICAL COLLEGE FACULTY ON TRIAL.

Chicago, Dec. 13.—"Dr." Armstrong, and the other members of the faculty of the Metropolitan Medical College were up for trial in the United States Court last week. Among those who gave damaging testimony were James De Barth, a graduate and former attache of the fake college. He has the degrees of M. D., D. E., LL. D. and LL.B., all conferred by the Metropolitan, the independent, or whatever name it happened to be sailing under.

De Barth was at one time professor of medical jurisprudence for the Metropolitan. He was also salesman of diplomas and writer of pamphlets, setting forth the advantages to be gained by a course in the institution. Further, he helped to "graduate" students from the school. According to his testimony the process was peculiar, but simple. It consisted in getting as much money as possible out of a prospective physician and then giving him a diploma beginning with the Latin word "Salutem." It was signed with the names of the full faculty. De Barth said that when "Dr." Armstrong had trouble in taking students through the necessary process he was always called in. A short talk would do the work and the student would then be prepared to go forth and minister to the needs of the sick.

But his chief business was to go forth and sell diplomas to outside students who thought that life is too short to spend four years in getting a medical education when it could be had on payment of a few paltry dollars. "Mr. Armstrong told me never to let a few dollars stand in the way of graduating a person, and I didn't," said De Barth. "I got what I could out of them and that was my business."

To protect the Metropolitan from State interference De Barth said that Armstrong had nine charters, and that as it would take two years to revoke each, and that as twice nine is eighteen, the college had a minimum life of that number of years. It was a simple matter of school arithmetic.

J. Edward Dumphley, proprietor of the American Hotel, in North Clark street, was one of the persons De Barth helped to graduate. It cost Dumphley \$100 in cash and a note for \$25. Dumphley went to England to practice. He thought the United States too small a field.

Dr. Van Noppen, according to the testimony of De Barth, went to India; and from letters received from him, mingled with the native princes and maharajahs. They proved as easy as the natives of the United States.

De Barth didn't know much about the faculty of the institution. He did remember that Miss N. P. Packard gave one lecture. The mention of the name was a struggle. It was so scientific. But De Barth bore up under the strain of it, and was ready for the cross-examination.

Komerowski, another witness, received his diploma first in 1897, and then, as his education was sufficient to tell others how it happened, he was commissioned to go forth and spread the educational system as taught by the Armstrongs. But it took him two years before he sold his first sheepskin. Then he sold two. One was to a laborer who talked in a foreign language. The other buyer was a barber who had read a few medical books. The barber paid Komerowski \$75 and was educated. Komerowski's fee was \$5. He expressed the opinion that \$75 is a very small sum to pay for an education.

The succeeding chapter of the case was taken up by G. A. Larkey, of Maquoketa, Iowa. His story was interesting, but if judgment should be passed on it he would be accused of plagiarism. For he told a similar tale of the peculiar methods of obtaining an education at the Armstrongs. Larkey once served in the army and later as an understudy to Dr. Bernardine of his home town. From the quiet of the Western village he was enticed to Chicago to take a course in the Independent Medical College. After three months as a student he was sufficiently educated to practice medicine in the States of Texas, Kansas and Arkansas. He went back to his home instead and became assistant in the sanitarium of Dr. Bernardine.

The Armstrong brothers sat unmoved, and listened to all the testimony. On a table before them were small piles of circulars and manuscripts which they say they will introduce as evidence to prove that they were conducting a legitimate business.

The case went to the jury Saturday afternoon. The accused were found guilty and the judge deferred sentence until December 14.

Chicago, Dec. 15.—"Dr." James Armstrong, president of the Metropolitan and Independent Medical colleges and the Illinois Health University at various times, was today sentenced to one year and a fine of \$500 for using the mails for fraud purposes.

The testimony showed that Armstrong's colleges were selling "diplomas" and blank diplomas had been sent to many places, including foreign countries, and sold there.

Drug Trade Club Elects Officers.

Chicago, Dec. 15.—The officers and directors of the Chicago Drug Trade Club for the year 1900 and 1901 have been elected and are as follows: President, H. A. Antram; first vice-president, John F. Matthes; second vice-president, Samuel H. Gunder; secretary, Charles E. Matthews; treasurer, Frank S. Hereth; directors, J. Walker Scofield, James R. Owen, C. P. Van Schaack, Francis Keeling, Jr., Porter B. Fitzgerald, Arthur Dawson, E. H. Buehler, H. A. Antram, John F. Matthes, L. A. Becker, Henry Beck, C. M. Phelps, Harry Holland, Ed. F. Mallory, Romaine Pierson, Chas. E. Matthews, Frank S. Hereth, Samuel H. Gunder; Standing Committees—Membership, Porter B. Fitzgerald, chairman; Ed. F. Mallory, Chas. E. Matthews; Board of Managers, Romaine Pierson, chairman; Francis Koehling, E. H. Buehler, C. M. Phelps, C. P. Van Schaack. The club starts with a membership of 184. Several new members have been added to the roll within the last day or two and the club rooms on Randolph street are filled during every luncheon hour with members who have discovered the advantages, social and otherwise, of taking their luncheon at the club. The rooms are pleasant, convenient in location, quiet, well-lighted and well furnished, and the cuisine is excellent. Members and their friends take pleasure in making the club their headquarters at certain hours, enjoying at once a feast gastronomic and a feast of reason, if they will. The experience of New York is being in many ways repeated, and the club has already passed the experimental stage and has entered upon a career of usefulness, which members trust may make it one of the permanent institutions of the drug trade, second to none in success and attractiveness. Several social events are scheduled for the near future, among them being a smoker.

Among the visitors from other cities during the past week have been Messrs. Chas. J. Lynn, of Indianapolis; J. E. Serwe, San Francisco; O. F. Symons, Minneapolis; G. W. Teed, Webster City Ia.; W. F. Chase, New York; Benj. Lillard, New York; E. J. Haines, Sandusky, O.; J. Sellmer, Milwaukee; Will C. Neal, Detroit.

Bowling.

Chicago, Dec. 15.—The averages at last week's meeting of the Chicago Drug Trade Bowling Club were as follows (three games):

Medbery, 590; Blocki, 425; Armstrong, 548; Baker, 538; Matthes, 357; Fechter, 358; Oldbert, 372.

The averages for October and November are as follows: Baker, 180.76; Armstrong, 177.44; Medbery, 165.51; Thomas, 165.12; Bauer, 155.76; Storer, 148.45; Matthews, 144.23; Blocki, 143.29; Oldbert, 140.80; Waldron, 137.37; Matthes, 127.42; Fechter, 120.38; Delbridge, 112.18.

In these games Medbery won the high score medal.

The Delta Bowling Club, on their alleys at the Drug Trade Club made the following averages last week:

Barring, 4 games, average 213; Ernst, 4 games, 205; Hoeft, 4 games, 197; Leistner, 4 games, 186; Foster, 5 games, 175; Mallory, 5 games, 174; Miller, 5 games, 163; Davidson, 5 games, 144; Thurston, 5 games, 136; Sponsel, 5 games, 129. J. Hugh Foster, secretary.

NOTES.

—The Searle & Hereth Company on Saturday afternoon, December 8, gave an entertainment to the senior class of the Northwestern University School of Pharmacy, at the company's laboratories on Wells street. The students were shown all through the plant and the different processes of manufacture were explained. At the close the usual refreshments were served by the hands of the young ladies of the establishment.

—Alex. Harris, a Chicago representative of Johnson & Johnson, will leave for a trip to the factory on December 19, and will spend a few days there and in New York City. Mr. Harris won the first prize of \$250 in 1899 and \$300 in 1900 for the greatest increase in business of any salesman employed by Johnson & Johnson.

—A. E. Hiss has bought out A. P. Hess, at Thirty-first street and Wentworth avenue. The thought will persist in intruding itself that the new owner need go to little trouble or expense in changing the sign, as a mere change in two letters will accomplish it.

—The Manilla Drug Company, of Chicago (Stolz & Grady), has increased its capital stock from \$2,000 to \$10,000. The Chicago Journal puts the item in its semi-news column under the caption "Expansion Note."

—C. A. Storer, the well known North Side druggist, who has been seriously ill with appendicitis, is reported to be slowly improving.

—V. H. Dumbeck, manager of the North End Drug Company at Pullman, has filed a voluntary petition in bankruptcy.

—Joseph A. Burger and wife, No. 4729 South Ashland avenue, have gone to New Orleans for a ten days' vacation.

—Romanto Wells, a druggist at Laughlin and Van Buren streets, has filed a petition in bankruptcy.

—The D. R. Dyeche Drug Company has been incorporated with a capital stock of \$20,000.

—The Chicago Pharmacal Company has been incorporated with a capital stock of \$2,400.

—A. Aronson has bought the Lion Pharmacy at Lawrence avenue and Robey street.

—Druggist August Cunradi, of Brighton Park, is reported to have sold his store.

—The Drexel Drug Company, of Chicago, has been incorporated for \$2,500.

DETROIT.

Work of Organization Progressing Nicely.

Detroit, Dec. 15.—In the Era of November 29 an account was given of the organization of a new association of druggists at Bay City, Mich. Already material benefits have resulted. Full prices have been restored on all articles except the few staples which are handled by the department stores of the town. They hope in time to bring this store into line.

Reference was made in the same issue to a prospective organization in Battle Creek. Since that time the association has been formed and has already accomplished all that it could hope to do—full prices restored on all articles. There being no department stores to fight in Battle Creek, it was comparatively easy for the druggists to agree among themselves as soon as the organization was perfected.

NOTES.

—Druggist Ed. C. Kinsel, of Detroit, returned yesterday (the 14th) from a trip to Seattle, where he went with some idea of locating. His brother, Will, formerly of Detroit, is established there and is reputed to be doing unusually well. But Ed. Kinsel has made up his mind that Detroit is pretty nearly good enough for him for awhile yet, spite of the fact that Seattle is a great business town. During all the time he was there Mr. Kinsel "never saw the sun or the moon"—not even once. He declares that all inhabitants become web-footed after a few years' sojourn there. He took his camera along and lugged it around patiently for days hoping for at least one snap, but he never got it. Next time he will take a photograph of the sun along with him, so that it will not be a totally unfamiliar sight when he gets back again to "God's country."

OBITUARY.

MARY BUHL WARREN, wife of William M. Warren, general manager for Parke, Davis & Co., died at her home in Detroit, Friday evening, December 14. Mrs. Warren had been ill for about eighteen months and quite recently contracted a severe cold. Her death, however, came unexpectedly and proved a sad shock to her many friends. She was the only daughter of Theodore D. Buhl, a prominent banker and merchant of Detroit, and president of the Parke, Davis & Co. corporation, and she was a grand-daughter of Hiram Walker. Mrs. Warren was married about eight years ago. Her husband and a daughter, six years old, survive. She possessed an amiable disposition that drew to her many friends who mourn with the family her untimely death.

LUTHER LINCOLN JENKINS, who has just died in Boston, Mass., was a well-known druggist of that city. He was born in West Cambridge, now Arlington, Mass., in 1828. In 1843 Mr. Jenkins entered the drug store of Thomas Farrington, located underneath the old Tremont House, in Boston. He soon after left there, however, and went to work for S. W. Fowle, a druggist at 138 Washington street, where he remained ten years, after which he spent ten years in Ohio. During the War he was assistant-surgeon and later a captain in the Eighty-Seventh United States Regiment of Colored Infantry, which was a part of Banks' Corps. He participated in the expedition up the Rio Grande and also did garrison duty in New Orleans during the spring of 1865. He was honorably discharged in March, 1866, and returned to Boston, where, in May of that year, he purchased the drug store at 119 Leverett street, which he occupied up to the time of his death. Dr. Jenkins was a member of the Boston Druggists' Association, Massachusetts Pharmaceutical Association, American Pharmaceutical Association, Massachusetts College of Pharmacy, and a prominent member of the Royal Arcanum, the Masons and the G. A. R. In 1853 he married Miss Caroline E. Stratton, of Boston, who died two years ago. He leaves two daughters and four grandchildren.

DR. JOHN IGNATIUS GROSS, a popular physician and widely known druggist in East Baltimore, Md., died at his residence on the southeast corner of Caroline and Orleans street, December 14 at the age of sixty-one years. For many years he had been noted not only as a competent physician and a thorough pharmacist, but had endeared himself to the poor of the city by his many charitable deeds. He was a native of Baltimore and attended Loyola College, receiving his medical education at the University of Maryland. He belonged to a number of societies, both religious and beneficial, and was elected a councilman from the Eighth Ward in 1872. He was a cousin of the late Archibald Gross and was held in the highest esteem. His wife died eight months ago. The couple had no children.

JAMES R. CLINE, for some years a drug clerk in Springfield, Mass., has just died at the home of his parents in that city. Mr. Cline was born in Bridgeport, Conn. He attended the Massachusetts College of Pharmacy in Boston, and was graduated in 1895. After his graduation he was employed in Cameron's drug store and later in the City Drug Store at the North End of Boston. In the fall of 1898, lung trouble began to show itself and in the hope of regaining his health he went to Denver, Col., where he stayed for some time, later going to Gainesville, Ga., returning to Springfield in August of this year. Since his return his health gradually failed and a recent attack of pneumonia is thought to have hastened his death.

ADOLPH E. GEBHARD, aged thirty-six years, a well-known druggist of New York, died at his home, Sunday evening, December 9, after an illness of three weeks with typhoid fever. Mr. Gebhard had conducted

a retail business for the last seven years, during the first four of which he was in partnership with Mr. Bell at 357 Eighth avenue. After the firm had been dissolved Mr. Gebhard continued the business at the same location. He leaves a widow. Services were conducted at the home Tuesday evening, December 11, by members of Star of Cuba Lodge, F. and A. M. The funeral services were held Wednesday morning. Interment was made in Woodlawn Cemetery.

AUGUSTUS PROSPERI, a retired pharmacist in the United States Navy, who was for many years stationed at the Naval Academy in Annapolis, died there on Saturday, December 8. Before taking up his duties at Annapolis, Mr. Prosperi resided at Washington. He expired very suddenly from hemorrhages. The deceased was a member of the Masonic fraternity and his interment took place in the Naval Academy Cemetery, a number of sailors acting as body-bearers.

A. PH. A. MEETING.

The A. Ph. A. meets at St. Louis September 16 to 21, 1901. At Richmond last May the association selected the place and the Council has just fixed the date for the forty-ninth annual meeting. The A. Ph. A. has not convened in St. Louis since 1871. An unusually large attendance and an exceptionally interesting and instructive meeting are anticipated. H. M. Whelpley, 2342 Albion Place, St. Louis, Mo., Local Secretary.

—At the meeting of the fourth quarter, held by the Kansas Board of Pharmacy at Salina, Dec. 5, 1900, twenty-one applicants were present and took the examination. The following were successful: W. M. Applebaugh, Hays City; E. H. Burns, Parsons; W. P. Dockhorn, Oskaloosa; George E. Forney, Hutchinson; James W. Ganerholz, Kensington; Thos. S. Grisell, Lebanon; L. E. Hendrickson, Abilene; John C. Loch, Lane; H. E. Nelson, Kinsley; E. C. Pace, Osawatomie; L. Schuhmacher, Washington. Registered Assistant.—F. H. Lane, Topeka. There were registered as pharmacists without examination, by virtue of being graduates of recognized colleges of pharmacy: Clarence A. Carter, Topeka; L. P. Nichols, Williamsburg; Joseph Finley Hocking, Wichita; Louis B. Loeb, Junction City; Edward L. Heintz, Ottawa; W. S. Shaw, Kansas City; Charles F. Peters, McPherson. As assistant without examination: Eugene A. Sweet, Minneapolis. The next meeting of the board will be held at Wichita, March 6, 1901. Those who desire to take the examination should notify the secretary at least five days prior to the date of meeting.—W. E. Sherriff, secretary, Ellsworth, Kan.

Seidlitz Powders.

Charles R. Doane, No. 22 Meserole street, Brooklyn, N. Y., desires to call the attention of pharmacists to his Seidlitz Powders, which he is now able to sell at reduced prices owing to improvements in methods of preparation. As his chemicals can be relied upon for purity and correctness in weight, we advise you to write for his new price list.

Good Cologne at Popular Prices.

A popular-priced cologne is the Florentine Cologne manufactured by C. H. Selick. It is put up in sizes to retail at 5 cents to \$1.50 per bottle. A specialty is made of the ten-cent size, two dozen of which are arranged on a handsome display card. These goods are sold at wholesale by McKesson & Robbins, New York. If you desire free samples, write to C. H. Selick, No. 56 Leonard street, New York.

The second edition, revised and enlarged, of Daggett's School of Pharmacy Lecture Course was published recently. This is a book of 120 pages, written in a plain and concise style, and should prove a valuable aid to students of pharmacy and medicine preparing for State Board examinations; in fact, it should be added to every pharmacist's working library. The price is \$2, and it will be sent, postpaid, on remitting to the publisher, C. H. Daggett, 67 Portland street, Providence, R. I. We call attention to his advertisement on another page.

The revision of a work which has been before the public for over forty years, and which has an annual circulation of over ten million copies in five different languages, is somewhat remarkable. Its venerable author here gives the result of half a century of professional experience in perfecting his system of medicine. As a guide to those who use his Specifics and valuable hints as to diet and care of the sick this Manual of 144 pages is admirably systemized for the needs of the sick. We especially notice the unmistakable professional tone which pervades every page of the book. It is a compact little volume fitting the vest pocket. It contains a portrait of the author, and the cover is a beautiful half-tone from an original model, and a supply will be sent prepaid to any druggist on request to the Humphreys' Medicine Company, corner William and John streets, New York.

For the Soda Fountain.

One of the most reliable, inexpensive and practical machines of its kind is the Lippincott Automatic and Continuous Carbonator. The manufacturers claim it will accomplish instantaneous absorption with no loss of gas, and that it will furnish bright, sparkling, pungent soda water at a cost of one cent per gallon. The same firm manufactures the Original Tilting Jar Soda Apparatus, said to be the most rapid, economical and attractive system in use. A portfolio containing models for 1901 is now ready for distribution. Write to the American Soda Fountain Company, successors to Charles Lippincott & Co., No. 230 Arch street, Philadelphia.

"Attention pay to what I say." These were the parting words of a prominent physician in an uptown pharmacy recently when he supplemented his written specifications by a firm request for N. Y. Q. Cocaine in a solution for ophthalmic purposes.

STATE OF TRADE.

Very Dull.

New York, Dec. 18.—Attention is being largely diverted to the affairs incident to the approaching holidays, and in a business way there is little doing in excess of supplying the light current requirements of the consuming trade, but a fairly firm feeling prevails throughout the wholesale market, and there is no apparent inclination on the part of dealers to force goods upon reluctant buyers. Consequently, quiet conditions are reported in all departments, and no improvement in demand is looked for until after the turn of the year. As usual under such conditions there is very little fluctuation in values, and with one or two exceptions the few changes during the past week are of no special importance. The quinine situation has not fully recovered from the depression noted last week, but the downward tendency appears to have been checked in the London market, where prices have advanced slightly from the recent low level. Bark shipments from Java for the first half of December show a falling off compared with those for the corresponding period last month, and this is considered an encouraging feature. In the local market, business has been wholly of a hand to mouth order, and there was an entire absence of speculative interest. Opium has remained quiet, but with continued unfavorable crop conditions, holders maintain firm views regarding values. Morphine and codeine continue to move freely on orders from the consuming trade.

The leading change for the week was a break of 25c. per pound in manufacturers' prices of chloral hydrate. The decline is attributed to keen competition among European manufacturers, and it is evident that the new quotations are not very profitable, as none of the makers will enter contracts at the reduced figures, and will sell only for prompt delivery. Salicylic acid is without quotable change, but the future course of prices is somewhat uncertain, as there is some intimation of a probable dissolution of the European combination of manufacturers, which would undoubtedly result in an unsettled market. The present agreement will expire at the end of the current year, and unless the manufacturers are able to renew it, or make some other satisfactory arrangement, there will be an open market, and for a time at least prices will be irregular.

In the department of essential oils business has continued limited to the filling of small jobbing orders, and there have been no important changes in values of any description. Pure sandalwood is held firmly, owing to a stronger position of raw material in primary markets. The annual sandalwood auction at Mysore is now in progress, and the final sale will take place on Friday next. Thus far prices have advanced about 15 per cent., and it is expected that still higher figures will be reached. It is claimed that quotations for oil will undoubtedly move upward, as there is said to be no profit for manufacturers at ruling prices. Messina essences continue firm in sympathy with corresponding conditions abroad, and some holders of bergamot have withdrawn from the market pending expected further developments.

Among the minor articles which have changed in price during the week are lycopodium and colchicum seed. The former is slightly lower under a slow demand and increased stocks, while the latter is higher owing to scarcity.

A Little Quiet in Boston.

Boston, Dec. 15.—With a week of exceptionally good weather, of seeming prosperity betokening good Christmas trade, druggists appear to have caught the spirit of the hour, and no one is found complaining regarding present business. The holiday season brings to light many pretty things in toilet goods and sundries which add to the regular sales at the drug stores.

Drugs are in fairly good demand, although active trading will not be found until after annual stock taking has come and gone. Some things, notably quinine and opium, seem to be firmer in tone. In chemicals, only a fair trade is found, and this has not affected prices materially. Dye-stuffs and tanning materials show little life just now, and prices therefore remain practically without change. Hops are firmly held, and the outlook is good for higher prices. Alcohols and cologne spirits are pretty well demanded at rather good prices. Waxes are not over active, remaining steady on the whole.

Steady and Quiet in Philadelphia.

Philadelphia, Dec. 15.—Business is reported as being fairly good during the past week, but rather steady and quiet. Sales of holiday goods, perfumes, toilet articles, etc., are growing brisk, in spite of competition from the department stores, and the cold snap has created a good demand for chest protectors, plasters, cold creams, etc. A downtown druggist who makes a specialty of stocking up with holiday goods and then advertising them in his neighborhood reports the best business of several years.

Wholesale dealers report orders coming in steadily from local and out of town customers, with collections

a bit slow. There is a close scrutiny of orders from suspected "cutters" being carried on quietly, and several up-State druggists have been refused supplies in accordance with their agreement to the N. A. R. D. plan. Heavy drugs and chemicals are in good demand. Large orders have been placed with several manufacturing chemists for cinchona alkaloids to take advantage of the present low prices.

Moderate Activity.

Baltimore, Dec. 17.—Although the general public is now engrossed in holiday preparations, which always exert a diverting effect upon pursuits not directly connected with such arrangements, a fair amount of business is being done by the wholesale druggists. While orders are as a rule of moderate proportions, the aggregate is gratifyingly large, and there is every indication that the year will close in satisfactory shape. The manufacturers of pharmaceuticals, too, continue to meet with very acceptable results, while the retailers are disposing of the usual proportion of holiday goods. The market for botanicals is without special strength, and the movement of heavy chemicals is rather restricted at the present time.

Plenty to Do.

Detroit, Dec. 15.—Everybody in the wholesale houses has had plenty to do for the last week, but receipts have not been correspondingly increased. This is the time of the year when numerous little orders for sundries come in at the last minute, and every clerk knows it is harder to select a bill of sundries amounting to ten dollars than a bill of ordinary drug supplies amounting to fifty. Retail druggists of the city report a quiet trade. Country druggists say their trade is good, largely owing to the crisp, cold weather which has prevailed for a week. Farmers come in with a little wood or farm truck, and take home the merchants' wares. There is no snow to speak of in southern Michigan, and the roads are in good condition for driving to town.

Western Trade Good.

Chicago, Dec. 15.—Until this week manufacturers have been unusually busy. As usual, trade begins to fall off about the middle of December, and will hardly resume normal activity again until after New Year's. Until this week business has been good, and several houses have had to work nights to get out their orders. The holiday trade has been more active than ever before. The demand for staples remains good.

Decided Improvement in Collections.

St. Paul and Minneapolis, Dec. 14.—The great feature, and the more than welcome, in Twin City trade the past week has been the decided improvement in collections. This has been the experience of jobbers and retailers alike. The retailer who now complains of unsatisfactory collections is the exception, not the rule, as was the case for so many weeks previous. Prescription work shows a steady increase—a no uncommon event for this season. Jobbers point to the prospective fall in prices of proprietary medicines, which is expected to follow the removal of the stamp tax. It is, of course, too early to figure upon the probable scope of such effect upon values, but it is likely to influence the market very materially. Twin City wholesalers report a continued acquisition of new territory in Iowa and other sections where trade has hitherto been controlled—almost monopolized—from Chicago. Our jobbers have to contend with the disadvantage of unfair freight rates, which have been as low between Chicago and Iowa as between the Twin Cities and the State named; but in spite of this they are coming nearer holding their own than ever before, if they are not actually gaining.

Profitable for the Druggist.

The druggist is often in a position to effect the sale of physicians' chairs, tables and cabinets. Upon application, W. D. Allison Company, Indianapolis, Ind., will send you catalogue descriptive of physicians' furniture and invalid chairs.

MARKET REPORT.

NEW YORK MARKET.

New York, Dec. 18.—Seldom has the general market presented so little in the way of new features, and rarely has a week elapsed when the fluctuations in values have been limited to such a small number of articles. Tame conditions have prevailed in all departments, and affairs incident to the approaching holiday season have received the bulk of attention. The undertone, however, continues steady, and dealers appear confident that there will be a revival of demand shortly after the turn of the year. About the only noteworthy change in values was a decline of 25c. per pound in quotations for chloral hydrate, due to a corresponding reduction in manufacturers' prices.

OPIUM.—There is no abatement of the firmness among holders heretofore noted, but the demand has been light and unimportant, and jobbers continue to quote the former range of \$3.55@3.75 for 9 per cent. and \$3.65@3.85 for 11 per cent., according to size of order.

POWDERED OPIUM.—Small parcels continue to find a fair consuming outlet, and quotations are well sustained at \$4.75@5 for 13 per cent. and \$5.10@5.25 for 16 per cent., the outside figures for single pounds.

MORPHINE.—Continued activity is a feature of the market, but there is an absence of new features, and jobbing quotations remain unchanged on the basis of \$2.40@2.60 for eighths, according to brand and quantity.

QUININE.—There is no further change in values, and the demand from the consuming trade has continued light, but the market is steadier in tone, partly on account of a slight improvement abroad, and local dealers are less anxious to sell at current prices. Jobbers' quotations are firm on the basis of 30@31c. for bulk in 100-oz. tins, according to brand and quantity.

CHLORAL HYDRATE.—Competition among European manufacturers has resulted in a reduction of 25c. per pound, and the revised jobbing quotations for crystals are \$1.30@1.40 in pound bottles, \$1.40@1.50 in halves, \$1.50@1.60 in quarters and \$2.50@2.75 in ounces; crusts, 5c. less than crystals.

LYCOPodium.—A slow demand and increased stocks have caused holders to modify their views slightly, and quotations for jobbing quantities have been reduced to 72@82c., as to size of order.

COLCHICUM SEED.—The market is firmer, owing to scarcity and higher prices abroad, and jobbers have advanced quotations to 40@45c. for whole, 43@48c. for ground and 45@50c. for powdered.

CITRATE OF IRON AND QUININE.—Jobbing quotations have undergone further revision, and the corrected figures are \$2@2.25, as to quantity.

INDIGO.—The Madras variety is in greatly reduced supply, and the market is stronger in tone, with jobbing prices showing an advance to 55@60c.

LINSEED OIL.—Values are easier in sympathy with lower quotations for seed, and jobbers have reduced their prices to 62@63c. for raw by the barrel and 70@80c. for less; boiled, 64@65c. by the barrel and 75@85c. for less.

Improved Menthol Inhaler.

At this season of the year there is considerable demand for menthol inhalers. With these, as with all other articles which druggists sell, there is satisfaction in selling those that not only afford a good profit, but also perfectly perform the work for which the customers purchase them. Smith's Improved Menthol Inhaler is of this description. It is filled with pure Japanese menthol, and is enclosed in a neat metal case. Each dozen is attractively displayed in a nice counter stand. It sells for 25 cents, and the customer gets more for his money in Smith's than any other inhaler. Druggists should order it of their jobber. It is manufactured by the Smith Inhaler Company (Carter, Carter & Meigs), Boston, Mass., whose advertisement appears on another page.

Mocking Bird Food.

An excellent food for mocking birds is that prepared by M. A. McAllister, who claims for it a national reputation. This preparation has been in use for twenty-five years, and makes a superior food for all soft billed birds. The same firm can supply you with imported mixed bird seed, fish food, bird lice destroyer, washed gravel, etc. All food put up by this house has the facsimile signature of the originator, F. E. McAllister, across the face of label as a guarantee that the ingredients used are pure. For information regarding prices, etc., write to M. A. McAllister, No. 69 Cortlandt street, New York.

THE ERA BLUE BOOK.

The next edition will be issued in January. It will contain complete price lists of Drugs and Chemicals and Proprietary Preparations (some 8,000 titles in the former and 20,000 in the latter) with blank spaces for price corrections.

A most valuable feature will be the key number affixed to the title of each proprietary medicine, by which the name and address of the manufacturer may be learned.

The Blue Book will be sent free to all yearly paid subscribers—no free copies.

THE WEEKLY CHANGE SHEETS.

These Sheets will be greatly improved and enlarged, and contain all the latest price changes of drugs, chemicals, proprietary preparations and manufacturers' lists, arranged for easy reference and for correction of the lists in the Era Blue Book. Clip Files for preserving these Change Sheets, 50 cents each, post paid.

The Change Sheets will also present full Market Reports and miscellaneous trade information of great interest and value to all drug buyers.

The support and co-operation of subscribers are solicited to make these Change Sheets increasingly serviceable. Tell your manufacturers to put their changes in these Sheets so that you will have them where you can find them.

WATCH FOR THIS NEW FEATURE.

WILL THEY REDUCE PRICES.

The retail trade is asking with a good deal of unanimity and insistence what the manufacturers of proprietary medicines intend to do if the stamp tax is repealed. Will those who advanced prices when the tax was imposed restore them to the original figure? The retailer has a right to ask this question, and the wise manufacturer will make the answer an affirmative one at the earliest opportunity. The retail trade are not in a humor to stand much longer the impositions practiced by some manufacturers and, what is more, they have gained sufficient power through the widespread organization which has been effected within the past two years to make it distinctly interesting for the unwise manufacturer who attempts opposition to their wishes in this matter.

We have a pretty straightforward answer to the query from one Ohio manufacturing concern, and we quote from it thus:

"We did not raise our prices. We saw at a glance that the tax would either force the retailer to overcharge the customer or stand it himself. We are anxiously awaiting the repeal of the war tax, and believe that every manufacturer should put his shoulder to the wheel and help to kill it. Manufacturers, come to the front! Don't sit in the background unconcerned, refusing to say what you are going to do. Tell the retailers what you propose to do with regard to prices, should the war tax be repealed, and thereby help the dealers in their effort to secure its repeal. We believe our customers should know exactly how we stand in this matter. The retail dealers are the general distributors, and we feel it our duty to aid and assist them, not only as much as we can, but as promptly. Now, brother manufacturers, do likewise!"

EDUCATION BEFORE OR AFTER EXPERIENCE.

For many years past there has been debated at the meetings of our pharmaceutical organizations, especially the American Pharmaceutical Association, whether it is better for the student of pharmacy to first get his practical experience in the drug store before attending the college for systematic education, or vice versa. We have never come to any conclusion in the matter, as opinions seem to be pretty equally divided. There seems to be as much variety of sentiment in England, but it is evident that both there and here we are inclining more to the opinion that the college education, or more properly that general and systematic education should come before the shop experience. We are slowly approach-

ing the point where there will be demanded of the apprentice a good general education before he will be admitted to learn the practical store work, and undoubtedly within a few years this will be made a legal requirement, and extended to embrace the specific pharmaceutical education obtained in the college. No one questions the value of store experience, in fact it is essential, but it is contended, and with very much reason and truth, that this experience can be more easily gained and better assimilated and appreciated if it comes after the college training, rather than before. In other words, the young man can learn more in six months after he has his college education than he could in six years without it. For this college education explains, makes clear, simplifies much of the duties of the store, which without it would be groping in the dark.

At a recent meeting of the Chemists' Assistants' Association (England) a very significant paper upon the matter of education and shop experience was presented. From our cotemporary, the Chemist and Druggist, we select the salient features of this address.

The speaker divided pharmacists into two classes, the professional and the commercial, each of whom, he said, looked down upon the other instead of trying to find a common point of agreement. He withered with gentle sarcasm the present-day business methods of modern chemists, and laid it down as an indisputable fact that the present bad condition of pharmacy was not the fault of the craft, but of the craftsmen. He deprecated the prevalent idea that the pharmacist was being over-educated. The faults in this particular were the apprenticeship system, want of curriculum and the system of examination. The present apprenticeship tended to teach the youth trade pure and simple, making him chary of scientific work. Commenting on examinations, he said it was absurd to expect that an examiner could find out after a few minutes' questioning anything like all that a man knows of such subjects as botany, chemistry or *materia medica*. Piling on examinations is not education, for the examinations are in the majority of cases looked upon by the students merely as the inevitable and objectionable price to be paid for creating a monopoly. The remedy suggested was to do away with the present apprenticeship and substitute a three years' curriculum, during which the student would receive a synthetical, scientific training. At the end of the three years a searching examination in all the subjects taught should entitle the student (if found worthy) to become a qualified assistant. Before becoming a fully qualified chemist and druggist he should be requested to pass another examination not less than eighteen months or two years after leaving college. The second examination might include prescription reading, pharmacy law, dispensing, recognition of crude drugs and their impurities or adulterations.

In this country we are not quite ready for all this, but we are fast getting there.

ARSENIC IN BEER.

During the past year there have been several discoveries of arsenic in substances used by our English friends. First it was arsenic in supposedly medicinally pure sodium phosphate, now it is arsenic in beer. In both instances the percentage of arsenic discovered by the analyst has been sufficiently large to render the consumption of the chemical or the beverage distinctly dangerous. In tracing the matter back to its cause it has been found that the arsenic contamination comes from the use of sulphuric acid made from iron pyrites which contains arsenic. In the manufacture of sodium phosphate sulphuric acid is used as a decomposing agent. The arsenic gets in the beer through the employment of glucose, in the manufacture of which sulphuric acid is employed. The acid, of course, should not contain arsenic, and certainly glucose made by its use should contain none. An attempt has been made by British brewers to saddle upon American makers the responsibility for the contaminated glucose, but it has been abundantly proven that American glucose is absolutely free from arsenic taint. The sulphuric acid employed here is not made from pyrites, but from other arsenic-free substances and, what is more, American glucose is so well made that no sulphuric acid remains in it, and in some methods of manufacture this acid is not employed at all.

It has generally been believed that British beer or ale was made on honor, that it was a nutritious beverage, hence this disclosure of the practices of English brewers of using adulterants, and mighty poor adulterants at that, has aroused a great deal of interest and comment; even more than was occasioned by the discovery of arsenic in the sodium phosphate, which stirred up the pharmaceutical fraternity in England a few months ago. Our British brethren must assume the responsibility in both cases, and not attempt to saddle it upon American manufacturers.

THE SALE OF NARCOTICS IN DRUG STORES.

There has been a good deal published in the newspapers all over the country recently relative to the sale of cocaine and morphine by retail druggists, and in several localities public sentiment has shaped itself into a very strong movement to secure legislation prohibitive of the sale of these articles except in a strictly legitimate manner. In Georgia, in Missouri and in other States movements of this nature are in progress. This is as it should be. The druggist has no right, moral or legal, to sell drugs of this nature save upon the prescription of a reputable physician. Unfortunately, some State laws permit unrestricted sale of these drugs, requiring merely their entry upon the poison book, or proper labeling, or some restriction of the sort, and undoubtedly in many places there are druggists who observe merely the letter of the law and have no compunctions of conscience in violating its spirit. It ought not to be possible for the

COMMITTEE ON FINANCE,
U. S. SENATE.

December 20, 1900.

To the Editor of The Pharmaceutical Era,
NEW YORK.

My Dear Sir:—

I beg to acknowledge receipt of various petitions, collected and forwarded by you and numerous signed by druggists and manufacturers of proprietary medicines, praying for the repeal of the stamp tax upon medicinal preparations. These petitions will have the careful consideration of the Committee when the subject comes before it for action.

Very truly yours,
NELSON D. ALDRICH.

druggist to sell cocaine or morphine at his own volition. He is not capable, either by training or in law, to decide whether the customer should have these poisons. The physician is the one upon whom the sole responsibility should be placed. It would be a good thing for the drug trade if laws were passed absolutely prohibiting the sale of these articles under any and all conditions, save upon prescriptions.

STOP CRITICIZING.

There is an inclination on the part of a certain element in this State to criticize the new pharmacy law, and it has been stated that there will be an attempt made to have it declared unconstitutional. This attitude of opposition is assumed by druggists who, while the law was being framed and organizations were discussing it, held themselves aloof and showed no interest at all in the matter. It comes with a very bad grace from these gentlemen to carp and criticize and object as they are now doing. If the law is not entirely satisfactory whose fault is it? Primarily, of these very objectors themselves. It would be much more becoming if they were to endeavor to make things work smoothly and without friction, rather than to throw obstacles in the way. Let us give the law a trial; give it a fair show, then if it is found defective, unduly burdensome, we can all get together and seek for its amendment. The individuals in question, many of whom are in Greater New York, and who always seem to object to everything as a matter of course, unless it emanates from them, would show much better sense if they would try to remedy matters than to make a bad thing (as they may deem it) worse. Of course there are defects in the law, but it is distinctly an improvement over previous acts, and will undoubtedly work to the benefit and advancement of all concerned. So stop your fighting, criticizing and objecting. Do your share as you expect others to do, and there will be little cause for complaint, either of the law or the manner of its enforcement.

NEW REMEDIES.

Airogen.—Trade name for bismuth oxyiodogallate.

Lactolin.—Trade name for an acid potassium lactate.

Peruscabin.—Trade name for pure benzoic acid-benzyl-ester.

Vioform.—Trade name for iodo-chloroxychinolin, a surrogate for iodoform.

Rubin.—Trade name for an organic iron preparation, to serve as a generator of haematogen.

Ferropyrin.—Trade name for haemostatic, available in excessive epistaxes, gaping wounds, post-partum haemorrhages, etc.

Antineon Locher.—A preparation of sarsaparilla, portulacca and veronica officinalis, used in affections of the stomach and bladder.

Furunculin.—Trade name for a basic preparation derived from brewer's yeast, recommended in splenic fever, furunculosis, catarrh of the stomach and intestines, etc.

Pernol.—Trade name for a 25 per cent. solution of benzoic acid benzylester, dissolved in either olive or castor oil. Intended as a succedaneum for balsam of peru.

Silberol.—Trade name of a sulphophenylate of silver ($C_6H_5-OHISO_3Ag$), recently introduced by Zanardi. Used in the treatment of blennorrhagia, certain affections of the eye, etc.

Sapolane.—Trade name for a new preparation used in dermatology. It is of an unguentlike consistency, and consists of lanolin, soap and a naphthol derivative. It has yielded excellent results in parasitic skin troubles.

Elosine.—According to the Pharmaceutische Rundschau, this is a trade name given to a resinoid substance obtained from the root of Chamadirum luteum (Gray), a Melanthacea. It has tonic, diuretic, vermifuge and emmenagogue properties.

Bromocoll.—Trade name of a compound of bromine, tannin and gelatin, carrying 20 per cent. of bromine in organic combination. It appears as a slightly yellow, odorless and tasteless powder, almost insoluble in acids, but instantly soluble in alkalies and alkaline media, generally. It is recommended as a succedaneum for potassium bromide, as a vulnerary powder, and an addition to soothing ointments.

Sanguinol.—Name given by Dr. Vamstecker to a substance obtained by him from the blood of young calves. It consists of a dark red powder excessively fine and light. It dissolves easily and completely in water, the solution giving the spectrum of oxyhaemoglobine. Konoukess, basing his opinion upon investigations made in the laboratory of Runge, which demonstrated that sanguinol contains 99 per cent. of haemoglobine, came to the conclusion that the substance would prove of service in the treatment of anaemia and chlorosis. Sanguinol is best administered in cachets, in doses of 1 gm. (15.5 grains), 15 minutes before each meal, or 3 times a day.—Nat. Dr.

HOW SHOULD DRUGGISTS OBSERVE SUNDAY?*

By JULIUS M. FARNSWORTH.

Many people will maintain that druggists should observe Sunday as other reputable business firms do, by closing their stores and taking a day of rest. The long hours and the responsibilities entailed upon the modern pharmacist would seem to especially entitle him to one day in seven. The practice of pharmacy in large cities is by most members of the profession carried on more actively on Sunday than on week days. The mechanic, the clerk, the professional man, all nurse their ailments or forget them until Saturday night or get sick on Sunday from Saturday night's dissipation. Therefore, on Sunday they want medical treatment, or think they do, which is much the same thing.

Those who smoke want a good cigar or two on Sunday, and where else can they find that kind except at the druggist's? During the summer many druggists sell more soda water on Sunday than on any other day. The writer had that experience in Chicago, and for several years worked harder on Sunday than on any week day, and seldom spent a Sabbath with his family or friends.

In smaller cities and villages these objections to Sunday closing do not weigh so heavily; in some small places where there is only one druggist, and the terrors of competition are eliminated, our worthy craftsman who prefers long life to great riches (?) will close his store all day Sunday and let the public worry along with a quinine pill box and the camphor bottle or some other bottle as the only solace.

It is charged that in certain States some stores are kept open in order that the owners may make money by the illegal sale of liquor; of course this charge could not lie against the druggists of the old Badger State.

As a compromise between an open and a closed Sunday, probably a majority of the profession outside of the larger cities adopt the plan of keeping open a portion of the day, usually a few hours in the morning and an hour or two at night, enabling them to take the most of the afternoon and evening for rest or recreation. Some arrange to have their stores closed during the hours of divine service, thereby enabling themselves and their clerks to attend church if they desire.

In one prominent city on the shore of Lake Michigan, there is an arrangement whereby all the stores except one are closed from 12 to 6 Sunday afternoon, a different store remaining open during those hours each Sunday in turn, and the closed stores have a sign in the door or window directing the public to the open store; this plan has given good satisfaction.

In regard to the goods that should be sold on the Sabbath, the writer believes it is difficult to refuse to sell salable goods. There is not much labor involved in handing out cigars or sundries, and if one's store is open it is well nigh as difficult to refuse to sell these things as it would be to refuse to sell a package of headache powders. It is different with the soda fountain, however. Soda water is a refreshing and delicious drink only when great care is taken in serving. This involves a great deal of labor which the writer has found by experience may be avoided by telling his customers who call for soda water that on account of the labor necessary in serving it satisfactorily, he has decided to dispense with the soda water business on Sunday.

In one prominent city in the State the writer is informed that the injunction, "Six days shalt thou labor and do all thy work" is literally obeyed, at least as far as business is concerned, by all the druggists in the place, who keep their stores closed all day. Doubtless there are other places where it is also done, and it only confirms the theory that in organization for mutual benefit and protection, lies the only salvation for the overworked druggist in a physical and moral sense as well as in a financial one. The only valid excuse for keeping a drug store open on Sunday is the one that lies on the surface, namely, that those who need medicine may obtain it. In those places where the physicians dispense drugs along with their advice, a large part of this need is no longer apparent.

Extended arguments are not necessary to prove the druggists' special need of a weekly day of rest; I think

every one will concede it. There are many, also, who doubtless feel that it is wrong to do unnecessary work on the Sabbath, and it is only because of the apparent necessity of relieving the immediate needs of those who may be sick, that they consent to open on Sunday at all.

To both of these classes a way is open, and it is not an untried one. It depends, like many other plans for our well being, on the faithful co-operation of those interested. Let us suppose, for example, that in the thriving city of X—, there are five druggists. We will designate them as Ayer, Hood, Davis, Pierce and Paine. They get together and decide that one of them can take care of all the business on Sunday that is now divided among them; they therefore arrange that on the following Sabbath only druggist Ayer will open his store, and each of the others will have a printed card hung in a conspicuous place in his door or window stating that his store is closed on this Sunday, but that Ayer's store is open. On the next Sunday druggist Hood is open and each of the others is closed, with a card as before announcing that Hood's store is open. On succeeding Sabbaths the others keep open in turn. Neither of them has an undue advantage over the others, the public is well served and the druggists will live longer.

The only serious objection I have heard to this plan is possibility of refills. To my mind this would not be sufficient to defeat the plan. There could only be a small portion of the community who would need refills, and they could attend to that on Saturday. Every one has to eat, yet we are familiar with the fact that but very few groceries or meat markets are open on Sunday. People purchase their supplies on Saturday. By the above plan there is always an open drug store in case of an emergency.

This plan, I am informed, has been tried in several places, and has worked satisfactorily. It is in operation, I am told, in some parts of Chicago where the owners of a cluster of stores act together as in a village or small city. I am not the originator of the plan, but I am a firm believer in it, and think it is well worth trying in any community.

DETECTING ARSENIC IN GLUCOSE.*

By EDWIN DOWZARD, F. C. S.

The presence of arsenic in beer is due to the use of arsenical glucose and invert sugar in brewing. Unfortunately, the usual tests for arsenic do not give satisfactory results with these substances, owing to the large amount of sulphites present.

After trying modifications of all the usual tests, I find the following to give the best results:

Before examining any samples, the reagents should be tested as follows:

Select a flat-bottomed flask (capacity about 130 C.c.) with a neck about $3\frac{1}{4}$ inches long and $\frac{1}{2}$ inch in diameter.

A mixture of 30 C.c. of water, 5 C.c. of hydrochloric acid and 0.5 drop of a 5 per cent. solution of platinic chloride is introduced into the flask.

A piece of filter paper, 12 inches long by $\frac{3}{4}$ inch broad, is soaked in a 25 per cent. solution of lead acetate, allowed to drain for a few minutes, then doubled and rolled. A circle of filter paper, about $\frac{3}{8}$ inch in diameter, is also soaked in the lead acetate solution and drained.

A rod of pure zinc, about $1\frac{1}{2}$ inches long and $\frac{3}{16}$ of an inch in diameter, is placed in the flask, and the neck plugged with a small tuft of cotton wool. The roll of damp lead acetate is now gently placed on the cotton wool, and covered with the circle of lead paper. Before applying the mercuric chloride paper, see that the lead paper is from $\frac{1}{2}$ to $\frac{3}{4}$ inch below the mouth of the flask.

The mercuric chloride cap is taken off after thirty minutes and examined. There should not be the slightest coloration.

Fifteen grammes of glucose or invert sugar is dissolved in a mixture of 20 C.c. distilled water, 7 C.c. hydrochloric acid and 0.5 drop of a 5 per cent. solution of platinic chloride. The procedure is then exactly the same as in the blank experiment.

The roll of lead paper is rarely darkened beyond half its length, but, if the whole should be darkened, the test must be repeated, using a roll 1 inch or more in length. If the top portion of the roll has not been

*A prize paper read at the last annual meeting of the Wisconsin Pharmaceutical Association.

*Reprinted from Chemist and Druggist.

affected, it may be safely assumed that all the H_2S has been absorbed. The roll should be so arranged that the gas will come in contact with as large a surface as possible.

A faint but quite perceptible yellow spot is produced by 0.00005 gramme of arsenious acid. Working on 15 grammes of sample, this test will detect 1 part of arsenious acid in 300,000. If a more stringent test is required, 30 grammes may be used (it will, of course, be necessary to increase the amount of water and acid in proportion). In this case about 1 part of arsenious acid in 600,000 parts can be detected.

An approximate estimate of the amount present can be made by varying the amount of glucose or invert sugar until a spot is produced which is equal in intensity to that produced by 0.00005 gramme ($\frac{1}{20}$ milligramme) of arsenious acid, under the same conditions.

The mercuric chloride paper must be dried before use, and should always be examined in full daylight, never by gas or electric light.

This test may be used for the detection of arsenic in sodium phosphate. When the lead acetate roll is used, there is no need to use iodine.

The cotton wool plug should be rather tight. As a precautionary measure a piece of filter paper about 2 inches square should be soaked in the lead acetate solution, drained, divided into two or three pieces and packed on top of the roll. In estimating the amount of arsenic present the standard test must be made with the same weight of glucose free from arsenic, because the glucose retards the evolution of arseniuretted hydrogen; $\frac{1}{20}$ milligramme of arsenious acid will give a much deeper color without the glucose than with it. The arsenious acid should be in the form of sodium arsenite.

EXAMINATION QUESTIONS.

NEW YORK CITY BOARD OF PHARMACY.

PHARMACY.

- 1.—What is Torrefaction? How does it differ from Exsiccation?
- 2.—Give the full official title of each of the following:
 - (a) Gum Cotton.
 - (b) Citrine Ointment.
 - (c) Blue Mass.
 - (d) Glyconin.
- 3.—How many grains of Cocaine Hydrochlorate must be added to 8 fluid ounces of distilled water to make a 4 per cent. solution?
- 4.—Describe the official process for preparing Liquor Calcis giving reason for each step.
- 5.—What is Javelle Water? What are its principal uses? What official preparation does it resemble?
- 6.—How many grains of powdered opium are there in 250 grammes of Dover's Powder?
- 7.—Name an official infusion in the preparation of which an acid is employed. State what acid is used, and why.
- 8.—Name a good solvent for each of the following:
 - (a) Phosphorus.
 - (b) Camphor.
 - (c) Tannic Acid.
 - (d) Chloral Hydrate.

- 9.—What is the specific gravity of a crystal of Ferrous Sulphate which weighs in air 165 grains, and in oil of turpentine 120 grains? S. G. of oil of turpentine .870.
- 10.—What is the strength of official Ether? State how an undue proportion of water may be detected.
- 11.—State how the official Oleates differ from the so-called Oleo-Palmitates. Give the general outline of a process for the manufacture of the latter.
- 12.—What is Carron Oil? Give its official title, state how it is prepared and name its chief uses.
- 13.—Tartaric Acid: (a) What is its source? (b) How is it obtained from this source? (c) Give two tests which distinguish it from Citric Acid.
- 14.—What is so-called Coal-tar Creosote? Give two tests which distinguish it from Wood-tar Creosote.
- 15.—Critique the following prescriptions:

- | | |
|--------------------------------|--------|
| (a) R. Quinine sulphatis | 3 i |
| Tinct. ferri chloridi | f3 ii |
| Spt. ammon. arom. | f3 iv |
| Aqua | f3 vii |
| M. Sig. 3 i every 3 hours. | |
| (b) R. Morphine sulph. | 3 ss |
| Tr. catechu comp. | f3 ii |
| Tr. zingiberis | f3 iv |
| Syrup. ejusdem. ad. | f3 vii |
| M. Sig. 3i every 2 hours. | |

CHEMISTRY.

- 1.—Define the following terms: (a) Haloid Salt; (b) Porosity; (c) Deliquescence; (d) Anhydrous.
- 2.—What is a binary salt? Name two official ones.
- 3.—What is the valence of Mercury in "ous" and "ic" compounds? Give an example of each.
- 4.—Write the chemical formula of each of the following: (a) Red Precipitate; (b) White Precipitate; (c) Copperas; (d) Blue Vitriol.

- 5.—Name two official salts which may be obtained by the process of sublimation.
- 6.—Give the chemical name of each of the following: (a) $NaPO_3$; (b) $KClO$; (c) $KMnO_4$; (d) $MgSO_4$.
- 7.—What change takes place in Sulphurous Acid when it is acted upon by oxygen? How would you detect such a change?
- 8.—State what color each of the following imparts to a non-luminous flame: (a) Potassium; (b) Sodium; (c) Lithium.
- 9.—How many grammes of Sodium Hydrate are required to exactly neutralize 65 grammes of official Nitric Acid?
- 10.—When Ferric Oxide is acted upon by nascent Hydrogen, what compounds are formed?
- 11.—Why does Turpentine burn with a yellow and Alcohol with a blue flame? In which case is combustion complete?
- 12.—Give an outline of Marsh's test for Arsenic. State what materials are employed and how Arsenic is detected by it.
- 13.—Are there any points of difference between Benzol and Benzin? If so, state briefly what they are.
- 14.—Give the U. S. P. title of Tri-chlor Methane. Show its relation to Methane by graphic formula.
- 15.—Complete the following equations:

MATERIA MEDICA.

- 1.—From what are the following obtained: (a) Fel Bovis; (b) Paraffin; (c) Santonine; (d) Salicylic Acid.
- 2.—Give the official titles of two drugs that belong to each of the following classes: (a) Diuretics; (b) Anesthetics; (c) Demulcents; (d) Hepatics.
- 3.—Name three official drugs that belong to the Natural Order Composite.
- 4.—Define the following terms: (a) Stigma; (b) Rhizome; (c) Tuber; (d) Biennial.
- 5.—To what Natural Order does each of the following belong: (a) Conium; (b) Hops; (c) Wild Cherry?
- 6.—Give the Botanical name and habitat of each of the following: (a) Buchu; (b) Black Haw; (c) Guarana; (d) Couch Grass.
- 7.—What is Apomorphia? From what is it obtained? State process.
- 8.—Give the official titles of three Fixed Oils, three Oleoresins, three Essential Oils.
- 9.—Describe Camphorated Oil and Oil of Camphor. State the difference, if any.
- 10.—What is the source of each of the following: (a) Acetic Acid; (b) Phenic Acid; (c) Resorcin; (d) Menthol.
- 11.—Give the official name of each of the following and state the part of the plant from which each is obtained: (a) Hyoscyamus; (b) Chamomile; (c) Iris; (d) Lupuline.
- 12.—Describe: (a) Antimony; (b) Bismuth; (c) Bromine; (d) Arsenic. How are they obtained?
- 13.—Name two official drugs belonging to each of the following classes and give their official titles: (a) Alkaloids; (b) Seeds; (c) Gum Resins; (d) Oleoresins.
- 14.—Describe: (a) Colocynthis; (b) Phosphorus; (c) Amyl Nitrite; (d) Sal Ammoniac. From what is each obtained and what are its medicinal uses?
- 15.—Give the official titles of each of the following drugs: Marshmallow, Bitter Almond, Sweet Flag, American Wormseed, Elder Flowers, Stavesacre.

TOXICOLOGY AND POSOLOGY.

- 1.—Define: Chemical antidote, Irritant poison, coma, dose, drug.
- 2.—Name three emetics, with dose of each. Describe the stomach tube and method of employing it.
- 3.—Name two stimulants of different character. When is artificial respiration applicable and how is it performed?
- 4.—Name a poison which produces spasms or convulsions, also one which produces great stupor, and one which produces dilatation of the pupil of the eye.
- 5.—Name two poisons, for poisoning by which oils should not be given. Give reason. Name a poison, for poisoning by which Potassium or Sodium Carbonate or Bicarbonate should not be administered. Explain.
- 6.—In what poisoning is starch the proper antidote? In what poisoning should albumen be employed and in what form?
- 7.—What emergency treatment should be employed for poisoning by Alcohol? By Arsenic?
- 8.—What emergency treatment should be employed for poisoning by Atropine? By Opium?
- 9.—What emergency treatment should be employed for poisoning by Digitalis? By Phosphorus?
- 10.—What emergency treatment should be employed for poisoning by Carbolic Acid? By Lunar Caustic?
- 11.—State the largest dose it is usually safe to give of each of the following: Croton Oil, Diluted Hydrocyanic Acid, Corrosive Sublimate, Lead Acetate, Strychnina Sulphate.
- 12.—What is the dose of Ammonium Chloride, Guaiacol Carbonate, Mild Mercurous Chloride, Salol, Sulphonal?
- 13.—What is the dose of Extract of Aconite, Extract of Digitalis, Tincture of Belladonna, Tincture of Hyoscyamus, Tincture of Opium?
- 14.—What is the dose of Creosote Carbonate, Morphino Sulphate, Phenacetin, Salicylic Acid, Santonin?
- 15.—What is the dose of Chloral, Donovan's Solution, Potassium Acetate, Red Mercuric Iodide, Syrup of Lactucarium?

(Special Correspondence.)

BRITISH PHARMACEUTICAL AFFAIRS.

London, Dec. 8.

ARSENIC IN BEER.

For the last three months in Manchester, Liverpool and the surrounding district, there has been an extraordinary number of patients under medical treatment suffering from what was at first set down as alcoholic neuritis from beer drinking. The outbreak has latterly, especially in Manchester, assumed the proportions of an epidemic, and Dr. E. R. Reynolds, of the Manchester Royal Infirmary, was led to suspect from the number of cases and from some differences in the symptoms from ordinary alcoholic neuritis, that the effects were not due to the normal constituents of beer; in fact, he suspected arsenical poisoning. At this juncture, the aid of Mr. William Kirkby, pharmaceutical chemist attached to Owens College, Manchester, was requisitioned, and he examined the beer from a number of local breweries and also the materials used in its preparation, with the result that arsenic has been found in sufficient quantity to be dangerous in the beer, the ingredient from which the contamination was derived being glucose, in the preparation of which an impure sulphuric acid containing arsenic had been used. It will thus be seen that the arsenic is derived from the same source as that in the arsenical phosphate of sodium, which was recently the subject of proceedings in the courts. It is impossible to state the number of cases, but they at any rate total some hundreds, and several deaths are said to have occurred. In some cases the victims have been moderate drinkers, and a further point is that children have been affected from eating sweets made with the contaminated sugar. Here is a new danger lurking in the festive bowl and the apparently harmless lollipop.

THE TRADE POISONS BILL.

This bill to permit the sale of poisons for agricultural and other trade purposes by unqualified persons came before the Chemical Section of the London Chamber of Commerce for the third time on Tuesday, December 4. The bill provides that such poisons may be sold by unqualified traders provided they take out a government license, and sell in original packages labeled poison. The bill was strongly opposed at the meeting by Mr. F. H. Lescher, president of the Drug Club, and the wholesale druggists present, while many of the manufacturing chemists supported it, but finally a motion that the Chamber should support the bill was not carried, the voting for and against being equal. A curious thing is that, although the bill threatens to take away from chemists one of their few privileges, viz., that of being the sole vendors of legal poisons, the Pharmaceutical Council are taking no steps to oppose it. Of course it is in the present condition of Parliament unlikely to become law, yet as the Privy Council have supported the principle of it on previous occasions, it certainly stands a chance of passing.

THE IRISH VETERINARY COLLEGE AND PHARMACISTS.

The new Veterinary College of Ireland has declined to accept the preliminary examination of the Pharmaceutical Society of Ireland in lieu of its own test of general education. This has caused considerable dissatisfaction in Irish pharmaceutical circles, as it bars pharmacists, qualified and unqualified, from taking a veterinary certificate without passing another arts examination. It is pointed out as a way by which Irish pharmacists may score off the new college that whereas the British and Irish Pharmacy acts contain provisions permitting licentiates of the English and Scottish veterinary examining bodies to dispense and sell remedies for animals containing poisons, no such permit exists for the diplomates of the Irish College (it was not in existence when the Pharmacy acts became law), and every veterinary surgeon practicing on the Irish diploma is liable to prosecution if he sells a poison in any medicine he dispenses for an animal under his care.

THE IRISH PHARMACY ACT.

The Irish Society last month prosecuted at Roscommon the unqualified assistant of a local firm for selling corrosive sublimate, the poison thus sold having caused the

death of the purchaser. The local magistrate dismissed the case, holding that the employers should have been proceeded against. This decision is against the principle established by the Wheeldon case in 1890, in which Justice Hawkins laid it down that an unqualified assistant who sold a poison was liable under the Pharmacy act to a fine. Nevertheless the judgment of the Roscommon magistrates has been upheld by the Irish Court of Queen's Bench.

A NEW PHARMACY BILL.

After a long delay, the pharmacy bill which the Council of the Pharmaceutical Society intend to submit to Parliament during next year, saw light in the Council chamber at the meeting held on December 5. The bill is much more moderate in its proposals than that of last year, which sought to prevent companies carrying on business under any conditions, and to restrict the sale of all medicines to chemists. Briefly the provisions are as follows. (1) Every branch shop to be conducted by a registered chemist; (2) It shall be unlawful for a company to assume the title of chemist; (3) Every corporate body must have every shop in its possession conducted by a qualified person, the names of each assistant so acting, with the address of the business he conducts, to be notified to the Registrar of the Pharmaceutical Society; (4) All the directors of every corporate body practicing pharmacy to be registered chemists; (5) The Registrar of the Pharmaceutical Society to keep a register of all shops where poisons are sold, with the name of the proprietor and the name of the qualified person in charge; (6) The Pharmaceutical Society to have power to enforce a curriculum of study before examination, and to accept the certificates of other licensing boards in the British Empire.

It is very unlikely that the bill will become law in the present congested state of business in Parliament, but with the exception of Clause 4, it asks for no more than might reasonably be expected. Fines are imposed for breaches of the act, and the main principle is that the employer will be responsible as well as the unqualified assistant who commits a breach of the provisions of the act. Another noticeable feature is that the Pharmaceutical Society seeks power to establish reciprocal relations for the interchange of diplomas with colonial boards should it desire to do so, a power which it has not at present.

DOCTORS' UNQUALIFIED ASSISTANTS.

It has long been felt that the General Medical Council were not acting consistently in declaring guilty of infamous conduct in a professional respect and removing from the Medical Register, practitioners who employed unqualified assistants for medical duties, unless they took notice of those who allowed poisons to be sold and dispensed by employees who held neither a medical nor a pharmaceutical certificate. At last Friday's meeting of the Council, however, the case of an Airdrie doctor named Thompson was brought before them on the complaint of the Pharmaceutical Society. It was a charge of unprofessional conduct in allowing unregistered persons to vend poisons. The Council found Dr. Thompson guilty and postponed sentence. The case was a test one, and the judgment of the Council, although no penalty will in this instance be imposed, must be taken as a warning that the Council will be prepared to act vigorously against practitioners who employ unregistered assistants for pharmaceutical duties. The practice mainly aimed at is the keeping of open shops by doctors, the business being largely carried on by youths who have no qualification whatever. In Airdrie and the west of Scotland generally doctors' shops are very numerous.

THE ROYAL SOCIETY.

The anniversary meeting of the Royal Society was held on November 30, when Lord Lister, who has been president for five years, delivered his retiring address, dealing mainly with the recent researches with regard to malaria and mosquitoes, and the part played by these insects in spreading the disease. The society's medals (the list of awards has already been given in the Era) were then distributed. In the evening there was a brilliant assembly at the society's dinner, which was presided over by Sir William Huggins, the eminent astronomer, who succeeds Lord Lister in the presidential chair.

HOW SHOULD A RETAIL DRUGGIST ADVERTISE HIS BUSINESS?*

By E. W. SACKSTEDER.

In all progressive stores advertising is now looked upon as an expense as necessary as clerk hire, light, etc. From a mercantile standpoint, druggists cannot ignore the above fact, and therefore must act accordingly.

A modern drug store with its numerous side lines, offers a particularly fertile field for the advertiser.

While in an article of this kind it is impossible to lay down rules that would cover all the varying conditions of each drug store, yet there are a few general rules that apply to all.

Two important rules are:

Be persistent. Spasmodic advertising is money wasted. Keep your name so prominently before the public, so that as one writer has said: "If any of the residents of your city should walk in their sleep, they would unconsciously wend their way to your store."

Be honest. Never advertise goods you have not got, nor quote prices at which you do not intend to sell. Neither make statements about the quality of your goods that cannot be borne out by facts.

Of the methods and means to be pursued in advertising the most important are:

The store itself, newspaper advertising, circulars and booklets, sign boards and novelties. All the advertising you may do, will not help you one iota, if your store is not well conducted. A prospective customer who is attracted to your store by your advertisements, will not come a second time if the condition of things falls below his expectations.

On the other hand a well conducted store is your best advertisement, because every customer you have becomes in a general way a traveling salesman for you, in other words, "Your Advertiser."

A well conducted store means briefly, cleanliness, neatness, orderly methods, prompt and polite attention to all customers, by every one connected with the store. A well kept and full stock of every line that you carry. Particular care in filling all wants in the drug line. Properly labeling every drug sent out with label bearing your name.

Have all wrapping paper bear your imprint. Good clerks are indispensable, yet the proprietor should not be conspicuous by his absence any more than is necessary.

Treat everybody alike. Have a smile and a kind word for all. Maintain the dignity of your store by discouraging all loafing. Be a public spirited man. Do not allow yourself to be advertised as a stingy druggist.

In a well conducted store window displays are a most valuable advertising medium. A window tastefully and attractively dressed, wherein is shown a seasonal article or a line of goods with prices attached and placards calling attention to their merits, becomes a powerful factor in the advertising of a store.

Druggists in large cities will not find the newspaper of any great value to them, first because of its great cost, and second, they can only hope to control the trade of their immediate neighborhood.

What follows concerning papers is true of the druggists in smaller cities and towns. A standing ad should be carried in at least one of your city papers. If a daily paper, ads should be changed twice a week, and if a weekly, change ad every issue. Secure a prominent place and hold that as your own.

Well chosen cuts which help to accentuate what you have written are advisable in newspaper advertising. If cuts are not used, you should have your own distinctive border, so that the public can distinguish your ad at a glance. Unless you have a large space, advertise only one thing at a time, or at most two, for one point well made is worth more than all the generalization ever indulged in. Write your ads in a clear, terse style. Talk business. Advertising writing can only be learned by being in business and studying the subject.

Quote prices and the make of your goods whenever possible.

At regular intervals a booklet or circular should be issued. I would advise four circulars a year and one booklet. A good quality of paper should be used.

A circular should only be intended to call the attention of the public to some particular seasonal article or a

particular line of goods. Should be short and to the point.

Booklets have grown in favor of late, and are commonly understood to be a small book 4x5 inches, of 12 to 16 pages. These booklets should be written with great care, and should treat of all lines carried by the druggist devoting one page to each item.

Right here mention might be made of semi-proprietary or patent medicines manufactured by the druggist, because booklets and circulars offer a favorite means of calling attention to them. Let me emphasize that a line of such preparations possessing real merit and advertised properly become of themselves one of the best advertisements you have, because people must come to you for them.

Booklets and circulars can be mailed (the preferable way), or a careful house to house distribution made of them.

In the smaller cities and towns where the merchants depend on the country trade to a great extent, the use of one or two large signboards on each road leading into the city, reinforced by short pithy advertisements on the fences, are most valuable in making your store well known.

While I have mentioned the most popular, and at the same time I believe the most profitable ways of advertising, there yet remain other means at our command. The distribution of novelties, useful articles, as calendars, fans, etc., is regarded as good advertising.

While all advertising has some value, yet great care must be exercised, so that the expense may be kept in bounds, for profitable advertising has its limit, just as the volume of your business has its limit. Study your situation well. Try some of the suggestions herein set forth, and I believe that you will get your reward by a profitable increase of business in your pharmacy.

A PHARMACEUTICAL POSTMASTER.

By HIMSELF.

Through the marriage of our pretty "cashier and postmistress" to one of our best stamp customers, it suddenly devolved upon me, a pharmaceutical graduate of one of our famous colleges, to take up the work where she had left off until another "would-like-to-be-engaged" girl was found to take her place.

The reason the boss selected me to run the post office cage was my superior training. I being a graduate, as before stated, and consequently by my aforesaid training, was most adapted for the work. So, bright and early on the following Monday after our girl's departure, I left the pharmaceutical department (for the time being) and entered the "cage."

Stamps sold very quietly for a while, but that was only of short duration; my happiness was soon to receive a blow in the medulla oblongata, for in came an Irish woman with a package under her arm, and says she, "I want you to registry this package to the old country for me." I took the package, made a few comments on it, asked the many questions I remembered our girl always asked, and finding a stub book, like a cheek book, I started to make out her receipt, which in due time I finished and handed to her. I then weighed the package, and told her it would cost \$2.56. "B' gorry," says she, "and I niver yit saw the loikes of that," and thereupon heaped threats and abuses by the wholesale upon me. Well, she finally fished the money out of her stocking and paid. But that was not to be the end of it. She had plenty of policemen friends, and half an hour later she entered with two bluecoats, who with clubs drawn, asked me why I had insulted the "lady." I argued and tried to explain, but all of no avail; the "cops" were just about to haul me off to the station house when in came the boss, who, sizing up the situation, came to my rescue. It took him a very short while to settle the affair with all concerned, and after giving back her money, likewise the package, all outside parties went out.

Well, after that it is safe to say that I only sold stamps and the like; for all other business calling the boss, and I was happy once again, when we secured the service of a very nice young "lady" to take the other's place, and I got back again at the old reliable prescription counter.

Moral.—Don't attempt too much, or you will come to grief.

CHARLES A. LOTZ, Ph. G.,
Post Office Laboratory

*Prize paper read at the last annual meeting of the Wisconsin Pharmaceutical Association.

HOW TO INCREASE THE SALE OF PERFUME.*

By C. J. SACKSTEDER.

The perfume department in our drug stores is an interesting and delightful, as well as a profitable one.

To increase the sale of perfume the principal medium to employ is, of course, advertising.

The daily newspaper furnishes, perhaps, the best means of conveying to the minds of the public, and appealing to their purses, that your delicate odors and delightful extracts are to be desired. Neat cards with dainty samples of a certain favorite odor attached, distributed among the people as souvenirs, please them and bring them to your perfume counter, though it may be for any other odor than the one advertised.

It is foolish for a druggist or dealer in perfumes to give a lot of talk about his perfumes and perfume department, unless both appearance and reality substantiate what he is saying.

The perfumes in the store should be neatly and tastefully arranged. The goods sold in bulk in a very convenient and proper place. The fancy goods must be arranged nicely in a show case which occupies a conspicuous position.

Ladies all like perfume. Treat them to it by scenting their handkerchiefs when they visit your store. Tell them about the particular odor you have presented in this manner, and if they like it they will be sure to get it the next time they want perfume.

If a customer brings an unsuitable bottle, for instance an eight-ounce or even larger, (as it sometimes happens) for 25 cents' worth of perfume, present the person with a smaller bottle, accompanied by a polite remark such as: "I'll give you a nice glass stoppered bottle to keep your perfume in." This glass stoppered bottle later on acts greatly as an incentive to purchase more perfume and the donor is sure to be remembered.

All manufacturers have a long list of odors. As we cannot keep them all we must limit our purchase to the better odors and carry those of all leading manufacturers. In this way we can satisfy the public and give them anything they may want.

A good salesman can increase the sale of perfume to a great extent. He will show the perfumes well while making a sale. He will remark about some late odors just received, show them and allow their delicate fragrance to be inhaled. Give customers a good look at your goods instead of hurrying them into buying something which they perhaps would rather not have had.

We should make a study of perfumes, learn how they are made, where manufacturers are located, etc., etc., so that a customer can be readily answered correctly any question he may ask.

A window display of perfume is a great advertiser; I think the best manner to advertise them in this way is to display only one odor at a time and dress the window accordingly. For instance, if we are showing violet perfume, the decorations and colors of our show bottles should all have exactly the same color as the violet perfume we are showing. We can use colored waters in showing goods in this way, thereby not only protecting our goods from the injurious sunlight, but also making it appear as though we have a mammoth stock. If in the violet season, or if violets can be procured, bunches of them in the window make the trim a very attractive one.

If the perfumes we are showing are white rose or red carnation, we can use white roses or red carnations to beautify the displays. The prices should be conspicuously displayed in the windows and mention should be made that any other odor can be had at prices ranging from so and so to so and so.

Circular letters are also an excellent means of gaining new customers as well as reminding our old patrons of arrivals of new odors, or calling their attention to our perfume department.

These letters should be sent mainly to the better class of people, and to those who we know purchase perfumes.

A good quality of paper should always be used, as an inelegant and cheap grade will not make the impression that is made with a neat and good quality of paper.

Perhaps the greatest piece of advertising we can

accomplish is the scenting of a public building, for instance, an Opera House. Select a time when a good entertainment is to be given and when the house will be filled with people. The perfume can be sprayed with large atomizers a half hour before the doors open. Large placards should be hung up in conspicuous places, announcing (in large type) that the house has been perfumed by "Jones, Smith & Co." A blotter scented with the odor and giving the name of it, where it can be purchased, also the price, should be placed on every seat. The manufacturer will be glad to aid the retailer in this kind of advertising by furnishing the perfume to spray and also the blotters.

A local ad in a daily paper or papers run at the same time, announcing this wholesale odorizing and calling attention to the odor will simply work wonders.

Enumerating the points brought forth, i. e.: Newspaper advertising, window displays, goods displayed otherwise in store, salesmen, cards as souvenirs, presenting glass stoppered bottles, scented ladies' handkerchiefs, making a study of perfumes, circular letters, using flowers in connection with window displays, and last but not least, the scenting of an Opera House. I think these are the best methods to employ "To Increase the Sale of Perfume."

TO MAKE THE SODA FOUNTAIN PAY.*

By JULIUS KOEPENICK.

First of all, in order to make the fountain pay, it is absolutely necessary to practice economy in getting the soda ready to serve. The first step is in charging the fountain, and in order to effect a saving in this branch of the work, the old style generators must be dispensed with, and the charged drums must take their place; this effects a saving in time and labor, which, for most dispensers of cooling drinks, where trade is good, is an important item.

The syrups must always be the finest in the trade, and they must be fresh at all times. If the custom is not sufficiently large to warrant large quantities being prepared at a time, the proper thing will be to make it up in small quantities. It pays best to make them up from the juices. Lemon and orange syrup can always be made from the fruit direct, as they are always in the market. It has been found to be a good plan to make new syrups from time to time by mixing two or three kinds of syrup; give the mixtures certain new and catchy names, something easily remembered, and still not too common. For instance, mix pineapple, orange and unfermented grape juice and give it the suggestive name of "Angel Kisses." For a week or such a matter bring the name to the front in every manner possible, and it will never again be forgotten by your customers. An endless variety of these special flavors may be obtained by a careful attention to the mixing, care being taken to get the proportions correct. To learn whether or not these new flavors will please it is a good plan to "try them" on customers whom you consider to be good judges of flavors, tastes, etc., charging them nothing, of course, for their expert testimony in the premises. If they are not pleased, and they are honest, they will tell you so, and you will know better than to spring them on your regular paying patrons.

It is economy for the refreshment dealer in the drug store, to make his own ice cream, rather than purchase it already made. The latter costs in the neighborhood of 90 cents a gallon, while the cream made by the druggist does not cost to exceed 50 or 60 cents a gallon. The saving amounts to something in time. When the druggist makes his own cream he has the satisfaction of knowing that it is pure, and he can then guarantee it to his patrons, which is indeed a satisfaction; a druggist cannot always guarantee cream which he buys from cream makers, to be pure. It is policy to make up cream in small quantities. It had better be made up twice or three times a day than to serve old cream.

Customers should never be obliged to wait to be served.

*Prize paper read at the last annual meeting of the Wisconsin Pharmaceutical Association.

Delays in this matter are as dangerous, in their way, as in other departments of trade. A bright attendant should be ever ready to look after the wishes of those who seat themselves at the counter; he should be cleanly attired; it is a good idea to have the attendant wear a white coat one day, a modestly checkered one the next day, a tinted one the next, and so on, so that the constant customers may not tire of sameness. It gives the constant customer a feeling that everything is fresh, clean and pure.

The fountain decorations should be looked after. They should be modest and yet attractive. They should be artistic, a due regard being given to harmony of colors, suggestiveness, etc. There should be bowls or plates of classic design, filled with well washed fruits, neat looking glasses and vases filled with freshly cut flowers. To please and cheer the patron is half of the game; to tickle his palate with some delectable drink is the rest of it. Satisfy him once and he is yours forever; not only that, but he will bring others with him the next time, or send them, one of which is as good as the other.

I would suggest as a pretty feature for decoration a large cake of clean ice, lying on some leaves of winter-green, on which have been placed some slices of orange. There might be a few sprigs of the plant at the sides and on top of the ice; the idea is to get a pretty effect from the blending of the yellow and the green, and a deliciously cooling suggestion from the cake of ice.

I should also suggest, as a paying advertisement for a soda fountain, that the druggist provide a tank which he keep filled with ice water, from which he draws for each and every customer a small glassful, to be served before or with the fountain drink called for. The cost is slight and the friends made will in nearly every case prove a profit in the end. The impression created by the apparent courtesy is to say the least a good one.

Glasses and spoons should always be spotlessly clean and inviting, and there should be no smell of milk or cream in the glasses used for ice water or for the drinks that are served.

If egg drinks are served, and I find that they can at a profit, it is well to keep a small dish or plate filled with them, sitting in a convenient place on the fountain. They should be washed cleanly, and the public should be impressed in some manner that they are fresh eggs, just in from the hen's nest.

Syrups and soda should be kept cool. It is well when buying a soda fountain, to get one that is guaranteed to produce the largest amount of coolness from the least quantity of ice. See that it does so, and if it does not get rid of it as soon as possible. One of the big expenses of the fountain is the ice, and, as I said in the beginning, economy is the first thing to be considered.

It pays to advertise. Have a space in one or two of the leading papers in your town and see that it contains something bright, fresh and attractive each day. Pay as much attention to your advertising as you do to any other part of your business, and you will reap a far greater benefit in proportion. Once or twice a week, if you have a daily paper in your town, write up a crisp, spicy local, calling attention to something new that you may have in your fountain stock, give the reporter to understand that you want a head that will attract attention, give him something substantial in the way of a "friendly testimonial," and you will be sure to reap good results in the way of preferred position, on the best page. Don't forget the newspaper man when you have something good in stock and he will never forget you on complimentary mention.

He will expect you to pay for your space and your actual advertising, but the complimentary advertising that you will receive, will make you happy in the end, and your business will be benefited to a degree that you will not understand until you have tried it.

Advertise in every way that you can. Other druggists may call you cranky for springing new fangled ideas on the unsuspecting public, but you will reap your reward when the public flocks to your well advertised soda fountain to buy its summer drinks.

Keep a bulletin in front of your store, and each morning place upon it, in plain, readable letters, some idea which you wish to get before the public that day. Don't say too much in any of the advertisements of any description that you may get out. Say a few words that have the right sound to them and the public will get the rest by inspiration.

Good business makes the fountain pay; go after the business.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Hydrate of Ammonium.—(Subscriber). The chemical formula of hydrate of ammonium is represented by the symbol NH_4OH . The formation of this compound may be studied in almost any work on elementary chemistry. The preparation of ammonia and ammonium hydrate may be shown by the following equations:

A molecule of ammonia gas is composed of one atom of nitrogen with three atoms of hydrogen, and its formula as indicated in the equation is NH_3 . Its conversion into hydrate of ammonium (not hydrate ammonia, as you have it), is thus farther indicated:

In practice the ammonium salts are obtained for the most part from the ammoniacal liquor of gas works. This material is treated with lime and distilled; the ammonia so driven off is neutralized by sulphuric or hydrochloric acid with the formation of ammonium sulphate or chloride.

Containers for Sulphur Dioxide.—(W. A. L.) asks: "What is the best material for a box or bottle intended to hold sulphur dioxide? The container must be able to stand a fair amount of hard usage. Glass will not do."

Liquid anhydrous sulphur dioxide, as made by the Somerset Chemical Company, at Bound Brook, N. J. (the only American manufacturer at the present time, we are informed), is shipped in wrought-iron drums, each equipped with a special valve for the withdrawal of the acid either in liquid or gaseous form. If the vessels are placed horizontally, liquid sulphurous acid can be drawn off, and if the removal of gaseous acid is desired, the cylinders or drums must be set upright. It is stated that the handling and shipping of these drums is not connected with danger if ordinary care is taken with them, as they are subjected to a hydraulic pressure of 450 pounds per square inch before use, while the highest pressure exerted under atmospheric conditions is 80 pounds.

The liquid sulphur dioxide manufactured by Pictet, of Geneva, is sent into commerce in copper cylinders. On a small scale, liquid sulphur dioxide may be prepared and preserved by sealing in a strong glass tube one part of sulphur and five parts of sulphur trioxide (Sadtler). The reaction takes place spontaneously, according to the equation: $2\text{SO}_3 + \text{S} = 3\text{SO}_2$.

Action of Oil, Lanoline and Vaseline on the Skin.

—(E. S.) The action of expressed oil of almond on the skin is similar to that of olive oil and fats in general. When applied it relaxes the skin and protects irritated surfaces from the action of the air. Fluid fats are absorbed into the superficial layers of the epidermis, being carried into the blood through the medium of the lymph vessels. In this manner is to be explained the increase in bodily weight and the improved appearance after the methodic inunction of fat (Pasechki). A second property of fat is that of lessening the amount of water given off by the skin, since it forms a thin, impermeable coating which prevents evaporation. The secretions of the sebaceous glands and the fatty acids of the sweat are soluble in fat; the dirt of the skin is suspended in this solution as with soap, and in some cases the rubbing with oil or another fat may be sufficient to cleanse the skin and take the place of washing. Oil and fats in general are of importance for cosmetic purposes, since they serve

as a menstruum for many medicaments. On the skin the action of lanolin is similar to that of the animal fats. Under its use the skin is said to become tenser and more turgid, but whether drugs mixed in lanolin are more quickly absorbed by the skin than in other ointment vehicles is still an open question. It has one apparent advantage over all other ointment vehicles in that it does not become rancid. Read what the dispensaries have to say on this subject. Lanolin is frequently employed as an unguent in massage. Vaseline is used exclusively as a bland neutral protective dressing in sores and skin affections, and as a substitute for fatty materials in ointments. Books you can profitably consult on the cosmetic uses of these substances are "Cosmetics," a treatise for physicians and pharmacists, by Dr. Heinrich Paschkis; Plesse's "Art of Perfumery," and "Ointments and Oleates," by John V. Shoemaker.

Poison Label Must Be Printed in Red Ink.—(W. A. L.) writes: "In the new pharmacy law (New York). Section 198, does it mean that all the lettering on a poison label must be in red ink, or may the word 'poison' be in white and the name of the poison be in black or any color? How about the name of a poison written on a 'blank' poison label; must red ink be used?"

We think these questions are fully answered in the section of the law referred to, and which we quote:

Section 198. Poisons; retailing of.—It shall be unlawful for any person to sell at retail or furnish any of the poisons named in the schedules hereinafter set forth, without affixing or causing to be affixed, to the bottle, box, vessel or package, a label containing the name of the article and the word "poison" distinctly shown, with the name and place of business of the seller, all printed in red ink, together with the name of such poisons printed or written thereupon in plain, legible characters, which schedules are as follows, to wit: (Here follow Schedules A and B.)

The expression "all printed in red ink" is mandatory and the word "all" includes "the name of the article and the word 'poison' distinctly shown, with the name and place of business of the seller. . . . together with the name of such poisons printed or written thereupon in plain, legible characters" as are named in the schedules which follow. Wholesale druggists are also required to affix a "suitable label or brand in red ink with the word 'poison' upon it" to all original packages of the articles enumerated as poisons in Schedule A of the act. The use of red ink is apparently mandatory.

PHARMACY.

STERILIZING COCAINE SOLUTIONS.—The growing use of cocaine for producing anæsthesia by inter-spinal injections has caused a demand for a method of sterilizing the solutions without the use of heat, which sometimes acts unfavorably on this alkaloid. A simple method is recommended in the New York Medical Record: Place the desired amount of cocaine salt in a graduate that has been recently sterilized, then add an ounce of dry ether and stir the mixture constantly with a sterilized glass rod until the ether has completely evaporated. Pour on the cocaine the requisite quantity of recently boiled (and cooled) water, stir to effect solution and use at once. This method contemplates the preparation of only the actual amount of cocaine injection needed at the time; hence there is no danger of using a solution of cocaine that has become "spoiled."

BACTERIAL LIGHT.—A French savant now comes forward with a "brilliant" scheme of obtaining light from a microbe known as "photobacteria," 200 billion of which are required for a single lamp, which is a glass bottle two-thirds full of a culture of these germs. As these microbes are easily cultivated on a small or large scale and have no dangerous qualities, Parisian chemists

have suggested the use of cultures suitably colored to fill the show bottles in the druggist's windows, by so doing providing a new and novel attraction for the public, and also obviating the necessity for the use of gas or other light behind them! It is also said that there is a wide field of usefulness for "photobacteria" in druggists' cellars; the cultures may be 'grewed' down there for use in the shop bottles, and at the same time earn their keep by giving enough light to do away with candles, gas, etc.

HYDROGEN TELLURID was discovered by Davy in 1810, by the action of hydrochloric acid on sodium tellurid, but the gas has never been obtained pure, and beyond its odor and its instability, comparatively little has been known of its properties. The problem has been taken up by Dr. Edmund Ernyei, of Budapest, and his results are described in the last number of the *Zeitschrift für Anorganische Chemie*; (Science). After testing several methods, the best was found to be the electrolysis of 50 per cent. sulfuric acid by a 220 volt current with a tellurium cathode. The apparatus was kept at a temperature of -15° to -20° , and the evolved gas dried immediately over calcium chlorid and phosphorus pent-oxid. It was then condensed by the use of liquid carbon dioxid, and formed orange-yellow crystals which melt at -54° to a greenish-yellow liquid. This hydrogen tellurid proved to be practically pure. Its boiling point is slightly above 0° , but it decomposes quite rapidly below this temperature into tellurium and hydrogen. It is quite soluble in water, but its solution decomposes on contact with the air. In caustic alkalies it dissolves, forming alkaline tellurids, which decompose readily, and on standing these become dark red from the formation of polytellurids. Its density was obtained by the Dumas method, and by rapid working the decomposition was so slight as to have no appreciable effect upon the result. The value found was 65.1, which corresponds to the formula H_2Te . From this the molecular weight would be 130.2. These properties of hydrogen tellurid correspond to the position of tellurium in the sulfur-selenium group, while the high molecular weight agrees well in confirming the best atomic weight determination of tellurium, which places it above and not below that of iodine.

THE DIRECT COMBINATION OF ALUMINA AND OXIDE OF CALCIUM IN THE ELECTRIC FURNACE.—Messrs. Moissan and Dufan have recently undertaken a series of experiments upon the direct combination of alumina and oxide of calcium in the electric furnace, and in this way have succeeded in forming the monocalcic aluminate (Al_2O_3Ca) in crystalline needles. This body has been only imperfectly studied; several experimenters claim to have obtained it, but their results have lacked certainty. The experimenters pursue the following method, which is the subject of a paper read before the Académie des Sciences. By heating in the electric furnace an intimate mixture of 100 parts of well calcined alumina and 60 parts of anhydrous lime, with an arc of 1,000 amperes and 45 volts, after three minutes' action a gray mass, entirely melted, is found in the crucible, which upon breaking is found to be composed of an assemblage of fine brilliant needles. In the cavities of the mass some of the free needles attain one-eighth of an inch in length, and may be taken out and examined under the microscope. The product is freed from excess of lime by a series of washings with alcohol and ether, and dried in vacuo. In this way a crystalline powder is obtained, which by analysis gives very nearly the theoretical quantity for the formula Al_2O_3Ca , and it is thus found to be the monocalcic aluminate. The needles are colorless and transparent, appearing to be oblique prisms with rectangular base. This body does not scratch glass; its density is found to be 3.671. The aluminate of calcium is quite stable in dry air, but water attacks it easily, with dissociation and precipitation of alumina. It is quickly attacked by hydrochloric acid, but nitric, sulphuric and hydrofluoric acids act more slowly. Fluorine, which is without action in the cold, attacks it when heated, with incandescence and formation of white fumes. The halogen elements and sulphur are without marked action at a moderately high temperature. Carbon only acts upon it at the temperature of the electric arc, with formation of carbides.—*Sci. Am.*

NEWS AND TRADE DEPARTMENT.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

Captain J. T. Myers, who commanded the United States Legation Guard with distinguished bravery during the Pekin siege, has been detached from the Mare Island Naval Hospital at San Francisco, and ordered home on three months' sick leave.

The ministers in Pekin have agreed upon and signed the preliminary note to China, and it will be sent immediately to Prince Ching and Li Hung Chang.

Russia has agreed to give Great Britain entire control of the railway from Pekin to Shan Hai Kwan.

The French Government has decided that all loot taken by the French forces in China shall be restored to the Chinese. None of the plunder will be allowed to land in France.

South Africa.

Great Britain is taking steps to hurry troops to South Africa to aid Kitchener in repelling the invasion of the Boers into Cape Colony, where considerable fighting has occurred. The Colonial Police has been increased to 10,000 men.

In a statement issued from The Hague by Mr. Kruger he says Steyn is leading the Boer forces in the field that his troops are strong and well armed and that the Transvaalers will fight to the end.

It turns out that the forces of DeWet and Steyn, which were penned in the fork of the Orange and Caledon rivers by General Knox and were afterwards reported as having escaped, "escaped" by riding at full gallop through the British lines with Steyn in the lead and DeWet commanding the rear guard.

The Boers were driven out of Houtkraal, Cape Colony, last week by the British; were repulsed at Zuurfontein, near Johannesburg, and were defeated by General French at Thorndale with a loss of fifty killed.

There are fears that the Boer invasion of Cape Colony may lead many of the Cape Dutch to join their ranks.

The Philippines.

Brigadier-General George W. Davis, formerly Governor-General of Porto Rico, arrived in Washington last week and will soon leave for Manila by way of San Francisco.

Commander Hanford has been placed in command of the Cavite station to succeed Commander Fremont, who will command the Culgoa.

The battleship Kentucky has passed through the Suez Canal on her way to Manila. The Sultan has not yet paid up. Those who supposed that the Kentucky's visit to Smyrna would frighten him into paying our claim seem to have been unacquainted with the Sultan's ways.

The Philippine Commission has decreed that all laws in the islands shall be printed in English.

General MacArthur has issued a proclamation warning the Filipinos that non-combatants who give aid or comfort to the insurgents will hereafter be treated with severity.

The homeward movement of the Volunteers from the Philippines will begin on New Year's Day, when the Thirty-seventh Regiment will embark on the transport Sheridan.

Other Foreign News.

Cable dispatches from time to time, telling of new contracts obtained by our iron and steel manufacturers in Europe, Asia and Africa reveal the fact that the British iron trade, which has long been in supreme control of the world's markets, is being crowded out by American competition. Our manufacturers are not only sending bridges, engines and steel rails to the British colonies, but are now actually sending steel rails and steel plates for shipbuilding to England itself and underselling the British manufacturers \$2 to \$5 a ton. Norway has just given the contract for the entire year for rails for railways to American firms, and the German iron trade is said to be in despair at American prices.

The loyal British chiefs of Kumassi have captured the Ashanti Queen Mother and the rebel King Kokofu, and they hope soon to bag the remaining rebel chiefs.

At Antwerp 13,000 dock laborers, sailors and coal porters are on strike and the commerce of the port is badly crippled.

The Legislative Council of Victoria has rejected the woman's suffrage bill for the sixth time, and has refused to submit the question to a referendum.

Queen Victoria's failing health is said to be causing grave concern.

Two hundred Christians are reported to have been killed by the Moslems in the central provinces of Turkey.

DOMESTIC.

Congress.

The Senate on Thursday of last week, as expected, ratified the Hay-Panncote treaty with England for an isthmian canal, with an amendment permitting the United States to close the canal to any enemy in war time, a second amendment declaring that this treaty supersedes the troublesome Clayton-Bulwer treaty, and a third amendment cutting out of the treaty the article inviting the other Powers to join in ratifying it. It is somewhat doubtful if England will accept these amendments, and if she does not do so the construction of the canal may be seriously delayed. In case England does not accept the amendments some are in favor of abrogating the Clayton-Bulwer treaty and building an American canal without regard to England's claims, but it is not likely that any such radical course will be adopted.

The River and Harbor bill, as completed in committee, appropriates \$39,000,000, of which \$23,000,000 is for new work and the rest for work already authorized.

Congressman Richard A. Wise, of West Virginia, died suddenly last week.

The Indian appropriation bill, passed by the House last week, appropriates over \$9,000,000.

Congress will resume its sessions after the holiday recess on January 3.

Other Government Affairs.

The Philippine and Porto Rico tariff cases now before the Supreme Court of the United States involve the important question as to whether the Constitution "follows the flag," that is, whether the inhabitants of our new islands are entitled to the guarantee of citizenship and other rights which the Constitution gives (including free trade with the rest of our country) or whether they can be ruled by the President and Congress regardless of the Constitution. Those who hold that the Constitution does not follow the flag fear that if the Court decides that it does our industries will be swamped with cheap labor and cheap products from Porto Rico and the Philippines; while those who hold that the Constitution does cover the new islands argue that Congress is subject to the Constitution in all its acts, that our Republic was never intended to rule over distant peoples as subjects, and that it is best not to keep under our flag peoples who are not fitted to participate in our free institutions. This is probably the most important question that has come before the Supreme Court for a generation. The decision is expected in about a month.

Ex-Presidents Harrison and Cleveland, in public statements, have made known the fact that they hold to the opinion that the Constitution follows the flag.

Other Domestic News.

A gang of kidnappers last week abducted the son of Edward A. Cudahy, of Omaha, and notified the father that the boy would be returned upon the payment of \$25,000 ransom. After a few days of fruitless police and detective work, the father took a bag containing the required amount of gold coin and deposited it in a lonely spot designated by the kidnappers and the boy was returned. The father has offered a reward of \$25,000 for the apprehension of the abductors, \$5,000 for one and \$15,000 for two of them. Omaha lawyers, however, fail to find on the statute books of Nebraska any law that will land the kidnappers in jail if caught, although a more thorough search may happily disclose such a measure.

It is reported that the lines of the Central Passenger Association have decided to boycott several of the railroads west of Chicago unless they agree to withdraw the prepaid orders from that and the Trunk Line Association territories. All these railroad combinations for the purpose of controlling rates are contrary to the provisions of the Federal Inter-State Commerce law.

Two negroes were lynched at Arcadia, Miss., last week for the murder of a trading boatman named Thompson and his wife and child.

Mrs. William P. Frye, wife of the president pro tem of the Senate, died suddenly in Washington last week.

Ex-Governor Roger Wolcott, of Massachusetts, died in Boston last week.

The small pox epidemic in New York City continues to cause apprehension.

Three men were buried alive on Thursday of last week beneath thirty-five feet of earth in an irrigation canal near Chadron, Neb.

Three nurses were suspended from Bellevue Hospital in New York City last week under suspicion of having caused the death of an insane patient by unnecessary violence.

John D. Rockefeller has made another gift of \$1,500,000 to the University of Chicago. This makes nearly \$10,000,000 in all that he has given to the university.

THE DRUG NEWS.

New York and Vicinity.

N. A. R. D. EXECUTIVE COMMITTEE TO MEET.

A meeting of the Executive Committee of the National Association of Retail Druggists will be held in Chicago early in January, and much important business will come up for transaction.

A number of petitions from jobbers who have recently begun business, and who desire to be included in the list of accepted jobbers will be presented for consideration. It is also expected that the result of the Sterling Remedy Company's offer will be made known. It is said that the amount the N. A. R. D. will receive from this source will be upwards of \$5,000.

Much work has been done by the association since its last annual meeting in Detroit.

From the list of jobbers published in this paper October 4, there have been removed the names of W. H. Currier & Co., of Pittsfield, Mass., who are aggressive cutters; Hogan-Johnson Drug Company, Lafayette, Ind., for violation of the agreement, and Stovall-Smith Drug Company, Atlanta, Ga., who are not considered jobbers.

Recognition has been refused to the New York Consolidated Drug Company; R. P. Hoagland, Boston, and D. Maurer & Son, Philadelphia.

ACTIVITY IN NEW JERSEY.

During the last year the pharmacists of New Jersey have been making great strides toward the betterment of their trade condition by organizing pharmaceutical associations. The work has gone forward so rapidly that New Jersey may be classed as one of the strongest organized States in the Union. A prime mover in the work said recently, "I believe the action at the last meeting of the State Association has had a stimulating effect on the druggists of the State, for a regular tidal wave for organization has swept over the State, and we feel now as though we are worth just as much consideration for our force of numbers as any other State."

The two largest populated counties of New Jersey, Essex and Hudson, have powerful county organizations, which have been formed recently, and the next two largest, Camden and Passaic, are working toward the same end.

Eighteen cities, with a population of over 5,000 each, have independent associations. Newark, Paterson and Camden are among the most recent cities to come into the benefits of organization, and many other towns are contemplating such a move. Cities like Passaic, Trenton, Atlantic City, New Brunswick, Perth Amboy, Plainfield, Bridgeton, Morristown, Kearny, Harrison, Millville and Phillipsburg, all of which have a population of over 10,000, have no local associations, but a great many of the pharmacists of these cities are affiliated with some organization. Of these cities six have started movements for organization and will soon have working bodies.

Another interesting phase of the movement is that all of the organizations formed have affiliated with the N. A. R. D. or will do so soon. It is said that the action at the last State meeting of withdrawing from the N. A. R. D. will be reconsidered at the next meeting and the association will again enroll with the national body.

DRUG TRADE SECTION, BOARD OF TRADE.

Vaccine and asafetida were two topics of discussion before the meeting of the Drug Trade Section of the Board of Trade and Transportation, held Thursday afternoon, December 20. In the absence of the regular chairman, John McKesson, Jr., J. H. Stallman was named. The secretary read a communication from the Pasteur Vaccine Company, of Chicago, in which complaint was made concerning the action of the Department of Agriculture and other public bodies in disseminating alleged infor-

mation which militated against the fair and reasonable prices of the trade for vaccine. The company said it had been subjected to iniquitous competition in that the Agricultural Department and other public bodies have been engaged in the manufacture of "blackleg" vaccine and furnishing it free to customers. The letter stated that the time for a reform in this sort of trade competition was at hand. The communication was received and placed on file. In May of the present year the Section passed resolutions urging the Greater New York Charter Revision Committee to repeal Section 1226 of the present charter of the City of New York which "authorizes the Health Department to sell in competition with the drug trade certain so-called surplus laboratory products of its bacteriological laboratory, namely, vaccine virus and various antitoxines."

Chairman Stallman then called attention to the difficulty experienced at the present time in bringing asafetida into this port. He stated the prime article was not imported now. Considerable annoyance was caused by the requirement of the Government for the inspection of asafetida and "if something is not done to alter present conditions asafetida will become very scarce and high priced." The subject was discussed at some length, and it was decided that the Treasury Department was not at fault, but that the requirements of the U. S. Pharmacopœia were too exacting. On motion, the matter was left with a committee composed of importers of drugs and chemicals and jobbing druggists, with instructions that the committee confer with the Pharmacopœia Revision Committee with a view to securing a change in the percentage solubility of asafetida. It is expected the conference will take place shortly.

A report from the committee named at an informal meeting of the Section, held in November, to draft a bill, to be presented to the Greater New York Revision Committee regarding the storage of explosives, was received. Andrew B. Rogers is chairman of the committee. The bill has not been completed, but will be after the holidays, when its provisions will be made public.

A MISSTATEMENT CONCERNING NEW PHARMACY LAW.

The following paragraph taken from an editorial in a recent issue of a pharmaceutical journal has caused the New York Board of Pharmacy considerable annoyance and no little extra labor: "To comply with this law it is necessary for every drug store in the State to take out a license on or before January 1, 1901, and to renew this license at the beginning of every year thereafter." While the substance of the statement is correct the date when the license shall be taken out is entirely wrong as is shown by the law, which reads "In the month of January, nineteen hundred and one, and annually thereafter, the proprietor of every place, in which drugs," etc.

Since publication of the article the members of the New York Board have been besieged by proprietors anxious to "get in" before the law became operative. As a matter of fact, it will be impossible for any proprietor to register his store before January 7, as the new board does not meet until that date, although it exists technically January 1. "I am gratified to know," said a member of the board, "that proprietors are anxious to comply with the law. This editorial statement, though incorrect, has shown me the wind is blowing in the right direction, and my anticipation that difficulty would be experienced on this section of the law, seems to be groundless."

DRUG HOWLERS OBSERVE HOLIDAYS.

At a meeting of the Retail Druggists' Bowling Association Monday evening, December 19, it was decided to suspend bowling until after the holidays. The first meeting following New Year's will be held January 7, at which time "Ladies' Night" will be celebrated. At the Monday night meeting L. William De Zaller scored the highest number of points and will wear the club's medal until the January meeting.

ENGLISH AS SHE IS WRIT.

A druggist in Jersey City, N. J., has been distributing the following circular. His fellow members in the local pharmaceutical association are justly incensed by his unprofessional conduct. The circular is a wonderful production, from a literary standpoint at least:

PRESCRIPTIONS AND DRUGS.

We want your prescription and drug trade, we have good reason to believe that we are entitled to it far more than any other druggist. It is our pleasure to mention them.

OUR DRUGS ARE FRESH AND PURE.

Our Chemicals are Guaranteed by the Best Manufacturers. Our Medicines are made of Pure Ingredients and Standard Strength.

WE DO NOT SUBSTITUTE.

Of course, everybody else claims the same, but ours is no idle boast, we back up our statements with facts.

Before proceeding we desire to state that we are very well aware of the serious accusations in the following statements, and were it not for our being positive that this exposure will put those druggists on their guard with the result that the public will be benefited by it, we would have never mentioned it.

THERE IS ONLY ONE WAY TO DO A THING RIGHT AND THAT IS OUR WAY.

During our hunt for substitution, adulteration, etc., etc., we have encountered a good many of them; far more than could be mentioned in this circular, therefore we will mention here only a few prominent ones, those that produce bad results immediately, and a comparison with a standard preparation is sufficient to prove my charges correct.

Our Tincture of Iodine is a solution of 7 per cent. resublimed Iodine in pure grain alcohol, when applied on the skin it will dry up immediately, it does not affect the eyes.

Substituters and adulterators, Tincture of Iodine contains deodorized wood alcohol, Iodine and water, now; he deserves more credit for the water he adds than he is aware of, because without the water it is enough to ruin anybody's eyes when left exposed for few times while using, especially in a warm room, while the water which has been added merely to economize in the cost, keeps it from evaporating so fast, nevertheless, it injures the eyes anyhow, and when you get Tincture of Iodine that does not dry up immediately when applied, and hurts your eyes when exposed that is IT.

Our Solution of Citrate Magnesia contains Magnesum Carbonate and Citric Acid, when these two are dissolved and added together it forms citrate magnesia, to this we add Syrup of Citric Acid which sweetens and flavors it, the whole makes a pleasant and refreshing purgative.

S. and A. Solution of Citrate Magnesia contains common Washing Soda, Tartaric Acid, Syrup and Water. The immediate effect of this Citrate Magnesia is to gradually eat away the mucous membrane or lining of the stomach, as a matter of fact in New York State a few druggists have been prosecuted for dispensing it; it is considered a crime even in this State, but unfortunately the law did not provide adequately for the prosecution of those offenders; furthermore, even they that dispense it recognize the injustice of dispensing that stuff and the only extenuating circumstances they claim is this: "Our customers have been getting this Magnesia for years and if we go and change the formula now they will recognize the difference in taste, thinking that we made a mistake, we stand to lose all our trade, therefore we are doomed to dispense IT forever."

Our Spirit of Camphor is a solution of 10 per cent. refined Camphor in pure grain alcohol when applied to the body it alleviates pain, dries up immediately.

S. and A. Spirit of Camphor contains Camphor, Wood Alcohol and Water, the Camphor is dissolved in the Wood Alcohol and water added to it until it precipitates the camphor, then a little more of that alcohol is added to redissolve the camphor which can now stand a little more water, the resulting compound reminds you of some corporation stocks that contain more water than anything else and you are asked to pay for IT (the water) just as well. Yes! and how about Selditz powders that contain only half the quantity of Rochelle Salt that should be in there, but is substituted with Bicarbonate of Soda because it is cheaper, or Tincture of Iron that is made up and sold fresh instead of keeping it at least three months as it ought to be done and as we do it before we dispense it, because age reduces the corrosive action of the iron and is in better condition to circulate in the blood, or (as we do not think that the general public has got sufficient knowledge in pharmacy to comprehend the following form of substitution, therefore, we refer you to your physician and we sincerely hope that you will show him this circular) the practice of mixing fluid extracts with the required menstruum and replacing it for tinctures, it is a notorious fact that a tincture made up this way it not anywhere near as good as when it is made up by the official process and an Alkaloidal tincture it is positively criminal to do it. Last but not least we will compare the Tincture of Opium (Laudanum).

A UNIQUE DISPLAY OF BORAX.

The Pacific Coast Borax Company had a display in one of the large show windows of the Siegel-Cooper Company, this city, which attracted the attention of Christmas shoppers. The exhibit is a reproduction of the famous twenty-mule team and triplet wagons, in miniature, all in crystalized borax. The teams and loaded wagons are shown making a trip from the mines in Death Valley, Cal., across the arid regions of San Bernardino County to the nearest railroad shipping point at Mojave, Cal., a distance of about 162 miles, and requiring ten days' travel. Through sixty miles of this journey there is no water, and one of the wagons contains a carrying tank for the supply. The wagons carry fifteen tons each of borax.

Beside the mule team, specimens of borax are shown in the window. The company has but recently taken up the idea of advertising, and is sending like displays throughout the United States. In two stores in Brooklyn during the holidays, the Pacific Coast Borax Company had booths for the display of borax. The company is making a strenuous endeavor to suppress adulterated borax, and has secured a number of convictions in different States where the law is stringent.

Our Tincture of Opium (Laudanum) is made from essayed, granulated Opium (the best grade on the market, contains 14 per cent. of morphine) and we make it 10 per cent. in strength. S. and A. Tincture of Opium (Laudanum) is made in different ways, the process will hardly interest you, but for your physicians' benefit we will mention two ways that I have practised.

(a.) From Powdered Opium which does not contain more than about 10 or 12 per cent. morphine, this is made up by the old method of maceration and diluted to about one-half strength.

(b.) Gum Opium, which should be 10 per cent. morphine but, as a matter of fact, it does not range above 7 or 8 per cent. of morphine at the most, this is sliced up and cooked (cooking spoils just about half of the active constituents of opium), a piece of black licorice is added to make it look stronger and of course a little alcohol is added to keep it from getting sour, allowed to stand a week or two and there you have IT.

This weakening of Laudanum is rather a serious matter as we have tested certain kinds of Laudanum that did not contain more than 7-10 per cent. of morphine, while ours, which is the right kind, contains just double the amount.

Imagine for a moment the doctor prescribing Laudanum and not getting the desired effect he will increase the dose and if you happen to get that increased dose prescription in a drug store where you get double the strength, what would the result be? We therefore honestly advise your physician that if he prescribes it and does not get the desired effect to make sure first that he got full strength before increasing the dose.

Whereof, for all the reasons enumerated above and some more too numerous to mention, we reiterate our statement that we are entitled to your patronage for drugs and prescriptions and beg to remain,

Yours for Health,

THE ALUMNI ASSOCIATION OF THE COLLEGE OF PHARMACY OF THE CITY OF NEW YORK.

The Sixth Annual Ball and Thirtieth Anniversary of this association will be held at Lenox Lyceum on Wednesday evening, January 30, 1901. The object of this ball is to promote a friendly feeling between the members of the Alumni and their business associates. No expense has been spared to make this affair a grand success. Among the features prepared for the occasion by the Executive Committee are a grand concert, music to be rendered by the Eighth Regiment band and orchestra combined. The committee would consider it a favor if remittances covering price of tickets be made at least one week prior to date of ball to the chairman of the Executive Committee, Fred. Borggreve, Long Acre Pharmacy, 1491 Broadway, N. Y. The Committee: Fred Borggreve, chairman; Geo. E. Schweinfurth, F. N. Pond. Dr. Geo. C. Dickman, Wm. H. Ebbitt.

Sub-Committee: G. H. Hitchcock, chairman; C. O. Bigelow, W. S. Brown, H. H. Butler, F. H. Boyd, R. J. Bell, H. Burmeister, Wm. Brandt, S. H. Carragan, J. M. Chalwell, Geo. Yager.

EXAMINATION UNDER NEW PHARMACY LAW.

Several pharmacists, including a member of the new Board of Pharmacy, were discussing the new law recently, when one of them was overheard to ask: "Is there anything in the law which provides how the board shall prepare its questions for the examinations?" The member of the board answered him: "No, there is not. The matter is left with the board and I for one am going to object very strongly to one of the provisions proposed at the informal meetings of the board held recently. It relates to the method of distributing questions of the various examiners. From time to time rumors have gained circulation that members of the New York Board have sold advance questions on board examinations. While this is entirely untrue and is impossible for the reason that no member has access before examination day to any of the prepared questions but his own, such a possibility must be considered. From the present arrangement examinations under the new law are to be held simultaneously at different places in the three sections of the State, and the questions of the examiners are to be forwarded to the secretary-treasurer of the new board in sufficient time to permit him to place them with the chairmen of the sections by examination day. While I am not making any accusations, I am opposed to submitting my questions in such a way, as it affords excellent opportunity for busy bodies to make fraud assertions like the one made against us New Yorkers. My way of relieving this state of affairs would be to allow the mem-

bers of each section to prepare each month a set of questions on one of the examination subjects. At present it is proposed to allow a different section to prepare all of the papers each month. Suppose we allow all of the sections to plan the examination in practical pharmacy; then each of the sections to prepare individual questions on chemistry, pharmacognosy and materia medica, alternating the subjects in the sections, monthly. I think this would make it next to impossible for anyone to get the questions in advance, as no section would know what either of the other two had prepared. I shall propose such a method at the meeting January 7."

CANVASSING THE CITY.

The Executive Committee of the Joint Conference Committee started eight men canvassing Greater New York yesterday to obtain the consent of 75 per cent. of the retail druggists in the section to a revised schedule of prices (see Era, December 20). It is expected the work will be completed in about two weeks, when a meeting of the Joint Conference Committee will be held and the date fixed when the prices will take effect.

"The eyes of the drug trade of the country are on us," said a member of the committee last week, "and we feel, to use an old political expression, 'as New York goes so goes the country.' This section is a pivotal point. The real center of the drug trade is here, and many cities follow our lead. Across the river in New Jersey they are waiting to see what we will do, but I think they can safely proceed, as I apprehend over 90 per cent. of the retail pharmacists in this section will agree to the schedule. I have been informed that nearly all of the aggressive cutters on Broadway favor our plan, and in Brooklyn I have the personal assurance of the largest dealer that he is with us heart and soul. But when the price list is in effect, our work is only begun, as we have to watch for any violations. I assure you, we will do our best to keep the druggists united."

CONCERNING "THE JAMES PHARMACY."

A number of inquiries concerning the financial status and business reputation of "The James Pharmacy," No. 645 Madison avenue, this city, have come to the Era recently from firms who had received large orders for goods, but no cash. A reporter for this paper called at the pharmacy for information. A Mr. James was pointed out as the proprietor, but he declined to give his initials, nor would he give any information concerning himself or business. He stated he had recently purchased the pharmacy of Ellison & Co., druggists, at No. 957 Fifth avenue, and a sign reading "The James Pharmacy, successors to Ellison & Co.," was above the street door. This Mr. James said he could not give the financial standing of his firm without first consulting "a certain party," but that he would send "a letter with the information to-morrow." The letter has not yet been received. "The James Pharmacy" should not be confounded with the reputable house of F. K. James, No. 700 Eighth avenue, as the two have no connection. "The James Pharmacy" is not rated by the mercantile agencies.

DRUG MEN NAMED IN MAYORALTY CONTEST.

A daily newspaper is conducting a "mayorality contest" through its columns, using the "please cut out this coupon" plan for obtaining a popular expression on the most desirable man for mayor of Greater New York. The possessor of a coupon may name any two men as first and second choice for the city's chief executive. Voters in the drug trade have expressed preferences for John McKesson, George J. Seabury and James Stillman as likely candidates for the office. Each of these men has received a goodly number of votes.

Some Estimates.

A newspaper estimate of the appropriations of general advertisers credits the Centaur Company and C. I. Hood & Co. with a yearly expenditure of \$500,000 each. Dr. Pierce's bill is put down at \$300,000, and the Pinkham Company, the J. C. Ayer Company and Scott & Bowne are said to spend \$250,000 each. Brent Good is in the \$200,000 class. In the list of advertisers spending from \$100,000 to \$150,000 apiece for publicity are the Sterling Remedy Company, Postum Cereal Company, Frank Stuart, California Fig Syrup Company, Warner's Safe Cure Company, Pond's Extract Company, Potter Drug & Chemical Company and Enoch Morgan's Sons.—National Advertiser.

WOMAN IN PHARMACY.

The old fogies cannot keep woman out of pharmacy; she is breaking in with great effect. One of the most recent acquisitions, and a very welcome one, is Mrs. Marietta Harmon, of Syracuse, N. Y., who, at the November meeting of the New York State Board of Pharmacy, achieved the highest general average ever secured in the State, her percentage standing being 100. At this meeting for examination the number of candidates was 116, of whom sixty-three passed, among this number being included those who received only the assistant's license.

Mrs. Harmon is the widow of Carl E. Harmon, a young pharmacist who died about four years ago, leaving

to his wife the drug store at No. 615 Almond street, Syracuse, N. Y. Mrs. Harmon was at the time teaching school, but she decided in addition to continue the drug business with the aid of a licensed clerk. She personally superintended the buying and financial part, but, realizing the necessity for a greater knowledge of pharmacy, and the desirability of being a registered pharmacist herself, she decided to take up the study of this profession in all earnestness. Securing a competent instructor, she applied herself diligently to study, which, owing to her school and business duties, had to be

MRS. MARIETTA HARMON.

done at night after closing of the store. It is therefore all the more honor to her that in the short time of five months she was able to so thoroughly equip herself that she secured in the board examination the exceptionally high standing. She is the recipient of many congratulations.

RUMOR OF LAW SUIT OVER N. A. R. D. IN NEW JERSEY.

It has been hinted that a well-known firm of aggressive cutters in a city in New Jersey within a few minutes riding distance of this city, is about to institute legal proceedings against an equally well-known local pharmaceutical association. The charge is that the members of the "pharmaceutical association" have combined to prevent the plaintiffs from securing goods to supply their trade.

The N. A. R. D. plan has been in operation in the city in question for the last two months and it is said the cutters have been feeling the effects of it.

A member of the association in talking over the situation recently said: "Our plan is working splendidly. The cutters do not display cut-rate signs in their windows any more, nor do they use as much advertising space in the papers. All of the members of our association are holding to the adopted price list and I think the cutters are beginning to feel it."

DR. SQUIBB'S SOXS GET ALL.

The will of the late Edward R. Squibb, who died recently at his home, No. 152 Columbia Heights, Brooklyn, was filed for probate on December 21. No schedule accompanied the document, but it is believed that the estate is worth at least \$1,000,000. The will is dated May 23, 1893, and the witnesses are William M. and George S. Ingraham. All of the estate is left to Edward H. Squibb and Charles F. Squibb, the sons of the testator. The will explains that the testator's wife, Caroline L. Squibb, and his daughter, Mary S. Munro, have received advances amounting to what he deemed their fair share of the estate.

GERRISH AGAIN.

F. L. Gerrish, exposed a few years ago for swindling the drug trade through the mail order scheme, has been inquired about recently. He seems to be connected with some corporation-forming project, the attorney for which is the well known Col. Halre, who has in the past few years achieved considerable notice through his defense of drug trade swindlers. Gerrish is said to give his house address as No. 355 West Thirty-second street, and his downtown address No. 45 Broadway, care of

Judge Grow. Some people are quite curious to know what he is up to now.

NOTES.

—The members of the traveling force of Parke, Davis & Company, in this section, numbering about thirty-eight, took occasion to remember their manager or "father," as some have facetiously called him, Sidney H. Carragan, at the Drug Trade Club Monday afternoon, December 24, by presenting him with a handsome pair of diamond studded link cuff buttons as a mark of appreciation. The presentation of the gift was preceded by a dinner, of which the following partook: S. H. Carragan, M. O. Martin, Dr. Takamine, A. G. Bissell, Harry Thornton, Frank Cuddy, George H. Dawson, W. L. Bradt, George Andrews, F. P. Tuthill and George E. Reed. Immediately following the dinner Mr. Cuddy arose and in an excellent speech presented Mr. Carragan with the token of remembrance. Mr. Carragan was taken completely by surprise but responded in a fitting manner. Harry Thornton then read a poem apropos of the occasion by Nathaniel Nickolai and toasts were drunk to William Warren, manager for Parke, Davis & Company, and Mr. Carragan. The affair was pleasantly ended in speechmaking by those present.

—At the December meeting of the New York Board of Pharmacy the following were successful in passing: W. H. Bennett, Ephraim L. Ennis, Benjamin Goldstein, Henry Goldwater, Victor Halper, Herbert B. Harding, Mar. Jacobus, Thomas N. Lahey, Isaac A. Myerson, Henry K. Parker, Ralph Paul, Adrian Paradis, Marcus Rosenber, William Schoelles, Rev. Hubert J. Straten, Alice W. Thonger, Maris L. Tobias, William G. Turner, John A. Valentine, David N. Weinberg, Bertram R. White, Max Wolfram, Jr., Fred H. Bettelle, Dominco De Lucas, Louis B. Epstein, Gennario Gragano, John Krack, Isaac Lear, Morris Leibowich, George A. Lewis, Samuel Meyer, Scott J. Selkin, Bernard Weinbaum, Katie Weiss, Edward S. Wolk and Augustus S. Wurzer, Jr. It is probable that many others of the 181 persons examined "passed the board," but up to Monday, December 24, the board had not completed the ratings. However, the others who are successful will be notified and given a chance to register before the old board passes from existence.

An order was handed down by Justice Lacombe in the United States Circuit Court last week in the case of the Farbenfabriken of Elberfeld Company against Christian A. Lotz, doing business as the Morris Chemical Company, in which the defendant is perpetually restrained from infringing on a patent of the plaintiff for an improvement in a compound of iodine with thymol. The order also directs that the defendant shall render an accounting of the profits accruing from his infringement from February 24, 1891. John A. Shields was named as master in the matter of accounting of profits. Justice Lacombe issued an order in another suit brought by the Farbenfabriken Company against the Orienta Chemical Company, of which a Mr. Frolich is president, restraining the defendants from infringing on the same patent as the one in the Lotz case, but the order grants only a preliminary injunction. The defendants did not appear against the order.

—The semi-annual election of officers of the Retail Druggists' Association was held at a meeting of the association Friday evening, December 21, and resulted in the following selection: President, J. Weinstein; first vice-president, C. H. Bernstein; second vice-president, B. Mishkin; secretary, L. Marmor; financial secretary, A. H. Solotaroff; treasurer, George Ginsberg; trustees, B. Bockshitsky, M. Nissleson and A. Lindemann. It was decided to donate \$50 to the Joint Conference Committee to carry out the work of canvassing the city. Arthur Briansen was elected to membership.

—The following druggists appeared before Justice Jerome in the Court of Special Sessions, Monday, December 17, to answer charges of violating the pharmacy laws: Dr. William E. Jenner, No. 993 Columbus avenue, Louis Romanoff, No. 212 East 121st street, and John F. Evers, No. 2208 Lexington avenue. The first two pleaded not guilty, and were held for trial, while Evers acknowledged guilt and paid a fine of \$50. Abraham Wolff, No. 761 Amsterdam avenue, also charged with violating the pharmacy laws, was not able to appear because of illness, and his trial was set down for January 15.

—"Business is the dulllest I have known it to be in years," said a proprietor of a store of the lower East side of town last week. "Why, giving our customers

Christmas presents has had no effect. Last year I had an extensive line of sundries of all kinds, and there was plenty of people buying; this year there's just as many people—a few more, perhaps—but they're not buying. In fact, I haven't seen a year since 1895 when business has been so poor. My story you'll find is the same as that of a good many other druggists in this part of the town."

—The bowling games of the Wholesale Druggists Association were continued on Saturday on Reid's alleys with the following results: Colgate & Company, 870; Johnson & Johnson, 755; Lanman & Kemp, 698; General Chemical Company, 630; Parke, Davis & Company, 797; Johnson & Johnson, 823; National Lead Company, 801; Lanman & Kemp, 687; National Lead Company, 824; General Chemical Company, 722; Colgate & Company, 730; Parke, Davis & Company, 755.

—Because of the nearness of the holiday season, the usual number of druggist visitors to the trade from out of the city was not great, and only a few called. Included among these were: Charles Minton, of Charles Minton & Co., Red Bank, N. J.; L. O. Grinnel, Asbury Park, N. J., and M. B. Cochran, Pittsburg, Pa.

—A bowling match is being arranged between teams representing the Alumni Association of the Brooklyn College of Pharmacy and the class of 1901 of the Brooklyn College of Pharmacy. The game will be played at an early date. The stake is that the losing team "settle for the dinner for the crowd."

—The Alumni Association of the New York College of Pharmacy gave the second reception of the season to the students of the college at the college building, on Wednesday evening, December 19. There was a large number in attendance, and the evening was pleasantly passed in dancing.

—The Hygeia Medical Company, of Newark, N. J., has incorporated under the laws of that State to deal in drugs and chemicals. The company is capitalized at \$100,000, and the incorporators are J. Ingle, Jr.; A. G. Loomis and G. F. Brandenburg.

—The Linton Pharmacy, No. 48 Union Square, has been incorporated under the laws of this State. It has an authorized and paid-in capital of \$20,000, and the incorporators are Thomas W. Linton, Harry Malarky and William P. Case, of this city.

—The Emancipo Company, of New York City, has incorporated to manufacture remedies for drug addictions. The company has a capital of \$30,000 and its incorporators are: W. Nittles and M. M. Cohn, of New York City, and W. A. Hilliard, of Brooklyn.

—The Bordeaux Chemical Company, of New York City, has incorporated with a capital of \$1,000 to manufacture patent medicines. The incorporators are: C. B. Frazier, N. B. Winstock, of New York City, and J. Murphy, of Hoboken, N. J.

—The Apothecaries' Bicycle Club made Oakwood, Staten Island, the objective point for the weekly run Thursday, December 20. The season is about closed, the wheelmen taking their "runs" only when the weather is mild and clear.

—M. R. Mandlebaum and J. H. Whittet, local representatives of the William S. Merrell Chemical Company, are in Cincinnati in attendance at the annual dinner given by the company to its traveling staff.

—J. J. Peterson, who has conducted a pharmacy at No. 166 Franklin street for some time, has sold his store and gone to Buffalo, where he will reside. Mr. Peterson retired from business because of ill-health.

—W. C. Dambach, a well known retail druggist of Buffalo, N. Y., "stopped a short while" with old friends in the drug trade last week. He had just returned from a trip of several weeks in Europe.

—Mr. Zeigmeister has sold his store on Second street, near Avenue A to A. Weinstein, who was formerly employed by Goetzhoff and Bakst.

—The annual holiday vacation at the New York College of Pharmacy was begun Wednesday, December 19, and the college will remain closed, with the exception of the office, until January 3.

—Another judgment has been added to the long list filed against that "king of drug swindlers," Henry P. Crosher. Constantine Stephano is the complainant, and the amount is \$300.

—The Brooklyn College of Pharmacy closed Saturday, December 22, for the holidays. Following the opening of college on January 2, the regular mid-term examinations will take place.

—The (MHA) Chemical Company, of this city, has incorporated to deal in chemicals, etc. Capital, \$19,000. Incorporators: J. Weston, L. S. Marx and L. Scheer, all of this city.

—William Churchill, of the scientific department of the local branch of Parke, Davis & Co., who had been confined to his home for the last three weeks, is able to be about again.

—A meeting of the Drug Clerks' Circle was held on Wednesday evening, December 19, at which time arrangements were discussed for the ball to be given in February.

—The Koch Lung Cure Company, of Rochester, N. Y., has incorporated in New Jersey. Capital, \$50,000, and incorporators: L. C. Tower, H. J. Brainard and K. K. McLaren.

—At the December session of the New York Board of Pharmacy about sixty-five senior students of the New York College of Pharmacy "were up" for examination.

—A slight fire occurred in the drug store of George Ginsberg, No. 225 Madison street, Tuesday evening, December 18. The damage was trifling.

—The American Chemical Society begins its twenty-second general meeting in Chicago to-day. The session will conclude to-morrow evening.

—A meeting of the Drug Trade Section of the New York Board of Trade and Transportation is scheduled for this afternoon.

—H. H. Hagerty has secured a judgment for \$99 against Charles F. Risley, of Charles F. Risley & Co., No. 46 Cortlandt street.

—Berthold Roubicek, of No. 2243 Eighth avenue, has purchased a second store of A. A. Rensen, at 161st and Caldwell streets.

—B. B. Hamlin, manager of the New York office for William R. Warner & Company, is confined to his home by illness.

—J. H. Corry has resigned his position at the Sherman Square Pharmacy, Seventieth street and the Boulevard.

—Mr. Voler opened a new store Monday, December 17, at Eastern Parkway and Wotkyns street, Brooklyn.

—A new drug store is to be opened at No. 3137 Broadway, corner of 125th street, by Harold L. Lesser.

—The Horse Review Company has secured a judgment against the Major Cement Company for \$125.

—Henry R. Worthington has secured a judgment against the Carlstadt Chemical Company for \$31.

—The well known "Chauncey Depew" of the drug trade, P. R. Lance, is in town for the holidays.

—"Wasself's Pharmacy" will open shortly at 124th street and Madison avenue.

—S. Volel has opened a new store at Pitkins avenue and Osborne street, Brooklyn.

—George Holran has accepted a position with Dr. Heron, druggist at Lakewood, N. J.

—E. P. Montague, of Lazell, Dalley & Co., is confined to his home by illness.

—A. H. Solataroff is repainting the front of his store at No. 91 Broome street.

—Mr. Hoffman will open a new store shortly at Madison and Montgomery streets.

—M. Studnitz has opened a new store at 118th street and First avenue.

—The annual dinner of the Drug Trade Club is to be held next month.

A Valuable Stimulant.

When the use of an alcoholic stimulant will save a life, it is imperative that only the best be administered. The purer the stimulant, the surer its action; and Hunter's Baltimore Rye has long possessed a reputation for purity. Because of its age and excellence, it is recommended to women obliged to use a stimulant. Order your supply of Wm. Lanahan & Son, Baltimore, Md.

Get It All.

On another page of this issue of the Era, James W. Tufts tells you in an interesting manner how to obtain the largest profit from a glass of soda. If you have not a Tufts fountain he asserts that you have not yet put your fountain department on the most profitable basis. If you want helpful suggestions along this line, write to the American Soda Fountain Co., successors to James W. Tufts, 282 East Congress street, Boston, Mass.

IN AND ABOUT BOSTON.

ANNUAL REPORT OF THE STATE BOARD OF PHARMACY.

Boston, Dec. 22.—In the recently issued annual report of the Massachusetts State Board of Pharmacy, there is much general information of interest to druggists as well as others not identified with the trade. In the main, it may be summed up that the board finds much among the trade worthy of commendation, as regards the way business is for the most part conducted. The board says, among other things: "That pharmacists have seriously suffered from unjust taxation and cut-rate competition cannot be denied. We have strong hopes that relief is near at hand, and that the government will readjust the stamp tax, placing the burden where it can be more equitably borne and where protection is afforded, and that a fair remuneration may be given those who toil in a profession requiring special skill and having to do with the agents of life and death. Looking backwards through the years since the organization of the board, we perceive that advancement has been made in the professional standing and in the qualifications of pharmacists, largely due to the excellent opportunities afforded within our own State for pharmaceutical instruction, and to the maintenance of a standard to which all must attain before being legally qualified to engage in the business or profession. We would emphasize the need of a proper preliminary education for all persons entering the business and desiring or intending to become pharmacists."

Regarding the conditions of the "model law" agreed upon by the American Pharmaceutical Association, the board says:

"Certain requirements as to age and experience must be established, which must be verified under oath before applicants can appear for examination before a board. When certificates are granted they are for a limited period. In this particular the laws of our State are defective. Since the enactment of the original pharmacy law, in 1885, to October 1, 1900, 3,952 certificates have been issued. To our best knowledge about 2,500 of these certificates are in use. Our agent is constantly finding certificates displayed, the persons owning the same either being deceased or having retired or forsaken the business, leaving behind their certificates, which are sometimes used by unscrupulous persons for illegal purposes. We therefore earnestly recommend a re-registration of all persons now engaged in the practice of pharmacy—not a re-examination, but a renewal of certificates, and that when issued they shall be for a limited period, either two, three or five years from date—thus providing for the future." The report shows that during the past year 306 candidates were examined for registration. Of this number only 37 passed and received their certificates, emphasizing the high standard set.

Referring to the enforcement of the pharmacy laws, the board says:

"The law requires that sales of intoxicating liquor of any kind (which includes alcohol) by retail druggists and apothecaries, for medicinal, mechanical or chemical purposes, shall be made only upon the certificate of the purchaser, which certificate shall state the use for which the same is wanted, and shall be immediately cancelled at the time of such sale in such manner as to show the date of cancellation. It also requires that there shall be a book of record, the form of which is also provided.

"We can see no good reason for maintaining a law requiring certificates in addition to the record, the law being of little or no effect, and an annoyance to worthy people, who fail to understand why they should sign twice in the same book, and to the pharmacist, who now has difficulty in obtaining signatures, many reputable persons refusing to sign until the law is explained to them as being imperative and the completion of the record absolutely necessary. The dishonest and unworthy are not so particular, and will sign any number of times to secure what they desire."

During the year covered by the report, twenty-six registered pharmacists died. There were about ninety complaints made to the board, and these were all investigated. About \$3,700 was paid in fines for infraction of the pharmacy laws.

STARTLING EXPERIENCE OF A BOSTON WHOLESALE DRUGGIST AND HIS WIFE.

Boston, Dec. 22.—Andrew G. Weeks, president of the Weeks & Potter Drug Company, with Mrs. Weeks, had a narrow escape one afternoon this week in what might have been a more serious, or even fatal, runaway. Mr. Weeks lives at No. 40 Beacon street, and with his wife was out for a drive on Commonwealth avenue. Burns, their coachman, lost control of the horses, which made a wild dash of a mile or more, during which several narrow escapes from collisions occurred. At Cottage Farm bridge a sawing machine in a wood and coal yard added to the fright of the horses, which were further startled a moment later by a steam carriage dashing past at full speed. They tore along after that, and the coachman could only keep them in the middle of the street and yell for everybody to get out of the way. Mounted Officer Bates was at the corner of Brighton and Commonwealth avenues, and saw the runaways bearing down on him like a whirlwind. He at once put his own horse into a run, and when the carriage came alongside, spurred his horse to equal speed. As soon as it was possible, he leaned far over and seized the reins of one horse, and, the coachman redoubling his efforts upon the other one, the trembling animals were gradually brought to a full stop, so that Mr. and Mrs. Weeks could alight. Their horses were allowed to rest while they reached home in another carriage. Mr. Weeks warmly thanked Officer Bates, and later notified Police Headquarters, giving him due credit for great nerve in stopping the terrified horses.

NOTES.

—People (that is, some people!) will steal almost anything in these days. A man who was in the Springfield Court on a charge of vagrancy and was released, was brought in again the next night because he was found with a physician's case containing drugs and medicines in his possession, for which he could give no satisfactory reasons, saying that he had seen some boys with the case, and had taken it away from them, believing that they had stolen it, and that he was looking for the owner. He was allowed to go, as there was no one on hand to claim the case. This later was identified as belonging to a doctor in West Springfield. He does not think it possible that it slipped from his carriage without the aid of some person.

—There was a good attendance at the monthly meeting of the Boston Druggists Association, held on the evening of December 19 at Young's Hotel. The president, G. W. Cobb, presided. Capt. R. G. F. Candage, of Brookline, surveyor of the Boston and Marine Underwriters, delivered a lecture on "Boston Ships, and Their Service to City and Country." Capt. Candage is a firm believer in American ships and in the Frye bill now before Congress. The association adopted the following resolution:

RESOLVED, That the Boston Druggists' Association heartily indorses the Frye Shipping bill as being in the interests of our exports, and that its passage would stimulate and benefit not only shipbuilders and ship-owners, but all industries connected therewith, to the advantage of American labor and American capital.

—Dr. John Bowker, the noted traveler, and who was a druggist at Lawrence, spent last summer in "out of the way" Europe, returning by way of Paris, and the people and things he found in the French capital make the topic of the illustrated lecture of twenty minutes which he is to give at Keith's the week of January 7. Dr. Bowker is now one of the great travelers of the world, having more than sixty countries to his credit, all of which have been studied in a careful and leisurely manner. As a lecturer his abilities are well known and he gains in popularity wherever heard.

—Owing to the fact that Joseph W. Creasley, proprietor of one of the drug stores in Amesbury, recently was before the District Court charged with a violation of the liquor law, on which charge he pleaded guilty and paid a fine of \$50, the chief of police has sent a written notice to all of the drug stores in that city calling attention to the law in regard to the sale of liquor by druggists in no-license towns. This had the effect of making all the druggists careful, and it is doubtful if any liquor can be bought in Amesbury now without a physician's prescription.

—The Eastern Drug Company's bowling team is winning new laurels constantly. This week they played against letter carriers and clerks in the South End District. The drug clerks won two out of three games, the

players and their scores being as follows: Huggan, 227; Cullen, 233; Grant, 244; Quinn, 247, and Williams, 228, a total of 1,178 as against a total of 1,172 made by their opponents, who, it will be seen, played them a hard game.

—Dr. W. B. Southworth, a leading druggist of Malden, was re-elected as chairman of the Board of Aldermen there. He is one of a committee which this week visited Chelsea to inspect the Chelsea police station with a view of selecting plans for the new police station to be erected in Malden.

—Daniel Kelly, recently of the drug firm of Kelly & Callahan, in Woburn, and who sold out his interest to his partner, is again to go into the business. He will open a pharmacy in the newly renovated block on Main street in that city.

—Francis A. Lavelle, for some time a clerk at H. B. Merchant & Co.'s drug store in Clinton, has concluded his services at that place. He intends to rest until after the holidays and then decide upon his future.

—One sometimes sees queer things round and about drug stores. In a Malden drug store a startling sign to call attention to a certain lung cure reads as follows: "Are Your Lungs Worth Twenty Cents?"

—The week's exports from the Port of Boston include drugs and chemicals, \$15,281; india rubber manufactures, \$5,601; tobacco, \$14,168; wax, \$314; spirits, \$15,135.

ELSEWHERE IN NEW ENGLAND.

—Charles C. Douglas, who for some years past has been in charge of the State Liquor Agency in Portland, Me., has oftentimes some queer experiences with odd characters. He is constantly obliged, in use of his best judgment, to refuse to sell liquor to people who demand it. Recently a well dressed man came to his agency and told him he wanted a pint of whiskey for medicinal purposes. He was perfectly sober and there was no reason for believing that he was not telling the truth. His name and address were taken, as the law requires, and Mr. Douglas then gave him the liquor. Greatly to his surprise, the man returned in about an hour and said he wanted another pint. The agent naturally refused to give it to him, at which he became quite indignant and asserted that he wanted it for "medicinal purposes" and "nothing else." Mr. Douglas positively refused to give him the liquor and he went out and over across the street and met a companion. They conversed for a few minutes and then the companion came over, and he was greatly surprised when he was turned down promptly. He said: "I haven't bought any liquor here to-day." "No," replied the agent, "and what is more you won't be likely to," and he went off. And the funny part of it all was that in an hour a young man who had not been seen before came in and asked for a pint of whiskey "for medicinal purposes." His name and address were taken and he then handed over a bottle which was the same identical one which the other two callers had used. It was recognized by the cork, which had a peculiar mark on it. The agent handed it back to him, saying "I guess I won't fill that bottle, it has been here too often to-day." He looked at Mr. Douglas for a second and then walked out without saying a word.

—A unique case at Clinton, Conn., is that where the Congregational Church upheld John B. Wright, a prominent druggist and a member of the church, when he was arraigned on the charge of violating the liquor law. The raid on his drug store was conducted by a clergyman who is assistant secretary of the Law and Order League of New Haven. He and his helpers seized a large quantity of liquor. On the Sunday night after the raid a temperance meeting was arranged to take place in the Congregational Church. The clergyman-secretary was advertised as the speaker, but the majority of the members were opposed to the meeting and sympathized with the druggist. The pastor and several prominent citizens told the secretary that he could not speak there. The anti-temperance party triumphed and the intended speech was not made.

—A company has been organized at Gardiner, Me., to be known as Forest Spring Water Co., with Z. F. Little as president, Walter Morse as the vice-president and G. W. Heselton as secretary and treasurer. The company has purchased the Forest Spring belonging to Walter Morse, and is planning to erect a bottling establishment with the idea of placing the water on the market.

—Before the adjournment of the Vermont Legislature the House passed a bill prohibiting the sale of cigarettes in that State by an overwhelming majority. The bill to regulate the sale of drugs and poisons was killed because

the members thought it would interfere with the business of small dealers in country towns.

—While druggists often have exhibitions in their shops which have no special bearing upon the trade or perhaps are merely incidental to it, it has remained for the Burpee Drug Store, in Waterbury, Conn., to have on view a large collection of reptiles.

—After being for some time with the Burlington Drug Company, at Burlington, Vt., Harry S. Burrows has resigned his position there and has gone to join Mrs. Burrows at Denver, Col., where she has been for several months.

—A fire that recently caused a total loss of nearly \$5,000 broke out in the rear of the Star Clothing Company's store, at Dover, N. H., and extended through the block in the rear, occupied by J. E. Vickery, a druggist.

—The famous Sheriff Reeves—ever watchful and who "never sleeps"—searched the drug store of E. Gosselin & Bro., at the corner of North street and Elmwood avenue, in Burlington, Vt., but found no liquor.

—C. H. Murphy, at his Augusta, Me., drug store, has 4,000 minnows in the basement, which makes a pretty sight. They are intended to be used for live bait by fishermen.

—Louis St. Hilair, who for some years was employed by Underhill & Klitredge, at Concord, N. H., has been given a position in the Depot street pharmacy in that city.

—A new pharmacy at Contoocook, N. H., near Concord, has been opened by Davis & Reed (O. N. Davis and Frank Reed). It is to be managed by Mr. Reed.

—Charles Reed, after serving as clerk at Tetrault's drug store, at Augusta, Me., has gone to Caribou, at which place he has taken a similar position.

—J. J. Estes, of Rockland, Me., has lately been in New York selecting late novelties and other goods for his store. Mrs. Estes accompanied him.

—A line of jewelry, silverware and like things has been added to the stock of Holton's drug store at Newbury, Vt.

—Joseph Robbins, a former drug clerk at Concord, is now manager of a pharmacy at Wolfboro, N. H.

—An exhibition of Oriental goods lately has taken place at the Concord drug store, in Concord, N. H.

—A new clerk at George W. Merrill's, Portland, Me., drug store is Frank Sholes.

PHILADELPHIA.

PHILADELPHIA COLLEGE OF PHARMACY.

Philadelphia, Dec. 22.—The third of the series of pharmaceutical meetings was held Tuesday, December 18. James T. Shinn presided. Owing to the number of practical matters which were brought forward the meeting was an exceptionally valuable one. The first speaker was Dr. Henry Leffman, who gave a most interesting talk on the subject of "Explosives," illustrating with numerous samples of the powders used in blasting and in modern warfare, and also giving a few practical demonstrations of the mode of action of explosives. J. Percy Remington exhibited and described "A Pharmacist's Apparatus Stand," which is designed for carrying on a large number of operations at one time, such as those of evaporation, filtration, percolation, etc., with the greatest possible economy of space. F. W. Haussmann read a paper on "The Discoloration of Syrup of Iodide of Iron," which property he had proved not to be due to free iodine as has been generally supposed. Those taking part in the discussion of this paper were: Messrs. Leffmann, England, Shinn, Weidemann and Lowe. M. W. Bamford showed that lard could be made satisfactorily and economically by pharmacists from the crude animal fat, and exhibited specimens which he had prepared. This subject was discussed by Messrs. Lowe, Wiegand, Shinn, Haussmann and Kraemer. A valuable paper on "Adulterations of Essential Oils," by Dr. G. R. Pancoast and Lyman F. Kebler, was read by the latter. The authors enumerated a number of the adulterants of essential oils and gave tests and methods for their detection. Mr. Kebler also said that the demand for cheap products was one of the chief causes leading to the adulteration of products of this kind. He did not hold importers responsible in all cases for this condition, for in many cases the adulteration is beyond their control.

It was announced that Professor Jas. H. Beal, of Scio, Ohio, was expected to be present at the next meeting.

The "social meeting," under the auspices of the class of '01 was also held Tuesday, at 8 p. m. The Museum Hall could scarcely hold all the guests who came to enjoy the hospitality of the future pharmacists, and up to a late hour there was still scarcely room for the dancers on the

floor. The function was one of the most successful and enjoyable of the season and reflects great credit in its management on the committee of the third year class. Light refreshments were served during the evening in the lower halls, at which '01 presided in a manner most genial, giving the guests specimens of their pharmaceutical skill in attending to the wants of all at one time.

THE WOES OF A CUTTER.

Philadelphia, Dec. 22.—C. G. A. Loder, who conducts a "cut rate" drug store at Sixteenth and Chestnut streets, has begun suits in the Common Pleas Court against the members of the Philadelphia Association of Retail Druggists, the National Wholesale Druggists' Association and the National Association of Retail Druggists, claiming that he is the victim of a conspiracy to drive him out of business, a conspiracy that extends over the whole United States. As yet no summons have been served on members of the local association, and the opinion is generally held that Mr. Loder has been given the benefit of some shrewd free advertising in the daily papers that have devoted a column or so to this case.

The suits are based on the assertion that members of the several associations have entered into an agreement not to sell Mr. Loder any goods because he refused to enter into an agreement to maintain a higher scale of prices that had been agreed on by them. The "boycott" as Mr. Loder calls it, went into effect November 1, and he claims that since that time no member of the allied associations would sell him goods, although the orders were accompanied with cash. The usual plea of the cutter is given, "that he has the right to sell goods at whatever price he wants to," and of course the other side of the question is overlooked, i. e., that the wholesaler has an equal right not to sell to any party that he does not want to have deal with him. The outcome of the case will be watched with much interest, as Mr. Loder is practically the only Philadelphia druggist who would not agree to the scale of prices suggested by the local association, and has expressed his determination to test the legality of the position assumed by wholesale dealers.

NOTES.

—The Philadelphia Wholesale Drug Bowling League held its initial meeting Saturday last at the Drug Exchange, with D. E. Bransome in the chair. The organization was speedily effected and a number of members were enrolled, committees being appointed to arrange for rules to govern the league games and for other necessary details. The organization promises to be a success from its very start. Nearly one hundred members have signed the membership roll and the greatest enthusiasm prevails. A large share of the credit for the inception and success of the league is due Mr. Bransome, J. & J.'s representative here, who has done yeoman's work in bringing the talk of the various schemes down to a practical working basis and stirring up the members' enthusiasm to the boiling point. The following firms are represented by clubs: Smith, Kline, French Co. (store), Smith, Kline, French Co. (laboratory), The J. Elwood Lee Company, Shoemaker & Bush, Robert Shoemaker & Co., Whitall, Tatum & Co., Hance Brothers & White, Aschenbach & Miller, V. H. Smith & Co., H. K. Mulford & Co. A number of representatives of different houses in other cities will form an "Allied Interests" club, which will also be a member of the local league. It was decided that there should be an initiation fee of \$1 per member; the monthly dues will be fifty cents, or more if it should be found that this sum is not enough for expenses. The following officers were elected: President, D. E. Bransome; treasurer, H. Starkey (R. Shoemaker & Co.); secretary, R. MacFarland (Shoemaker & Bush). Committees composed of one representative from each club were also appointed on "schedule" and "alleys." The first contest will be held some time in January.

—A word of warning might be given to Philadelphia druggists in connection with the "Universal Trade Association," of Detroit, which managed to secure many good dollars from the trade a few years ago. There is an agent of this concern now making the rounds of Philadelphia trying to collect bills from druggists who had formerly subscribed for the organ of the U. T. A., no matter whether they have discontinued their subscriptions or not. As a matter of fact, this paper has not been sent out regularly for some time, and no druggist should pay the slightest attention to the threats of this agent if he attempts to bluff them into paying subscriptions for it.

—T. H. Potts is telling quite a joke on one of his best customers, who rushed into his store the other morning in great fear of death and called for doctors and antidotes of all sorts and kinds. It seems that this gentleman had eaten freely of buckwheat cakes for breakfast and then discovered that the cook had mixed them up with plaster of paris instead of flour. Mr. Potts assured the party of the harmlessness of plaster of Paris as a substitute for flour—gave him a dose of salts and collected the usual fee.

—W. L. Cliffe, the well known Kensington druggist, has been confined to his bed with a heavy cold for several days. Happily he is now on the road to recovery and is around again. The counsels of Mr. Cliffe were greatly missed at the meeting of the committee appointed by the P. A. R. D. to formulate a new State pharmacy law, which met last Wednesday, as he is one of the best posted local men on pharmaceutical legislation.

—Proceedings in the suits against druggists who had violated the State Pharmacy Law, as announced in the Era last week, came to a rather lame conclusion when brought before Magistrate Devlin. This official refused to go on with the suits unless an amount sufficient to cover the costs was deposited with him in advance. This the Board's attorney would not do, so the suits still hang fire.

—A. Swisher, assistant to D. E. Bransome in persuading druggists to stock up with Johnson & Johnson's goods, who is commonly known to the trade as "the man with the confidential way," will enter into the uncertain state of matrimony in the near future. Those who know Mr. Swisher best are still wondering if he popped the momentous question above a whisper and how.

—Robert McNeill, of Kensington avenue and York street, has made a number of alterations in his store, having taken the entire upper floor of the building, which is to be devoted to a stock of physicians' and surgeons' supplies and sick room sundries. This new improvement will give Mr. McNeill the largest floor space of any drug store north of Arch street.

—A very enjoyable progressive euchre was given by Mr. and Mrs. Stiles at their home last Monday evening, the occasion being Mr. Stiles' birthday. Mr. Stiles still maintains the secret of what birthday it was and is going around looking ten years younger since.

—Changes: H. C. Cooley & Co. have retired from business; F. W. Jordan has moved in from Tacony and is now located at Thirteenth and Vine streets.

—E. H. Heyl has purchased the drug store at Seventeenth and Norris streets, making extensive alterations in its equipment.

Attention is directed to the advertisement of the A. P. W. Paper Company in this issue. This company is advertising in all the leading monthlies a Year's Supply of Superior Toilet Paper for One Dollar, delivered anywhere in the United States, and is actually paying for delivery at distant points double the cost of the goods. This appears a costly way of advertising, and indicates unusual confidence in the superiority of the goods. This superiority is evidently relied upon for future orders, which must go to such of the trade as are prepared to supply it. Obviously the advertiser will not continue longer than necessary a delivery system exceeding the price of the goods. Competition has flooded the market with so-called cheap rolls coarse in quality, short in count and dear at any price. The efforts of this company to convince consumers by actual demonstration that fine grade paper is really the cheapest per 1,000 sheets and more desirable in every way will undoubtedly be successful, and it will be to the interest of every dealer to have in stock The A. P. W. brand.

Wine of Cardui.

The Chattanooga Medicine Company are extensively advertising Wine of Cardui and Thedford's Black Draught by the distribution of the Ladies' Birthday Almanac for 1901. This almanac has an annual circulation of 15,000,000 copies, and last year attracted considerable attention because of its accurate prediction of the Galveston storm in September. If you desire a fine assortment of Ladies' Birthday Almanacs, Cardui Book, etc., address The Chattanooga Medicine Company, Chattanooga, Tenn.

Duffy's Pure Malt Whiskey.

The distillers of Duffy's Pure Malt Whiskey desire to emphasize the fact that theirs is the only whiskey taxed by the Government as a medicine, and that they pay the tax. Consequently, this tax is neither an annoyance nor burden to the jobber or consumer.

BALTIMORE.

CHARGED WITH FRAUD.

Baltimore, Dec. 23.—Samuel Blum, Philip Blum and Isaac Harris, until recently engaged in business at the corner of Hanover and Lombard streets, will be called upon to appear in court and answer the charge of having obtained goods to the value of \$25 from McCormick & Co., manufacturing chemists and drug millers on South Charles street. This is not the only case against the accused. Various other delinquencies of a similar nature are alleged against them, the total value of the merchandise secured being placed at \$1,000. The firm is now in the hands of receivers, and the prosecuting houses aver that it proceeded to order large quantities of articles when it had already become heavily involved and with the express purpose of defrauding creditors. Goods, it is said, were sold by the firm at a lower price than it had agreed to pay for them, which is regarded as evidence of dishonest intent. The outcome of the case is awaited with much interest.

Drug Trade Bowlers.

Baltimore, Dec. 22.—The Baltimore Drug Trade Bowling Club opened this week's games with three contests between Muth Bros. & Co. and McCormick & Co., or rather, these two teams were to have contested. But the first mentioned quintette forfeited the game to its opponents, who rolled them without competition, scoring 751, 694 and 655 points respectively. M. Smuck was high man with 202 points and an average of 166 1-3. Last night the Root and Herbs met Sharp & Dohme, the latter getting two out of the three contests by 697, 723 and 689 points against 658, 743 and 758 respectively. No particularly high scores were made during the evening. The games of the week leave the teams in the following position.

	Games Won.	Games Lost.	Per Cent.
Root and Herbs.....	16	5	.761
McCormick & Co.....	15	6	.714
Sharp & Dohme.....	14	7	.619
Jas. Bailly & Son.....	14	7	.667
Muth Bros. & Co.....	7	14	.333
Winkelmann & Brown Drug Co.	4	17	.190
Parke, Davis & Co.....	2	10	.111

Honor for Dr. Dohme.

Baltimore, Dec. 22.—Dr. A. R. L. Dohme has been asked by the president of the Johns-Hopkins University to deliver the lectures on pharmacy which Prof. Abel, who suffered a serious injury to his eyes by the explosion of a vacuum vessel, had been assigned to give. Dr. Dohme has accepted and will begin this important work in January. The choice of Dr. Dohme by President Gilman is at once a flattering compliment and a high tribute. Prof. Abel will, fortunately, not be blind, as was at first feared. The sight of one eye is assured, while the condition of the other cannot yet be determined, although the oculists have strong hopes of saving it.

A Club for Drug Trade Members.

Baltimore, Dec. 22.—A suggestion worthy of careful attention and thorough consideration has been made by Dr. A. R. L. Dohme, this being that a club for members of the drug trade be organized in location convenient to the different houses. Such a club could devote itself to athletics and provide other entertainment, like billiards and bowling, and would hardly fail to attract an eligible list of members. It would dispose of the objection sometimes hinted at, of being compelled to meet in a more or less public place, and would afford sufficient variety of diversion to satisfy all tastes. Employees of the wholesale and manufacturing houses, as well as retail pharmacists, could gather there in social intercourse and find the means to foster closer relations. Visitors could be entertained and the club could be made the means of cementing friendship and comradeship, besides promoting the advancement of members in other directions. The idea has been received with much favor and may lead to tangible results.

NOTES.

—The monthly dinner of the Wedgewood Club, which would ordinarily have taken place last week, was omitted owing to the close proximity of the holidays and the preparations incidental thereto. To make up for lost time the next banquet will be unusually elaborate.

—The Baltimore Chrome Works, at Fairfield, Anne Arundel County, near Baltimore, which were destroyed by fire some time ago, will be rebuilt. The contract for the reconstruction of the works has already been given out.

—The past week has been a very quiet one in the retail drug trade. Few visitors came to town, and those who called were usually from the immediate vicinity of Baltimore.

LOUISVILLE.

Louisville, Ky., Dec. 20.

—Bennett Bros., of Fulton, cannot be accused of a lack of enterprise. On Saturday morning their drug store, consisting of the building and the entire stock, was destroyed by fire and before twenty-four hours had passed they had purchased another store and were doing business. Immediately after the blaze had destroyed their own stock they were in negotiation for the purchase of the store conducted by R. A. Kellam and it took but a short time to close the deal. Mr. Kellam, the retiring druggist, has not yet decided upon a location.

—Charles Scribner, the druggist at Sixth and Jefferson streets, who threw an inspector for the Kentucky Heating Company out of his store last week, was presented in the police court on Tuesday morning and was dismissed. Mr. Scribner is now receiving the congratulations of his friends and is thinking seriously of entering the prize ring. He is being complimented on the artistic manner in which he rid himself of the intruder.

—Emmett Logan, colored, was arrested in Louisville on Tuesday by the detectives and it is believed that he looted some drug store. He had in his possession about fifteen ounces of cocaine and he attempted to dispose of it at a ridiculously low price in the district inhabited by the members of his race. He came here from Cincinnati, but so far no robbery has been reported. He also had a quantity of morphine and opium.

—Leech & Ellis, the wholesale druggists of Glasgow, have finished their new building and will be ready to occupy it in a few days. The firm was visited by a disastrous fire about six months ago and their entire stock was lost. The new building is one of the handsomest in the southern part of the State. It is much larger than their old building and the firm expects to do an increased business.

—The Maysfield newspapers are wondering what became of Byron Johnson, a young man who went there from Calvert City and purchased a drug store from Gilliam & Albritton. It is said that he packed enough of the stock to pay for his investment and left town between the setting and rising of the sun. Messrs. Gilliam & Albritton took charge of the deserted stock and continue in the business.

—R. B. Phelps, for many years a druggist at High Bridge, Ky., is disposing of his stock of drugs and will shortly remove to Louisville. He is very much impressed with the way the business is conducted in the metropolis of Kentucky, and is confident that it offers more possibilities than do the rural districts.

—Col. E. P. Burr, one of the best known druggists in the State and for many years a druggist at Auburn, Ky., will sell his stock of drugs to Sherman Whitaker, of Beaver Dam. Col. Burr will accept a position with a Louisville wholesale house.

—James Evans, a druggist of Owensboro, and Miss Eva Stanton, of this city, were quietly married at the residence of the bride in Portland on Wednesday afternoon. They left immediately after the ceremony for a trip in the East.

—Greenville will soon have a new drug store. G. E. S. Countzler, of Sebree, spent last Thursday and Friday in Greenville discussing the project with the citizens and it is likely that he will open a new store there in the near future.

—L. A. Pettus, of Livingston, has severed his connection

with Hocker & Co. at Crab Orchard and has accepted a position in his home city. J. H. Hagan has accepted the position at Hocker & Co.

—Drs. Alf. Palmer and A. W. Paris, of Fulton, Ky., have removed across the line to Tennessee where they have purchased the drug store formerly conducted by H. J. Collins.

—J. T. Crecelius, the druggist at Twelfth and Market streets, who was ill of appendicitis, is now out of all danger and will soon be able to take charge of his business.

—J. T. McElrath, of Murray, has purchased an interest in the Yelser-Wells Drug Company, of Paducah, and will leave at once to take charge of his new position.

—N. B. Kingsley, of Greenville, has accepted a position in the drug store conducted by S. C. Gist at Central City.

CHICAGO.

N. W. D. A. ENTERTAINMENT COMMITTEE BANQUETS.

Chicago, Dec. 20.—The Committee of Entertainment of the 1900 meeting of the N. W. D. A. and the P. A. of A. met in the Tower room of the Union League Club in Chicago, Saturday evening, December 15, and held a very pleasant informal banquet. All the gentlemen brought their wives. Among those present were: Messrs. C. F. Weller, G. P. Englehard, M. L. Barrett, E. H. Buehler, F. M. Odena, E. D. Kenfield, J. R. Kathrens, Godfrey H. Ball, A. F. Murray, G. D. Searle, Thomas A. Cobb, J. J. Kearney, C. F. Matthews, B. T. Van Alen and ladies.

The room was festooned with American flags, the mantle banked with holly and the table was decorated with chrysanthemums, pinks and ferns. Mr. Weller made a fine address, congratulating the committee on its success. Mr. Kenfield paid an eloquent and graceful tribute to the ladies. Mr. Engelhard's speech was in a patriotic vein.

The menu was a success both as to contents and artistic merit.

All the gentlemen made brief speeches. A permanent organization was formed to meet and banquet once a year.

The address of B. T. Van Alen was one of the most enjoyable features of the evening. Mr. Van Alen said:

Mr. Toastmaster, Ladies and Gentlemen: I have not misjudged the temper of this meeting, we have passed the danger point, and are now lodged in safety behind the ramparts so recently resounding with the booming of champagne corks. Hence it appears safe to speak of "the men behind the fun." We are assembled to-night to celebrate our oneness of purpose, for, to the perseverance and self-sacrifice of this body is due the success of the recent entertainment of the N. W. D. A. and P. A. of A. Not one of this assemblage was a fossil; not one seeking an office; not one a doubtful factor; not one fostering petty jealousies; not one courting preferment. But each man was imbued with ardor for the work, and taking the Chicago "I Will" from the bosom of Chicago's trade mark, placed it upon his heart. The life of this committee has been short, but their accomplishments have received approval from the Atlantic to the Pacific and from the snow-clad wilds of Canada to the murmuring waters of the Gulf. Realizing that some potent factor had dominated the selection of this assemblage of workers, and in order to learn the reason of their individual appointment, I began a careful examination into the family history of each member, and to secure this information, opened correspondence with a bureau of heraldry—the location of which I positively refuse to disclose—and applied for a complete sample line of information not to exceed 25 cents' worth on each man. Here follows what was received, and I did not consider it a grievous sin to help out the few historical facts given me.

B. T. Van Alen was born of poor but respectable parents, at a time when silver cups were the substantial influence held out by admiring grandparents in influencing the baby's name, hence the name "Benjamin," meaning "the son of my right hand," and I assure you all of his ancestors had right hands. He has felt them, and his recollection is that they were larger and heavier than the hands of parents of the present day. The prefix "Van" of a Dutchman, means in English simply "from," but half the half Dutchmen don't know where they are from or what their original Dutch name in Holland was. This man's readiness to make speeches and exploit his Dutch ancestry has been known to drive a cheerful assemblage into depression and occasionally a section of it, to drink. Hence the committee delegated him to

make the association announcements, which for the first time now explains the large receipts of the Auditorium bar.

Chairman Charles F. Weller. His name appears annually in our archives, dating back nearly to the year 1801, at which time he was chairman of a juvenile congress. The origin of the name is uncertain, but a record has been found giving an account of an examination in a district school in which a pupil, being asked to decline "Weller," promptly replied, "Well, Weller, Well-est." The teacher asked for an explanation, which was given as follows: "When in the drug business in Quincy, St. Louis and Omaha, he always did 'Well'; as an officer of volunteers in the Civil War he did 'Weller'; but as chairman of the 1900 Entertainment Committee of the N. W. D. A. he did 'Well-est.'" He is a Christian gentleman of the good old Methodist school, and one who has never failed to respond with alacrity and zeal to all calls made upon him, either by the clergy or the boys. He is noted for his love of children and he set a good example in inculcating character and in making the children what they ought to be. He is eight times a father and eight times a grandfather—he may live to be eight times a great grandfather.

George P. Engelhard—hard signifying "earnestly; not easily done;" the bureau intimated his descent from a Baron Von Engelhardt, of Breslen, who was the possessor of a 12-inch equatorial refractor, used for observation of comets, double stars, etc. Hence the marked ability of our confrere to make observations, take notes and publish them for the delectation of the Knights of the Mortar and Pestle.

M. L. Barrett, surnamed Bond, has made a reputation as a treasurer and holder of bonds. He has persistently declined investment in matrimonial bonds, never having been able to procure them at par. His ancestry is undoubtedly English and probably includes the family of Elizabeth Barrett, the English poetess, known as Mrs. Browning.

F. M. Odena. (This information cost thirty-five cents.) The bureau suggested his probable descent from Odenathus, Prince of Palmyra, a Roman Senator and great merchant prince, who enjoyed all the luxuries of the ancient world, silks, jewels, pearls, and the like. He dispensed hospitality with open hand and had the widest circle along the trade routes, collected a troupe of dancing girls, and, forming a great caravan, took all on "A Trip to Africa."

E. D. Kenfield. The bureau stated that his name was derived from "ken"—to know—and "field"—all out doors—which includes both land and water. He has a marked affinity for water, and is credited with drinking nothing else. He recently chartered the largest passenger steamer on Lake Michigan and invited some 400 of his friends to make a pilgrimage to the shrine of Gambirius, presenting each lady and gent. with a beautiful medal. Of his infant history we have but a fragment. The amount of work he accomplishes is simply phenomenal, but his humor is always prominent. On the trip just referred to he is reported to have politely approached a most charming lady with the remark, "Isn't the water just delightful? I could live on it, couldn't you?" She replied: "Well, I think not. My health occasionally requires something stronger."

E. H. Buehler. The Bureau states that he began life very young. Among the Pennsylvania Dutch he made a local reputation as a successful commercial traveler; always demanded full fare at the hotels and protested against the refusal of half fare on the railroads. He came West over twenty years ago and settled in an educational suburb of Chicago where he expanded his name from E. H. to E. Handy Buehler. He displayed his patriotism by distinguished service in the Army during the War of the Rebellion, proving handy as a reserve at Gettysburg, and has always been handy in responding to subscription lists. He is most wonderfully successful in getting up banquets. Here, too, his enthusiasm in his work has made his handy name beloved by all. His church activities and Christian life have been encouraging examples to all with whom he has come in contact. He is married, but stays out nights when he feels like it, has a den where he smokes, the latch string of which always hangs out. It is reported that upon a visit to Canada the customs officer asked if there was anything dutiable in his trunk. He replied, "Yes, a few so-called cigars." The officer took a look at them, smelled them and remarked: "Mr. Buehler, if you will give me your word of honor as a gentleman that you will take those ropes out of our Dominion when you return home I won't charge you a cent duty."

J. R. Kathrens. Tradition connects his name with the Kathrine Loch in Scotland, and the mass of subscriptions which were received through his persistent efforts as chairman of the Finance Committee would probably cover the surface of that body of water. The road from oysters to café noir is a long one and Kathrens has never been known to fall by the wayside, and he is filled with the "Best Tonie" now on the market.

Godfrey H. Ball. The name "Ball" signifies a round body. This gentleman was born in Australia, hence "After the Ball" snowballs and high balls are all foreign to Godfrey. During the convention a gentleman asked: "What's got into Ball?" He goes in bathing half-a-dozen times a day. "Oh, nothing unusual. The doctor advised him to take a lunch upon coming out of the water." Ball believes that absence of fraternity impairs usefulness and as fraternity is the most perfect flower that has yet been developed by the tree of human life, an admir-

"The deciphering of the ancient cuneiform inscriptions

able selection was made in placing this gentleman upon the Flower Committee.

A. F. Murray. Noah is the first seafaring man we read of, and next in antiquity is the family of Murray. Nothing in Scotch history is complete without a Murray. The Murray kilt, the Murray plaid, the buckles and bagpipes, have all been prominent for many generations. The bravery of the Murrrays as depicted in the story of the "Scottish Chiefs" influenced his selection as chaperone to faint hearted men on the Stock Yards excursion. Murray was feeling somewhat ill the day after the banquet, but was soon relieved by a young lady on the boat who recited to him the following gem of poesy:

"After too much business,

"After too much sup,

After seeing the elephant,

Bromo Seltzer will brace you up."

G. D. Searle is by profession a chemist, which fact dominated his selection as chairman of the Reception Committee. Searle maintains that quacks in medicine excite the malady to profit by the cure and retard the cure to augment the fees. For quacks he has no love. He insists that good health is dependent upon observing the following code of rules:

To avoid appendicitis, carry a book without an appendix.

To avoid prickly heat, go to jail where you can't break out.

To avoid the grip, ride on a trolley car.

To avoid the gout, work for a dollar a day.

To avoid the blues, wear black.

Thomas A. Cobb. The bureau stated his name was derived from Cobb, signifying a strong pony, an automobile, hence his genealogical record suitably placed him in charge of the gasoline parade.

J. J. Kearney. This man's ancestry is suggested as being Irish. He is an oracle among his neighbors, who daily collect around him to hear the thrilling account of the tally-ho ride, upon which occasion he was so cool amid danger. A friend of his, meeting an acquaintance last summer, remarked: "I hear Kearney is doing well since his marriage." "Yes, he sports a carriage and pair now." "Is that so?" "Yes, I saw him pushing it in the park yesterday."

NOTES.

—G. W. Mathison, Western representative of the Emerson Drug Company, accompanied by his wife, left yesterday on his annual Eastern trip, to visit the cities of New York, Baltimore and Philadelphia.

—Robert Wilson has sold his store at Monroe street and Ashland avenue to John Byrnd. Mr. Wilson will continue the store at Van Buren street and Ashland avenue.

—August Cunradi has sold his store at Thirty-eighth street and Archer avenue to Julius Cunradi, of Cunradi Brothers, Twelfth street and Wabash avenue.

—J. H. Wilcox has sold his store at Twenty-third and State streets to F. Wilson, who will move it to Boise City, Idaho.

—J. Gohl, a Western representative for Whitall, Tatum & Co., passed through Chicago this week on his way East.

—August Uhland, representing Sharp & Dohme in Denver, was in Chicago this week.

DETROIT.

—The Detroit Druggists' Bowling League, which comprises teams from Parke, Davis & Co., Nelson, Baker & Co., the Michigan Drug Company and Farrand, Williams & Clark, will play its first series of games the first week in January, and expect to keep at it until the season closes. Detroiters are enthusiastic over bowling, but up to date the druggists have been too tired to do much more than go to bed after working hours were over. They hope for a little more leisure now that the holidays will soon be past history.

—The Detroit College of Medicine closes to-day at noon (December 21), for its holiday vacation, and the boys of the pharmacy department go away with the others. College will open again on January 7.

Ouch!

A suggestive name for a vaccination shield. The druggist who has a supply of these shields in stock can always respond to an appeal for relief from the discomforts attendant upon vaccination. The Ouch is a pad made of chemically pure and antiseptically prepared wood pulp, which prevents clothing or infectious matter from irritating the sore. It adheres to the arm by means of rubber adhesive straps, so there are no strings to tie or slip and no stopping of the circulation. The reasonable price of this shield should make it a quick seller. For particulars regarding prices, write to Krembs & Co., Chicago, Ill.

THE NORTHWEST.

COCAINE RESTRICTION.

Twin City Movement to Lessen Sales of Certain Drugs by Legislation.

St. Paul, Minn., Dec. 20.—The latest reformatory movement attracting attention in St. Paul and Minneapolis—more especially the latter city—looks toward the restriction of sales of cocaine, morphine and kindred drugs. When the Legislature meets next month a bill with this object in view is to be introduced. It is understood that this measure has the support of the Legislative Committee of the State Medical Association and that its purpose is to place the several most sought drugs upon the same basis in the drug stores as alcoholic liquors.

There has been a tremendous increase in the use of cocaine as a sedative within the last few years, and, owing to an erroneous impression that it is less harmful in its effects than morphine, many people have fallen into its use who would never have become addicted to the morphine habit.

Under present conditions the drug stores sell the drug in small quantities on call, the majority of them compelling the purchaser to sign the poison book, but such precautions have no effect whatever in checking the growth of the demand. The use of cocaine for toothache and neuralgia has led hundreds of persons, especially women, into forming the cocaine habit. The number of persons in the two cities who are confirmed users of the drug is so large that the attention of the medical fraternity has been directed towards devising means of prevention.

Dr. R. O. Beard, of Minneapolis, when questioned, said he doubted whether the proposed law would be effective, for the reason that people in search of these drugs would obtain them in one way if they could not do so in another. He favored any measure that would restrict the sale of such drugs, but considered that the law relating to sale of alcoholic liquors was far from being effective, and he feared that a similar law concerning morphine and cocaine would fall short of its purpose in the difficulty of its enforcement.

Thomas Voegeli, of Voegeli Bros., the Minneapolis druggists, announced his belief that some such restrictive law was absolutely necessary. At present there was no authority vested in the druggist to refuse purchasers of morphine or cocaine in small quantities. The number of people calling for such drugs was very large and on the increase.

"So far as our firm is concerned," said Mr. Voegeli, "we exercise all possible discretion in selling cocaine and morphine. We have a class of purchasers to whom these drugs are absolutely necessary, not in small doses but in large ones. These are the unfortunates known as morphine and cocaine fiends. A serious difficulty that presents itself to my mind is this: What are we going to give these victims of morphine and cocaine that will prove in any way a substitute for the drugs their systems demand? I know of nothing that will fill the bill. Physicians are aware that to remove from such cases the drugs which alone sustain them, will be to precipitate innumerable cases of utter collapse.

"But, on the other hand, there should be a law giving the druggist authority to refuse selling either of these drugs except upon prescription to persons other than habitual users. I am heartily in favor of any legislation which can be depended on to lessen the evil which now unquestionably exists."

DRUGGIST WITH AN ILLUSTRIOUS ANCESTOR.

St. Paul, Minn., Dec. 21.—It was discovered this week that Minneapolis numbers among her druggists a grandson of George Fredrich Grotefend, who, nearly a hundred years ago, achieved fame as the translator of the Persian cuneiform inscriptions. The translation was furnished by Mr. Grotefend to the Royal Society of Göttingen, Prussia. The grandson, H. F. Grotefend, who has a drug store in Minneapolis, thus refers to his grandfather's achievement:

of the Persepolis was for the world one of the most important and scientific discoveries of its kind. The discovery occurred Sept. 4, 1802, after Niebuhr had returned from his oriental trip, bringing with him several more or less accurate inscriptions from the ancient monuments of Babylon and the palaces of Persepolis. The whole scientific world was agitated about these relics, and all connoisseurs of the oriental languages endeavored to decipher and explain the inscriptions chiseled in the ancient stones. Their attempts were all in vain, as there was nothing to guide. The inscriptions remained a puzzle in spite of the efforts of the scientists to solve them. They finally gave up the work in disgust, some even going so far as to declare them mere garnishments. My grandfather, who was known for his extraordinary sagacity and ingenuity, and had made classical philology his favorite study, then took hold of the work of deciphering the puzzling problems. He worked with unceasing zeal until his efforts were rewarded, and he could prove beyond a doubt that they contained the characters of the oldest language of the world. He afterwards published several scientific dissertations and important large works, which study was the object of his life's work."

Would Accommodate An Aged Statesman.

St. Paul, Minn., Dec. 21.—As is well known, Daniel R. Noyes, the wholesale druggist of this city, was a prominent member of the committee that recently met in New York to put the final preparatory touches upon the work of revising the Presbyterian creed. When he returned to St. Paul Mr. Noyes was called upon by Alexander Ramsey of this city, the octogenarian who was formerly Governor of Minnesota, United States Senator and Secretary of War in President Arthur's cabinet.

"You did your work pretty well, Mr. Noyes," said the old Governor, who is likewise a good Presbyterian. "but there is one thing I would like to have omitted from the creed."

"Just name it," returned the man of drugs, "and I'll see that the thing is fixed up to suit you. What would you have left out?"

"Final condemnation," said the retired statesman.

And Mr. Noyes, with the suave smile so characteristic of him, assured the old gentleman that if a little thing like this was necessary to his peace of mind it would certainly be attended to.

Afraid of Substitution.

St. Paul, Minn., Dec. 21.—Fred, Conger, the St. Paul druggist, narrates a joke that is strictly Truthful James, for it happened to him personally. One of his customers had a prescription filled of which bismuth was an ingredient. As every drug dealer knows, this is subnitrate of bismuth. In a few days the customer came in and presented another bismuth prescription. "I want bismuth this time, and no mistake," he said. "Why," replied Mr. Conger, "you always get bismuth when the prescription calls for it." "Not so sure about that," retorted the buyer, "for see what the doctor has written: 'Bismuth sub-nit.'" And Fred straightway had such a fit that the patrol wagon was summoned.

NOTES.

—Successions: C. B. Atzen, Thor, Ia., by A. O. Peterson & Co.; Ollinger & French, Maxwell, Ia., by the French & Laself Co.; Landon & Burchard, Plainview, Minn., by Burchard & Laack; N. F. Sturges, Clinton, Ia., by Sturges & Campbell; Lee Warren, Bozeman, Mont., by the Warren Drug Co.; Donaldson & Hoover, Truman, Ia., by the W. L. Hoover Drug Co.; Jones & Olds, Wells, Minn., by L. N. Olds & Co.; J. E. Hammond, Silverton, Ore., by J. A. Brisbane; the Bonaparte Drug Co., Bonaparte, Ia., by W. I. Bogle; E. W. Galtner, Toledo, Ore., by Galtner & Talt; the Lovilla Drug Co., Lovilla, Ia., by I. T. Williams, under same style.

—A verdict of \$1,000 and interest for the plaintiff, the full amount asked, has been rendered in the case of Emile De Ralche, of St. Paul, against the London, Liverpool and Globe Insurance Company. The action was brought to recover on a policy on the plaintiff's drug store, which was destroyed by fire last July.

—Romans & Rohrback will next week move into the new building at Fourth and Wabasha streets, St. Paul, diagonally opposite the place they have occupied several years, which has for many years been one of the familiar drug corners of the city.

—It is currently reported (and believed) that D. E. Billington, of St. Paul, has recently taken unto himself a wife. In fact, it is said he has himself admitted the soft impeachment.

—This was a bad week for fires among druggists. Among those burned out were W. J. Conley & Son, Elk Point, S. D.; A. J. Salts, Cornling, Ia., and F. B. Leach, Thompson, N. D.

—J. N. Palmquist, who had started for the Far West, has returned to this city. He says the farther he went West the better it seemed to him to return to Minnesota.

—A. A. Tozer has started in at Everett, Wash.; C. L. Rich at Litchville, Minn.; D. C. Englund at St. Paul, Minn., and J. F. Hilton at Thayer, Neb.

—A. G. Laack, a Cass Lake, Minn., druggist, has removed to Plainview, where he has purchased an interest in the Landon & Birsher drug store.

—Andrew Bottelson, who recently sold his drug store at Blue Earth, was in the city for a brief visit the end of this week.

—E. E. Beard is reported to have begun business as manufacturer of drugs at New Whatcom, Wash.

—M. E. Coan, proprietor of the Clarendon Pharmacy, Wabasha street, has moved across the street.

—J. L. Townsend, Payson, Utah, has established a general store in connection with his drug store.

—Victor Lagerquist, a hotel keeper at Hillyard, Wash., has entered the drug trade likewise.

—C. L. Barewald, Buffalo, Ia., and the Bitter Root Drug Co., Hamilton, Mont., have sold.

—The Bitter Root Drug Co., Hamilton, Mont., and the St. Paul, Minn., Paint Co., have sold.

—Samuel Haas, president of the Harle-Haas Drug Co., Council Bluffs, Ia., died this week.

—Claude McNeal, Spooner, Wis., has sold his interest in Cox & McNeal to Kate E. Cox.

—J. F. Koontz, Humboldt, Ia., and the Everett, Wash., Drug Co. have given bills of sale.

—E. N. Arvidson has gone back to his old place with Dr. E. M. Johnson, at Cloquet.

—J. W. Bowden has gone to Rice Lake, Wis., to take charge of a pharmacy there.

—New stores: A. A. O. Tozer, Everett, Wash.; S. M. Champlain, Swanville, Minn.

—Charles F. Curtis, Owatonna, Minn., has located at Beresford, S. D.

—Macy & Moore, Coquille, Ore., are reported moving to Oregon City.

—J. N. Palmquist has gone to Thomas' Pharmacy, Cottonwood.

—The Gibbonsville, Idaho, Drug Co., is retiring from business.

—The Peters Drug Co., Ottumwa, Ia., has been foreclosed.

—F. B. Leach, Thompson, N. D., was burned out this week.

—The Central Drug Co. has incorporated at Astoria, Ore.

—R. T. Storey, Albion, Idaho, has admitted a partner.

—C. H. Carroll, Marcus, Wash., has removed to Colville.

—B. R. Bowlby, Nez Perces, Idaho, died this week.

—Frank Yost, St. Paul, has removed to Minneapolis.

—Harry Schoch has returned to St. Paul.

—H. A. Moore, Monroe, Wash., is dead.

While it may not be possible for every salesman to secure a barrel of orders each day, he may secure quite a bunch if he makes it known that his house will promptly supply N. Y. Q. products on demand. You may serve yourself, your jobber and the New York Quinine & Chemical Works by occasionally contributing to the success of your favorite salesman by specifying N. Y. Q.

ST. LOUIS.

Drug Clerks Elect Officers.

St. Louis, Dec. 22.—The St. Louis Drug Clerks' Society held its annual meeting and election of officers last Thursday night. The attendance was very slight for such an occasion. This was partly due to some mishap in getting out the notices, as several of the leading members knew nothing of the affair until it was all over. There was very little business of importance transacted. It was decided to give a ball in January, all arrangements, etc., for which were left with the Executive Board and Entertainment Committee. The Committee on Ball reported that the society came out about \$85 ahead on the last affair. The treasurer reported a balance of over \$200 on hand and all bills paid. Charles Witt, in charge of the Bureau of Information, said that he had several requests for competent clerks and no applicants for positions. He said this had been a record-breaking year for scarcity of competent clerks. The following officers were duly elected and will be installed at the regular meeting in January; President, I. A. Schulers; first vice-president, G. R. Gibson; second vice-president, Carl G. Klie; secretary, A. W. Kauffman; treasurer, Theo. F. Runge; chief of Information Bureau, Chas. Witt; Executive Board, L. H. Schlenker, C. F. C. Bausch, Chas. Roth.

NOTES.

—The boys are telling a good joke on Michael Aurendes, the well-known representative of the J. S. Merrell Drug Co. He not only looks after a large portion of their city customers, but makes weekly trips to the nearby towns. Last week while at St. Charles he met with a little accident. He put on a pair of new twelve-dollar trousers, of which he was very proud. While seated in H. D. Meyer's drug store of that city he took quite a fancy to Mr. Meyer's favorite dog. The dog took quite a fancy to his new trousers, but this Mr. Aurendes did not discover until there was a large hole chewed in the rear of the lower portion of his pants. Mr. Meyer declared that Mike was asleep, while Mike claims he was so interested in talking politics that he did not notice what the pup was doing.

—The Barnes Medical College has decided to give all medicine free of charge to worthy patients at their clinics. This is something which has never been tried by any local medical college. It is intended to overcome the difficulty which all the colleges experience in getting enough patients to go before the classes for examination and treatment. It will probably greatly increase the number of patients at the clinics. The city has a dispensary where worthy charity cases are treated and supplied with medicine free. There is an average of over one hundred patients treated every day at this clinic. The appointments are all secured and held by political pull and the patients complain that they do not receive the careful attention and treatment that they do at the college clinics.

—An attempt was made last week to secure warrants against forty of our local druggists on a charge of substituting and using inferior and adulterated drugs in filling prescriptions. Dr. Edmund Y. Meyers, chairman of the Committee of Permanent Physicians, first called on the Board of Health to take up the matter, but was advised to go to the Prosecuting Attorney, which he did. Here he was advised to secure more evidence before warrants could be issued. It seems this committee has been collecting evidence in this line for some time. They will not give out the names of the druggists until they are sure of securing the warrants.

—The Merchants' and Manufacturers' excursion No. 3 was given on December 5 and 6. This time they went to Vincennes, Ind. Geo. R. Merrell, of the J. S. Merrell Drug Co., and E. C. Cochran and J. W. Estes, of the Meyer Bros. Drug Co., looked after the druggists' end of the affair. They stopped at forty different towns and called upon 120 druggists. The object of these excursions is to bring the wholesalers more in touch with the country merchants. They go and pay them a purely social call. The next excursion will run to Oklahoma soon after the first of the year.

—B. W. Westendorff recently returned from Seattle, Wash., where he has been spending the past year, and has purchased the drug store at Eleventh and Madison streets

from W. E. Stille. Mr. Westendorff is an old time local drug clerk. He got the gold fever some time ago and started for the Klondike, but upon reaching Seattle and being offered a good position there and hearing the tales of the many disappointed and destitute returners from the gold fields, he decided to give up the idea of getting rich in a hurry.

—An Indiana patent medicine proprietor has recently been distributing advertising circulars around this city and in them are some statements which will do anything but make his preparations popular with the druggists. He says his preparation will be sold by the grocers, and as a reason the circular says, "Because the grocers, as a class, are more honest than the average wily druggist who will try to palm off the so-called 'just as good' or a worthless counterfeit for the genuine."

—Word has just been received from Wm. Oldendorff, a former drug clerk who has spent some time in Alaska, the Klondike and lastly Cape Nome. He recently returned to Seattle, Wash., where he holds a good position. He advises all his friends to keep as far away from those gold fields as possible. He returned with considerable less money than he went there with.

—All the local wholesale houses report that this has been a very successful and prosperous year for them. Their collections have been good and their sales much larger than any previous year. When asked if they had any new policy or plans to put into effect with the New Year, they said no, that everything would be run as before with little or no change.

—William F. Kahre, druggist at Thirteenth street and Geyer avenue was recently called to his old home, Evansville, Ind., by the death of his mother. He is one of the leading members of the Druggists' Cocked Hat League and that organization passed resolutions of respect and sent an elegant floral offering.

—At a meeting of the Druggists' Cocked Hat League last Thursday night the following results were recorded: Meyer Bros. Drug Co. 3, J. S. Merrell Drug Co. 2; Moffitt-West Drug Co. 3, Mound City Paints 2; Eli Lilly & Co. 3, The Searle & Hereth Co. 2.

—The abstract of the proceedings of the United States Pharmacopoeial Convention held at Washington last May has been prepared by the secretary, Dr. H. M. Whelpley, and is ready for distribution. It is compiled in accordance with the resolution adopted by the convention.

—The Meyer Bros. Drug Co. will close at noon next Friday and remain closed until Monday morning in order to take stock. The J. S. Merrell and Moffitt-West Drug Companies will probably not close at all, but the employees will work overtime.

—Every winter there is quite a number of our local drug stores broken into and robbed of cigars, perfumery, etc. So far this year they have all escaped, but it would be well to take warning and use every possible precaution.

—The students of the St. Louis College of Pharmacy petitioned the Board of Trustees to grant them three weeks' holiday vacation instead of two weeks as had been provided. Their request was not granted.

—Wm. Pfeffer has purchased the drug store at Thirteenth street and Geyer avenue from William J. Kahre. Mr. Pfeffer has been chief clerk at this store for several years.

—Frank L. E. Gauss, Missouri representative for The Searle & Hereth Co., with headquarters in this city, has been confined to his home by illness for the past week.

—Chas. Stockhausen, for the past year in charge of the drug store at Mississippi and Park avenues, has quit the drug business and is now manager of a steam laundry.

—The St. Louis, Paint, Oil and Drug Club will hold its last meeting of the year at the Mercantile Club tonight. It will be known as "Ex-Presidents' Night."

—L. F. Able, chief clerk at the Garrison pharmacy, Garrison and Easton avenues, was recently married to Miss Elizabeth Rader, of the West End.

—A. W. Pauley, druggist at Fourteenth and Madison streets, is receiving congratulations over the arrival of a young daughter in his family.

—R. N. Gray, druggist at Sarah and Choteau avenues, has moved his store into a new building across the street from his former location.

—A large number of our local druggists will spend a portion of the holidays with friends or relatives in the country.

—Wm. Junghans, druggist at Taylor and Garfield avenues, has been quite ill for the past week.

—J. E. Kuch, druggist at Jefferson and Shenandoah avenues, is rapidly recovering from an operation for cancer of the stomach.

—William Berryman has come into possession of the Terminal Hotel pharmacy, located in the west end of the Union station.

—R. H. Knoll, druggist at John and Florissant avenues, was married last Tuesday to Miss Louise Brenecke, of the North Side.

—Edward Blinschadler, secretary of the J. S. Merrell Drug Co., has been severely ill at his home for the past two weeks.

—H. F. Fricke is preparing to open a new drug store at Jefferson avenue and Benton street. He already has two stores.

—Hermann Bros., of Carondelet, have purchased the Reeves pharmacy at St. Ange avenue and La Salle street.

—Louis Bray, formerly with E. A. Bernius on Easton avenue, is now chief clerk at the Belt avenue pharmacy.

—W. E. Stille has purchased the drug store at Seventeenth street and Cass avenue from Dr. Paul Weeks.

—Dr. J. P. Fitzpatrick has moved the store which he recently purchased from 3110 to 5633 Easton avenue.

—Brenner & Duerling have opened their new drug store at Jefferson avenue and Hebert street.

—H. Sheolnick is embarking in the drug business at Twentieth and Mullamphy streets.

PITTSBURG AND VICINITY.

THE DRUG COMBINE.

Many South Side Stores Bought by the P. C. Schilling Company.

Pittsburg, Dec. 22.—The P. C. Schilling Company, whose large holdings in the drug line were recently published in the Era, has now made an invasion of the South Side, the result of which is the control of ten stores on that side of the Monongahela River. The company's latest acquisition is a store owned by Jacob Schlein, the Thirty-eighth Ward. The corporation is now conferring with B. J. Stenger, of Sixteenth and Carson streets, with a view of either buying his store or gaining a controlling interest in it. Mr. Stenger owns two stores, one at Sixteenth and Carson streets, the largest on the South Side, and another fine establishment in Homestead. C. A. Rowe, manager of the South Sixteenth store, stated that Stenger's stores are not on the market, though he actually acknowledged having been approached by the Schilling people.

Among the stores purchased by the Schilling combine are those situated at Sixth, Eighth, Tenth, Twelfth and Fourteenth streets. The names of the former owners are still over the doors, but all prescriptions are affixed with the Schilling company labels. This company now owns about fourteen stores in various parts of the city, exclusive of its South Side holdings. There is not the slightest doubt that in a short time it will control all drug stores on the South Side, which means also those on Mt. Oliver, Mt. Washington, Duquesne Heights, Beltzhoover and Knoxville.

Alleged False Pretenses.

Pittsburg, Pa., Dec. 22.—S. B. Zang, the druggist at No. 633 Rebecca street, Allegheny, who was recently closed by the Sheriff, is now encountering more serious troubles. On December 15, R. S. Levin, of the Druggist Sundry Company, of 307 Third avenue, Pittsburg, made an information before Alderman John Groetzinger, charging him with false pretenses. It is alleged that on December 12 Zang purchased a bill of goods from the prosecutor and stated that his liabilities were only \$200. On this standing he was given the goods to the amount of \$26.16. The defendant, it is alleged, promised that he would get the matter fixed up, but several larger executions appeared in the hands of the sheriff in the meantime and his place was closed. Mr. Zang gave bail for a hearing.

After Impure Drugs.

Pittsburg, Dec. 22.—Suits have been ordered by an agent of the State Pharmaceutical Examining Board against Dr. R. S. Kennedy, Eighteenth street and Penn avenue, Dr. Christian Nelson, 198 Woodlawn avenue, Allegheny, Mrs. Pauline May, 506 Market street, all owners of drug stores, and G. B. Ryland, manager of Kaufmann Brothers' drug department, charging them with selling adulterated drugs. The informations were made under an act of Assembly, approved by Governor Hastings, in May, 1897. Other suits, it is said, are to follow. The agents are securing drugs from various drug stores and submitting them to Chemist A. S. Aschman for analysis. The informations made are from the chemist's reports.

Drug Clerk Burned by Acid.

Pittsburg, Dec. 22.—W. S. Pasche, a clerk for E. T. Walther, at Jackson and Buena Vista streets, was painfully injured by the explosion of a bottle of nitric acid. His hands, face and arms and the upper part of his body were burned by the fluid. Mr. Pasche was working in the compounding department when the explosion occurred. The acid bottle was on the table when the bottle burst into a thousand pieces, and the fluid was thrown over Mr. Pasche. Fortunately he closed his eyes or his sight would have been destroyed. While the injuries are painful they will not result seriously.

After Meadville Druggists.

Pittsburg, Dec. 22.—Detectives in the employ of the State Board of Pharmacy were in the town of Meadville, near Pittsburg, lately, and made the rounds of the drug stores. They found that five of the Meadville druggists had neglected to comply with the law relative to displaying the certificates of registration, and ordered each to appear before an Alderman and pay a fine of \$10. All the druggists had secured renewals but had not complied with the law as regards posting the renewals. There is some talk of appealing these cases.

NOTES.

—A story anent Druggist J. C. Dent, of Bridgeport, Ohio, and his sportsmanlike proclivities was brought to Pittsburg recently by one of his friends. It appears that Mr. Dent, armed with a fine shotgun, went hunting after wild turkeys. He was placed by obliging companions in a comfortable spot behind a large tree where wild turkeys were said to abound. Mr. Dent sat for some time when directly two fine gobblers made their appearance, pecking here and there, up almost to the muzzle of the gun. They disappeared in their leisurely manner and Mr. Dent sat on until the shades of night came on. He then sought his friends who had bagged considerable game. In reply to their astonished inquiries, Mr. Dent said that he hadn't seen a "wild turkey," only two tame ones, which he didn't like to shoot. The sodas were upon Mr. Dent, who enjoyed the chaffing of his friends.

—Druggists of Western Pennsylvania are having a salty dose of the law, as may be noted from above items. Geo. S. Morron, of Canonsburg, was sentenced on Dec. 17, to pay the costs, a fine of \$500 and to undergo three months' imprisonment in jail on the charge of selling liquor without a license.

—An answer was filed in the suit of the city of Pittsburg to recover taxes from the Pittsburg College of Pharmacy. It is alleged in the answer that the college is exempt from taxation as it has earned no profits and is sustained mainly by friends.

—Druggist Albert O. Evans, Ross Lytle, H. C. McCormick, J. C. Moore, Arthur A. Clarke, of Connellsville, and W. A. Belghley, of New Haven, Pa., were arrested on the charge of failing to display their certificates.

—Charles R. Goetze, of Wheeling, has sued eight wholesale and retail druggists of that city for \$50,000. He is a cut rate druggist and alleges a conspiracy to keep him from buying goods in Pittsburg and Wheeling.

—W. P. Sykes, a druggist at No. 331 Fourth avenue, pleaded guilty to a charge of filling prescriptions without having the proper credentials. He was fined \$30 and costs.

—Siegfried's drug store, at Warren, Pa., was destroyed by fire on the morning of December 22. The loss will be about \$2,000.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS' DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

ARKANSAS.—Antoine.—Z. L. Kirkham, sold to H. E. Van Camp & Co.

CALIFORNIA.—Los Angeles.—Thomas Drug Co., Spring and Temple, sold to McLean & Gleason.

CONNECTICUT.—Lakeville.—E. R. La Place, sold to E. A. Eldridge.

New Haven.—G. B. Hanover, 251 Howard avenue, sold to A. E. Simpkin.

GEORGIA.—Allapaha.—George A. Paulk, succeeded by Paulk & McInoy.

Moultrie.—A. B. Peters, deceased.

ILLINOIS.—Asa Oren, corner Sixtieth and Centre avenue, sold to O. A. Hupfeld.

Kankakee.—Albert Kurrasch, Sr., 175 Court street, sold to C. E. Patrick.

Kewanee.—Parsons & Cornish, succeeded by N. A. Parsons & Co.

Mattoon.—Charles W. Sellew, sold to F. O. Finfrock.

Milford.—F. D. Dempster, sold to Campbell Bros.

North Henderson.—D. L. Rowe, sold to J. Neil Cox.

Raymond.—C. A. Preston, deceased.

INDIANA.—Alfordville.—M. L. Arthur & Bro., succeeded by H. M. Arthur.

Franklin.—Wm. B. Jennings, sold to Dr. D. H. Miller.

Logansport.—J. E. Strecker, 516 Broadway, sold to F. J. Briggs.

Shirley.—Houck & Wiggins, succeeded by A. S. Houck.

Zionville.—Albert E. Smith, sold to J. J. Knox & Co.

IOWA.—Adel.—McCullough Drug Co., sold to Krabiel Drug Co.

Blanchard.—C. C. Clark, sold to Arthur Wm. Davies.

Mount Pleasant.—J. E. Holland, 105 North Jefferson, sold to Bosworth Bros.

West Liberty.—E. L. Henderson, sold to C. A. Burt & Co.

KENTUCKY.—Auburn.—Burr & Co., sold to T. L. Whitaker.

Rowlets.—Dr. J. W. Gaines, sold to W. L. Sanders.

MAINE.—Skowhegan.—H. W. Cushing, 107 Water street, sold to G. R. Fogg.

Yarmouth.—F. W. Bucknam, sold to B. L. Alden.

MASSACHUSETTS.—Foxboro.—W. A. Ferguson, deceased.

Salem.—Benjamin Webb, 54 Essex street, deceased.

Springfield.—Worthen & Co., 254 Chestnut street, assigned.

Worcester.—E. D. Buffington, president and treasurer of the Buffington Pharmacy Co., 300 Main street, deceased.

MICHIGAN.—Grand Rapids.—Estate of W. H. Wills, Fifth avenue and South Division street, sold to E. J. Fletcher.

Saginaw.—A. L. Klemm, 2700 South Washington avenue, E. S., sold to Enos C. Kinsman.

MINNESOTA.—New Prague.—F. Mikiska, sold to Robert Iltis.

MISSISSIPPI.—Sardis.—R. P. Jenkins, assigned.

Yazoo City.—J. W. Rucker, sold to H. L. Crook & Co.

NEBRASKA.—Beatrice.—P. W. Clancy, sold to Miller & Jones.

Lindsay.—H. E. Ayars, sold to G. D. Walker.

NEW YORK.—Binghamton.—Willard Day, 21 Main street, incorporated as Day Drug Co.

New York City.—J. F. Comerford, Columbus avenue and Fifty-ninth street, sold to Ward & Lindemann.

Otto Lenz, 498 Second avenue, sold to H. Reaske.

OHIO.—Milo.—George Meyer, assigned.

Tiffin.—J. F. Marquardt & Son, 60 South Washington, sold to J. H. Morcher & Co.

PENNSYLVANIA.—Philadelphia.—F. P. Riedenauer, 5624 Germantown avenue, sold to Smyser & Scott.

VIRGINIA.—Berkeley.—J. B. Floyd, deceased.

WEST VIRGINIA.—Charleston.—George Ort & Co., succeeded by Ort & Klostermeyer.

—A meeting of the North Carolina Board of Pharmacy for the examination of candidates for license to practice pharmacy will be held in the city of Raleigh on Tuesday and Wednesday, January 15 and 16, 1901. Application blanks may be had from the secretary of the board, William Simpson, Raleigh, N. C.

The Mineral Water of Spain.

On a mountain in the Pyrenees of Spain, near the village of Rubinat, is the spring from which gushes forth 20,000 pints daily of a rich, mineral, health-giving water which has been named Serre-Rubinac, and which is bottled at the spring and from there sent everywhere to relieve the suffering of mankind and incidentally enrich all who handle it. The American agents, who have but recently received a large consignment of Serre-Rubinac, will make good terms with their friends in the trade who will put this first-class article on sale. See their advertisement in this issue of the Era, or write to Serre-Rubinac Co., 2-4 Stone street, New York.

Old Duroy Port Wine.

The Duroy & Haines Co., Sandusky, Ohio, have a supply of Old Duroy Port Wine which they offer to the retail drug trade with the assurance that it is the best wine ever offered for the money. As it is sold only to the retail druggist the demand for it must be supplied by you. Send for prices and full particulars.

Artificial Limbs.

One of the oldest firms in the country engaged in the manufacture of artificial limbs is the George R. Fuller Company, No. 15 South St. Paul street, Rochester, N. Y. As this company allows a liberal commission to the druggist who may take an order for their goods, we advise you to send for their catalogue.

A Twentieth Century Greeting.

John Matthews, in behalf of the American Soda Fountain Co., extends to all the trade, to friends and those who think they are not friends, greeting and good wishes. Read his message on another page of the Era and find in it an inspiration for 1901.

STATE OF TRADE.

Quiet Conditions Have Prevailed.

New York, Dec. 24.—Very few important price changes were noted, and generally quiet conditions have prevailed in the various departments of the wholesale drug and chemical markets. Consequently the volume of business has reached only narrow proportions, but nothing has been heard in the way of complaints and dealers appear well satisfied. Opium has maintained a fairly firm position considering the slow demand from consumers, the stimulating influences being found in the continued strong tenor of advices from primary markets. Previous reports of heavy damage to the autumn sowings have been confirmed, and late cable advices are to the effect that the winter sowings have been seriously injured by frost. According to reliable authorities the next crop will probably be comparatively small, and as the visible supply is somewhat below the usual average, holders in producing markets are decidedly firm in their views. Morphine and codeine are in fair demand for consumption, but competition among manufacturers has a more or less disturbing influence.

The quinine situation has undergone no material variation. There has been very little consuming inquiry and speculative operators are inclined to await the outcome of the next Java quinine auction, which is scheduled for Friday next, and the Amsterdam bark sale on the 6th prox. Cocaine, while showing no quotable change, is somewhat easier, and manufacturers are again willing to book orders for either prompt or forward deliveries. Chloral hydrate is in demand at the recently reduced figures, but manufacturers decline to enter contracts and will sell only in a limited way for immediate delivery. Menthol is offered more freely and with the demand rather slow holders have modified their views to the extent of reducing their inside quotation fully 10c. per pound.

In the department of essential oils several changes in quotations have occurred. Bergamot is firm at advanced prices, the improvement being wholly due to higher primary markets. Cassia is weak and lower on account of similar conditions abroad. Both natural and artificial saffras are slightly easier. Oil of Canada snake root is scarce and higher. Expressed limes shows a decline of 10c. per pound.

Among the roots, Ipecac is a leading feature, prices having declined about 15c. per pound owing to lower cable quotations from London, together with some competition among local holders. Cantharides are in reduced supply and holders of the light available stock have advanced their quotations fully 2c. per pound. Cubeb berries are exceedingly dull and concessions in price have failed to stimulate the consuming demand. Cacao butter is offered at slightly lower figures, but consumers are well supplied and the movement is light and unimportant. Colchicum seed continues to harden in price under steadily diminishing supplies and a further advance is noted. Holders of carnauba wax have shown more inclination to sell and concessions in price have resulted in fairly liberal purchases by manufacturing consumers. Oxalic acid is a fraction higher owing to reduced offerings, English brands having been withdrawn from the market.

No Special Excitement.

Boston, Dec. 22.—No special excitement has marked this week and business has kept on its way undisturbed. "Trade is evenly good," one prominent man says, and from other opinions expressed this just about sizes up the present situation. The holiday trade has given a bit of added life because druggists receive many calls for perfumes, colognes, toilet waters and toilet articles suitable for gifts. The demand for these articles also lends a little extra life to the general trade. Everybody's mind is on the holidays and the annual problem of gift making, and one man facetiously remarked, when questioned about trade, "People haven't time just now to be sick." He apparently looked upon illness of any kind as a mere matter of convenience. There has been no feature of special note in the wholesale trade. Drugs and chemicals have been, as a whole, in only fair demand, no one thing standing out prominently in showing special activity. Prices therefore have been little affected. The same may be said of dyestuffs and tanning materials. Alcohols and cologne spirits are fairly active. Waxes show no great life or activity.

Some Improvement in Quinckermom.

Philadelphia, Dec. 22.—Business has been quite steady for the past week, showing somewhat of an improvement over that of the week before. Holiday goods find ready sale and business in these lines is reported as being very satisfactory. The recent changes in the weather have caused about every other person to "catch a cold" and the sales of remedies are consequently brisk. The "holiday spirit" seems to extend this year even to the druggist, and almost everybody declares that money is more plentiful this year than for many seasons.

There is no change of note in the conditions of trade

in wholesale circles business being commonly reported as quite brisk and satisfactory. Large orders for heavy chemicals were booked by a local firm for January delivery, the line being in use for color printing of cloths and yarn goods.

Business Only Fair.

Baltimore, December 22.—The drug trade, wholesale, manufacturing and retail, has been only fair this week. In the jobbing houses a large part of the clerical force applied itself to the work of stock taking and similar labors incidental to the expiration of the year, while the same was the case in the manufacturing establishments. Attention was diverted from the regular pursuits and no attempt was made to push business. The retailers on their part met with about the usual encouragement and experienced somewhat augmented receipts owing to the sale of special holiday goods. The drug market was featureless and the movement of goods in all lines of moderate volume. The year, however, will average up very well.

A Splendid Trade in Detroit.

Detroit, Dec. 22.—A splendid trade is reported by the wholesalers for the first three days of the week. Not only have buyers ordered tag ends in the sundry lines, but straight drugs have been in great demand. One house said the trade for the three days really amounted to half a month's work. Retailers about town are equally satisfied with the business they have done. Fancy articles, such as atomizers and "ebonoid" goods, have sold better than ever before.

Continued Improvement in Collections.

St. Paul and Minneapolis, Minn., Dec. 22.—The most noticeable feature of the past week's operations has been the continued improvement in collections. The jobbers note a wide contrast between now and two months ago and within the next week or ten days are looking for a very large increase of receipts in settlement of outstanding accounts. Retailers, too, are well satisfied, only one or two who were questioned having responded with the old familiar statement—"collections are slow." Some of the druggists are rushed with the holiday trade. Others, who do not get or even expect much of this, are nevertheless secure in view of the sustained excellence of their general business. There is so much sickness that the man behind the prescription counter has his hands full night and day. Some retailers whose holiday trade is confined mostly to perfumeries complain that they have miscalculated and stocked themselves up too liberally with this class of goods. The cigar trade appears to be increasing.

The "Quaker City" Oval.

The ideal prescription bottle should be large and neat in appearance, symmetrical in shape, have sloping shoulder to facilitate the pouring out of contents, and a lip so finished that there are no sharp corners to chip off, leaving ragged and sharp edges—a great deal to require of one bottle, but the Quaker City Oval comes up to the standard. It is made of clear flint glass, has a large, oval label surface, and will contain exactly the number of ounces indicated by a neat figure on the back of the bottle. For prices, write to the manufacturers, Saltsburg Bottle Works Company, Pittsburg, Pa. If you desire samples, enclose three two-cent stamps to cover postage.

High Grade Chemicals.

Our representative recently called on the Thomsen Chemical Company and learned that during the past few months they have enlarged and improved their facilities for turning out their well known and high grade products. They are now prepared to fill all orders promptly, at lowest market prices, and desire to call special attention to their Sodium Sulphite, both crystallized and granulated; crystallized Hyposulphite of Sodium, Sodium Phosphate in all forms, Tri Sodium Phosphate, Ammonium Phosphate, Solution Chloride of Antimony or Butter of Antimony and Epsom Salt. For catalogue, address Thomsen Chemical Company, Baltimore, Md.

Mineral Water.

The Red Jacket Mineral Water has been placed upon the market for use in cases of indigestion, constipation, kidney complaint and rheumatism. For further information and price list, address the Red Jacket Mineral Water Company, Seneca Falls, N. Y.

MARKET REPORT.

NEW YORK MARKET.

New York, Dec. 24.—Another week of quiet conditions has passed and affairs incidental to the midwinter holiday season have received the bulk of attention. There is no change, however, in the tone of the market, and a continued steady feeling is manifested on the part of dealers and prevailing conditions appear to be satisfactory.

OPIUM.—The demand has continued light and unimportant but the market retains a firm undertone and jobbing prices are well sustained at \$3.55@3.75 for 9 per cent. and \$3.65@3.85 for 11 per cent., according to size of order.

POWDERED OPIUM.—Business in a jobbing way is of average volume and quotations are unchanged at \$4.75@5.00 for 13 per cent. and \$5.10@5.25 for 16 per cent., the inside figures for single pounds.

MORPHINE.—There is no abatement of activity and prices continue steady on the basis of \$2.40@2.60 for eighths, according to brand and quantity.

QUININE.—Only a light consuming demand is noted, but the steadier feeling mentioned last week is retained and jobbing quotations continue firm on the basis of 30@21c. for bulk in 100-oz. tins, according to brand and quantity.

CHLORAL HYDRATE.—Jobbers have again revised their quotations and the corrected figures show an advance to \$1.35@1.50 in pound bottles, \$1.45@1.60 in halves, \$1.55@1.70 in quarters, and \$2.50@2.65 in ounces. Crusts 5c. less than crystals.

CARNAUBA WAX.—Values are easier and show a decline to 35@45c. for jobbing parcels, as to quality.

CACAO BUTTER.—The consuming demand is light and jobbers have reduced quotations to 49@50c. by the box and 53@55c. for less, according to brand.

CANTHARIDES.—Owing to scarcity and stronger primary markets jobbers are firmer in their views and quotations have been advanced to 90@90c. for whole and 90c.@\$1 for powdered.

OIL BERGAMOT.—Primary markets are decidedly firmer and jobbing quotations have been advanced to \$2.70@2.90 for best and \$2.45@2.70 for second quality.

OIL CASSIA.—Cables have been received reporting foreign markets weak and lower, and spot quotations for jobbing quantities show a decline to \$1@1.10 in cans and \$1.25@1.40 for less.

IPECAC.—Lower quotations from London have caused an easier feeling among local jobbers and spot quotations for small lots have been reduced to \$3.35@3.60 for whole, \$3.40@3.65 for ground and \$3.50@3.85 for powdered.

COLCHICUM SEED.—Stocks are exceedingly light and jobbers have advanced quotations to 45@50c. for whole, 48@52c. for ground and 50@55c. for powdered.

GLYCERINE.—Refined has been marked up by jobbers to 17@18c. for 30 degrees in cans and 22@25c. for less. For 28 degrees the quotations are 16@17c. by the can and 21@25c. for less.

—At the December meeting of the Erie County (N. Y.) Board of Pharmacy the following licenses were granted, all on examination: Assistant Pharmacist—Edward James Biles, Mrs. Mayme Elliott Horton. Pharmacists—Charles Theodore Pohlman, Mason Smith Brown, Solomon Platon Teolnitsky, Herbert Taylor, Earl Justin DeGoller, Henry Herman Thompson. At the recent meeting of the new State Board, held in New York, it was suggested that the old boards have a meeting the latter part of December to enable those applicants who have had only one examination and were unsuccessful, to have another opportunity. The Erie County Board will therefore have another meeting on December 29, after which the board will review its work for the past fiscal year and thereafter the powers and duties of the Erie County Board of Pharmacy will cease. Geo. Reimann, secretary.

—The Acme Compound & Chemical Company, of Lincoln, Neb., has incorporated to manufacture and sell chemicals. Capital, \$20,000. Incorporators: A. Kroner, W. F. Schwind, A. M. Storch and M. Kroner, all of Lincoln.

—The Welton Drug & Mercantile Company, of Denver, has incorporated to do a general drug business. Capital, \$4,000. Incorporators: C. A. Linde, J. E. Matthews and Etta L. Linde, all of Denver.

—Dr. Lebscher, of Plains, Mont., has recently opened a drug store in the place. It was the first pharmacy to locate there.

—D. J. Linskill has purchased the pharmacy of J. V. Pearse, at Plymouth, Pa.

SODA SALICYLATE

U. S. P., H. & F. Pure White.

We invite the careful attention of the Pharmacist and Physician to the superior quality of our brand. It conforms in every respect to the requirements of the U. S. P., 1890. We emphasize the following important points in favor of our product, which should merit for it the preference of physicians and pharmacists alike, viz.:

Its pure whiteness.

Perfect solubility.

The absence of carbolic odor so objectionable in some makes, and

The fact of its forming colorless solutions, even if concentrated.

Cascara Jellules.

Physicians are Prescribing Them.

See That You Have Them in Stock.

The word "Jellule" is new. So is the thing it describes; a soft jelly like medicated Tablet. Physicians recognize it as a good thing if it is new. Patients welcome the innovation, finding it a great improvement over the Pill or Compressed Tablet. It is bound to become popular.

The Cascara Jellules contain each $2\frac{1}{2}$ grains of a properly seasoned extract of Cascara Sagrada, combined with aromatics. They are put up in boxes containing each 15 of the Jellules, a convenient quantity for the physician to prescribe.

ROUGH ON RATS
TRADE MARK

THE ROUGH ON'S.

Beginning with "Rough on Rats" in 1873-4, E. S. Wells has rapidly added new "Rough On" preparations to his list, until the expression "Rough On" in connection with vermin, insect household, toilet and medical preparations is not only recognized by the public and trade as his trade mark, but the patent office at Washington, later, granted him Trade Mark papers on the expression "Rough On" as applied to vermin, insect, household, toilet and medicinal preparations. The public feel a confidence in buying a "Rough On" preparation because it is known Mr. Wells so jealously guards the reputation of the "Rough On's" that he never allows a preparation to be offered under the name unless it has been thoroughly tested and is found to have unusual virtues, for purposes intended. Beware of imitations or substitutes, said to be just as good, and of any so-called "Rough On" preparations not bearing the name E. S. Wells.

ROUGH ON RATS.

used by all civilized nations, never disappoints, always does the work. Clears out Ants, Cockroaches, Bed bugs, Rats and Mice, 15c., 25c., \$1.00 boxes.

ROUGH ON ROACHES.

A non-poisonous destroyer of Ants and Yellow Cockroaches, 25c. Druggists. Too heavy to mail.

ROUGH ON MOTH, FLY AND FLEA.

Keeps fleas from Dogs, Mosquitos, Flies and Gnats from Persons, Horses or other animals. Keeps Moth from Clothing, Carpets or Rugs, 25c. at Druggists. Too heavy for mail.

ROUGH ON TOOTHACHE. Instant relief, 15c.

ROUGH ON CORNS. For hard or soft corns, 15c.

ROUGH ON WORMS. Liquid, easy taken, 25c.

ROUGH ON HEADACHE

TABLETS. Years of experience prove these the best of all, sure, quick, safe. 15c. Druggists, or by mail.

ROUGH ON PAIN.

Liquid. Soothing relief for Neuralgia, Headache, Rheumatism, etc. Very penetrating and effective. Handy, quick relief for Cramps, Colic, Cholera Morbus, Sprains, Aches, Pains in chest, side, back or limbs. 25c., 50c., \$1.00 at Druggists.

ROUGH ON HUNIONS.

The first and only genuine cure of Bunions. Gives ease and comfort at once, and cure is quick. Cures also hard or soft corns. As a bath for relief of sore, tired, aching feet it has no equal. 35c. at Druggists, or by mail.

ROUGH ON PILES.

Used largely in this and foreign countries. This is the only remedy for Piles that has stood the test and proved a real cure. For bleeding, itching or protruding Piles, it gives relief, ease, comfort at once, sure cure in a short time. Not a single case of failure has yet been reported. 50c. at druggists, or by mail.

ROUGH ON HILE (Tablets).

If nothing else clears the bile out of you, these will. For persons subject to severe, stubborn bilious attacks, these are particularly well adapted. Specially anti-bilious and effectively cathartic. 25c. Druggists, or by mail.

ROUGH ON BRONCHITIS.

Tablets. The worse the case the more marked and noticeable the relief. Simple coughs and colds may be helped by simple means, but those severe coughing spells that rack the bronchial tubes and lungs; deep seated colds, coughs and bronchial, throat, chest and lung affections; severe persistent tickling, hacking and irritation can be quickly quieted, helped, soothed and cured by this remedy only. 25c. at druggists, or by mail.

Bind Your Drug Journal.

The Pharmaceutical Era answers hundreds of questions on dispensing, and furnishes hundreds of formulas and notes on pharmacy every year.

It pays to preserve this information, that you have paid for, in shape for convenient reference.

THE ERA BINDER

supplies the means. Without the advertising pages it holds the numbers for one year (2 volumes and index). With the advertisements it holds the numbers for six months (1 volume and index).

Price, 75 Cents Each, Postpaid.

DR. J. C. HOOD, LOUISVILLE, KY.

Established 1888.

BOARD OF PHARMACY INSTITUTE, Chartered.

Incorporated 1898.

WM. J. ROBINSON, Ph. G., M. D., Director and President.

Occupies a unique position among schools of Pharmacy. Primary object, the preparation of drug clerks for Board of Pharmacy examinations, with the least expenditure of time and money. Fee: \$50 to \$75, including all expenses. Books free. New class organizes on third Tuesday of each month. For further information, and for interesting prospectus, containing numerous testimonials, address

BOARD OF PHARMACY INSTITUTE, 119 East 128th St., New York City.

THE CITIZEN'S MANUAL,

Containing
Naturalization
Laws of the
United States,
Declaration of
Independence,
Articles of
Confederation,
Constitution of the United
States, Amendments to the
Constitution, Washington's
Farewell Address, Lincoln's
Emancipation Proclamation,
Second Inaugural Address,
and Oration at Gettysburg.
This handy and reliable little
book is issued to meet a want
of a great many, as the American
Republic is the most suc-
cessful attempt at self-govern-
ment yet instituted by the
people, and as its influence
widens and extends among
the masses of mankind, the
history of its origin, the prin-
ciples upon which it is found-
ed, and the laws and axioms
which govern its existence
are constantly referred to and
earnestly discussed by lovers
of liberty in every land. 112
pages, postpaid, 25 Cts.

IRISH YARNS

AND WITTY SAYINGS. Containing New and Original Humorous Irish Stories and rare Gems of Wit, set forth with the irresistible humor of the Irish Brogue.

When we say that this is the Best Collection of Irish Dialect, Wit and Humor that has ever been offered to the public, we are not asserting merely our own opinion, but we are giving the judgment of the most famous story tellers of the present time, who have contributed some rare specimens of Irish Wit and Humor to this famous collection. This great humorous book contains over 350 Yarns, Witty Sayings, Droll Stories, and humorous Irish Dialect Poetry. Among this great collection of Irish Wit and Humor will be found the following side-splitting yarns and jokes: "An Irish Count," "Catch them after Dinner," "Don't Lose a Wife's Respect," "She Took no Risks," "The Lost Pound," "Widow Mulcahy's Demise," "Not Bigoted," "An Irish Doctor," "Giving the Waiter a Tip," "Pat's Interim," "Could Never be President," "How he Kept the Score," "Mike went for Water," "Roped in," "He Knew His Door," "Wasn't Smoking Aloud," "Would Like to be a Bishop," "An Irish Trunk," "Two of a Kind," "Pat and the Mosquitoes," "Obeying Orders," "The F was Lost," "Efficacy of a Countersign," "A Stone Coffin," "Irish Evidence," "Rough on Parrots," "Pat's Love to the Cook," "A Question of Brains," "An Irish Mix," "The Captain's Speech," "From an Irish Standpoint," "Mick's Courtship," "Widow O'Brien's Toast," "An Irishman's Will," "Joke on Rafferty," "Pat and the Oysters," "Civil Service," "Con's Description of the Fox Hunt," "The Tailor's Thimble," "Jimmy Butler and the Owl," "Mrs. Donnegan's Cat," "Norah Murphy and the Spirits," "O'Connell and the Fish Woman," "Paddy's Dream," "Pat Scores One," "The Day we Celebrate," "An Irishman's Toast," and 300 other gems of Irish Wit and Humor, of which space will not permit to give titles here. This great humorous volume contains 100 pages double column, with very funny illustrations, size 8x6 inches, Lithograph cover in 5 colors, price 25 cents

Order from D. O. HAYNES & CO., 396 Broadway, NEW YORK.

GET IT ALL!

TEN years ago the miner got all the silver he could get out of his crude ore with the machinery he had. He was entirely satisfied, for he didn't realize that better machinery could be made. But suddenly another man came along with a better machine and made a fortune out of what the miner had thrown away!

You are a druggist and you are taking all the profit you can get out of each glass of soda with the apparatus you have. As long as every glass yields you a profit you are satisfied. But it is a great mistake to imagine you are getting all the profit. You can't get all the profit until you put your soda department on a Tufts basis. Have it Tufts and all Tufts! A

TUFTS FOUNTAIN

extracts all the profit. It makes the druggist rich and increases his trade.

Of course, your old fountain gets some of the profit, but does it get all of it? You know what it can do! Find out what a new Tufts can do. That's all we ask! We will help you. Our experience and knowledge is yours upon postal card request.

Send for Portfolio of Prints.

DO YOU WANT TO Study Pharmacy ... AT HOME?

THE ERA COURSE IN PHARMACY offers you the facilities for obtaining a sound pharmaceutical education at a cost of only \$10.00, and it can be followed without interfering with your ordinary duties, or requiring your absence from home.

The instruction is personal, adapted to your particular needs, prepares you for advancement and increases your earning capacity. A splendid preparation for examination by the Board of Pharmacy.

WHAT IS THE ERA COURSE IN PHARMACY? It consists of printed lectures covering the subjects

Chemistry, Pharmacy,

Materia Medica,

Botany, Dispensing

...AND...

Pharmaceutical Technique.

ONTARIO
COLLEGE OF PHARMACY
11 GERRARD ST. E.
TORONTO.

The lectures are systematic, exhaustive, and prepared by well known and experienced teachers. They are sent to you in regular monthly instalments, for Ten Months.

An especially valuable part of the work is the correspondence feature. The student receives printed questions upon all the lectures, his replies are carefully rated, and at stated periods he undergoes a thorough written examination.

**A NEW CLASS IS FORMED
EACH MONTH.** ❀ ❀ ❀ ❀

Ten Dollars covers the entire cost of the lectures, the correspondence work, and twelve months' subscription to The Pharmaceutical Era. If the student satisfactorily completes the work he receives a diploma, without extra fee, at the termination of the Course.

WRITE FOR THE PROSPECTUS, which will give you full detailed information. Address

THE PHARMACEUTICAL ERA,
